US. A6d v.60 pt.2

PROCEEDINGS AND DEBATES OF THE SIXTY-SIXTH CONGRESS
THIRD SESSION.

SENATE.

FRIDAY, *January 7, 1921.*

(Legislative day of Thursday, January 6, 1921.)

The Senate met at 12 o'clock meridian on the expiration of the recess.

DISPOSITION OF USELESS PAPERS.

The VICE PRESIDENT laid before the Senate a communication from the Assistant Secretary of Labor, transmitting, pursuant to law, schedules and files of useless papers devoid of historic interest accumulated in the files of the department and asking for action looking to their disposition, which was referred to a Joint Select Committee on Disposition of Useless Papers in the Executive Departments, the members on the part of the Senate to be selected by the Chair. The Vice President appointed Mr. WALSH of Montana and Mr. FRANCE members of the committee on part of the Senate, and ordered that the Secretary of the Senate notify the House of Representatives thereof.

CALL OF THE ROLL.

Mr. CURTIS. Mr. President, I suggest the absence of a quorum.

The VICE PRESIDENT. The Secretary will call the roll.

The reading clerk called the roll, and the following Senators answered to their names:

Ashurst	Harris	McNary	Smoot
Ball	Heflin	Myers	Spencer
Borah	Henderson	Nelson	Stanley
Brandegee	Hitchcock	New	Sterling
Calder	Johnson, Calif.	Norris	Sutherland
Capper	Jones, N. Mex.	Nugent	Swanson
Colt	Jones, Wash.	Overman	Thomas
Culberson	Kellogg	Phipps	Townsend
Curtis	Kenyon	Poindexter	Trammell
Dillingham	King	Pomerene	Underwood
Elkins	Knox	Ransdell	Wadsworth
Fletcher	La Follette	Robinson	Walsh, Mass.
France	Lenroot	Sheppard	Walsh, Mont.
Gerry	McCumber	Smith, Ariz.	Warren
Glass	McKellar	Smith, Md.	Williams
Gronna	McLean	Smith, S. C.	

Mr. GERRY. I wish to announce the absence of the Senator from Oregon [Mr. CHAMBERLAIN] and the Senator from South Dakota [Mr. JOHNSON], on account of illness.

I wish also to announce that the Senator from Kentucky [Mr. BECKHAM] is absent on official business.

The VICE PRESIDENT. Sixty-three Senators have answered to the roll call. There is a quorum present.

PETITIONS AND MEMORIALS.

Mr. McLEAN presented a petition of the Woman's Christian Temperance Union of Windsor, Conn., praying for the enactment of legislation to punish violators of the eighteenth amendment to the Constitution by American citizens in certain foreign countries, which was referred to the Committee on Foreign Relations.

He also presented a petition of the American Veteran Soldiers of the World War of Ukrainian origin, the Ukrainian Branch of the American Red Cross, Connecticut branches of Ukrainian organizations, and sundry citizens of the State of Connecticut, favoring the recognition of Ukrainian independence, which was referred to the Committee on Foreign Relations.

He also presented memorials of the T. K. Polish Naturalization Club, of Willimantic; of sundry Polish citizens of Norwich; and of Independent Norwich Lodge, No. 309, I. O. B. A., of Norwich, all of the State of Connecticut, remonstrating against the enactment of legislation restricting the immigration of aliens, which were referred to the Committee on Immigration.

He also presented a petition of the Ukrainian Society of New Britain, Conn., favoring the recognition of Ukrainian independence, which was referred to the Committee on Foreign Relations.

He also presented a petition of the Hartford Section, Council of Jewish Women, of Hartford, Conn., praying for the enactment of legislation providing for the protection of maternity and infancy, which was ordered to lie on the table.

He also presented a petition of the Social Hygienic Committee, National League of Women Voters, of Hartford, Conn., favoring appropriations for the education and protection of the women of the country, which was referred to the Committee on Appropriations.

He also presented petitions of C. P. Kirkland Camp, No. 18, United Spanish War Veterans, of Winsted, Conn., and of Lieut. N. W. Bishop Camp, No. 3, United Spanish War Veterans, of Bridgeport, Conn., favoring the confirmation of the nomination of Comrade Frederick A. Royse as Deputy Commissioner of Pensions, which were referred to the Committee on Pensions.

He also presented a memorial of the University Council, Yale University, of New Haven, Conn., remonstrating against the enactment of legislation commercializing the national parks, which was referred to the Committee on Commerce.

Mr. KNOX presented petitions of the Civic Club of Bedford, Pa.; sundry citizens of Erie, Pa.; and sundry citizens of Ardmore, Pa., praying for the enactment of legislation providing for the public protection of maternity and infancy, which were ordered to lie on the table.

He also presented a resolution adopted at a mass meeting of citizens at Chambersburg, Pa., in favor of the enactment of legislation to forbid interstate transmission of race-gambling odds and bets, which was referred to the Committee on Interstate Commerce.

He also presented a petition of the Oakland Board of Trade, of Pittsburgh, Pa., praying for the enactment of legislation providing for a 1-cent drop-letter rate in cities, towns, and on rural routes, which was referred to the Committee on Post Offices and Post Roads.

He also presented a petition of Captain Charles V. Gridley Garrison, No. 4, Army and Navy Union, United States Army, of Erie, Pa., praying that existing laws be so amended as to place the entire retired list of the Army, Navy, Marine Corps, and Public Health Service on the same basis as the active list with reference to increased pay, which was referred to the Committee on Military Affairs.

He also presented a petition of Local Union No. 2484, United Mine Workers of America, of Eriton, Pa., urging that further prosecution and imprisonment of violators of the espionage act be abandoned, which was referred to the Committee on the Judiciary.

He also presented a petition of Local Union No. 3825, United Mine Workers of America, of Meadow Lands, Pa., urging that further prosecution and imprisonment of violators of the espionage act be abandoned, which was referred to the Committee on the Judiciary.

He also presented a memorial of the Board of Trade of Philadelphia, Pa., remonstrating against the enactment of legislation proposing to use certain profits of Federal reserve banks for the purpose of extending live-stock credits, which was referred to the Committee on Banking and Currency.

He also presented a resolution adopted at a mass meeting of citizens of Chambersburg, Pa., in favor of the enactment of legislation establishing a Federal censorship of motion-picture films, which was referred to the Committee on Education and Labor.

He also presented a memorial of the Philadelphia Board of Trade, of Philadelphia, Pa., remonstrating against the enactment of legislation to provide for the protection of the monetary gold reserve, so that additional tax may not be laid upon the users of gold in the useful arts, etc., which was referred to the Committee on Banking and Currency.

Mr. WARREN (for Mr. KENDRICK) presented a petition of the Rawlins Range Association, of Rawlins, Wyo., favoring the so-called truth in fabric bill, which was referred to the Committee on Interstate Commerce.

He also (for Mr. KENDRICK) presented a petition of the Rawlins Range Association, of Rawlins, Wyo., praying for the

UMI

enactment of legislation placing an embargo on wool and wool products, which was referred to the Committee on Finance.

Mr. CAPPER presented a resolution adopted by the annual convention of the American Farm Bureau at Indianapolis, Ind., in favor of the enactment of legislation authorizing the several States to regulate intrastate railroad rates and local distribution of cars, which was referred to the Committee on Interstate Commerce.

He also presented a resolution adopted by the annual meeting of the American Association of State Highway Officials, held at Washington, D. C., and a petition of the Automobile Trade Association of Kansas, of Topeka, Kans., praying for the enactment of legislation providing for the continuation of Federal aid in highway construction, which were referred to the Committee on Post Offices and Post Roads.

REPORTS OF COMMITTEES.

Mr. KENYON, from the Committee on Education and Labor, to which was referred the bill (S. 4643) to amend an act entitled "An act to provide for vocational rehabilitation and return to civil employment of disabled persons discharged from the military or naval forces of the United States, and for other purposes," approved June 27, 1918, as amended by the act of July 11, 1919, reported it with an amendment and submitted a report (No. 675) thereon.

Mr. NEW, from the Committee on Military Affairs, to which was referred the joint resolution (S. J. Res. 236) directing the Secretary of War to cease enlisting men in the Regular Army of the United States until the number of enlisted men shall not exceed 175,000, reported it with amendments and submitted a report (No. 676) thereon.

BILLS INTRODUCED.

Bills were introduced, read the first time and, by unanimous consent, the second time, and referred as follows:

By Mr. JONES of Washington:

A bill (S. 4798) enabling the Secretary of the Interior to purchase for the United States all the interest and rights of John Arvid Petterson under his application for patent for an improvement in envelope-printing attachment for adding machines; to the Committee on Patents.

By Mr. STERLING:

A bill (S. 4799) to amend section 9 of the Federal reserve act, as amended by the act approved June 21, 1917; to the Committee on Banking and Currency.

By Mr. WALSH of Massachusetts:

A bill (S. 4800) for the relief of the owner of the schooner *Itasca* and her master and crew; to the Committee on Claims.

By Mr. JONES of New Mexico:

A bill (S. 4801) to amend an act entitled "An act for the relief of Indians occupying railroad lands in Arizona, New Mexico, or California," approved March 4, 1913; to the Committee on Indian Affairs.

By Mr. CALDER:

A bill (S. 4802) granting an increase of pension to Andrew Henri Hart; and

A bill (S. 4803) granting an increase of pension to Henry S. Nichols; to the Committee on Pensions.

A bill (S. 4804) for the relief of Sophie Caffrey; to the Committee on Claims.

By Mr. CURTIS:

A bill (S. 4805) to regulate the employment of minors and to provide for compulsory school attendance of children within the District of Columbia, and for other purposes; to the Committee on the District of Columbia.

AMENDMENTS TO EMERGENCY TARIFF BILL.

Mr. POMERENE submitted an amendment intended to be proposed by him to the bill (H. R. 15275) imposing temporary duties upon certain agricultural products to meet present emergencies, to provide revenue, and for other purposes, which was referred to the Committee on Finance and ordered to be printed.

Mr. TRAMMELL submitted an amendment intended to be proposed by him to the bill (H. R. 15275) imposing temporary duties upon certain agricultural products to meet present emergencies, to provide revenue, and for other purposes, which was referred to the Committee on Finance and ordered to be printed.

STANDING ROCK INDIAN RESERVATION LANDS.

Mr. STERLING submitted an amendment intended to be proposed by him to the joint resolution (H. J. Res. 346) extending the time for payment of purchase money on homestead entries in the former Standing Rock Indian Reservation, in the States of North and South Dakota, which was referred to the Committee on Public Lands and ordered to be printed.

MESSAGE FROM THE PRESIDENT.

A message from the President of the United States, by Mr. Sharkey, one of his secretaries, announced that the President had, on January 6, 1921, approved and signed the following bills:

S. 46. An act for the protection of the water supply of the town of Sunnyside, Utah;

S. 429. An act to authorize an exchange of lands with Henry Blackburn;

S. 1447. An act to correct the naval record of Fred C. Konrad;

S. 1546. An act for the relief of Katie Norvall;

S. 1743. An act for the relief of Matthew McDonald;

S. 2188. An act to amend section 3 of an act entitled "An act making appropriations for sundry civil expenses of the Government for the fiscal year ending June 30, 1902, and for other purposes," approved March 3, 1901 (31 Stat. L., p. 1133);

S. 2278. An act for the relief of John Healy;

S. 2964. An act providing additional time for the payment of purchase money under homestead entries of lands within the former Fort Assinniboine Military Reservation, in Montana; and

S. 2977. An act to amend section 8 of an act to provide for the sale of desert lands in certain States and Territories approved March 3, 1877, as amended by an act to repeal timber culture laws, and for other purposes, approved March 3, 1891.

OFFICIAL RECORDS OF THE CIVIL WAR (H. DOC. NO. 959).

The VICE PRESIDENT laid before the Senate the following message from the President of the United States, which was read and referred to the Committee on Military Affairs and ordered to be printed:

To the Senate and House of Representatives:

I transmit herewith, with my approval, for the consideration of the Congress a communication from the Secretary of War, suggesting the enactment at an early date of legislation authorizing the Secretary of War to make disposition of the volumes of the "Official Records of the Union and Confederate Armies," which have accumulated in considerable numbers in the office of The Adjutant General of the Army.

WOODROW WILSON.

THE WHITE HOUSE,
7 January, 1921.

REORGANIZATION OF ADMINISTRATIVE BRANCH OF THE GOVERNMENT (S. DOC. NO. 352).

The VICE PRESIDENT laid before the Senate the following message from the President of the United States, which was read and ordered to lie on the table and to be printed:

To the Senate:

Senate joint resolution No. 191, entitled "Joint resolution to create a Joint Commission on the Reorganization of the Administrative Branch of the Government," having been presented to me on December 17, 1920, and not having been approved by me or returned to the Senate within the 10 days prescribed by the Constitution, has become a law without my approval.

The resolution has in some way been misplaced or destroyed. In order to comply with the provisions of section 204 of the Revised Statutes of the United States that all laws be filed with and published by the Secretary of State, may I ask that a duplicate of Senate joint resolution No. 191 be sent to me for that purpose?

WOODROW WILSON.

THE WHITE HOUSE,
7 January, 1921.

Mr. WADSWORTH submitted a concurrent resolution (S. Con. Res. 36), which was considered by unanimous consent and agreed to, as follows:

Resolved by the Senate (the House of Representatives concurring), That the President of the Senate and the Speaker of the House of Representatives be, and they are hereby, authorized to sign a duplicate copy of the enrolled joint resolution (S. J. Res. 191) to create a Joint Committee on the Reorganization of the Administrative Branch of the Government, and that the Secretary of the Senate be directed to transmit the same to the President of the United States in compliance with his request.

PRICES OF COAL.

Mr. SMOOT. Mr. President, I would like to ask the Senator from New York [Mr. CALDER], chairman of the Special Committee on Reconstruction and Production, or the Senator from Iowa [Mr. KENYON], a member of the committee, if that committee has gone into an investigation of the retail prices of coal in the District of Columbia.

Mr. CALDER. In reply to the Senator's inquiry, I will state that we have not. The coal situation here deals with anthracite wholly and we have been trying to clean up the bituminous

situation. The committee proposes now to give its attention to anthracite.

Mr. SMOOT. I notice that the committee finds a profit of $6 a ton on coal sold to the Government. I would like to have the committee go into the question and ascertain what profit is being made upon anthracite sold in the District of Columbia, as it costs to-day $15.80 a ton delivered.

Mr. CALDER. The committee is arranging, I will say to the Senator from Utah, to take up that matter next week. We shall be glad to have the Senator give us any information he may possess.

Mr. SMOOT. I hope the committee will take it up.

Mr. BORAH. May I ask the Senator from New York a question while we are on this subject? Of course everyone is greatly interested in the investigation and the revelations which are disclosed, but the most interesting question is, What are we going to do about it after we get the facts?

Mr. CALDER. The committee contemplates recommending legislation to the Senate, and we are preparing bills now. We hope that we shall have them ready to present in the course of the next week.

Mr. BORAH. Is there no law at the present time by which these men can be dealt with?

Mr. CALDER. They could be dealt with under the Lever Act through the Department of Justice if the department would take up the matter. I will say to the Senator that we have to-day forwarded to the Department of Justice such information as we have in our possession concerning the recent revelations, and suggested to them that they begin prosecutions at once.

Mr. BORAH. The Lever Act is the only act applicable?

Mr. CALDER. It is the only one that I know of.

Mr. KENYON. Apropos of the inquiry of the Senator from Utah and the remarks of the chairman of the committee, I wish to say a word in view of the editorial in the Washington Post this morning entitled "Burning money," which ought to be published in the RECORD, but I defer to the rule, which I hope we may follow, that these things be not published.

I wish to say that the figures submitted to the Calder committee by the War Department show that they bought in 1920 spot bituminous coal, 765,252 tons, paying therefor an aggregate price of $5,447,937.27, or an average price of $7.12 f. o. b. mines. They also bought 150,925 tons of spot delivered, dumped and stored, paying therefor an aggregate of $1,305,926.72, or an average of $8.65 per ton. Col. Barney stated to the committee that the charge for dumping and storage would put it practically on the $7.12 basis, so that it is fair to say that for the entire 916,177 tons of spot coal for the year 1920, including the last month when the price was somewhat less, it cost the War Department $7.12 per ton, which included the commission and purchasing charge.

The coal was purchased, according to Col. Barney's testimony, in Pennsylvania, Alabama, eastern Kentucky, and Illinois. The average cost in central Pennsylvania for the first nine months of 1920, which included the high-cost months, was $2.82 at the mine. The average cost in the other fields, then, was somewhat less for the identical period. Therefore it is fair to say that the $2.82 cost at the mine is a fair cost price.

Mr. CALDER. Will the Senator state to the Senate just where we got the figures indicating the cost?

Mr. KENYON. We got the figures from the reports of the mine operators to the National Coal Association, which papers we took out of their office.

Mr. CALDER. The prices were prices they made themselves.

Mr. KENYON. Yes; their own statement. Adding to this Col. Wentz's figure of 50 cents a ton as a good profit for the operator, makes $3.32 per ton, which would be a proper selling price f. o. b. the mines, with a reasonable profit to the operator.

Mr. POMERENE. Mr. President——

Mr. KENYON. Will the Senator allow me to finish this short statement?

This means, as I figure it, that the Government paid an excess profit on these 916,177 tons of spot coal of approximately $3.80 per ton, or nearly three and one-half million dollars, instead of $1,500,000, stated in the article in the Post this morning.

Not only that, but the Navy bought its coal at around $4.35 to $4.75 at the very time the War Department was paying the other price. How does that affect the situation? The parties from whom the coal was commandeered by the Navy Department are going into the Court of Claims. The department officials are met there, in trying to get at the fair price, by the fact that the War Department was paying $7.12 per ton. While that evidence is not conclusive, it would be admissible in court as bearing on the question of a fair price for coal. So that the Navy, trying to save money on coal, will be compelled to carry the weight of the mistake, to put it mildly, or the lack of business methods of the War Department in paying excessive prices for coal.

Mr. POMERENE. Mr. President——

The VICE PRESIDENT. Does the Senator from Iowa yield to the Senator from Ohio?

Mr. KENYON. I yield.

Mr. POMERENE. I want to ask the Senator a question. The Senator stated that the operators were selling coal at the mine for $3.80; I believe that was about the average.

Mr. KENYON. The cost at the mine, I will say to the Senator, was $2.82; but I do not think he will find that any of them were selling it for that price.

Mr. POMERENE. The Senator also gave $7.12 as the average paid for spot coal.

Mr. KENYON. That is what the War Department paid.

Mr. POMERENE. Can the Senator give the contract price of coal which was charged by the various operators?

Mr. KENYON. I can tell the Senator that Col. Barney testified before the committee that the contract coal bought by the War Department for 1920 was chiefly in the Central West field, and was at a much less price presumably. I can not give the figures, but not much above a reasonable price. That is a fair statement of his testimony, I think.

Mr. POMERENE. My recollection is that it was something less than $4 a ton.

Mr. CALDER. That is correct.

Mr. POMERENE. The question I wished to ask was, Did the same operators who were selling their contract coal at a fraction less than $4 a ton charge the Government of the United States $7.12 for spot coal?

Mr. KENYON. That is the average, though they charged the United States as high as $11 in some cases.

Mr. POMERENE. Perhaps that does not answer directly the point I had in mind. Were those charges made by the same operators?

Mr. KENYON. They were made, I think, by some of the same operators.

Mr. CALDER. Mr. President, we have not been able to tie that up to exactly the same operators except in one case, where we had the statement of the operator that his costs were something like $2.85 a ton and that he sold coal to the Government for $9.12.

Mr. KENYON. But that, I wish to say to the Senator, was in the same field where the other purchases were made; so it is perfectly fair to assume if that operator made a profit of $6 a ton the others in similar fields made the same profit.

Mr. POMERENE. And the agent who bought the coal charged 50 cents a ton commission?

Mr. KENYON. The agent was allowed 50 cents a ton commission.

Mr. POMERENE. I simply desire to observe——

Mr. KENYON. I did not mean to get into this controversy, but I simply desire to observe that if the whole American people have been robbed on coal as the Government has been robbed the aggregate of the robbery will run into hundreds of millions of dollars. That may not be a polite term to use, but it occurs to me at this moment as the most descriptive term to apply.

Mr. POMERENE. It is interesting, perhaps, to note, Mr. President, that some years prior to the war in my home city we used to invite new industries to come there—at that time I was a member of the board of trade of our city—and one of the inducements we held out to them was that they could get coal run of the mine, at the mouth of the mine, for 90 cents a ton, and here we are paying 50 cents a ton commission on coal.

I may also say that in an investigation which was made in Cleveland by the grand jury some time prior to the war the statement was made by operators then that they would be happy to get 10 cents a ton profit on the coal which they mined and sold.

Mr. KENYON. The Fuel Administration, I think, fixed 15 cents a ton on coal as a fair commission to purchasing agents.

Mr. JONES of Washington. If I may ask the Senator from Iowa a question, he referred to the controversy in the Court of Claims wherein the coal operators are trying to make the Navy Department pay an additional price for the coal they obtained.

Mr. KENYON. I am assuming that they will go to the Court of Claims; I do not know that they have gone there.

Mr. JONES of Washington. I understood the Senator to say that they had gone to the Court of Claims.

Mr. KENYON. If they have not already gone to the Court of Claims, they will do so.

Mr. JONES of Washington. I desire to ask, on the assumption that the controversy is in the Court of Claims, whether

the evidence that the committee has procured as to prices and costs and the exorbitant profits which the War Department paid for coal would not be available in a controversy in the Court of Claims?

Mr. KENYON. Oh, yes; but I merely referred to that not to indicate that the price that the War Department had paid would be at all controlling, but it would simply make more difficult the burden of the Navy in fighting the price which the operators might seek to charge for commandeered coal.

Mr. JONES of Washington. That certainly would be true if the committee had not developed what it has developed. It seems to me what the committee has developed would certainly overturn any suggestion of that kind.

Mr. KENYON. I hope it may be helpful.

Mr. CALDER. Mr. President, in reference to the inquiry of the Senator from Washington, I should like to say that I have forwarded to the Secretary of the Navy a copy of our hearings dealing with this subject in order that his office may have the record if the effort is made in the Court of Claims to collect from the department $7 per ton for coal.

Mr. KELLOGG. Will the Senator from New York yield to me?

Mr. CALDER. Yes.

Mr. KELLOGG. Is it not true that the Secretary of War objected to the arrangement which Secretary Lane made with all the coal mines to sell coal to the Navy at $3 per ton, in order to encourage its production, and that he is now paying from $7 to $11 a ton for coal or has been doing so?

Mr. CALDER. I recall some such objection a year or two ago, I will say to the Senator from Minnesota.

Mr. McLEAN. Mr. President, I desire to inquire if the Secretary of War, or whoever purchased the coal for his department, invited bids?

Mr. CALDER. Yes.

Mr. McLEAN. Was there any competition?

Mr. CALDER. Yes. He invited bids in May, and received bids of $4.50 a ton. He rejected the bids, or some official of the War Department did so, because it was thought the bids were too high. Then he invited other bids in the territory west of the Mississippi. Bids at moderate prices were obtained there, and the coal was contracted for, but for the territory east of the Mississippi River he received no bids at all. The Quartermaster Corps of the War Department then conferred with the Navy Department and ascertained that the Navy Department proposed to commandeer its coal. The Navy Department officials advised the War Department to do likewise, and I understand that subordinates in the War Department, including the Assistant Secretary of War, advised the commandeering of the War Department's needs, but Secretary Baker refused to take the step which the Navy Department had taken, and so the War Department did not commandeer their coal. However, the Navy Department did so, and obtained coal at prices in the neighborhood of $4.50 a ton.

Then, again, the War Department made some inquiry about the prices of coal and endeavored to obtain priority orders from the Interstate Commerce Commission, putting the War Department on the same basis as the public utilities of the Nation, but Col. Barney testified that the Interstate Commerce Commission refused to give priority orders to the War Department, and they fell by the wayside. They found it impossible, as Col. Barney contended, to buy coal other than through the spot market, and they went out and bought coal and made arrangements with certain agencies to buy coal at prices not exceeding $11 a ton, and the average price they paid was something like $7.

Mr. FLETCHER. Mr. President, may I ask the Senator about what date the contract was made with reference to the coal to which he refers?

Mr. CALDER. The bids asked for by the War Department were in May.

Mr. FLETCHER. May of last year?

Mr. CALDER. Yes; last year. As I have said, at that time the bids were rejected because they were too high. Subsequently the War Department arranged by contract for the delivery of coal west of the Mississippi River, but east of the Mississippi River coal was bought on the spot market, so called.

Mr. FLETCHER. Was that done by a special agent at the head of some branch on the pay roll of the Government at a dollar a year?

Mr. CALDER. No. There is, so far as I know, no charge involving the integrity of any official of the Government.

Mr. POMERENE. Mr. President, I should like to ask the Senator a further question. Col. Wentz, as I understand, bought the coal as spot coal?

Mr. CALDER. Yes, sir.

Mr. POMERENE. Was he asked why he did not make a contract with the operators to furnish the coal instead of going out and buying it as spot coal?

Mr. CALDER. Col. Wentz is the head of a number of coal-operating companies in this country. He told the committee that all of his own coal had been contracted for, and that he had no coal of his own to sell the Government. His office sought the business. It appears that Col. Wentz is a coal operator and a coal wholesaler. He did not sell the Government coal as a coal operator, but sold it as a coal wholesaler.

Mr. POMERENE. I understood that was the situation, but that does not quite answer my question. There must have been a supply of coal on hand, otherwise he could not have sold it as spot coal; and if there was a supply on hand, there was a supply in the hands of the operators which had not been contracted for. So why did he not contract in the name of the Government for some of the $4 coal instead of buying it as spot coal and selling it at $7 a ton?

Mr. CALDER. I do not think it is fair to blame Col. Wentz entirely for that. It seems to me that is where the Government was negligent. I asked Col. Barney if he had gone out and gotten the coal operators together and said to them, "You have got to get this coal for us." He said he had not done so, and therefore I think the blame lies in that direction. The War Department neglected to do what the Navy Department did and what the Bureau of Mines did. It may be interesting to tell the Senate that the Bureau of Mines——

Mr. KING. Mr. President, will the Senator yield?

Mr. CALDER. In just a moment. The Bureau of Mines purchases coal for the Department of the Interior and the Department of Agriculture and other departments in the city of Washington, their needs totaling about 250,000 tons a year. Those departments could not get coal, and so the Bureau of Mines simply called upon the coal association to get them coal and paid them a price of something like $4.50 a ton at the mines.

Mr. KING. Mr. President, I was just about to ask the Senator if this is not a repetition of many instances which have come to the attention of the Senate showing the efficiency of the Navy Department and the inefficiency of the War Department, and if it would not argue in favor of a policy by which the Navy not only should purchase its own coal supplies, but purchase coal for the Army?

Mr. CALDER. I think it emphasizes the need of some department of the Government or of some officials here in Washington having charge of the purchase of all the coal for all the departments. Then we would have a uniform system and would be able to buy coal at moderate prices.

Mr. BORAH. Mr. President, I can not see any benefit to be derived from such a course, because the coal operators would soon control the particular individual who had charge of the purchase and do so more successfully than if there were a half a dozen who had to be controlled.

Mr. CALDER. That might be so; but I think if some man who knew something about coal should assume the responsibility and then would apply some business sense, the Government would get coal at proper prices.

Mr. SUTHERLAND. Mr. President, I should like to ask the Senator from New York whether he has directed his attention entirely to the question of coal or whether he has inquired into other instances of high prices in other products?

Mr. CALDER. I will say to the Senator from West Virginia that our committee is directing its attention to the cost of building material generally throughout the country, and we are hopeful that we will be able to show a situation as to some building materials that will be of ultimate benefit to the people of the country, as well as our inquiry into coal.

Mr. SUTHERLAND. I will say that the cost of fuel is rather an insignificant item in the cost of building operations generally. It seems to me there must be a great many other items in connection with building operations which would warrant an inquiry.

Mr. CALDER. Perhaps the Senator misunderstood me. We are making a direct inquiry into the prices of building materials without regard to the cost of the fuel entering into their manufacture. We hope to have some information on that subject in the course of a few days.

Mr. KENYON. I think the Senator from West Virginia will find by the time the committee is through that profiteering in building materials is not confined to coal. There are a number of other lines which give evidence of as fruitful results as have been obtained in the case of coal profiteering.

Mr. SUTHERLAND. I should like to ask the Senator if it is not true that the same kind of profiteering has been going on in practically all kinds of material and commodities used by

the War Department? If that is so, it does not seem to me to be fair that the inquiry should be directed solely to the coal situation, and that the coal operator should be singled out. He is not more guilty than are a great many other producers of commodities in this country.

Mr. KENYON. Mr. President, sometimes you can not catch all the robbers at once. You have to take them one by one. We are proceeding as best we can to discover the truth about them all.

Mr. SUTHERLAND. Of course, Mr. President, it is a very popular thing for those States that are entirely consumers of coal to jump on the coal man, and yet no doubt there are instances of many products in their own States that might bear the same scrutiny and with the same result. No doubt New York would like to get its coal at a very low price, and other States, and I should be glad to see them get it. Most of these instances did not involve the coal operators. It was a buyers' market. Buyers came to these coal operators, the scarcity of cars causing a scarcity of coal, and offered them one price and then another and then another, until the price was put up to a point where sometimes the coal operator was almost ashamed to take the money; but they did just as other people did who are in business—took what the traffic offered. While in some cases the prices were no doubt higher than they should have been, and many of them recognized the fact that it was an unwholesome condition of the trade that prices should be so, yet the vast volume of the coal business that was carried on in the country was not carried on at those prices. The vast majority of the coal produced in the coal-producing States was sold at moderate prices on yearly contracts. Many operators through the war were selling coal on three and five year contracts at prices on which they lost money. So I say it is fair to bring out those instances rather than to bring out some one particular instance upon which to base a conclusion in which some individual, perhaps, charged an excessive price. If the Senator is going into that, I think the entire subject should be brought out by some committee which justly has that question before it as a principal inquiry rather than as a side issue of an inquiry into building conditions.

Mr. CALDER. Mr. President, I know that the Senator will not justify the paying of $9.12 a ton by the War Department for the coal it needed to take care of our sick and wounded soldiers and our men in encampments, when the cost of that particular coal at the mine was only $2.80 a ton. I will say to the Senator further that when this committee concludes its inquiry into coal it will report the facts to the Senate and it will recommend legislation. That legislation will go to some one of the standing committees of the Senate, and the Senator then can, if he wishes, check up what we have done.

I am sure the Senator would not defend some other things that we find the coal industry has done. We find that last winter contracts were made for supplying coal for the Northwest in the usual form at, I presume, a reasonable price at that time. When it became evident that there was a shortage of coal for delivery in some parts of the country the National Coal Association here in Washington, through its officers, assisted in preparing priority orders, which had the effect of completely destroying the value of contracts made by these people in the Northwest for their fuel a year in advance, with the result that they were compelled to pay two and three dollars a ton more for their coal, although they had contracts for its delivery. We find every evidence in our hearings that the National Coal Association, through its officers, representing the great bulk of the bituminous coal operators of the country, were back of a movement of that character. They do not deny it, although they say it was justifiable under the circumstances. We have had complaints from Minnesota, from Wisconsin, from Michigan, from Ohio because of the invalidating of these contracts, brought about, I will say to the Senator from West Virginia, largely through the efforts of the coal operators themselves.

The Senator does not defend methods of that character. I am sure he does not.

Mr. SUTHERLAND. Mr. President, I do not defend the imposition of unfair prices upon products of any character; but it is just as unpleasant to go into a clothing store and buy for $100 a $30 suit of clothes made in New York State as it is to buy for $9 a ton of coal that perhaps cost only $4 at the mines.

Mr. CALDER. Mr. President, the Senator from New York condemns practices of the character referred to by the Senator from West Virginia and will join with him in any effort to punish offenders against the laws, whether they live in New York or West Virginia.

Mr. SUTHERLAND. Therefore I say, Mr. President, that this thing is a question of such broad scope, covering practically every industry in the country, that I hardly like to see just one industry singled out because it is a popular thing to jump on the poor coal operator.

Mr. KENYON. Where are the poor coal operators?

Mr. SUTHERLAND. Perhaps I should not say the poor coal operator; but he certainly receives more than his quota of abuse.

Mr. OVERMAN. Mr. President, I desire to inquire of the chairman of the committee whether or not he has invited the Secretary of War to come before the committee to see if he has any explanation at all of this matter.

Mr. CALDER. He has not requested an opportunity to appear. We have had the War Department officials. We have had his subordinates there. We have heard their story. We should be glad to have the Secretary appear if he cares to come.

Mr. POINDEXTER. Mr. President, I should like to ask the Senator from New York if his committee has investigated whether or not there are any violations of the criminal laws of the country in this matter? I remember a few years ago when some pretty prominent coal dealers of the Pacific coast were tried and imprisoned for a considerable period of time for the very thing that the Senator has stated the committee has discovered in this case. I do not know whether the circumstances were the same or not. Probably in those cases there was some question of conspiracy to put up the price of coal; but it seems to me a very peculiar situation that the country is to be subjected to the general effect of a great purchasing agency like the Army, which consumes enormous quantities of coal, paying more than the market price, taking the money out of the Public Treasury, and thereby tending to increase the price of coal to all the consumers of the country, without anybody being to blame for it.

Mr. CALDER. Mr. President, I will say to the Senator from Washington that we are submitting all of our testimony to the Department of Justice and asking them to inquire thoroughly into whether or not any criminal act has been committed.

ATMOSPHERIC NITROGEN.

Mr. UNDERWOOD. Mr. President, has the unfinished business been laid before the Senate?

The VICE PRESIDENT. It is before the Senate. Yesterday we had petroleum, and this morning we have had coal. It is now time for the unfinished business to be taken up.

The Senate, as in Committee of the Whole, resumed the consideration of the bill (S. 3390) to provide further for the national defense; to establish a self-sustaining Federal agency for the manufacture, production, and development of the products of atmospheric nitrogen for military, experimental, and other purposes; to provide research laboratories and experimental plants for the development of fixed-nitrogen production, and for other purposes.

Mr. SMITH of South Carolina. Mr. President, yesterday my attention was called to the fact that the impression had been given in the course of the discussion of this Muscle Shoals plant that no fertilizer was produced there that was available directly for the farmer; in other words, that it produced an ingredient which in turn had to be turned over to a manipulator or a manufacturer and properly processed before it became available for agricultural purposes or was practical for the use of the farmer.

I had not had my attention called to that. I thought perhaps those who were discussing this question had sufficiently informed themselves not to make such an error. The fact of the business is that the process used by the Government now at the Muscle Shoals plant, the cyanamid process, produces a form of fertilizer known as cyanamid, which, when oiled and hydrated—which they do there, and this sample is in that condition—is immediately available for the soil. The farmers can take it and use it just as it is.

This cyanamid is 5 per cent richer in nitrogen than the Chilean nitrate. The nitrogenous contents of this are inorganic, just as the Chilean nitrate. Its action is about as rapid. The result of the use of this when properly applied to soil in its concentrated form is as effective as either the organic or the inorganic forms of nitrogen, or its converted form, which is known as ammonia, which in fertilizer parlance are convertible terms.

The mistake those who have been discussing this matter have made is to suppose that what is known as a balanced fertilizer is the only one that is available or generally used by the farmer. I have been amazed at the lack of information on the part of those charged with such legislation in discussing this subject. There are soils in this country that are rich naturally in potash absolutely wanting in phosphoric acid. Therefore the application of phosphoric acid will tend, of course, to make the soil more productive. There are soils—some of the bottom lands of

the Piedmont and those continguous to the mountains—which are rich in phosphoric acid and in potash, while they are absolutely wanting in nitrogen.

We have in the Department of Agriculture a bureau known as the Bureau of Soil Survey, who are supposed to go out and analyze the soil and find what are the chemical elements lacking in that soil for the proper production of a crop, and to indicate to the owner of the soil what he should supply in order to get a maximum return, or at least a profitable return for the cultivation of his soil.

The impression in this body is that the manipulators of fertilizer, or the manufacturers of it, mix these elements and send them out in their mixed form for the use of agriculturists. The fact of the business is that was the primary way in which this matter reached the farmer.

But when it is taken into consideration that in a ton of what we call ammoniated goods, such as 8–2–2 or 8–4–4—that is, 8–4–4 meant 8 per cent phosphoric acid, 4 per cent ammonia or its equivalent in nitrogen, and 4 per cent potash—that meant 8 pounds to the hundred, or 160 pounds in a 2,000-pound ton of fertilizer of phosphoric acid and 80 pounds of ammonia and 80 pounds of potash, out of a total weight of 2,000 pounds, the balance being just a mere filler, any kind of dirt or any kind of a composition that would carry in a mechanical mixture these ingredients, the farmer paying freight on from 1,500 to 1,700 pounds of dead weight that was absolutely of no use to him at all.

Mr. STANLEY. Mr. President——

The VICE PRESIDENT. Does the Senator from South Carolina yield to the Senator from Kentucky?

Mr. SMITH of South Carolina. I yield.

Mr. STANLEY. Is it not true that this is the only country in the world among cultured nations using fertilizer where the custom prevails of using mixed fertilizer at all?

Mr. SMITH of South Carolina. I think that is true as to great manufacturing plants. But the point I want the Senate to get is that the farmers themselves buy the concentrated ingredients and mix them under their own sheds, mix them according to the needs of the several soils they are going to fertilize.

Of course, I do not mean to give the impression that there are not thousands upon thousands of tons of this commercial or mixed fertilizer on the market. A great many tenants and a good many landowners go to these factories and specify the composition they want, and have it mixed for them. But the economical way, the up-to-date way, is to buy these concentrates. For instance, Chilean nitrate, muriate of potash, and phosphoric acid.

At this Muscle Shoals plant, or at the fixation plant, you get the lime nitrate known as cyanamid. That is about 20 per cent pure. By a very simple process they can convert that into the form presented in this bottle before me, known as sulphate of ammonia. Here it is in a salt, easily handled, as easily applied as nitrate of soda. So that the very initial step at Muscle Shoals or at any of the cyanamid plants in getting the product out of which they ultimately extract the nitrate acid to be used by the Government in the manufacture of explosives is first to produce it in the form of the article available for the farmer.

Mr. STANLEY. Have they the apparatus there at present for turning out the sulphate of ammonia? That was denied.

Mr. SMITH of South Carolina. This morning I called up and asked the Department of Agriculture, which has this matter in charge, or which is collaborating, being the parties most interested, and they inform me that an old company, operating at Ashville, had three units of sulphuric acid plants which the Government had purchased, and that were now on the ground, to produce the sulphuric acid, and they have the equipment all ready to take the nitric-acid gas driven off by heat from the cyanamid after they have gotten it in the cyanamid form, into the sulphuric-acid bath, and produce sulphate of ammonia practically without any great additional cost, but putting it in a more available form than even the cyanamid or the nitrate of lime. In either form it is immediately available for agricultural purposes.

In this country, perhaps, we do not realize, and I am sure the Senators here engaged in looking at the obvious things which appear before us, looking to those which seem proper to engage our attention, forget the fact that the billions and billions of tons of grain taken from the plains of the West and the fields of this country are that much actual chemicals extracted, never to come back.

Mr. NORRIS. Mr. President——

The VICE PRESIDENT. Does the Senator from South Carolina yield to the Senator from Nebraska?

Mr. SMITH of South Carolina. I yield.

Mr. NORRIS. If the material the Senator has exhibited is shipped to the farmer, with everything saved except the actual product that he wants, can he use it in that form?

Mr. SMITH of South Carolina. Yes.

Mr. NORRIS. Or must he mix it with something else before he puts it on the soil?

Mr. SMITH of South Carolina. No. Let me explain to the Senator. Here is cottonseed meal. That is the result of extracting the oil from the meat of the cotton seed. The oil is expressed and put on the market, and the hulls are taken and used as a filler for cattle feed. The meal is about 7½ per cent ammonia and about 6 per cent nitrogen. Cereals such as corn, wheat, rye, and barley do not need any great amount of potash or of phosphoric acid. The principal ingredient which produces the protein in our grains is ammonia. I take that cottonseed meal, use 250 or 300 pounds to the acre on depleted sandy soil, and produce from 50 to 60 bushels of corn. It is not more than half as rich in nitrogen as cyanamid, just half as rich in nitrogen as Chilean nitrate. But this form of the concentrate, when the oil is expressed and the hull taken off, is more immediately available for plant food than what we call the raw cotton seed.

Mr. NORRIS. The first thing the farmer must know, from a scientific analysis, is what his soil needs in the way of fertilizer, what it lacks?

Mr. SMITH of South Carolina. No. Let me correct the Senator there. It, of course, is desirable that he should know from a scientific standpoint what the need of his soil is. But they do know by experience that to which the soil responds; which is a negative way of arriving at the same thing.

Mr. NORRIS. If he does not know it scientifically, he knows it some other way.

Mr. SMITH of South Carolina. Yes; he knows it.

Mr. NORRIS. In order to use fertilizer intelligently, he must have that knowledge.

Mr. SMITH of South Carolina. Yes; surely.

Mr. NORRIS. He knows, in the next place, what he wants to produce.

Mr. SMITH of South Carolina. Yes.

Mr. NORRIS. And having those two things before him, he can ascertain what kind of fertilizer he needs on that soil.

Mr. SMITH of South Carolina. Yes.

Mr. STANLEY. Mr. President, the Department of Agriculture, as the Senator has said, has made extensive surveys of the arable soil of the greater part of the United States, indicating in maps by counties just what that soil needs, whether nitrogen, phosphoric acid, or what not. The agricultural colleges of the various States, and the farmers' institutes, as I understand it, everywhere where fertilizer is used to any extent, have gone into these counties and have explained in a simple way to the tillers of the soil just the character and the amount of fertilizer that is needed, and the most practicable way to apply it to the soil.

Mr. SMITH of South Carolina. Mr. President, I wish I had taken the time to go into a careful and exhaustive preparation to present to this body a fact that is fraught with more interest to this country of ours in this very matter than all the armies and navies we could appropriate for, fraught with more interest to us than all of the schools and colleges of this country. Any man who has the power of comprehending in the slightest degree the law of cause and effect must know that you can not from year to year take untold billions of tons of product from the soil and not leave the soil poorer. It has the original fertility less the amount exhausted in the production of those billions of tons of products.

Before the advent or the discovery of the use of artificial fertilization the plans pursued in the rich, almost unlimited, undeveloped lands in America was that one would clear the forest from a piece of land and cultivate it for a period of years until its fertility was exhausted, and so limitless was the uncleared virgin soil that the farmer would abandon that and clear more, finding it cheaper to do that than to attempt to cultivate the exhausted piece. That was essentially true when labor was cheap, when there was practically no manufacturing concerns, and each home was its own feudal system. But that time has passed, and we are face to face now with possibly the maximum of the arable land in this country under cultivation, if we take into consideration the fact that deforestation is producing profound climatic changes in the country, and that the taking away of the great moisture-conserving areas of forests may precipitate a condition that will make the country almost uninhabitable. Already the denudation of our foothills, extending over the whole Appalachian chain of mountains, is beginning to have its effect upon the coastal plains

from mountain to seashore. The terrific rise of the streams, unknown to men in former years, is now becoming a yearly occurrence. The excess of heat and cold, of drought and of precipitation, is becoming more marked and disastrous every year, so that the future generations of the country, multiplying as they are, while not an acre of land is being added to our domain, must depend not only upon maintaining the present fertility of our soil but must increase that fertility.

Mr. STANLEY. Mr. President——

Mr. SMITH of South Carolina. I yield.

Mr. STANLEY. I am very much interested in what the Senator from South Carolina has so well and so eloquently said. I have been impressed with the fact that there seems to be an impression that the need for fertilizer is confined in a great measure to sections that are using fertilizer. The great plains of the West that do not use it now have more at stake than the agricultural sections east of the Mississippi. We had a deep soil to begin with. It took a long time to exhaust it, although it is being exhausted, as the Senator has said, of its nitrogen, its phosphorus, and its potash. The arable part of the soil of the western plains is shallow. It is the result of decay for centuries of the growth of prairie grass and droppings from buffaloes and other animals. That soil will be much more easily and quickly exhausted of its fertility and its nitrogen than ours, and when it is so exhausted those plains can not be cultivated at a profit without the use of these fertilizers.

Mr. SMITH of South Carolina. Mr. President, there is a curious fact that when we abuse one of nature's laws she exacts frightful penalties. The entire forested area of our country, when left in its original form, refertilizes itself each year. The fall of the leaves from the trees produce a mold in which there is almost a balanced fertilizer. There is secreted, by a vast number of plants, ammonia from the air. The cultivated legumes are an illustration, as are certain trees of the forest.

When we have stripped that area of its forests and put it under cultivation not only are we subtracting from the soil the deposits of unknown ages from the forest itself but we have stripped it of all its source of replenishing that store and are also using that store in the production of our crops. So that not only do we stop the source of original fertilization when we have taken the forests off, but we are extracting year by year the deposits that would have accumulated while it was under forest. In addition to that, the erosion caused by rain, the exhalation of moisture caused by the sun also deplete the soil, so that we have arrived, as statistics from the Department of Agriculture will show, at a point where decreased production, in spite of increased acreage, is a fact.

Mr. POMERENE. Mr. President——

The PRESIDING OFFICER (Mr. McNARY in the chair). Does the Senator from South Carolina yield to the Senator from Ohio?

Mr. SMITH of South Carolina. Certainly.

Mr. POMERENE. Referring to what the distinguished Senator from Kentucky said a moment ago, there can not be any question at all about the exhaustion of soil, particularly in the West. I think our western farmers—and I say it with all due respect—have got to learn to use some fertilizer to a greater extent in the future than they ever have done in the past. I think that they are very largely neglectful when they take off their crops and use no fertilizer at all, as is the fact in certain sections of the West. In my judgment, there can be no question about the necessity of having fertilizer of the right kind and in great quantities. Of course, that is needed. I do not think there can be any dispute about it.

Mr. SMITH of South Carolina. Now, the question naturally arises, as we know the ingredients essential to the enrichment of our soil, what are the sources from which we are to get them? In 1856 Congress passed an act granting to any citizen of the country who might discover a guano island the right to a royalty or to protection to himself in the price of the fertilizer sold. Those islands were off the coast of Chile. On account of the extraordinary dry climate, the deposit of birds and sea animals for untold ages had produced there a form of fertilizer that was very rich in nitrogen and which also had some of the other ingredients.

Our Government granted the most liberal terms in order to get it to this country, and from Maine to Florida its application to the soil was so magical and the results were so wonderful that within a few years the supply was entirely exhausted.

By analysis as well as by experience it was found that certain barnyard fertilizers were rich in those elements, but the amount produced was so infinitesimal as compared with the demand that it was idle to think that a great grain grower, who planted vast acreage for the production of corn or wheat or rye, could raise enough live stock on his place to refertilize the acres that he cultivated. He was absolutely helpless, so far as his own power to enrich his soil from his own domestic sources were concerned. There were added, in addition to this, the cover crops, as they were called, the legumes, which in themselves secreted in the soil ammonia. That was only practical in a very small and limited way. That presupposed that an ordinary farmer had land sufficient to plant at least one-half of it in the cover crop or in the ammonia-precipitating crop one year, and then the next year plant his cultivated crop where the year before he had planted the legumes. That was entirely impractical, for the reason that the vast majority of those who produce the crops of the country are tenants, men who do not own the land, and who, therefore, cultivate just enough of the standard crops to meet their own requirements. Even if they did own the land, the vast majority of landowners are not in a position to let one-half of their cleared and arable land lie fallow with these cover crops.

So that, taking the East, the West, the North, and the South, the vital question that confronts us to-day is how we, standing at the threshold of the depletion of America's rich virgin soil, are going to preserve and conserve this source of the Nation's wealth and prosperity and increase the production per acre as the demands of an increasing population require.

Here we are increasing in population by leaps and bounds. The struggle for existence is becoming sharper. The issues between life and death from an economic standpoint are becoming accentuated. When we analyze it and trace it to its last source it must find its solution in the prosperity of the farmer and in the abundant production of the soil.

I state without fear of successful contradiction, taking the coastal plains from Maine to Florida, that without artificial fertilization there would not be produced enough to support one-fourth of the population of this now prosperous section. The famous farms of the Carolinas would be worthless without the use of an abundant artificial fertilization.

Just here is a curious illustration of the compensation of nature. The rich valleys of the West, which for ages have produced crops without any seeming diminution and without artificial fertilization, do not in their virgin production approximate the production per acre of the fertilized areas of the coastal plains of the Atlantic seaboard.

To illustrate: In my own State there was a premium offered for the greatest production of corn per acre. I think the competition was open, perhaps, to the entire United States, including the Dakotas and other great corn-producing States of the Middle and far West, which, on an average, produce corn far in excess of what my State produces, there being no comparison between them. I believe the statistics of several years ago showed a production of about 40 bushels an acre on an average for the Dakotas, perhaps, as against 11 bushels per acre for my State. Yet, by the use of these ingredients on 1 acre of land in South Carolina, Jerry Moore, within 10 miles of the city of Florence, produced 230 bushels of corn. That corn was measured by officials of the Department of Agriculture and was also measured by the agricultural commission of my State.

It is said—and the facts, I believe, are on file in the Agricultural Department—that Capt. Drake, of Marlboro, S. C., produced 254 bushels of corn on 1 acre. According to the figures which were submitted in reference to this marvelous production it was not practicable from a commercial standpoint, because the cost of the fertilizing ingredients was so great that after a certain point of fertilization was reached the law of increasing and diminishing returns asserted itself, and the corn cost more per bushel than was profitable for marketing purposes. It, however, demonstrated the fact that were the fertilizer available at a sufficiently low price the sandy loam of the Carolinas would produce as much on 1 acre as has heretofore been produced on 20 acres, thereby multiplying the resources of my State, from an agricultural standpoint, 20 times without increasing the acreage of the State by an acre.

I have knowledge of a field—I myself own it—which has been in active cultivation since the Revolutionary War. By the use of fertilizer that field to-day will produce more per acre than it did the day it was cleared, but it would not produce enough to justify cultivation were I not to fertilize it.

I see sitting around me at least two Senators the soil of whose States is practically the same as that of my State. By the use of nitrate of soda as a top dressing on the oat and wheat crops of their States and mine, and using no other fertilization at all, the yield can be doubled, trebled, and quadrupled. Therefore, in this instance, what is the problem as to an abundant production? The availability of the proper form of nitrogen. What lies back of that problem? Its supply and cost.

The two Senators who sit near me will bear testimony to the fact that with the use of the same ingredients the yield of

cotton also would be doubled. Therefore, in order to insure an abundant supply of the textiles from a given amount of ground the question is one of an adequate supply of this fertilizing material. The cotton produced in the South Atlantic States of North Carolina, South Carolina, Georgia, Florida, and eastern Alabama would be negligible if fertilizer could not be obtained.

The financial distress to-day in the South Atlantic cotton-producing States, which is such that I shall not attempt to describe it now, largely grows out of the obligations assumed by the farmers for the purchase of their fertilizers when they planted their crops. I state here and now that in the States which I have named the present price of the cotton produced last year would not more than pay the fertilizer bills. Yet we have a monopoly of the cotton production of the world, producing 65 per cent of all the cotton that is produced in the world and 100 per cent of that splendid spinnable variety which is known as "American upland."

There is no other cotton known to the civilized world which stands the test of the loom as does the American cotton. No other cotton has the same elasticity; no other cotton has the same tensile strength; no other cotton yields itself to the manufacturing processes as does the American cotton. The American cotton is the king of all the textiles of the world; and yet with that monopoly in our hands we are paying in the greater part of the cotton-producing States the profit to the manipulators of artificial fertilizers.

Mr. President, the question that confronts the entire country—it is more acute with us; it is chronic with us; but it is becoming more or less acute in all the remainder of the country—is on what source in the future are we to depend for the proper fertilization of the soil to sustain the life of the country, to say nothing of its commerce in agricultural products? I have before me here estimates as to the possible life of the Chilean nitrates. It is a sad commentary on the foresight displayed by this country that, knowing the absolute need, the imperative, the vital need of the enrichment of our soil, and knowing that we have no domestic source which even approximates ability to furnish a sufficient supply for the growing needs of the country at a price that will permit its use, we are indifferent as to whether or not we can get such a supply and from what source we shall get it. The nitrate beds of far-away Chile are not at our disposal; we import into this country only a small percentage of the amount of Chilean nitrate which is used by other countries for the same purposes for which we use it. In addition to that, it has been said on the floor and should be repeated now, that the Chilean Government is practically supported by the royalty charged on the exportation of Chilean salts, that charge approximating $12 a ton. We are subject to any rule, regulation, or condition which may be imposed by Chile, and over such questions we have absolutely no control.

Mr. STANLEY. Mr. President, may I interrupt the Senator for a moment?

The PRESIDING OFFICER. Does the Senator from South Carolina yield to the Senator from Kentucky?

Mr. SMITH of South Carolina. I yield.

Mr. STANLEY. In that connection, I should like to suggest to the Senator from South Carolina that during the World War, as the hearings show, we were compelled to make concessions in the way of furnishing fuel oil and other commodities to Chile in order to secure an absolutely essential supply of nitrogen for the carrying on of the war.

Mr. SMITH of South Carolina. I am glad the Senator has called my attention to that fact. I was the author of the original bill for the erection of the nitrate plant, and was also the author of the bill for the purchase of Chilean nitrate to be sold to the farmers at cost during the war. I was present when the matter referred to by the Senator from Kentucky was being discussed with the Chilean authorities. Chile was in as great distress for the commodities to which the Senator from Kentucky has referred as we seemed to be for nitrate; in fact, they stated to our Government that they could not produce the nitrate unless they could get the necessary substances with which to develop power in order to produce the salts from the mines.

Furthermore, the quality of the Chilean nitrate is deteriorating; the rich beds have already been exhausted; and it is not good statesmanship, it is not good business, for us to sit here and depend upon a natural deposit in a foreign country when the brain of the scientist has discovered that there are 27,000,000 tons of nitrogen in every square mile of air, and has indicated the process by which it can be taken in a commercial form to enrich every acre of land in America.

Mr. STANLEY. Mr. President——

The PRESIDING OFFICER. Does the Senator from South Carolina yield to the Senator from Kentucky?

Mr. SMITH of South Carolina. I yield.

Mr. STANLEY. At that point I should like to suggest that we will import this year 900,000 tons, it is estimated, of Chilean nitrate. If the Chilean nitrate decreases in its content of nitrogen for the next 30 years as it has in the last 30 years, in 10 years from now, or in less time than that, we will consume the entire output of the Chilean nitrate beds.

Mr. SMITH of South Carolina. Not only that, Mr. President; not only is it deteriorating in its nitrogenous content but we have no guaranty as to what exigency may arise which will cause the Chilean Government to foreclose any great amount of shipments from their shores. It must not be forgotten that the $12 royalty charged by the Chilean Government on each ton of nitrate as an export duty to support the Government there has no reference whatever to the price that the trust, which controls the entire output, may charge for the commodity, including the $12.

Mr. SIMMONS. Mr. President, I should like to inquire of the Senator, who seems to have given great study to this question, to what extent other countries are relying upon the Chilean deposits and to what extent other countries, if there be such other countries, are prepared to make their nitrogen from the air as the Senator suggests that we do?

Mr. SMITH of South Carolina. Mr. President, as we all know, the foremost country in the production of atmospheric nitrogen is Germany. Of course, the war placed an absolute necessity upon her to depend upon her own sources of nitrogen for explosives; but before ever the war broke out Germany was producing more, perhaps, than any other country except Norway and Sweden, which I shall mention in a moment. But even before the war Germany was producing more of this material than any other country, because she seems to have been at all times the foremost in the application and practical use of all economic scientific appliances. Germany leads, England comes next, France and Italy both have equipment, Norway and Sweden have a different process from this. Theirs, according to my information, is largely the production of nitric acid by the arc process; but these countries to which I have called attention—Great Britain, Germany, Italy, and France—are more or less prepared, and Germany is thoroughly prepared to meet all of her domestic needs from this source. Germany produced annually during the war 600,000 tons, as I recall. I have not the figures before me.

Mr. STANLEY. She produced 300,000 tons by the Haber process, 120,000 tons by the cyanamid process, and 150,000 tons from her coke ovens.

Mr. SIMMONS. That supplies her needs?

Mr. STANLEY. It more than supplies them.

Mr. SMITH of South Carolina. It more than supplies her needs. Now, this curious thing happened—and I am glad the Senator from North Carolina asked the question—Germany, with her notoriously sandy and bad soil, especially in the northeastern part of her territory, and having been cultivated for thousands of years, produces four times to the acre what America produces of any given crop, truck and grain, and produces it at a less cost per acre than America produces it, in spite of the great per cent of virgin soil in this country that uses no fertilizer at all.

Mr. SIMMONS. Mr. President, what I want to get the Senator to discuss is this: Is any other great agricultural country than our own—that is, under the necessity of preserving its soil by constant annual fertilization—forced to rely upon this natural deposit found in Chile and nowhere else?

Mr. SMITH of South Carolina. Our own is the only one in the category of great agricultural countries. The fact is, the only other source of this nitrogen deposit was the potassium nitrate beds found in India; and, of course, Great Britain, always on the alert for the preservation of her people and their progress and prosperity, possessed herself of that great supply, and is in possession of it to-day, in addition to her artificial nitrogen plants.

Mr. STANLEY. Mr. President——

The PRESIDING OFFICER. Does the Senator from South Carolina yield to the Senator from Kentucky?

Mr. SMITH of South Carolina. I do.

Mr. STANLEY. In further elaboration of the answer to the question of the Senator from South Carolina, I will say that this is the only agricultural country or the only highly civilized country that has not in recent years made an approximately adequate production of the nitrogen needed for war and peace. Nearly all of these great plants have been constructed since the beginning of the World War. Germany has constructed

seven great plants, producing nitrogen by the two processes, by Government aid or at Government expense. France has constructed nine. The English commissions have reported that it is absolutely necessary to have plants constructed immediately to supply this demand, notwithstanding the fact that England controls all the potassium nitrates of British India and that an English syndicate to-day has absolute control of the output of the Chilean beds; and it has announced, there being no law there to prevent it, that it proposes to organize a known and admitted trust that shall operate only after it has gained control of 90 per cent of the entire output of Chile, for the avowed purpose of controlling and raising the price of Chilean nitrate, since the production has become so much more expensive. A few years ago the per capita production of nitrogen was 60 tons per man. It is not half that now. A few years ago they had 28 per cent of nitrogen to a ton. Now they have 15—just about 50 per cent.

Japan is experimenting now with every known process, and has doubled her production. Italy has doubled her production. The per capita production of nitrogen in Italy is seven times as great as it is in the United States. It is three or four times as great in France. It is twice as great, nearly three times as great, in England.

There is not a great country in the world that is producing as small an amount of nitrogen as we are, and we are the only one of the five great powers that is not maintaining at its own expense plants which will produce sulphate of ammonia in time of peace and nitric acid in time of war.

I trust the Senator will pardon the interruption.

Mr. SMITH of South Carolina. I am glad to have it.

Mr. President, the question that stares us in the face now is, Where are we going to get this source of fertilization? Let me call your attention to what occurred when the war broke out.

The ingredients that are essential in a balanced fertilizer, as has been said, are phosphoric acid, potash, and nitrogen. There is not now available in any practical form any potash-producing plant, mine, or system in this country. I have here what is known as German kainit. It contains about 12½ per cent of pure potash. In mining the potash from their potash wells or their mines this is taken out of the culm. This is 12½ per cent potash. They brought that stuff to this country in ballast and sold it around $6, $7, and $8 a ton several years ago. It is what is known all through the cotton belt as kainit—a form of potash salt that was highly acceptable and profitable in its purchase and use.

Mr. SIMMONS. What does it sell for now?

Mr. SMITH of South Carolina. I am coming to that right now. This kainit in a more concentrated form was known as muriate of potash, which was 40 per cent pure. They refined it and shipped it. The farmers found that it was cheaper to buy the concentrate and pay less freight on the potassium content than to buy the kainit. This concentrated form sold at about $35 to $40 per ton before the war.

When the war broke out it jumped to $100, $150, and eventually went to $500 a ton, and then the market collapsed because there was not any at any price. We did not have enough potassium in this country to accommodate the arts and sciences, where it was needed, to say nothing of the crying need of agriculture where the soil was bare of potassium. Five hundred dollars per ton because the door of Germany was shut, and America with unlimited supplies, but comparatively hard to get under certain processes, in the green shale of the Appalachians and in the green sands of Jersey, an unlimited supply in the Rocky Mountain regions, and yet we had left the tillers of the soil, the people upon whom the very life of this Nation and the struggling nations of Europe depended for bread and meat, at the mercy of the exigencies of a war as to whether or not their production should be kept up! And here to-day on the floor of the Senate we have Senators carping about whether or not the Government, which is the people of the United States, shall harness its water powers and utilize its air to furnish the helpless tillers of the soil a material needed to enrich it and to guarantee in times of peace and war an abundance for the American people!

Back of the whole opposition to this bill is the greed of corporations, which, recognizing more acutely than the Senators on this floor recognize it the dependence of the agriculture of this country upon artificial fertilization, and knowing that they can not live and even approximate anything like prosperity without it, want the Government to keep its hands off in the exploitation of the great God-given resources of this country, for fear it will interfere with the profits that go into their pockets.

What, in the name of God and reason, is the profit of a few manufacturers to the people of the United States compared to an abundance of bread and meat for the teeming millions of America coming out of the enrichment of our soil? What is the limit of the possibilities of this discovery of science? The unlimited supply of air that surrounds the globe.

This thing is only in its empirical state, and the marvel is that at its very birth it not only promises hope but gives help to the agriculturists.

Mr. STANLEY. Mr. President——

The PRESIDING OFFICER. Does the Senator from South Carolina yield to the Senator from Kentucky?

Mr. SMITH of South Carolina. I yield.

Mr. STANLEY. In connection with what the Senator has said, I will state that two-thirds of the nitrogen now available in this country comes from the blast furnaces and coke ovens. Those coke ovens are practically all controlled by the large and powerful steel concerns, the United States Steel Corporation. Smith & Loughlin, and others, that have been known to be in combination in the sale of steel products. All that is necessary is for the United States Steel Corporation and two or three other enormous concerns to agree with the concerns which produce Chilean nitrate, and in an hour they can put on nitrogen for fertilizer purposes all that the traffic will bear.

Mr. SMITH of South Carolina. Mr. President, it is absolutely needless for me to stand here in this body—the evidence of whose interest in this vital thing is eloquently shown by the absence of Senators—and say that this hour 100 per cent of the hope of production in the Atlantic States rests in the hands of a half dozen trust magnates.

Mr. SMITH of Arizona. They can tell us whether we shall breakfast.

Mr. SMITH of South Carolina. As the Senator from Arizona intimates, they can tell us whether we shall breakfast or not, or at least tell us whether the vast number of the wage earners of this country shall have an opportunity to eat and be clothed decently. In the hands of a half dozen trust magnates rest the size and value of an American crop.

In the hands of half a dozen magnates rest the issues of life and death in America. The patient worker in his laboratory, with test tube and blowpipe and retort and electric torch, has discovered the secret of nature, and found a way of extracting this life-giving element and making it available to enrich every acre of America's land, and yet we stand here and debate as to whether or not the great Government of the people, for the people, and by the people shall leave the fate of our people to the sweet will of those who control the furnaces which produce this ammonium sulphate as a by-product from their already enormous profits in the steel business, and the exigencies of the trust which controls the nitrate plants in Chile, and to those who have a monopoly of the importations of potash from Germany. We sit here and solemnly debate as to whether the unlocked possibilities of American agriculture shall be left in the hands of those who care not whether the fields produce or whether they do not, as long as the profit on the stuff they produce rolls into their pockets. It is a commentary on the American Congress.

As I said a moment ago, this thing is in its initial stage.

Mr. STANLEY. Mr. President, right at that point, as an evidence of the fact that the opposition to this measure is due to a desire to control prices, it is claimed by the steel interests that they can produce and are producing over 500,000 tons of sulphate of ammonia. This plant has produced but 200,000, not one-fourth of the legitimate needs and of the actual consumption of this country.

The only effect it would have, from the viewpoint of the steel producer and the Chilean trust, would be that it would affect and could affect the price of nitrogen by showing the cost of producing it and by preventing a corner on the entire market.

Mr. SMITH of South Carolina. Mr. President, whenever anything is said here for the benefit of the farmer we are at once met with the cry of class legislation and paternalism. There is no student of economics worth listening to who does not recognize that the great agricultural classes of any country are by the very laws of nature in a class to themselves and, from a legislative standpoint, have to be treated entirely different from the producer of other commodities. There is all the difference in the world between the artificial producer and the natural producer. One is the master of his season. He can control his output to the inch or the yard or the pound. If he sees on the financial horizon a cloud which may threaten disaster, he can stop his plant instanter and produce not another pound or yard. But when the natural producer has invested in fertilizer, stock, and implements and put the seed in the ground, the clouds may roll up, and horrible disaster may not only be impending but certain, he can not stop the process of nature.

but, as has been said here, he must stand and take his medicine, as he is doing this year. He bought all of his supplies at the peak prices and then, while the crop was in the middle stage of production, came the order from the powers that be that contraction and deflation must take place. It did take place. And where did it take place? Just where the law of nature said it should take place—where there was the least resistance. And where was the least resistance? In the poor devil who had hypothecated the crop that was growing. It hit him first.

Mr. President and Senators, I had a letter last evening from a gentleman who is in a better position to know about those conditions than any other man in America. He wrote and asked me if I realized the condition of the country—horses being killed and their hides taken off for sale and the carcasses fed to hogs. This letter was from a man occupying, perhaps, a most influential and high position, which would enable him to gain this knowledge. He spoke of women and children being dispossessed of their little meager home implements and comforts and turned into the road; small bankers being left at the mercy—and thank God there seems to be a little mercy amongst them—of the larger banker, already broke, already ruined, unless the unthinking and unfortunate men who have charge of the administration of our affairs can be brought to a realization of what they have done and help to stem the disastrous tide and turn it upward.

The conditions are beyond the description of mortal man. They are beyond any possible power to describe. Positively I have sat here in the Senate Chamber and marveled at the seeming cheerfulness and optimism that characterizes this body. I do not know what would be the effect upon this body if Senators realized in its full import the condition which exists this very hour in practically every State in the Union.

The only thing between us and a condition never paralleled in the history of America is the hope that maybe the tide may turn. Men are already potentially ruined, hope gone, except the slender hope that this body will by some utterance or some act turn the tide of unspeakable disaster and save the country from the throes of a condition beside which all other panics and calamities seem insignificant. It is on us now; and yet if I were to stand here and give the Senate certain real facts they would be almost ready to turn themselves into a lynching party.

But that is getting afield, Mr. President. At some other time perhaps I shall discuss this terrible cataclysm which has occurred, this awful disaster which has occurred without rhyme or reason. The world is an infinitely small place now. China is nearer to us to-day than Richmond was a hundred years ago. The condition of the world is known, and we are all one family when it comes to transportation and communication. We are close together. Cable and telegraph and wireless and the steamships and the modern methods of communication and transportation have annihilated time and space and gotten us all into one family, and yet this family, with the same soil and climate and possibility of production, and the same amount of gold, the same amount of potential energy, is going through the throes of starvation, ruin, and death because certain men must hold on to preconceived notions as to the value of the gold dollar against a human life, whether we shall be on a paper basis or be in hell.

Mr. President, I have wandered somewhat afield, but it is all pertinent and germane to this, because I say here to-day that upon the soil the happiness and prosperity of those who produce the bread and meat and the clothing of this country rest, and on them the stability and happiness of this Government rest. I do not take any stock at all in this cry that has gone abroad about the high cost of living. It was not anything of the kind. It was a temporary cost of higher and better living amongst all the people, and certain individuals could not stand that.

The farmer was buying an automobile. Across his threshold had fallen for the first time in his hard-driven life the golden sunlight of prosperity, and through that portal rushed his children singing happily, going to school for the first time. For the first time perhaps in 25 years his accounts with his fellow men were squared; he was free and independent. The world looked different. He rebounded and reacted to it, and he was hunting a home of his own. He did not want to be a tenant any longer. He wanted to stand on his own soil and be a freeman. The prospect looked inviting, it was inviting, and the spirit of the native-born American asserted itself. There was singing on every side and the very air was charged with an electric current of hope and prosperity.

There was no extravagance when we come to speak of the great mass of the people. They did buy automobiles; but why should they not? If the man who produces that upon which the world subsists is not entitled to ride in an automobile, who, in the name of God, is? If the man who produces the material out of which shoes are made is not entitled to wear the best, who is? If the man who produces the bread and meat we eat is not entitled to proper fare on his table, who is? If the man who, in the lonely desert and hillside, minds the flock at night in the brain-racking condition of loneliness, and watches the sheep and protects them, is not entitled to wear the best clothes, who is?

Yet under the magic touch of this new law that we have passed, known as the Federal reserve act, which changed the basis of credit and made the wealth of this Nation the basis, the tide began to rise and prosperity began to emphasize itself in a thousand desolate places, and then, as though God himself had intended to put that system to the supremest test, He allowed the passage of that act and the great World War to be contemporaneous. But the system tided it over and stood the strain of the world's demand upon America without the cessation of a single industry or the retardation of her onward progress toward prosperity and development.

In the year 1919, in spite of four years of war and the call of readjustment, there was not a single national-bank failure in America. That was when the war and the bloody hand of lust were straining every nerve and fiber of organized society the world over. That system responded without a creak or the snapping of a joint. The war clouds rolled away. America was left intact. Not a single foreign foe, armed, had put his foot on American soil. Not a gun had been fired in her domains. Not a single resource had been touched; aye, they had been developed, and yet right at the time when the harvest seemed to be ripe for America to dispose, to the naked and starving of the world, of the bounties that had been given her by the providence of God, under the inscrutable, unexplainable actions of two departments, the whole sunlight of prosperity and hope of America was blotted out, prosperity was changed into despair, and hope was changed into the howling wilderness of an unspeakable calamity.

We sit here, the lawmakers of America, and say, "Well, it was inevitable and had to come." It is a monstrous proposition that organized society, world civilization, which was thoroughly competent to organize, finance, and prosecute the war; feed, clothe, arm, and equip six or seven millions of men, the greatest fighting force the world ever dreamed of, and feed and clothe them splendidly, taking them out of the productive departments of life and crowding them onto the battle fields of Europe, furnishing them with munitions of war and with all the paraphernalia that goes therewith, and, when that danger to civilization had been overcome and the Hun had been driven back and despoiled, has not ingenuity or statecraft enough to keep the receding wave of victory from destroying the victors.

It is the most monstrous proposition that ever a sensible people were called upon even to give hearing to, much less credence, and it will go down in history as an afterclap of the great World War that the legislative power of America could not cope with a few forces that had the power to destroy the hope of the nations of the world.

The same spirit is manifesting itself in the opposition to this legislation. I am going to grant—the fact is I think that a great amount of unnecessary expense—mark you, I am using that in a comparative sense—unnecessary as the times differ and the circumstances differ under which these plants were constructed; but when we are criticizing the seemingly staggering amount spent in the construction of the plant at Muscle Shoals we must not forget the time and the circumstances, we must not forget Hog Island, we must not forget airplane production, we must not forget the coal investigation. It seems to me a sort of disease, the same disease that is opposing this legislation, the very same identical disease. They got in their work then because the Nation was too busy to stop to ask questions.

But, I say, granting that the thing did cost too much as measured by peace times and ordinary business methods the fact remains that the Government owns at Muscle Shoals a great up-to-date plant for the benefit of those who must support the Government. To repeat, the sources from which the agriculturists and the farmers of the country are to get the wherewith to enrich the soil is bound up in the hands of a half dozen trust magnates who can determine at their own sweet will what shall be the output of our fields and determine where the profit shall go, and the major part of it goes elsewhere than to the farmer.

I wish to call the attention of the Senate to what I started to remark a moment ago, that it is idle for us to stand here and talk about the farmer being, under legislation, on the same plane

and in the same category with other producing bodies in the country. He is not.

Time has demonstrated the fact even if a study of the conditions would not have demonstrated it. Time has demonstrated and experience has demonstrated that he can not be organized in the sense that a corporation is organized.

Mr. STANLEY. Mr. President——

Mr. SMITH of South Carolina. I yield.

Mr. STANLEY. Does the Senator believe that the conservation of the soil of the Nation is just as much, in its last analysis, a matter of national defense as the maintenance of an army or coast defenses?

Mr. SMITH of South Carolina. Yes; and just as much and infinitely more, a thousand times more, than the control and regulation of our railroads.

Mr. STANLEY. In that event, the legislation, while primarily affecting the farmers, is in the interest of every man who needs cheaper and more of the essentials of life.

Mr. SMITH of South Carolina. It is in the interest of the whole American people. You may talk about fertilizer and all the ingredients that are necessary to produce a plant, but if the soil is not there for it to root in it goes for nothing.

The argument has been made here, What right has the Government to come in competition with private individuals? Generally speaking, that is a good position to take and a good point to make, but when we come to the question of the entire agricultural interests of the country, involving the fertility of the soil and the production of the crops, it is a nation's concern infinitely more than the transportation system of the country, upon which we have laid our hands and whose prices, fares, and charges we have undertaken to regulate.

I state here to-day that it would be a piece of economy for the Government to defray the entire expense and, if necessary, give without cost the product of these plants to the soil of the country and reap the benefits in a thousandfold interest in the increased actual wealth of the country. And yet it is said that the great reservoir of the air may be tapped, with an addition of twenty-five million or thirty million dollars more to the machinery of the Government, and the ingenuity of American brain put to work to perfect this process to the point where we can more than compete with Germany in her synchronizing plant that produces with one-tenth the horsepower the maximum amount of this product.

As years go by the process will be developed, until at last, like the automobile, which was a curiosity at one time, is a great national necessity now; like the wireless, that was an experimental plaything for the scientists and became a vital force in the modern struggle for existence; like the U-boat, that was a dream of "Twenty Thousand Leagues Under the Sea," to-day is a sinister weapon that decides the fate of nations, this will be equally a necessity of incalculable value.

Here is the thing upon which the world waits. The tables of the peoples of the earth waiting upon us to get some source from which the fertility of the soil may ever be maintained. Yet we sit here and want to know whether or not a few millions expended might enter into competition with one or two big trusts in the country, who are dealing out this life-giving stuff to the poor devil who can not help himself and who must be the victim in every cataclysm that occurs, and yet upon whose labor we are dependent for the bread we eat and the clothes we wear.

Oh, it is statesmanship of the highest order. We can put our hands on the railroads and regulate them, and incidentally guarantee them 6 per cent profit on their capital stock, but we can not, in the interest of the whole people, regulate the source of their food and their supplies.

Mr. STANLEY. Mr. President, may I interrupt the Senator from South Carolina at that point?

The PRESIDING OFFICER. Does the Senator from South Carolina yield to the Senator from Kentucky?

Mr. SMITH of South Carolina. I yield.

Mr. STANLEY. If the supply of nitrates from Chile were cut off by any means by the Chilean Government, and in that way we were prevented from using fertilizer in the South, would not the loss to the Government in supplying this 6 per cent to the railroads over their own losses exceed many times the cost of the fertilizer?

Mr. SMITH of South Carolina. As a matter of course, it would.

Mr. President, as an illustration of the point which the Senator from Kentucky has just made, I desire to say that the tax receipts of this Government, both State and National, are going to startle the Nation. The taxes may be collected, but they will be collected under a sheriff's hammer this year. The taxpayers of neither the States nor of the Nation are going to be able to pay their taxes. Where will they get the wherewithal to pay the taxes? Corn, which cost $1.50 a bushel to produce, is down to 25 cents a bushel; wheat is off in price, $1 a bushel; lambs are selling at 32 cents a head; horses are being killed and their pelts are being sold as the basis of a small return while their carcasses are fed to the hogs; cotton, which cost 30 cents a pound to produce, is down to 5 and 6 cents a pound.

Tobacco growers, as the Senator from Kentucky [Mr. STANLEY] suggests to me, are in a similar condition. Where are the taxpayers to get the wherewithal to meet their taxes? From whom are the taxes to be collected? If, in default of payment, the property of the taxpayers is going to be sold, to whom are you going to sell it? Such a condition as this never before confronted this country, and it is in line with and illustrative of the very point which the Senator from Kentucky has made. If the price of farm products gets to a point where there is no profit in their production, the country will face a famine. If the production becomes so meager that it is not sufficient for the needs of the people, the same condition will exist.

Mr. FLETCHER. Mr. President, may I interrupt the Senator from South Carolina?

The PRESIDING OFFICER. Does the Senator from South Carolina yield to the Senator from Florida?

Mr. SMITH of South Carolina. I do.

Mr. FLETCHER. The observations of the Senator from South Carolina with reference to our legislation relative to the railroads brings to mind also another situation. I refer to a great industry in my State, the citrus-fruit industry, in connection with which there is always the need of fertilizer; in fact, oranges and grapefruit can not be produced in Florida without the use of fertilizer. That industry has been found profitable so far, though the increase of the cost of fertilizer is a great problem, and the freight rates are likewise becoming an important factor there to-day. For instance, I had a box of oranges shipped to me from Florida, and the express charges on that one box were $2.48. The cost to the grower of the oranges for the box and material and the labor of packing must have been something over a dollar. That means that $3.48 must come out of the price of that one box of oranges before the producer gets anything. The result is the growers are getting practically nothing for their fruit at present. A correspondent informs me that he paid $385 freight on a car of oranges from Florida to Boston, and the returns gave him 30 cents a box on the whole car. So the question of excessive freight and express rates has a bearing on the present situation.

Mr. SMITH of South Carolina. The Senator from Florida will agree that there is not a Senator in this body to-day who if asked which was of the most vital interest to the Nation, agricultural production or railroad transportation, would not answer agricultural production, and yet the freight of which the Senator from Florida speaks has got to be paid regardless of whether there is a profit to the man who produces the freight which the railroads carry. The railroads have a fixed charge for freight. Commodities may go up, commodities may go down, but that charge is fixed. It is fixed by law; it is fixed by an act of Congress to guarantee to the carriers of the country a reasonable return on the operation of their properties for Government benefit; and yet the men who produce the commodities which are converted into freight, the great mass of the American farmers, are left to the tender mercies of speculators and gamblers. The railroad corporations—and I am not attempting to array one class against another—secure their profit, regardless of the condition of those who produce the commodities which they carry.

Mr. President, in this plea which I am making I desire to say here and now that I sincerely hope the Senate of the United States will come to a realization of the radical differences between the condition under which the farmers of this country produce the wealth of the country and the condition of the artificial producers, the manufacturers of the country, who convert it into different forms; and that they will be willing, as they should be more than willing, to see to it that the condition of the agriculturist shall be the first concern of Congress in order to make his life pleasant and profitable, for we know by the very character of those who constitute the great rank and file of the agricultural classes that they are impotent and helpless in the hands of the manipulators and financiers. The farmer has never fixed a price for any great staple product and obtained that price. Whatever fluctuations in the price of farm products have occurred have occurred around the gaming table of the speculator. When the bulls are in the ascendancy the price of agricultural products goes up, and when the bears are in the ascendancy the price goes down

without regard to what it costs the farmer to produce the material which is the subject of the dice on the gaming table. Yet we sit idly by and say that the farmer must take his medicine along with other men. That is all he does take, Mr. President.

Mr. President, I desire to incorporate in the RECORD a letter which I have received from Dr. Whitney as to the use of fertilizer in this country. It is too long for me to read, and I have already spoken at too great length on this subject.

The PRESIDING OFFICER. Without objection, the letter will be printed in the RECORD.

The letter is as follows:

UNITED STATES DEPARTMENT OF AGRICULTURE,
BUREAU OF SOILS,
Washington, August 1½, 1920.

DEAR SIR: The Bureau of Soils would like to have your opinion on certain important problems connected with the fertilizer industry of the country, and I am inclosing a list of questions which I should be very glad to have you, after careful consideration, answer and return.

The application to the soil of the modern fertilizer materials, which started about 60 years ago, has been one of the important means of increasing the acre yields of crops. It has grown to large proportions, especially in Europe and in the United States.

In this country the supplies of potash have been obtained mainly from Germany, phosphate rock mainly from Florida and Tennessee, and ammonia, the most costly ingredient, has been derived in part from nitrate of soda imported from Chile, from sulphate of ammonia obtained from the by-product of coke ovens and from city gas works, and by the use of castor pomace, cottonseed meal, animal tankage, dried blood, and fish scrap. Garbage tankage is also a small but rather important source; and factory wastes, such as leather scrap, horn shavings, etc., have been processed so that their nitrogen has been made available. The organic ammoniates have been valued not only for their nitrogen supply but also as containers for the minerals that have been used.

Some 20 years ago the world was startled by a statement made by Sir William Crooks before the Royal Society of England that the future of agriculture and food supply of the world was threatened by the relatively decreasing supply of ammoniates. Since then the scientists of the world have been actively studying methods for the fixation of atmospheric nitrogen for an independent source of nitrogen supply for fertilizers.

It has been foreseen by many that if we are to increase the food supply with the increasing demand for food the fertilizer industry must eventually be put on a chemical basis; that is, while use will always be made of wastes and by-products for fertilizer, the industry must be able to look for a dependable supply to chemical plants manufacturing fertilizer materials as their primary product. The European war has sharply emphasized the importance of this subject and has tended to bring about changes in the fertilizer industry much quicker than they would otherwise have developed. The increasing demand for meat and animal products has resulted in the increasing use of the organic ammoniates for direct feeding purposes, with the result that the organic ammoniates to-day are hard to obtain for fertilizers, as they bring higher prices for feeding stuffs and their direct use for feeding purposes is saner than their indirect use as fertilizers. The war has also stimulated the production of fixed-nitrogen products, so that the world is equipped to-day to fix the nitrogen of the air and make it available for fertilizer material.

Under the stress of war conditions the War Department has erected a great nitrogen fixation plant at Muscle Shoals, Ala. The primary product made at the Muscle Shoals plant is calcium cyanamide. This is a basic nitrogenous product, which is capable of being transformed into the commercial fertilizer material bearing the trade name of "Cyanamid." The latter is a product in whose use difficulties have been encountered, and whose action under certain conditions is deleterious. Cyanamide is not an ideal substance to use in mixed fertilizers, as it can only be mixed in small proportions with the ordinary form of acid phosphate. The Muscle Shoals plant is equipped to convert the nitrogen of the crude calcium cyanamide into ammonia and to oxidize part of the ammonia into nitric acid, from which ammonium nitrate may be obtained, a very important material for explosives. Ammonium nitrate gives good results when used as a fertilizer. It is rather deliquescent and therefore somewhat objectionable for this reason as an article of commerce. It is likewise not adapted for use except in small proportions in mixed fertilizers, as it reacts with the acid phosphate and readily decomposes. One can convert the nitrogen of crude calcium cyanamide into ammonia and absorb it in sulphuric acid, making ammonium sulphate, and this is the plan, in case Congress authorizes the operation of the plant in peace times for the manufacture of fertilizer material. How it shall dispose of this product and the price to be charged with reference to the commercial prices is a matter which need not be discussed here.

The Bureau of Soils has been working for a number of years on the problem of fixing atmospheric nitrogen and also on the conservation of our phosphate deposits. Ordinarily the phosphate rock is treated with about an equal weight of sulphuric acid to convert the insoluble calcium phosphate into a soluble form of calcium phosphate and a considerable amount of gypsum. This product (acid phosphate) is being sold to the farmers usually in a form which contains 16 per cent of available phosphoric acid (P_2O_5). The sulphuric-acid treatment requires a rock of rather high purity and low in iron, alumina, and carbonate of lime. In getting out rock of sufficient purity for the acid-phosphate manufacturers about two-thirds of the rock that is mined is thrown on the dump as waste material.

The Bureau of Soils has been working for several years to conserve and use this wasted phosphate material. If cheap water power were available, the wasted phosphate rock could be smelted in an electric furnace and collected as a liquid and the phosphate extracted, resulting in the saving of most of the rock now mined and at present thrown away. In the absence of cheap water power the bureau is experimenting with a furnace using oil as a fuel, and we think that the cost of production can be brought down to a point where the phosphoric acid can be produced in competition with the sulphuric-acid treatment.

This phosphoric acid, like the ammonia gas from the Muscle Shoals plant, is in itself not adapted to fertilizers and is not, strictly speaking, a fertilizer material, as neither of them can be used in this form. The ammonia gas has to be fixed by absorption in an acid, and the phosphoric acid has to be fixed by neutralizing it with a base. The obvious thing to do with the phosphoric acid is to fix it by passing in ammonia gas and form ammonium phosphate, which is a concentrated and valuable fertilizer material. Here the proposals of the War Department and of the Bureau of Soils come together. The ammonia to be produced at Muscle Shoals will need to be fixed, and phosphoric acid will be more valuable for this purpose than sulphuric acid, while such phosphoric acid as may be produced in plants adopting the furnace method, which the Bureau of Soils has been developing, will need to be fixed, and the Muscle Shoals ammonia will be most suitable for this purpose.

Ammonium nitrate can probably be mixed in all proportions with ammonium phosphate. Furthermore, it seems likely that potash can be put into the mixture in the form of potassium phosphate which, it is believed, could also be mixed in any proportion with ammonium nitrate and with ammonium phosphate. This would give the most concentrated fertilizer that it is possible to make.

There are two important questions to solve before such investigative work can be applied on a commercial scale. If concentrated fertilizers are made on a commercial scale, will the farmers be willing to use them, and can the country absorb the amount of ammonia that can be produced by the Muscle Shoals plant without disorganizing existing commercial sources?

The farmers have always been inclined to criticize the fertilizer manufacturers for selling fertilizers that contain a considerable amount of valueless material which they class as filler. When they buy acid phosphate they only get 16 per cent phosphoric acid figured as P_2O_5. The rest is inert and more or less valueless material. When they purchase ammonium sulphate, the ammonia equivalent is not over 25 per cent; in nitrate of soda, the ammonia equivalent is not over 20 per cent; in muriate of potash, the actual potash equivalent is not over 50 per cent; and in cottonseed meal, the ammonia equivalent is about 8 per cent. If there was put on the market a concentrated fertilizer made of the materials above described a standard formula containing 2 per cent of nitrogen, 8 per cent of phosphoric acid, and 2 per cent potash would contain in the concentrated form and, without filler, about 12 per cent of nitrogen, 49 per cent of phosphoric acid, and 12 per cent of potash. If this were diluted to correspond with the formulas the farmer has been accustomed to buy, it would require nearly 84 per cent of filler. A fertilizer containing 10 per cent of nitrogen, 8 per cent of phosphoric acid, and 4 per cent of potash in concentrated form would carry 24 per cent nitrogen, 19 per cent of phosphoric acid, and about 10 per cent of potash. It would require to dilute it to the present concentration 59 per cent of filler.

In applying concentrated fertilizers considerably more care has to be exercised than in applying the ordinary commercial fertilizers of commerce. The farmer would save freight on the filler unless he desired to have the fertilizer manufacturer put in the filler at the factory. The railroads would save car space if concentrated materials were shipped. If the farmer purchased a concentrated fertilizer he could apply it as such, but he would have to use more care and not let it come in direct contact with the seed, at least if it were applied in the drill. He could dilute the concentrated fertilizer by adding dry sand or finely divided and dried peat or soil of any kind, or he could dilute it with water if he had conveniences to apply the fertilizer in a spray. The question is whether the farmer would adapt himself to concentrated fertilizers and whether there would be a market for such material.

I have asked you to express an opinion as to whether the country could absorb the ammonia that could be produced at the Muscle Shoals plant without seriously disturbing the present commercial production of ammonia in its different forms. In order that you may judge this question intelligently let me say a few words about the present supplies and present markets for fertilizers.

The rated capacity of the Muscle Shoals plant is 56,716 tons of ammonia (NH_3) per annum. It is not contemplated for the present, however, to run the plant at full capacity, as only 8 of the 10 units will be run at any one time. This would mean a capacity of 44,440 tons per annum of ammonia, equivalent to 168,000 tons of ammonium sulphate. If this ammonia, instead of being made into ammonium sulphate, were made into concentrated fertilizers the output would be equivalent to some 2,000,000 tons of mixed fertilizer of average grade, but it would, of course, be far less in actual weight, though quite the equivalent in crop-growing value, as they would contain no inert material.

In 1909 the production of ammonium sulphate was about 106,000 tons, while in 1904 the production was something less than 55,000 tons. The present rated capacity of the by-product coke ovens and city gas plants is probably between 500,000 and 600,000 tons of ammonium sulphate per annum. The actual production in 1919 was only about 423,000 tons, of which about 140,000 tons were exported. On account of the coal strike, the railroad strike, and the car shortage the supply has been inadequate, and would have been inadequate if the 140,000 tons had not been exported. It is believed that the maximum recovery of ammonium sulphate from coke ovens may in the course of a few years be increased to 700,000 tons per annum, but that this is the limit of capacity unless the demand for pig iron is constantly and largely increased. The increased production of ammonium sulphate has been used to a considerable extent in replacing the ammonia from the organic ammoniates which have been rapidly absorbed as feed.

From a thorough survey of the fertilizer industry made by this department in 1917 and 1918 it appears that of all the materials sold by the fertilizer manufacturers in 1917, 3.3 per cent was ammonia. This figure has been used in the preparation of the table which follows.

It has been estimated by the War Department that for 15 years (1899–1914) the annual rate of increase of fertilizer production was 7½ per cent compounded annually; that is to say, that each year the production of fertilizers was approximately 7½ per cent larger than for the year before. The capacity of the coke ovens has nearly reached its maximum. The proportion of the organic ammoniates available for fertilizers is rapidly decreasing. The importation of nitrate of soda is limited by the shipping facilities, so that the time must soon come, if in fact it has not already arrived, when the country must turn to the use of fixed-nitrogen products to supply the ammonia for the increasing amounts of fertilizers that will be needed.

The situation may be presented from another point of view. The war interfered with the fertilizer trade as it has with many other industries. If the normal increase of 7½ per cent yearly in the fertilizer output had continued from 1914, the production of fertilizers in 1919 would have been about 10,500,000 tons. In 1914 the production is given as 7,367,528 tons, in 1915 it was 5,586,212, in 1916 it reached its low point of 5,407,549 tons. From then it began to rise. In 1917 it was 6,224,543 tons, in 1918 it was 6,779,743 tons, in 1919 it was 6,927,322 tons, or somewhat less than 1914. It would appear, therefore, that the production in 1919 was less than it would have been on the

basis of the normal increase by some 3,649,717 tons. This decrease of fertilizer production during the war period was not due to lessening demand but was due to the inability to obtain material. The foreign potash supply was cut off, the phosphate rock could not be mined or transported, the sodium nitrate and ammonium sulphate were diverted in large part to munitions, and the organic ammoniates were used to a large extent for feeding purposes. In 1919 the potash situation had not recovered its normal volume. The strikes in the Florida phosphate fields and the car shortage made acid phosphate hard to obtain, and it was found that the organic ammoniates had not been released by the feeders. If the fertilizer manufacturers had been required to produce 3,500,000 tons more fertilizer in 1919 than was actually produced, it is not apparent where the ammonia supply would have been drawn from. The phosphate rock that was not used for fertilizers is still in the ground, the potash that was not used is still in the mines, but the organic ammoniates have been completely used up, either as fertilizers or as feeds. It seems apparent, therefore, that the country has been short of fertilizer material for the past five years, and if this shortage is to be made up and provision made for a resumption of even the normal annual increase additional sources of ammonia must be found. The only place to look for this increased supply of ammonia is in fixed-nitrogen products.

The latest comparable figures showing the intensity of use of commercial fertilizers in European countries and in the United States pertain to 1912. From the figures obtainable for that period it appears that Germany was using 188 pounds per acre of land in crops; Great Britain, 162 pounds of fertilizer per acre of land in crops; France, 79 pounds; Italy, 77 pounds; the United States, 40 pounds; Spain, 31 pounds; and Russia in Europe, 6 pounds per acre.

The following table shows the acres in crops as determined by the Bureau of Crop Estimates (Crop Reporter for March, 1920), the tonnage of fertilizers sold in each State (the American Fertilizer Handbook, 1920), the estimated amount of ammonia contained therein (estimate, 3.3 per cent), and the additional amount of nitrogen that would be required to bring the practice in the several States at least up to the present rate of use in Georgia. There are nine States that use more fertilizers per acre of land in crops than Georgia. Georgia was selected as a basis of comparison, because the intensity of use is nearly the same as in the United Kingdom and is less than the practice in Germany in 1913, and because of the general agriculture practiced as against the specialized use in Florida and in some of the other coast States.

Total acreage in crops in 1919, the tonnage of fertilizers sold in each State, and the additional amount of ammonia required to bring the intensity of use at least up to the present practice in Georgia.

State.	In crops.	Fertilizer used in 1919.		Ammonia used.	Additional required.

We have always thought of the agriculture at least of northern Europe as being of the most intensive kind with the use of a relatively large amount of fertilizers. It appears from this table, however, that already in 10 of the States of this country the use of fertilizers is more intensive than in the European countries.

The following table shows the fertilizer tonnage in 1913 and in 1919 as taken from the American Fertilizer Handbook, together with the increase or decrease in 1919 based upon the 1913 figures:

State.	Fertilizer tonnage.		Per cent.
	1913	1919	
New England:			
Maine	160,000	156,000	— 2

[1] Exclusive of Porto Rico.

NOTE.—Increase or decrease (—) in 1919, compared with 1913.

From the first table showing the intensity of use and from the second table showing the actual sales it would appear that the intensity of use in the so-called fertilizer States has already reached the maximum application. It has long appeared to students of agriculture that the future development in the fertilizer industry would be in its extension westward into the so-called corn and wheat States and the Central and Southwestern States. The increase shown both by tonnage and by percentage in the East North Central States as compared with the New England, the Middle Atlantic, and the South Atlantic States is significant and appears to show the westward trend in the use of fertilizers while individual States, such as Oklahoma, Arkansas, Kentucky, Tennessee, and Missouri appear to emphasize the same fact.

With this data before you and the knowledge of local conditions, I should be very glad to have you give me your best judgment in answering the questions on the inclosed questionnaire. The questions which the bureau has to answer and which we hope to be able more intelligently to answer from your questionnaire are as follows:

(1) If the Muscle Shoals plant operated by the Government or by private enterprise should within a period of three years be prepared to produce annually 168,000 tons of sulphate of ammonium, could this country absorb this, either for straight application to the soil or in mixed fertilizers, without seriously interfering with production by private capital?

(2) If the Muscle Shoals plant instead of producing sulphate of ammonium produced concentrated fertilizer materials such as ammonium nitrate, ammonium phosphate, and potassium phosphate, which could be mixed in many proportions by the farmers themselves or at Muscle Shoals or by fertilizer manufacturers, would the farmers be willing to use such concentrated materials either in mixed fertilizers or in straight application just as he employs nitrate of soda, ammonium phosphate, acid phosphate, and would he take the pains which he must now take with nitrate of soda to use it so that it will not damage the crop by coming undiluted into intimate contact with the seed at planting time?

(3) If the farmers would accept the concentrated form of fertilizers, could the country absorb the equivalent of 2,000,000 tons of fertilizers carrying 44,440 tons of ammonia in addition to what is now produced?

I have purposely refrained from discussing prices as these are relative and are dependent upon many conditions in the business world. It must be assumed that the fixed nitrogen products will have a relative value comparable with the ammonia derived from other natural sources.

Very truly, yours,

MILTON WHITNEY,
Chief of Bureau.

QUESTIONNAIRE.

1. With this information before you and your knowledge of local conditions, is it your opinion that if fertilizer material, especially the ammoniates, were produced in larger amounts, through the operation of the Muscle Shoals plant, there would be a larger market in your State for fertilizers or fertilizer material; and if so, approximately how much greater than in 1919?

Increase per cent ———.
Decrease per cent ———.

2. If suitable methods can be developed for the manufacture of concentrated fertilizers at Muscle Shoals, would you favor the manufacture of ammonium sulphate, or of concentrated fertilizers, or of fertilizer materials at that point?

Ammonium sulphate, ———.
Concentrated fertilizers, ———.

3. If the Muscle Shoals plant, instead of producing sulphate of ammonium, produced concentrated fertilizer materials, such as ammonium nitrate, ammonium phosphate, and potassium phosphate, which could be mixed in any proportion by the farmer himself, or at Muscle Shoals, or by fertilizer manufacturers, would the farmer be willing to use such concentrated material either in mixed fertilizers or as straight applications just as he now employs the commercial grades of nitrate of soda, ammonium sulphates, acid phosphates, or other readily soluble fertilizer salts in straight applications, and would he take the pains to use it so that it will not damage the crop by coming undiluted into intimate contact with the seed at planting time?

Answer yes or no.

Please write on a separate sheet other information or discussion you desire to give and inclose in the penalty envelope without postage and return to the Bureau of Soils.

Name: ———.
Title: ———.
Post office: ———.
State: ———.

—

Following is the list of States showing the consumption of fertilizers for the fiscal years ending in 1912, 1913, 1914, 1915, 1916, 1917, 1918, and 1919, compiled from the most reliable statistics that are obtainable. In some of the States there are absolutely no accurate figures available. For the States indicated by an *, estimates have been made based on information obtained from State officials and fertilizer manufacturers:

SEPTEMBER 27, 1920.

Col. J. H. BURNS,
Nitrate Division, Ordnance Department, Washington, D. C.

DEAR COL. BURNS: In line with the cooperative work we have been carrying on concerning the operation of the Muscle Shoals plant, as well as the Haber process, and after consultation with you, I addressed a letter on August 14, 1920, to the commissioners of agriculture and directors of the experiment stations of the several States to obtain their opinions on certain phases of the problem. It seemed to me that they were in a position to advise in regard to fertilizer problems, as they either have charge of the administration of the fertilizer laws of the respective States or have been vitally interested through their investigational work in the general fertilizer problem.

In this letter I laid before them in some detail the present status of the fertilizer industry and the relative intensity of use in the several States, asking them to give their judgment so far as their State is concerned as to whether, and approximately how much, additional fertilizers would be used in their States in the event that a larger supply of fertilizer material, especially nitrogenous material, were made available through the operation of the Government plant, in order that I might determine whether the production of 168,000 tons of ammonium sulphate could be absorbed by the country without seriously upsetting the present industrial relations.

I sent these letters to representatives in 48 States. I have received up to date replies from 37 States. These 37 States represent 89 per cent of the tonnage of fertilizers in 1919. I sent out 85 letters and have received to date 46 replies.

Three States did not express an opinion as to whether or not there would be an increase in fertilizers used in these States if larger amounts of nitrogenous material were supplied. These States in 1919 had a total consumption of 22,937 tons out of a total of 6,927,322 tons used in all States in 1919. Three States which consumed 29,000 tons looked for no increase in use in their States. Eight States which consumed 1,053,102 tons in 1919 expressed the opinion that there would be an increased use, but did not state how much. Twenty-three States which consumed 5,070,744 tons gave the probable per cent of increase. The average weighted increase to be expected, according to the judgment of the officials of these 23 States, is about 17.2 per cent. This, applied to the total tonnage of 1919, would indicate that 1,191,499 additional tons of fertilizers could have been consumed if the fertilizer material had been available. If we use the factor 3.3 per cent for the ammonia content, it would be equivalent to 157,276 tons of ammonium sulphate. This is close to the estimated capacity of the Muscle Shoals plant. In no case was any doubt expressed by the officials that the product of the Muscle Shoals plant could be absorbed without serious disturbance to commercial production.

My opinion previously expressed to you that the production of 168,000 tons of ammonium sulphate could be absorbed into the fertilizer industry of this country is thus confirmed, as, if I had taken their maximum estimates, the amount stated by them which could be used would considerably exceed this figure.

The general opinion of the correspondents is that there is at present and has been for a long time a serious shortage of fertilizer materials, especially of the nitrogenous materials, and they seemed to feel very strongly that the operation of the Muscle Shoals plant, with the production of fixed-nitrogen compounds, would be of great benefit to agriculture.

I called the attention of the State officials to some of the difficulties in the use of fixed-nitrogen products, such as cyanamid and ammonium nitrate, in the system that has always prevailed in this country of depending largely upon mixed fertilizers. I also called attention to the waste of phosphate-rock material in the present system of acidulating with sulphuric acid. I suggested that this waste could be eliminated by the preparation of liquid phosphoric acid from mine-run material and from low-grade rock, which could then be fixed by introducing potash or ammonia, with the formation of potassium phosphate or ammonium phosphate, to which ammonium nitrate could be added without chemical change taking place. I told them that in my judgment the time had come to put the fertilizer industry on a real chemical basis.

After laying before them such details and such opinions of my own I asked them whether, in their judgment, the Muscle Shoals plant should produce ammonium sulphate or should produce concentrated fertilizer material of the above kinds. Four States, which used in 1919 a total of 17,000 tons, expressed no opinion on this point. Two States, which used 46,500 tons, advised that ammonium sulphate be produced. Thirty-one States advised the manufacture of concentrated fertilizer materials. These 31 States represent practically 99 per cent of the tonnage of 1919 from those States reporting and about 87 per cent of the total tonnage of all States in 1919.

I further asked my correspondents if in their judgment, if concentrated fertilizers are produced, the farmers would take pains to apply them with the same care that they now have to exercise in applying straight nitrate of soda or acid phosphate so that they will not come into direct contact with the seed at planting time. All of the correspondents who favored the production of concentrated fertilizers expressed the opinion that with suitable warning and a campaign of education the farmers could and would use concentrated fertilizer materials safely.

I trust this information will be of interest and value to you.

Very truly, yours,

MILTON WHITNEY,
Chief of Bureau.

Mr. SMITH of South Carolina. I desire to call attention to certain facts set forth in the letter, knowing that Senators will not read it when it is printed in the RECORD, but, at any rate, I will have it as a matter of record. It furnishes some very enlightening statistics as to the general use of fertilizer throughout the country.

Dr. Whitney divides the country up into groups, and he shows that the New England States consume 323,000 tons of fertilizer on 4,520,000 acres under cultivation, an average amount of 143 pounds of fertilizer per acre, or 10,659 tons of pure ammonia—that is, 100 per cent of ammonia, it having been reduced to its ammonia content.

The Middle Atlantic States, including New York, New Jersey, and Pennsylvania, use 899,485 tons, or 100 pounds per acre, amounting to 29,683 tons of pure ammonia.

The East North Central States, comprising Ohio, Indiana, Illinois, Michigan, and Wisconsin, use 704,500 tons, or 22 pounds per acre.

The West North Central States, including Minnesota, Iowa Missouri, North Dakota, South Dakota, Nebraska, and Kansas only use 122,437 tons, or 2 pounds per acre.

The South Atlantic States, comprising Delaware, Maryland, Virginia, West Virginia, North Carolina, South Carolina, Georgia, and Florida, use 3,926,000 tons, or 202 pounds per acre.

The East South Central States, including Kentucky, Tennessee, Alabama, and Mississippi, use 620,000 tons, or 39 pounds per acre.

The West South Central States, comprising Arkansas, Louisiana, Oklahoma, and Texas, use 248,451 tons, or 9 pounds per acre.

The States in the Rocky Mountain region, Montana, Idaho, Wyoming, Colorado, New Mexico, Arizona, Utah, and Nevada, use 7,000 tons, or eight-tenths of a pound per acre.

The Pacific States, Washington, Oregon, and California, use 54,626 tons, or 8 pounds per acre.

The grand total of commercial fertilizer used in this country is 6,905,507 tons. I have not made the calculation, but at current prices that will approximate something like half a million dollars.

Mr. WADSWORTH. Mr. President, will the Senator yield?

Mr. SMITH of South Carolina. I yield.

Mr. WADSWORTH. I have been listening to the figures read by the Senator. I note that he recited in each case that so many pounds of fertilizer were used per acre. Does that mean pounds per acre fertilized or pounds per acre within the State?

Mr. SMITH of South Carolina. For the purposes of this computation, Dr. Whitney has considered only the arable land in the State, the land cultivated, and he gives the average of the fertilizer used if the fertilizer were used on all the acres under cultivation. The figures do not mean the pounds per acre actually cultivated. The Senator understands now, does he not? For instance, if there are a thousand acres, say, in a given county, and only 500 acres use fertilizer, the amount of

fertilizer used is divided by the 1,000 acres, so as to ascertain the average if the fertilizer were used on all the land.

Mr. WADSWORTH. One thousand acres of arable land, or 1,000 acres of total area?

Mr. SMITH of South Carolina. The figures refer to arable land; that is my impression; but I will make sure as to that, for I wish to get it correct. The letter says "acres in crops," so that the figures refer to "acres in crops."

Mr. President, there is another very interesting table to which I desire to call attention containing percentages of increase and decrease in six years. In the New England States, Vermont has increased the use of fertilizer 24 per cent; Massachusetts, 20 per cent; and Connecticut, 4 per cent; while Maine has decreased her use of fertilizer 2 per cent, and New Hampshire 22 per cent.

I will skip the Middle Atlantic States, merely quoting, for instance, New York State, which has increased its use 8 per cent.

In the East North Central States these very startling percentages occur: Ohio has increased its use 66 per cent, Indiana 24 per cent, Illinois 50 per cent, Michigan 78 per cent, and Wisconsin 178 per cent in six years.

In the West North Central States—Minnesota, Iowa, Missouri, North Dakota, South Dakota, Nebraska, and Kansas—Minnesota has increased its use 42 per cent, Iowa 42 per cent, Missouri 51 per cent, North Dakota 100 per cent, South Dakota 328 per cent, and Kansas 129 per cent.

Like percentages have occurred throughout the entire balance of the list.

Mr. President, I hope I have clarified in the minds of some the mistaken idea that this plant at Muscle Shoals is not producing an ingredient immediately available for the farmer. It is right here, and can be seen. It is 5 per cent richer in nitrogen than the Chilean nitrate; and I have here from the Department of Agriculture the completed fertilizer, if the farmer desires it in a concentrated form, containing phosphoric acid, nitrogen, and potash, all derived from American sources on a comparatively cheap and abundant commercial scale. It gives that in 8-2-2, 8-3-3, and 8-4-4. The ingredients can be combined in any relative quantity that the farmer may desire.

This great plant is located at the greatest water power, perhaps, in America. It has, perhaps, been constructed at an enormously exaggerated cost. That water has gone over the wheel. There was, perhaps, no more extravagant expenditure there than there was at Hog Island, or in the airplane plants; or in the purchase of coal that we heard about this morning, and other things. It was war time; and I understand that when it was apparent that there might be some doubt as to our getting our Chilean supply, the President ordered this plant constructed within a year, and, of course, that necessitated the use of the disastrous method of cost-plus.

Now I want to have just a word to say before closing.

There has been some talk here about the supply of nitrogen that we shall have to carry. Here is the business aspect of that matter: We shall have to provide 300,000 tons of Chilean nitrate and carry it in stock. At $50 a ton you have something like $15,000,000 invested, the interest on which is lost. The storage has to be paid. The interest is lost. There is a deterioration, as everyone knows. It is a volatile stuff, and evaporates. It has to be replenished from time to time. All the incidental cost is a positive loss; whereas, if this plant is completed, perhaps before another war shall occur the capacity of it will be sufficient, with subsidiary plants that will be constructed, to produce enough of the ingredients of explosives for us to be independent of Chile, and during times of peace, if properly managed, it will not only prevent a loss as to interest and deterioration and storage expense, but it will be a positive source of revenue to the Government.

Mr. WADSWORTH. Mr. President, will the Senator say what he has in mind when he mentions subsidiary plants yet to be established?

Mr. SMITH of South Carolina. What I meant was that as this process is developed and cheapened, there doubtless will be, either by the Government or by private corporations, the erection of other plants, because I am convinced that this thing now in its infancy is the hope of this country agriculturally, for I have before me now from the Agricultural Department the completed balanced land ration out of ingredients that are found in this country in unlimited supply.

Mr. WADSWORTH. Does the Senator think that private industry will erect plants and operate them, in view of the powers of condemnation that are given to this corporation?

Mr. SMITH of South Carolina. I want to say to the Senator here and now that I am not enamored of the power of condemnation in this bill. In my opinion the bill would be strengthened with that provision taken out. I did not draw this bill——

Mr. WADSWORTH. The Senator voted to report it, however.

Mr. SMITH of South Carolina. Yes; I voted to report it, hoping that I might, like the Senator from New York, have stricken out whatever was not necessary in it. I believe that this is the beginning of a proper Government function, as much so as crushing out the foot-and-mouth disease, as much so as hunting down the gypsy moth, as much so as hunting down the corn borer, because they are preying upon the products of the field. This is a thing that helps to produce a product of the field, and if we can protect the fields from the one, surely we ought to protect it from depreciation and ruin and not leave it to the fate of India, whose famines occur because her soil does not respond to cultivation.

I believe, and I think every other Senator here believes, that with the proper use of this wonderful invention in the hands of the Government, properly officered and conserved, it is the greatest piece of constructive work in the interest of all the people of America that has ever been brought to our attention.

Mr. WADSWORTH. Does the Senator believe that the Government will produce the material cheaper than private enterprise?

Mr. SMITH of South Carolina. I do.

Mr. WADSWORTH. Then does the Senator think there will be any private enterprise left?

Mr. SMITH of South Carolina. I think there will be plenty of room for both.

Mr. WADSWORTH. How can there be if the Government undersells private enterprise?

Mr. SMITH of South Carolina. I do not hesitate to say to the Senator from New York that if it is a question as to whether this thing is to be left to private enterprise to develop——

Mr. WADSWORTH. That was not the question.

Mr. SMITH of South Carolina. Let me answer the question in my own way. I know that the Senator's question was whether I thought private enterprise would enter the business if the Government can produce the product cheaper. If the Government can furnish it more adequately and more cheaply, being of the nature of business that it is, for the benefit of the agricultural classes of this country, I should be perfectly willing to vote to commit the Government to it to the exclusion of everybody else.

Mr. WADSWORTH. That is very interesting, as I thought that is the point at which the Senator must arrive if he followed out the chain of his argument. In other words, then, under the circumstances with which the Senator believes the country is confronted to-day, he advocates that all fertilizers be supplied by Government operation, does he?

Mr. SMITH of South Carolina. No; because I do not believe that the Government, in the initial period of this thing, can vitally affect the profitable sale of the by-products from the coke ovens.

Mr. WADSWORTH. But the Senator has said that the Government will undersell private enterprise, and the coke ovens are a part of private enterprise.

Mr. SMITH of South Carolina. It need not undersell, because if the Government, in producing this material, gets down to where it costs the Government more than the other, the Government still has the plant—and there is a demand for this material in the Government's use of it—and it might restrict its plant to the uses of the Government alone. But, be that as it may, the Senator is asking a question which none of us here is competent to answer, in this respect: Neither the Senator nor I knows what is the real cost of the ammonia now put on the market. It is only approximate. It has a book value. The real actual cost of production of the by-product of the coke oven, the real cost of production of the Chilean nitrate, is known to those who produce it. The Nitrate Trust knows. I do not. The by-product coke and coal people know. I do not. And about as good a way as any to find out is to let the Government begin its production, and I do not think they will ever go out of the business. I think there is too much margin of profit.

Mr. UNDERWOOD. Mr. President, will the Senator allow me to make a suggestion at this point in reference to the matter of by-products? I should like to have it in the RECORD.

Mr. SMITH of South Carolina. I shall be very glad to have the Senator do so.

Mr. UNDERWOOD. I know something about by-products, because to some extent I have been in the business myself. The point of competition between a plant of this kind and a by-

product furnace would be at ammonia. Ammonia is only one of the by-products of a by-product coke oven.

Besides ammonia there are toluol, coal-tar products, and a number of others. It is true that the by-product ovens have usually earned some profits—not the material part of their profits, but some profits—from the ammonia end of their production. In recent years the larger proportion of their profits has come from other by-products than ammonia; but the main thing that I wanted to suggest to the Senator, or suggest to the RECORD, was that there is a field for the consumption of by-product ammonia where there is no competition which will come from this plant, and that is in refrigeration. It would be a costly process to convert the nitrogen from this plant into nitrate of ammonia, whereas the by-product furnace makes it itself, and a large portion of the by-product ammonia is consumed in refrigeration to-day.

I want to say, as one who is engaged in the business only slightly—my interest is not great, but I have kept up with it—that I think there is no greater fallacy and there is no greater pursuit of an idle fantasy than to indicate that the people who are engaged in the by-product business are in danger of disaster by reason of the passage of this bill.

Mr. LENROOT. Does the Senator think that those who are engaged in that business now are making exorbitant profits out of that portion which does go into fertilizer?

Mr. UNDERWOOD. I do not know what the profits are on their ammonia, and I would not say that they are making exorbitant profits; but I will say that in my judgment they might abandon their profits from ammonia entirely and yet carry on a profitable by-product business. They have their own field for a large portion of the consumption of their ammonia product. The real reason, in my judgment, why these men are pursuing this bill and fighting it, is that they want the royalties on patents. It is not the man who is producing the by-products in the coke ovens, but the Koppers people, the Semet-Solvay people, the men who own the patent rights, and when a by-product plant is built, sell it to a corporation with a royalty, with a greater and wider field to develop the by-product business in, and persuade the future investor that he has enormous profits to pursue this business so that the royalties on their patent rights may accumulate in their pockets.

Mr. WADSWORTH. Is that why the Senator supports this bill, because it will give the corporation the power to condemn patents?

Mr. UNDERWOOD. I will say that the Senator from New York is the author of this bill.

Mr. WADSWORTH. The Senator from New York is not, and the Senator from Alabama knows it.

Mr. UNDERWOOD. I mean that he is the technical author on the record. I know who is the author, of course.

Mr. WADSWORTH. That is quite a qualification.

Mr. UNDERWOOD. Of course, I know that the bill was written in the War Department. I know that naturally the men who wrote it in the War Department were seeking to put all the power they could in the corporation. Of course, I know that the Senator from New York introduced it by request, but he is technically the author of the bill; that is what I mean.

As far as I am personally concerned, if the Senator will offer an amendment to strike out that portion of the bill I will support it. I do not think he can ask more than that from me.

Mr. STANLEY. Mr. President, I am at a loss to see where the steel industry or the operation of by-product coke ovens can be materially affected by this. Of course, if it affects as big a business as the operation of by-product furnaces, they are going to oppose it. The truth is that out of the multiplicity of things that are produced from a by-product coke oven, the coke being the principal product, there are about 6 pounds of nitrogen, or about 16 pounds of sulphate of ammonia, in 2,000 pounds of coke. That is 3 cents a pound, as I understand it, and is negligible.

Mr. WADSWORTH. Will the Senator state again how much it will cost to produce a pound of ammonia in a by-product oven?

Mr. STANLEY. Two thousand pounds of sulphate of ammonia are worth about $60. Is not that correct? That would be about 3 cents a pound, and there are 16 pounds of sulphate of ammonia in a ton of coke.

Mr. WADSWORTH. Will the Senator repeat that statement, so that I may ascertain how much it costs to produce a pound of ammonia in a by-product oven?

Mr. STANLEY. There are only 16 pounds of sulphate of ammonia in a ton of coke. That is worth about 3 cents a pound. Is not that correct?

Mr. WADSWORTH. I do not know.

Mr. STANLEY. At $60 a ton, would it not be 3 cents a pound? So the 12 or 15 pounds of a commodity worth 3 cents a pound is negligible in the total profits from the production of a ton of coke.

Mr. WADSWORTH. If the Senator from South Carolina will permit, I think the statement of the Senator from Kentucky that this product is negligible is scarcely borne out by the testimony. As I recollect it, Dr. Whitney, of the Department of Agriculture, estimates that in a few years we will have 900,000 tons produced by by-product coke ovens in this country.

Mr. SMITH of South Carolina. It does not matter how much we produce. They estimate you will get 500,000 tons this year. I do not think that is warranted by past production. I do not think you will get over two or three hundred thousand tons at the outside. If you get 600,000 tons, 45 per cent of it is going to be consumed by refrigeration and industrial demands. Only 55 per cent can go into agriculture. It strikes me as being absolutely indefensible to junk this great concern, to raise the price of the most essential element of fertilizer, which agriculturists, horticulturists, and fruit growers in this country want, not to affect by a cent or half a cent one-half of one of the most inconsequential of the multitudinous by-products of a coke oven.

Mr. WADSWORTH. My difficulty is due only to the fact that, junk or no junk, there is a product with which this plant must compete or else overcome the competition. Even if it is only 55 per cent of the output of the coke ovens, nevertheless that, on a basis of 900,000 tons at the end of a few years, according to the estimate of the Department of Agriculture, is about 500,000 tons.

This plant must compete with the production to that extent, and it can only compete and provide a cheaper product to the consumer by underselling the products of the coke oven.

Mr. SMITH of South Carolina. If the Senator from New York will allow me, that is going upon the assumption that either this plant or the by-product people could supply the entire needs for nitrogen or ammonia. The Senator from New York is not going to contend that the salts of ammonia used in the arts and sciences, as well as in agriculture and in explosives, all cost the same to produce?

Mr. WADSWORTH. No.

Mr. SMITH of South Carolina. Neither the Senator from New York nor myself is informed as to whether Chilean nitrate costs more or less than sulphate of ammonia as a by-product. That may cost more or less than the product of this plant. But none of us has yet discovered sources sufficient to supply the entire needs of the people. Does the Senator mean to say that he would stop the construction of this plant and the sale by the Government at whatever price they could find they could sell it at?

Mr. WADSWORTH. That is different.

Mr. SMITH of South Carolina. I say, selling this at whatever price they would be justified in selling at, with an economical administration of the plant, when the market would take it all up and more, and then contend that we must stop all the plants and all the sources of ammonia, except the cheaper one, when the cheaper one would not furnish one-sixth of what the country needs.

Mr. WADSWORTH. No; Mr. President, I have made no such contention, and never would. It would be unsound from an economic standpoint. I am only trying to find out, as a man who has had a little experience in business, what effect upon the operation of this Government plant there will be from the output of the by-product coke ovens. I can not see how you can decrease the cost of a fertilizer ingredient to the ultimate consumer unless you produce your ingredient more cheaply than any other element in the industry produces it to-day.

Mr. SMITH of South Carolina. The Senator means "sells it" to-day. Let us get our terminology together. More cheaply than they are selling it to-day. The Senator can not tell me what it costs the coke producers to produce this by-product.

Mr. WADSWORTH. I was just trying to find that out from the Senator from Kentucky [Mr. STANLEY].

Mr. SMITH of South Carolina. I think that is beside the question in this argument, for this reason: One can not tell what it costs to produce cottonseed hulls in the incident of getting the oil from the meat. It is a book arrangement, because something must be done with the hulls. They are crushed, and by a process the meat is sifted out from the hulls, and there they are. When it comes to a question of selling, the law of supply and demand will govern that. If there is a great demand for the hulls regardless of what they cost to produce, they are going to be sold at that price. And yet it might be possible for the producers of the hulls to give those hulls away and still

not very materially affect the object for which they have erected their plant, namely, the production of oil and the sale of it.

Mr. WADSWORTH. Yes; but the Senator would not deny that the fact that those hulls have some value increases the value of the raw material.

Mr. SMITH of South Carolina. If there is a market. Now, we come to the crux of the matter. If the hulls are a negligible quantity, but the market is sufficient to justify any price, they must be gotten rid of, and are that much velvet to those who sell them.

It may be that after you have installed your process of getting this sulphate of ammonia as a by-product, amongst other things, it has to go somewhere, because it is drawn off in the coking process. If, in conjunction with dyestuffs and other by-products, it can be sold, it is so much profit. But if it can not be, it is just dissipated; but the object is coke. I can sell the hulls at half what hay costs, or half what any kind of a filler will cost to produce; therefore all the other fillers must go out of business, because I am producing some hulls, as a by-product, that I could burn up, and still my object to get oil be accomplished.

Mr. WADSWORTH. The Senator has said that in that case all the other fillers would have to go out of business.

Mr. SMITH of South Carolina. No. I said that was the Senator's argument. All the other fillers would not have to go out of business. I would sell my hulls at just what the market would absorb them at in competition with the other fillers; and that is what the ammonia people are doing in the by-product business. The Senator does not know what it costs them, and I do not know. It is a by-product, and I say the mills do not know what it costs to get the hulls off the seed as cattle feed. Their object is to get the meat out of the hulls, and if they can find a sale for the hulls, well and good. If they can not, they are going to get the meat out of the hulls.

These people are going to get the ammonia out of the coke. If they can find a market for it, well and good; if they can not, they are going to get the ammonia out of the coke and let it be dissipated. Now, the only question is, To what will they charge it up? In one case they will charge it to profit and loss and in the other case they will keep a book account, because it is going to sell in the market at what other ammoniates bring.

Mr. WADSWORTH. Mr. President, is the Senator sure about that? If it is merely a by-product and costs next to nothing to produce; if, in other words, they can not help producing it when they are operating the coke ovens and will sell it where they can sell most of it, they will undersell competitors. I want to find out, if I can, to what extent the output of by-product coke ovens is going to compete with the taxpayers of the United States when there is set up a corporation to go into a commercial business.

Mr. SMITH of South Carolina. Compete with what taxpayers?

Mr. WADSWORTH. The taxpayers are going to own this corporation.

Mr. SMITH of South Carolina. Exactly, and I am of opinion that if it is properly administered the vast majority of those who ultimately pay the taxes are going to be the beneficiaries of it.

Mr. WADSWORTH. Not if it loses money.

Mr. SMITH of South Carolina. It may lose money so far as bookkeeping is concerned and make millions when it comes to the application to the soil. The subject has so many angles that I do not think the Senator from New York and I can exhaust it.

But I want to come back to another point. Is the Senator from New York prepared to say whether or not there is any understanding, corporate or otherwise, between the producers of ammonia for fertilizer purposes from the by-product coke and coal ovens and the importers of tankage from Argentina and nitrate of soda from Chile?

Mr. WADSWORTH. I have no idea.

Mr. SMITH of South Carolina. That might be worthy of investigation, because it will be found they are selling per unit of nitrogen around about the same. It does not seem that in far-away Chile the price of that stuff in the cost of production would accidentally happen to be just the price of the cost of production of ammonia here. If we can develop this and put it on the market, we will find by competition, as we always find, what is the cheapest and most available and abundant source of ammonia for agricultural purposes, and I am thoroughly in favor of that.

Mr. WADSWORTH. Some day I would like to find out what the effect of competition will be.

Mr. SMITH of South Carolina. We will only know by trying it.

Mr. STANLEY. As far as the coke-oven business is concerned, it is bound to be negligible, for the reason that the coke oven, and no other industry that I know of in the country, is engaged in the business of producing ammonia or sulphate of ammonia. It is a scavenger business. It is taken from fish scraps, from cottonseed meal, and from tankage, and is one of the small by-products of the coke oven. The value of a ton of coke is dependent upon the value of a ton of pig iron. The making of coke in this country is an incident to the demand for pig iron. When the blast furnace closes, the coke oven, which is an addenda to the blast furnace, just like the limestone mine, closes also. It makes just as much coke as the demands for pig iron requires in the fluxing of it. When the coke oven runs, among the many things it produces are a few pounds only of this product, one of the smallest of its by-products. The 10 gallons of tar, the 5,000 cubic feet of merchantable gas, and the highly expensive motor oil and toluol are the things that count.

It would be just as sensible to stand here and argue that by making artificial bristles for the purpose for which bristles are used we would destroy the value of the pork packer; it would be just as sensible to argue that by manufacturing an article that goes into glue and in a way affects the value of hoofs and horns that we would destroy the packing business, as to say that $90,000 worth of sulphate of ammonia produced by a concern whose gross income is literally billions of dollars we would affect the steel industry of the United States.

Mr. WADSWORTH. I have not suggested that.

Mr. SMITH of South Carolina. Well, Mr. President, this is a very interesting colloquy, but I wish to say what I have to say, and when I am through, then I shall allow those who are getting such a great amount of conjecture out of so little fact to proceed.

This thing has been demonstrated in Germany to her lasting benefit. This thing has come with all the potential power of a great discovery. Surely we are not now going to turn it over to the tender mercies of that which has cursed America—the trusts. The Senator from New York [Mr. WADSWORTH] came very near, a while ago, discovering to me the inevitable logic of events, namely, that in America certain manufacturers producing the same thing find that conditions perhaps will cause a difference in the price at which they may sell.

Rather than compete and let those who are less advantageously situated trim their profits a little to meet the competition, they will meet in a very nice room and they will pool their interests and they will sell their stuff at a profit to all. Hence the trust.

Mr. WADSWORTH. That is against the law; is it not?

Mr. SMITH of South Carolina. Oh, why does the Senator talk about antitrust law? That is like a great many other things that are said on that subject—a joke!

That is what is the matter now. The men out in the field can not combine; nature says they shall not combine; and yet they must produce or the Nation starves. Those men are the victims of the Fertilizer Trust, the victims of railroad rates, the victims of the Clothing Trust, the Shoe Trust, and every other trust. No wonder Markham wrote his "Man with the Hoe," and no wonder if we go out in the rural districts in the Senator's State of New York—for this is not confined to the South alone—we find this horribly distressing condition that we do not even approximately know, much less realize.

The man out in the field bears the burden of the whole business, and when there is something brought here that promises something of relief to him and through him to the whole American people it is said it might interfere with the enterprise of a great corporate trust, whose profits we know not of and whose methods are dark and mysterious.

Now, Mr. President, I have said all that I care to say about the measure. I have an amendment which I am going to offer to the bill, and I am going to read it now and let those who are disposed to agree with me do so. I shall offer the amendment formally at the proper time.

I am going to propose an amendment on page 5, at the end of line 19, after the word "others," to strike out the period and insert a colon and the words "*Provided*, That in the sale of such products not required by the United States preference shall be given to those engaged in agriculture."

With certain amendments which I think can be offered to the bill that will materially help it, I hope that the Senate will put itself on record as upholding what, in my opinion, is the most constructive act the Senate can do. Out of this plant will grow others that will dot the country and make us independent, as to the fertility of the soil, of the invasion of a foreign foe. I hope we may reach an early vote on the matter.

Mr. HEFLIN. Mr. President, I have listened with a great deal of interest to the very able and instructive speech of the Senator from South Carolina [Mr. SMITH]. I wish that every

Member of this body could have heard his speech. I feel that if Senators knew the facts involved as he presented them they would respond to the call of the farmers of the country and vote for the pending measure. I think that a lack of information as to the great good that will come from the enactment of this measure is causing some Senators to oppose it. I had rather think that than to feel that this opposition existed because of a lack of sympathy for the great agricultural industry of America.

Every farm organization in the country of a national character has indorsed this nitrate-plant project at Muscle Shoals. The farmers of the United States see in the completion and operation of this nitrate plant an abundant supply of fertilizers at a price far below that which they are now compelled to pay. But we are told by some that money has been extravagantly spent in the work of constructing this great nitrate plant, and strange to say those who make that charge seem willing now when the project is almost complete to abandon it and by so doing throw away all that has been expended there. The war is over now and the matter of the expenditure of money can be better safeguarded. I am unable to agree with the argument that because some money has been extravagantly expended, the whole project should now be abandoned. The Government would be guilty of a great piece of folly if it should be induced to pursue such an unbusinesslike and ridiculous course.

We have expended eighty-odd million dollars, I believe, on this great project, which, when completed, will make us independent of all foreign countries as to our nitrate supply. Would Senators who oppose this measure have us abandon this project because in bringing about the work that has already been accomplished there extravagance has been indulged in? It seems to me that the wiser and better course is to watch and safeguard the matter of expenditures hereafter and complete the work. This would be infinitely better than to stop the work and permit the whole plant to become a total loss.

Mr. President, there are two roads open to the Senate. We shall travel one of them and complete the project, supply the Government with nitrates for war purposes, and supply our farmers with fertilizers, or we shall travel the other and throw away the eighty-odd million dollars already expended, leaving the work incomplete, and permit this vast machinery to stand idle while it goes to ruin earning not a dollar for the Government of the United States.

I can well understand and appreciate the spirit that prompted the farmers of the West to send petitions here, bearing the names of thousands of farmers, calling upon the Congress to pass this measure and deliver them from the Fertilizer Trust of the United States. They know that this measure enacted into law will greatly bless and benefit them.

Mr. President, the United States is not so fortunate as is Chile in having nitrate beds, but we have a boundless supply of nitrogen in the air, and we have found that that nitrogen can be extracted, fixated, and used as fertilizer, which when applied to the soil makes the earth to "blossom as the rose"; and yet some Senators would have us abandon this project, which seeks to supply us with all the nitrogen that we need for war purposes and which will help to control somewhat the price of fertilizer to the farmers and at the same time increase the supply for agricultural purposes in the United States.

I have very much enjoyed the great speech of the Senator from South Carolina [Mr. SMITH]. He has completely answered the argument of those who have denied that the plant at Muscle Shoals can extract nitrogen from the air and manufacture nitrates. He has shown that now it actually manufactures materials ready for use by the farmer. The Senator from South Carolina had them on exhibit here to-day.

So, Mr. President, the Muscle Shoals nitrate plant is no longer an experiment; it has proven itself. Why then is all this bitter opposition to the completion of the whole project? The Government needs it in providing for the national defense, and the farmers need it to cheapen the price of fertilizers. This great American nitrate plant was located in Alabama at the most appropriate place in all the States of the Union. There it stands at Muscle Shoals, within a radius of 150 miles of the finest phosphate beds in all the world. With water power in abundance from the lordly Tennessee to operate the plant when the project is complete makes the location a very desirable and an ideal one.

In the face of all the very favorable facts that surround this great project I am utterly amazed to find any Senator willing to stop the work and kill this great American nitrate industry at Muscle Shoals.

Du Pont, the powder king, is opposed to the completion of the Muscle Shoals nitrate plant. Why? Because he is one of the great importers of Chilean nitrates and he does not want the United States Government to have a nitrate plant of her own. The fertilizer trust of the United States does not want this plant to function. Why? Because it would contribute greatly toward giving cheaper fertilizers to the farmers of the country, and the fertilizer trust is opposed to that.

There is no doubt but that the passage of this measure would result in a greater supply of fertilizers and in a more reasonable price to our farmers. How, then, can any Senator afford to go upon record as opposing a measure so fraught with good to the agricultural industry of our country? Senators know that present world conditions have greatly injured and embarrassed our farmers in every State in the Union. They are asking for relief and they are entitled to have the Government do everything in its power to bring about that relief. Here is an opportunity to serve the farmer and you can do so without offending anybody except the powder trust and the fertilizer trust.

I have been unable to find anything sound in the arguments, Mr. President, against this nitrate project. We hear it said frequently—and it is nearly always true—that there are two sides to all questions, but I can not see that there is more than one side to this question. Here is the Government of the United States driven by sheer necessity to build for itself a great nitrate plant. It had no such plant and was dependent upon a foreign country for its nitrate supply in time of war. Germany on the one hand had built nitrate plants at the expense of the German Government, France has done likewise, and Great Britain is expending millions for the same purpose, while the United States, the greatest Nation on the globe, is to be denied the ownership and operation of a nitrate plant within the confines of her own country. Senators, it is inexcusable and indefensible to place this Government in any such ridiculous position.

The Government has sought to prepare itself for any emergency, and it has sought to free itself from dependence upon a foreign country for its nitrate supply, and just as we stand at the threshold of that great accomplishment we are told that these things must be abandoned and that the old order must prevail. If such a shortsighted and dangerous policy is to be adopted, let those who advocate it get ready to defend their course at the judgment bar of the thoughtful and patriotic people of the country. Some of the very Senators who now oppose the Government in its efforts to provide for any emergency that might arise in connection with war were bitter in their criticism of the present administration because they said we were not prepared for war when the great World War came. How can they justify themselves now in opposing the Government when it seeks to provide itself with equipment for any emergency that might arise in the future? It has been suggested, Mr. President, that we might sell this project or plant to some private enterprise in the United States. If when the whole project is completed the Government desires to sell it to some private enterprise and thus deprive itself of the means of furnishing its own nitrate supply in case of an emergency, why it could do so. But I submit that if the Government should desire to sell it we can get a vast deal more for it after it is completed and in successful operation than we can by selling it in its present unfinished condition. Everybody with any business judgment at all will agree to that proposition. The duty of the Government, as I see it, is to complete this great nitrate plant and then continue to own and operate it. There is no good reason or necessity for selling it. If the powder trust and fertilizer trust fail in their efforts to defeat it, they will in all probability try to buy it when completed.

Mr. President, some of the opponents of this measure are indeed hard pressed for arguments. I clipped from the Washington Post yesterday morning an interview purporting to have been given by some mysterious individual by the name of Hampden Norman.

The paper states that his home is at Memphis, Tenn. When I first read it I was of the opinion that Hampden Norman was a fake or an imaginary person, because I felt that no man of standing and intelligence who lived at Memphis, which is close to Muscle Shoals, would make such a statement as this man is alleged to have made. I immediately took the matter up with the junior Senator from Tennessee [Mr. MCKELLAR]. He said that he had never heard of the gentleman in question. Senator MCKELLAR lives at Memphis. I had the matter taken up with Representative FISHER, of Tennessee, who also lives at Memphis. He wired to some one at Memphis regarding the matter, and received an answer saying that no such man had ever been heard of there. I telephoned to the Willard Hotel, where the alleged interview was said to have been had, stating that I wanted to speak to Mr. Hampden Norman, and I was told that no such man had registered there.

I should like to know, Mr. President, just who Mr. Hampden Norman is. I challenge those here who fight the nitrate plant at Muscle Shoals to produce him, and the failure to do so will be proof of the nonexistence of such a person, and it will also disclose the fact that some strange, covert influence is in the city of Washington resorting to improper and cowardly methods to bring about the defeat of this great and meritorious measure.

Mr. McKELLAR. Mr. President, will the Senator yield to me for a moment?

Mr. HEFLIN. I will be glad to yield to the Senator.

Mr. McKELLAR. I saw the article to which the Senator has referred, and on yesterday I sent the following telegram, addressed to Mr. W. H. Hayley, Chamber of Commerce, Memphis, Tenn.:

Man claiming to be Hampden Norman, of Memphis, Tenn., gave out interview here yesterday excoriating Muscle Shoals project. Please look up man and wire me who he is. I do not know him.

This morning I received the following telegram in reply:

Can find no trace of Hampden Norman.
(Signed) MEMPHIS CHAMBER OF COMMERCE.

It appears that Mr. Norman either is not a resident of Memphis or he is not a known resident of Memphis. Possibly he may be a fictitious character; I do not know as to that, but I give the facts to the Senate.

Mr. HEFLIN. I am glad to have this additional testimony regarding this strange and mysterious enemy of the Government's nitrate plant at Muscle Shoals.

In the statement attributed to the said Hampden Norman he says that this nitrate project never has been of the slightest use, and that it has already cost millions of dollars. His first statement is untrue. Plant No. 2 is operating now successfully. It is accomplishing the purpose for which it was constructed. Again, he says the plan to produce power at Muscle Shoals was a good one at the start, but it somehow got started wrong. Well, let us do whatever is necessary to keep it on the right track until it is completed, but do not let us abandon it and thereby lose all the millions already expended in constructing this very valuable and much needed nitrate industry.

The alleged interview of Hampden Norman sounds to me more like an agent of the fertilizer trust than it does like that of a man who has the welfare of the country at heart, and I here and now ask anybody and everybody to be on the lookout for one Hampden Norman, who is opposed to the Government's nitrate project and wants the whole thing abandoned.

Mr. McKELLAR. Mr. President, will the Senator yield?

Mr. HEFLIN. I shall be glad to yield to the Senator.

Mr. McKELLAR. I suppose the Senator received a copy of the article that I received a day or two ago—an anonymous article—and I think other Senators received it. It was sent out from New York, and in it the horrors of the Muscle Shoals plant are set out and a number of statements made. I am sorry I have not the article with me. It is in line with what the Senator is talking about. It is purely anonymous, unsigned by anybody. It is a printed article which does not state the facts and is evidently propaganda sent out by some interested person or corporation which for reasons of its own does not care to sign its name.

I do not think a project of this kind ought to be decried against in any such manner. I do not think it is a fair way of arguing the case.

Mr. HEFLIN. Mr. President, I agree with the Senator from Tennessee. I felt just that way when I clipped this supposed interview from the Washington Post yesterday morning; and I determined to consult the Senator from Tennessee, and did so, with the result that he and I have announced to the Senate.

With the great American Government entitled, as it is, to have this project completed in order to relieve it of the necessity of depending upon some foreign country for explosive power, the most vital thing in the national defense in time of war, I submit to this Senate that it is unfair to resort to such underhanded methods as the so-called Hampden Norman interview discloses in order to defeat the pending measure.

There is no better place than Muscle Shoals in the country for the location of the Government's nitrate plant, and when we consider the matter of manufacturing fertilizers in time of peace the close proximity of the phosphate beds of Tennessee makes it an exceptionally desirable place to have this plant located. It is far removed from the sea or from any large watercourse where in time of war it could be fired upon from a battleship and destroyed or put out of commission. If war should come there would be no question about this great plant being able to operate all the time.

Mr. KING. Mr. President, will the Senator yield?

Mr. HEFLIN. I shall be glad to yield to the Senator.

Mr. KING. My information—and it has been derived from the proponents of the bill—is to the effect that the plant, for the purposes for which it was constructed—namely, to provide nitrates for the Government necessary for the manufacture of explosives—has been completed, and that a power plant which is operated by steam has also been completed; and, using the expression of the Senator, the plant for the purpose for which it was designed has been completed and is functioning.

What else does the Senator want to be done? Does he want the Government to expend twenty-eight to thirty more millions of dollars to complete one or more dams in the river, or to install additional machinery not necessary for the production of nitrates for explosive purposes?

I repeat, the plant functions perfectly, according to the statements of the proponents of this bill, for the purpose for which it was designed. What else does the Senator desire to be done?

Mr. HEFLIN. It has been said that even when the whole project is completed, it will not manufacture or supply enough nitrates. We need to manufacture as much as possible; and plant No. 2, already completed down there, will not manufacture as much as is needed nor as much as the whole plant will when it is completed. Not only that, but we have got to add to the nitrate plant itself machinery and equipment to manufacture fertilizer and put it in such form as to be used by the farmers of the country.

Mr. KING. Mr. President, will the Senator yield further?

Mr. HEFLIN. I shall be glad to yield.

Mr. KING. Is it the purpose of those who are supporting this proposed legislation to manufacture for fertilizing purposes anything other than cyanamid and sulphate of ammonia? As I understand, the plant will now produce a few thousand tons per annum of cyanamid, and perhaps forty, fifty, or sixty thousand tons per annum of sulphate of ammonia. Is it the plan of the Senator to increase the plant's capacity and manufacture more sulphate of ammonia and more cyanamid?

In that connection let me call the attention of the Senator to the fact, with which he is undoubtedly familiar, that the record shows that the cyanamid produced now across the line in Canada by an American company is not all consumed in the United States, because there is not sufficient market for it, though it is a limited amount, and, further, that the amount of sulphate of ammonia produced in the United States to-day is in excess of the demands for manufacturing and for agricultural purposes. We have become an exporter of sulphate of ammonia. More than 136,000 tons are available for export now; and the Senator knows that with the increase in the construction of coke ovens—and they are multiplying in various parts of the United States—the output of sulphate of ammonia will be greatly increased from year to year, and at the same time with the increase in the output of ammonia there will be an increase in the output of the by-products of coal which are so essential to the dyes and arts and industries of the United States.

Mr. HEFLIN. Mr. President, I am glad to hear the Senator say that we produce more fertilizer than we need in the United States. I should like for the farmers of the country to get that information when they get ready to obtain fertilizer for the next crop. Usually when they get ready to buy, the report is circulated that the supply is short and then the price is high.

I can not and do not agree with the Senator that we have ever yet produced enough fertilizer for the agricultural interests of the United States. We need to use more fertilizer to conserve the fertility of the soil and increase its productive power, and we must not stop this project because the Senator suggests that private plants are being multiplied and will be multiplied. Let this Government go on with the work and complete this project at Muscle Shoals. I suppose the same argument that we hear in this Chamber was made when France completed her nitrate industry. I judge that the same kind of argument was indulged in when Germany completed hers, and it may be that somebody in the British Parliament is now indulging in the same argument as Great Britain undertakes to build up great nitrate plants at different points in her possessions. If the Government for any reason should ever desire to sell its nitrate plant to some fertilizer concern in the United States, it could do so to greater advantage if the plant is fully completed and in operation.

Mr. WADSWORTH. Mr. President, will the Senator yield?

Mr. HEFLIN. I shall be glad to yield to the Senator.

Mr. WADSWORTH. The Senator surmised that the same argument was used in Germany, France, and England when those countries were encouraging their nitrate establishments. The Senator is aware, however, that those Governments have not gone into business themselves; is he not?

Mr. HEFLIN. Who is operating those plants?

Mr. WADSWORTH. They are privately operated.

Mr. HEFLIN. And the Government built them?

Mr. WADSWORTH. The Government has extended financial aid, which is to be returned by the industries. The industries are privately operated.

Mr. HEFLIN. Ah! I submit that this Government had better go on, then, and do as Germany did and as France did and establish a great nitrate plant of its own and then, if necessary, it can turn it over for a good consideration and in good running order to some private enterprise to operate, and not leave it half finished for somebody to buy at the price that would be paid for a lot of junk. That is what would happen if you should offer to sell the plant now. We would be told that "the plant is not completed—that it is needing this to be done and that to be done. We really do not need it, anyhow; we already have a very nice plant; but we are willing to give you something for it rather than let it stand there and rust out."

That is the kind of talk that would be given to us.

Why, Mr. President, if fertilizer is furnished more cheaply to the farmer, the cost of production will be less, and it follows that the consumer can buy at a price more agreeable to him; so the farmer will be benefited, the consumer will be benefited, and the Government will have a plant that it can fall back upon if war should come and Chile should say: "We can no longer furnish you nitrate." Then the Government would be in position to say: "We do not need your nitrate. We have a plant of our own and can make our own nitrate supply." I had rather for the Government to be in that position than to stop this great nitrate project now and be dependent upon Chile or any other foreign country for our nitrate supply in time of war.

Mr. President, when this matter was up before the Committee on Agriculture of the House, of which I had the honor to be a member, I asked several questions regarding it of Mr. Washburn; and he stated to that committee that the completion of a plant like this would result in the farmer getting his fertilizer at about half the cost that he was then paying for it.

It seems to me that that would be an argument sufficient in itself to induce Senators to vote for this project, to say nothing of the matter of freeing us from the clutches of the fertilizer trust or of freeing us from the necessity of buying nitrates in Chile. The fact that the passage of this measure will result ultimately in giving to our farmers cheaper fertilizer should cause every Member of the Senate to give it his support.

Mr. KING. Mr. President——

The VICE PRESIDENT. Does the Senator from Alabama yield to the Senator from Utah?

Mr. HEFLIN. I gladly yield to the Senator.

Mr. KING. Does the Senator have in mind the statement made by Secretary Baker, namely, that the purpose was to sell ammonium sulphates produced at this plant at $65 a ton, and, as I read his testimony, that can only be accomplished by adopting certain figures upon which he bases his computations? Among those elements or factors which permit the conclusion that the Government can sell at $65 per ton were, first, that the property or plant be appraised at an inconsiderable sum, not what it cost the Government of the United States or what it will cost the Government of the United States, but a very small sum, perhaps $5,000,000, and allow 5 per cent interest upon that amount, or not to exceed $12,500,000. All of the vast sum expended by the Government and to be expended by the Government, if this bill becomes a law, which will aggregate in the neighborhood of $126,000,000 to $150,000,000, and probably more, is to be disregarded, treated as already having been amortized. Then, secondly, that the water power, which will be utilized for the manufacture of the product, can be furnished for a very small amount; I do not recall the amount, but something like sixteen or eighteen dollars per horsepower.

Mr. WADSWORTH. Mr. President, nearer $5.

Mr. KING. Five dollars, the Senator from New York corrects me. The Senator from Alabama knows, I think, that those factors upon which the Secretary of War bases the conclusion that the Government can sell at $65 per ton are absolutely indeterminate and do not comprehend many important elements.

The conclusions of the Secretary are unwarranted and unsound. They are not only fallacious, in my opinion, but seem to be the statements of an advocate rather than those of a fair and impartial witness.

I further suggest that the Senator will also take into account the fact that the Government is notoriously inefficient and wasteful in all that it undertakes. Its business activities produce chaos and are accompanied by extravagance. Paternalism is inconsistent with our form of Government, and it results in waste and harm not only to the Government but to the people. Private enterprise will accomplish a task for much less than can the Government, and its efficiency is of a much higher standard. Witness the fiasco of the Shipping Board and the tragic mistakes of the airplane organization, and many of the other undertakings of the War Department and other agents of the Government.

I suggest to the Senator that if he will consult his Democratic heart and go back to his Democratic principles and apply his splendid intellectual processes, he will reach the conclusion that this scheme is a mere dream of some officials of the Government who desire to perpetuate themselves in power, and to project the Government of the United States into matters that belong to private endeavor. Their efforts will cost the taxpayers millions of dollars annually, and will not result in any benefit whatever to the farmers of the United States. This plant, if completed for the manufacture of fertilizer, and if used for such purpose will not cheapen the product and will result in increased taxes and greater burdens upon the people.

Mr. McKELLAR. Before the Senator from Alabama answers, will he allow me to ask the Senator from Utah a question?

Mr. HEFLIN. Certainly.

Mr. McKELLAR. What would the Senator from Utah do with this plant, which has already cost $85,000,000? Would he throw it away?

Mr. KING. May I trespass upon the courtesy of the Senator from Alabama?

Mr. HEFLIN. I yield to the Senator.

Mr. KING. Mr. President, this plant has cost more than $85,000,000, and if the plan of the Senator from Tennessee is carried into effect it will cost double that, in my opinion. It could be duplicated to-day for $15,000,000.

But, waiving that, this is what I would do: I would put it in shape—and the testimony shows that that can be done for an inconsiderable sum—and keep it available in case the Government ever needs it for the manufacture of explosives.

But let me say to the Senator that with the developments in chemistry and explosives, within two or three or four years at most this plant will be unsuitable for the manufacture of explosives.

Mr. McKELLAR. Then, according to the Senator's argument, he is in favor of throwing away the $85,000,000 plant?

Mr. KING. I have made no such an argument, Mr. President. But, in my opinion, it would be cheaper for the Government, and better for the American people, if it were to be salvaged, the same as we are salvaging millions and hundreds of millions of dollars of plants that have been constructed by the Government for war purposes.

Mr. STANLEY. Mr. President, I did not hear all of the Senator's remarks and am somewhat surprised at the statement that this plant will be obsolete in a few years. Can the Senator give his reasons for that belief?

Mr. KING. I do not know that I said obsolete. I said for the purposes for which it was constructed, namely, for the manufacture of explosive nitrates, it would be unsuitable. What I intended to say, if I did not make myself clear, was that the developments in chemistry would be so great that it was only a question of a few years when this plant would be obsolete for the manufacture of explosives, because methods will be devised so much cheaper and superior for the manufacture of explosives; then this plant will not be required and it will become, therefore, practically obsolete.

Mr. STANLEY. Does the Senator know of any country in the world that is securing explosives now except from either Chilean nitrates or from air-fixation plants?

Mr. KING. I think they are obtaining explosives from nitrates. But you can obtain nitrogen from a large number of sources. You can obtain it from organic as well as inorganic elements and substances, and the Senator knows that the Haber process, which Germany has not perfected, but which she has brought to a very high degree of perfection, produces nitrogen much cheaper than this plant will produce it, and with the investigations along the line of the Haber process, and others, it must be manifest to the Senator that it is only a question of a short time when we will discover methods of air fixation of nitrogen very much superior to those which are employed in this plant.

Mr. STANLEY. Mr. President, Germany is producing nitrogen by either process at a less cost than we are, considering the cost of labor and other things of that character. But Germany does not produce nitrogen by the Haber process at a relatively less cost than she does by the cyanamid process. It has been estimated by the finest experts in the world, both in America and in Europe, that if you should put the Haber process in operation in the United States to-day, and we understood the process and could operate this delicate machinery, the additional cost of labor incident to the operation of the Haber process would more

UMI

than overcome the difference in the horsepower, and it would cost $200 or $300 a ton.

Mr. HEFLIN. Mr. President, I did not intend to occupy the floor but a little while in the discussion of this measure, and I hope I may be permitted to proceed to the conclusion of my remarks. I do not agree with the Senator from Utah [Mr. KING] that the Haber process is cheaper than the cyanamid process. Expert testimony in abundance is here to the effect that we will be able to manufacture nitrates cheaper than we now buy them from Chile. That is the main point at issue. If we can manufacture nitrates cheaper than we can now buy them from the only source of supply, a foreign country, is it not wise that we should do so?

The Senator from Utah would have us let this machinery stand idle, and he also says that it will soon be out of date. Mr. President, we do not know that. It may be that some time in the future some process may be developed or invented which may be better and cheaper and more efficient. But until that time comes it would be foolish to abandon a process that we already know is a success.

But the Senator says that the idea of the Government going into this thing and working it out is a dream. Why, Mr. President, most things of value accomplished in the world originated in the mind of some dreamer. Columbus dreamed of a new world far out beyond the sea, but he was told that it would be sheer foolishness for him to equip a ship and start out in search of the land that he had seen in his dream. But he was neither discouraged nor deterred by those who opposed him in his purpose to make the voyage. He made it and his dream came true. But for Columbus, this dreamer of dreams, we would probably not be enjoying as now the blessings and benefits of this ideal spot of earth.

Mr. President, later on another man, a German chemist by the name of Frank, had a dream the fulfillment of which has been the means of blessing and benefiting millions and millions of people. In his dream he saw a process through which nitrogen could be extracted from the air and used in increasing the fertility of the soil. We are using that process now at Muscle Shoals.

Mr. KING. Mr. President, does the Senator yield?

Mr. HEFLIN. I am glad to yield.

Mr. KING. I am sorry to interrupt the Senator's beautiful statement regarding flowers and dreams and so on, but let us get back to the facts, with the permission of the Senator.

The Secretary of War states that the cheapest production of ammonium sulphate by this plant will be $65 per ton, and in giving those figures, as I stated a moment ago, he disregards the question of interest, of insurance, of the true cost of power, of taxes, of overhead expenses; he disregards the question of the vast investment, perhaps $140,000,000 or $150,000,000, which the Government of the United States has in this plant. And there are other factors which I will not now enumerate which he entirely disregards.

The Senator also has stated that the cost of Chilean nitrates is greater than the cost of ammonium sulphate produced here. I differ from the Senator, if we are to take the statement of the Secretary of War as to the cost. Chilean nitrates will soon be sold at $50 a ton and less. Every person, it seems to me, familiar with the nitrate situation, with the demands for Chilean nitrate, will reach the conclusion that the price of Chilean nitrate in the United States will soon be brought down to $40 or less per ton.

One other question, if the Senator will pardon me, I desire to call his attention to. We are producing now from our coke-oven plants as a by-product sulphate of ammonia, the same commodity produced by this plant.

The Senator knows that sulphate of ammonia produced as a by-product can be manufactured so much cheaper than in a plant of this character that this plant, unless it is subsidized by the Government—and that is the purpose of this bill—will be compelled to go out of business.

Already the American Cyanamid Co., which built this plant for the Government, have been unable to make cyanamid or sulphate of ammonia in their plant in competition with the by-product of the coke ovens of the United States.

In my own State it is expected that by-product coke ovens will be constructed soon. We have a large number of beehive ovens now, and waste in the atmosphere millions of dollars worth of those vital and important elements each year.

Now, if sulphate of ammonia is important and there is a market for it, and that is what this Muscle Shoals plant is to make, then there will be a great many other by-product coke ovens operated in the United States, not only for the production of sulphate of ammonia but dyestuffs and innumerable products that are now thrown off into the atmosphere.

It is absolutely impossible, I repeat, under the testimony which the records show and in line with the views of the proponents of this scheme to manufacture sulphate of ammonia or any product in this plant in competition with by-product ovens in the United States. So that if the plant functions and operates, we have got to disregard the vast capital invested and we will have to get a subsidy from the Treasury of the United States every year for the purpose of keeping it alive. Then we are in competition with private enterprises that have built up industries and that will continue to build up industries for the advantage of the American people and for the advantage of the agriculturists particularly, and this competition can only be maintained by taxing the people to support a losing venture. It is not, nor will it be, legitimate competition. The United States will be compelled to appropriate millions each year to maintain a bankrupt and losing business. Fertilizer will not be reduced in price, and the people will be taxed to maintain thousands of individuals in positions of ease and profit.

Mr. STANLEY. Mr. President——

Mr. HEFLIN. I yield to the Senator from Kentucky.

Mr. STANLEY. The Senator from Utah, I think, has misread the testimony of Secretary Baker, a very natural error. He has quoted the selling prices for the cost prices. Secretary Baker states on page 10 of the hearings:

> But the outstanding fact was the one I was about to give Senator GORE, that we can sell sulphate of ammonia if we put in this sulphate process at $65 a ton, which is to be compared with a price for the imported Chilean nitrate of $75 per ton.

Again on page 11, Secretary Baker still being before the committee:

> Senator GORE. That $65 a ton that you mentioned, is that on the cost basis? Does that allow anything for interest on the investment?
> Mr. ROBERTS—

Mr. Roberts accompanied the Secretary of War in giving the testimony.

> Mr. ROBERTS. We have figured here the cost price of the sulphate of ammonia, as soon as we get the water power running, as $48.22 to us, and if we sell it at $65 it will give us $16.80 profit per ton.

Secretary Baker has stated before the committee, after most thorough investigation, that he can produce sulphate of ammonia at this plant and sell it, at a profit, in competition with Chilean nitrate, as low as $42 or $43 per ton.

It is universally conceded that we can not produce and sell Chilean nitrate in this country for that amount of money. I quoted here some time ago the statistics of well-known London authorities on the subject who had thoroughly investigated it. When we consider that the nitrogen content is the only thing of value, we must add nitrate to the cost of the Chilean product in order to get the value of a ton of sulphate of ammonia. In other words, we can sell sulphate of ammonia at 66⅔ per cent of the market price of Chilean nitrate and stay in the market.

Mr. KING. Mr. President——

Mr. HEFLIN. I yield again to the Senator from Utah.

Mr. KING. I am very much obliged to the Senator from Kentucky for calling my attention to the testimony, which I had not read. But the Senator knows that the experiments which were made with this plant, and they say it is a perfect plant, show that it cost more than $100, and my recollection is more than $200, per ton to produce the sulphate of ammonia that was manufactured in the plant.

When Mr. Roberts and Prof. Lamb, and these other officers who were attached to the nitrate division of the War Department, give this testimony, it is entirely speculative. Neither of them has had any experience, and their testimony, as I read it, shows their lack of appreciation of the character of the work and of the practical questions involved in the manufacture of this product. They are just as hopeless in their appreciation of this work as have been a number of officers of the War Department during the war in the manufacture of articles that were required in the prosecution of the war.

Moreover, I invite the attention of the Senator from Alabama and the Senator from Kentucky to the fact that Secretary Baker proposes to organize a company with a limited capital, not taking into account the vast amount which the Government has expended on the plant, but probably $12,500,000, and the dividends possible to be paid are limited to 5 per cent. It is obvious that in order to pay a dividend of 5 per cent, if a dividend ever should be paid, there must be included in the calculations the one hundred and forty-odd million dollars which the plant will cost, and the electric power necessary to operate the plant must be charged at only $5 per horsepower, when, as I read the record, it is absolutely impossible to produce horsepower, even after we spend thirty or forty million dollars more upon the dam for the purpose of operating the plant, for any such sum.

It would appear as if some who testified before the committee in favor of this scheme were interested in building up a proposition that would appeal to Senators and the public and those who did not have time to ascertain the practical questions involved in the enterprise.

With all due respect to my distinguished friends, I express the opinion that sulphate of ammonia produced by this plant will cost from 20 to 100 per cent more than that which is produced by the by-product ovens of the United States, and that it will be absolutely impossible to manufacture it in competition with private enterprise.

Mr. McKELLAR. If that is the fact, may I ask this question? Why is it that the coke-oven industry and the Cyanamid Co. and the fertilizer trust all oppose the bill, when the effect of the bill will not be to hurt them?

Mr. KING. I have no knowledge of opposition, but I can appreciate the fact that most business men of the United States, and most men who have a proper regard for the function of the Federal Government, when they see the Federal Government entering into the domain of private endeavor and trying to nationalize industries and trying to build up big industries in competition with private endeavor, would raise a mild protest against legislation of such character.

Mr. WILLIAMS and Mr. STANLEY addressed the Chair.

The VICE PRESIDENT. Does the Senator from Alabama yield; and if so, to whom?

Mr. HEFLIN. I yield first to the Senator from Mississippi.

Mr. WILLIAMS. Mr. President, the Senator from Alabama, of course, noted that the most salient argument made by the Senator from Utah [Mr. KING] was that there would be great improvements made in the method of producing nitrates, and that they would be so great that the plant would be out of the market. That, of course, takes for granted that the only people who are making nitrates that will not keep up with the improved methods will be the people who are running this plant for the benefit of the Government with by-products to help agriculture.

Is there any reason in the world why the plant, once organized and operating, should not be one of the very best judges in the Nation of every new invention, of every new improvement, and of the practicability of its application in the process?

Mr. HEFLIN. Precisely. I now yield to the Senator from Kentucky.

Mr. STANLEY. The Senator from Utah [Mr. KING] is in error in his estimate of the value of the production of sulphate. Mr. Arthur J. Roberts, upon whose testimony the Secretary of War based his own estimate, because this report was made to the Secretary of War and at his instance, states, in a cost sheet in which he goes into great detail, that cyanamid can be produced at $27 a ton, nitrate at $75 a ton—we were not considering that—and sulphate of ammonia at $48.20 a ton.

I also call the Senator's attention to a statement of Secretary Baker to the same effect in which he says:

> Then they will have to sell Chilean nitrate at $27 while we are getting for our cyanamid $37.50, and as I have been informed by one of the big firms who own the mines in Chile that it can not be brought into this country under $40 without any profit to them on their investment.

That is the statement of the Secretary of War.

Mr. HEFLIN. That, it seems to me, completely answers the contention of the Senator from Utah. The Senator from Utah discloses in his argument the fact that he has some of these nitrate enterprises in his own State with which this nitrate plant might be in competition. I still contend, in spite of the testimony of my good friend from Utah, that this plant operated by the Government at Muscle Shoals will produce nitrates more cheaply than they can be purchased from anybody. The testimony of experts is to that effect, and I prefer to take their testimony and to rely upon it than to take the testimony of my inexperienced friend, however well he may be informed in other matters.

I do not agree with the Senator from Utah, nor do a great many others who support the bill, that it will cost $150,000,000 to complete the plant. The argument, and a very able one, was made by a Republican Member of the House, Mr. HULL of Iowa, who is the friend of this measure, that it would take probably $28,000,000 in all to complete the whole project. So there is that difference between the Senator from Utah and the Member of the House from Iowa, who comes from one of the greatest agricultural States in the Union, as to what it will cost to complete the project.

Mr. WILLIAMS. A difference of only $122,000,000.

Mr. HEFLIN. Yes; a difference of $122,000,000, as my friend from Mississippi says. It would cost very much less to complete this plant, as has been suggested, than it would to build a new one.

Mr. STANLEY. May I suggest to the Senator from Alabama that he is basing the increased cost on dams and other things that we hope to add to it. The plant can be operated now without any cost whatever except the cost of operating. We do not have to appropriate another dollar in order to furnish the farmers with 200,000 tons of needed fertilizer.

Mr. HEFLIN. That is true. I thank the Senator from Kentucky, who has contributed so much in the masterful speech that he has made upon this floor in behalf of the nitrate plant, for the interruptions that he has indulged in to-day. He has furnished valuable information upon the subject under discussion.

A vast amount of work has been done by the Government at Muscle Shoals. It has built a railroad down there about 25 miles long, covering the territory in and around the plant and along the riverside. There are large cranes in operation down there and there are barges and material of every kind, and all of the machinery necessary has been shipped and is there on the ground, and all that is necessary is to permit the completion and operation of the plant.

I submit again that I can not see the force of the argument of Senators who would stop the development at Muscle Shoals, who would halt the work there, and permit that vast plant to stand idle, because some Senators fear that private enterprise may in the near future invent some other process that may put the Government's process out of commission. I submit, in line with the suggestion of the Senator from Mississippi [Mr. WILLIAMS], that if changes are made, if new inventions come, the Government will be the first, or should be the first, to make use of such inventions or processes; and I dare say that the Government, with all of its instrumentalities for acquiring valuable information upon this or any other matter that pertains to preparedness for war, will not overlook any advantage that might come by instituting a new process or changing old machinery so as to operate under new and changed conditions. So there is nothing in that argument of Senators.

There is more, Mr. President, in the suggestion that private enterprise will multiply and be ready to supply a vast amount of nitrates and fertilizers in the course of time; but, I repeat, that if that time shall come I would rather my Government would be in a position to act independently of any and all of them in the matter of supplying itself with nitrates. What have we witnessed in the war just ended? Men took advantage of the Government's distress and of the peril that was upon us and charged the Government enormous prices for everything that the Government consumed in the way of war materials to be used in winning the war. From that standpoint I suggest and submit that it would be infinitely better for the American people to have a great nitrate plant of their own so that if private enterprises should undertake to profiteer, as many of them did during the war just ended, the Government could operate its own plant and not be beholden to any private concern. It seems to me that this fact alone is sufficient to cause every Member of the United States Senate to vote for this measure.

If the Government should see fit to operate the plant in time of peace and help to increase the fertilizer supply it would be making a valuable contribution toward preventing the fertilizer trust from holding up and robbing the American farmer. So the completion and operation of this great nitrate plant for fertilizer purposes would be a good thing. Its completion and operation will free us from the embarrassing necessity of having to depend upon a foreign country for our explosive power in time of war.

It is a strange thing that whenever a measure comes up in Congress for the benefit of the people generally some special private interest always appears in opposition to it. Briefs are made and cunning arguments are furnished as to why and how this or that measure will affect private enterprise and put the Government into competition with private business. That argument was made when the Government saw the necessity of providing a Federal farm loan banking system for the farmers of the United States. The commercial banking system did not answer the peculiar needs of agriculture. The manufacturer did not want money for more than 60 or 90 days; other enterprises did not need money for more than six months; but the farmer needed it for a year or longer, and if he had bought land or had improved his own land and had to mortgage it he needed a long time in which to pay back the money borrowed at a low rate of interest. The Government set up the farm loan banking system and went to the rescue of thousands of farmers and loaned them, before the pending litigation involving the system was commenced, more than $300,000,000.

The farmers have been greatly benefited by the establishment of this very helpful and useful banking system. Of course,

special interests do not care anything about whether the farmers are benefited or not. This great farm-banking system is one of the ventures of the Government which has proved of vast benefit to agriculture in America. So I think that in this instance the Government is not only to be excused but commended for setting up a nitrate project of its own that will relieve it from the necessity of being held up by the powder trust, as it was in many instances during the great World War.

I would vote for this measure if for no other reason than to free us from a situation like that; I would vote for it if there were no other reason than to make us independent of any foreign power in the matter of acquiring nitrates in time of war; I would vote for it if for no other reason than to furnish the farmers of the country cheaper fertilizers; I would vote for it if for no other purpose than to free the farmers of America from the clutches of the fertilizer trust.

Mr. President, the Government of the United States has already expended on this great project at Muscle Shoals eighty-odd millions of dollars. If Senators opposing the pending measure succeed in defeating it they will have succeeded in making the money already expended a total loss to the Government. By continuing the work a little while longer the whole project will be completed and the money spent will prove to be a good investment. The completion of this project will free the United States from dependence upon a foreign country for its nitrate supply in time of war. It will be the means of furnishing to our farmers cheaper fertilizers in time of peace.

But we are told that some of the opposition to this measure has arisen because the nitrate plant is located at Muscle Shoals, in Alabama, a Southern State. Mr. President, I trust that that is not true. Surely we have reached the time when the people of the whole country are ready to frown down anything that smacks of sectional hate and prejudice. In the war with Germany boys from Alabama and Tennessee and other Southern States fought side by side with the brave boys of the Northern States. There was nothing of the littleness and meanness of sectional prejudice that has been suggested in connection with this measure shown by any of them on the battle fields of France. They were a band of brothers, American citizens all, fighting together for the cause of their country. Let us at home in every State in the Union contribute in every way that we can to the cordial relationship and good fellowship of the whole people of the United States. Let us vote upon all measures as the representatives of a great people, striving at all times to do that which is wisest and best for our common country. Let this spirit manifest itself here to-day in determining the question as to whether or not the United States Government shall have a great nitrate plant to be used for adequate preparedness for the national defense.

EMERGENCY TARIFF.

Mr. WADSWORTH. I move that the Senate stand in recess until 12 o'clock to-morrow.

Mr. SHEPPARD. Mr. President, will the Senator withhold his motion for just a moment?

Mr. WADSWORTH. Very well; I withdraw the motion temporarily.

Mr. SHEPPARD. Mr. President, it has been stated on the floor that there was no genuine demand for the proposed emergency tariff legislation. In order to show the demand from my State, I wish to quote from a few letters and telegrams.

From north Texas I quote from a letter from Mr. George O. Morgan, of Denison, reading, in part, as follows:

> The farmers of Texas are very much disappointed that this bill has apparently been delayed in the Senate, and a number of them have said that if our Senators would spend a few days at home visiting the farmers of Texas, so that they could thoroughly understand their conditions, they would then be ready to take action on this bill without delay. This applies to peanut raisers in particular. The time for planting is not far off, and the farmers very rightfully feel that there is no use for them to plant peanuts again this year unless they are protected against peanuts that can be imported from the Orient, as they simply can not raise them in competition and make a living. If the Senate is going to give relief, it would be much better for it to come within the next few weeks than to have it delayed until such a time as will be too late for the farmer to make his arrangements for planting another crop, and unless this relief is forthcoming thousands of farmers will not attempt to make a crop this coming season.
>
> We feel that much depends upon the action of the Democratic Senators of the South to get this measure through, but do not feel that it should be considered a political measure, as conditions that now exist are due to the results of the war, and the question of temporary protection should have nothing more to do with politics than a similar action during the period of the war.

From south Texas I quote from a letter written to me by Mr. A. M. McFaddin, of Victoria, reading in part as follows:

> I have been a Democrat all my life and have always voted a Democratic ticket, and am still a Democrat, but in my opinion times have changed so much in the South since the war that the South really needs some protection right now more so than any time in my memory. I am an extensive cotton farmer and ginned some 1,719 bales of cotton at my gin this year. Last year the seed from cotton sold from $70 to $84 per ton. To-day it is quoted f. o. b. my gin at $17 per ton, so you can see the vast difference in that. I immediately sought the reason for this great difference in prices, and I found that oriental oils, that is, soy-bean oil, coconut oil, beech oil, and, in fact, all vegetable oils, and even cottonseed oil, were coming into America in such enormous quantities that it will absolutely demoralize the cottonseed industry of this country. Now, taking the average farmer in America who raised 20 bales of cotton, he would have had 10 tons of cotton seed for sale last year on a basis of $84 per ton, which would be $840. Now, 10 tons of seed at $24 per ton will amount to $240. This makes a difference of $60 per ton. So you can see the average small farmer is badly hurt by this one item alone. To-day cotton seed is even selling lower than the average price, so you can see immediately what it amounts to to the cotton farmer of the South. I really think the cottonseed products are so badly demoralized that it is going to have a tremendously bad effect on the farming interests.
>
> During the war we were all asked to raise all the meat that we could. People in Georgia, Florida, Louisiana, Alabama, Mississippi, and Arkansas came to Texas and bought Texas cows and carried them to those States to start in the cattle business. They paid war prices for these cattle and now the market has declined so severely that they are not able to realize cost price for them. The sheepmen on the small farms of Kentucky, Tennessee, and all through the North did exactly the same thing; that is, stocked their small farms with sheep to raise lambs for the consumption of the Army and they were also ruined. The markets have been so severely demoralized on these products that the rural people of the South are badly punished by trying to help out the Government in time of war. Frozen lamb and mutton has been coming in in vast quantities from South America, Australia, and New Zealand, and they are shipping it as far west as Kansas City. As soon as refrigerated ships get into operation they can deliver meat from the South American countries to New York cheaper than we can ship it from Texas on hoof, owing to the excessive railroad rates that are being charged now. Now, remember that on my ranch lands I pay taxes to the State of Texas on a basis of $10 per acre for every acre that I run cattle on. I also pay taxes on the cattle until they are fully mature and are ready for beef. How can you expect me with the present railroad rates to compete at all with the vast quantities of cattle raised in the South American countries on free land and labor as cheap as it is there. I think these things are a serious menace to the country, and especially to the people who have invested their money in trying to help out the Government during the war. Ten years ago the oriental oils and the vegetable oils did not affect us, but they seem to be pouring into this country now. Something like 1,013,000,000 pounds of oil have come into the United States in the last 12 months; consequently we have had a big depreciation in all those things. Now, individually to me this is not going to hurt me, as I will simply quit the business. I have a vast lot of people with me that can not produce things on these lines and clothe and send their children to school decently. These facts I know.
>
> I joined the Southern Tariff Association with the view of helping the southern farmers, and I feel like it is the duty of all southern Congressmen and southern Senators to look into these things well. Under the Wilson administration they gave peanut oil 6-cent per gallon protection. That is a great industry and should be fostered in the South. Cotton is our greatest industry and has no protection. If peanut oil has 6-cent per gallon protection under a Democratic administration, I don't see that there would be anything wrong to help the cotton industry in the South out. I think a 20-cent per gallon tariff should be put on oil from all oriental countries, because with labor at 16 to 17 cents per day, and they find themselves; that is, board themselves. I don't see how we in the South can continue to live in the country and keep up agricultural lines. I think meat of all kinds should have at least 2½-cent per pound protection, owing to the railroad rates, as we get them here, and the taxes we have to pay to sustain our State government. It seems to me that this is the only way that we can hope to exist and maintain our businesses.
>
> During the past winter there was an extensive drought in the Northwest. I went over that country this year in an automobile and investigated it very closely; that is, Wyoming, North Dakota, and South Dakota. I found the men in the cattle business and in the sheep business in great distress, owing to the severe winter. In some instances it has cost them as high as $35 per head to feed and maintain their cattle, and with the 7-cent market on fat cows, and they would weigh 900 pounds, those men are financially ruined. I do not intend to restock my ranch, and I am running 40 per cent short and intend to continue so until these matters are settled. The railroad rates have been a very severe blow to us in the cattle business, and the rates have increased so heavily that it has made our business almost prohibitory. I have a store located on the St. Louis, Brownsville & Mexico Railway line at Marianna, Tex., 20 miles from Victoria by dirt road and 26 miles by railroad. I can haul goods with wagon and mules 40 per cent cheaper than I can ship them over the railroad under the present rates.
>
> I think it would be advisable for all southern Democrats to look into these things and see how badly their constituents are hurt, as these things are making it very burdensome to affairs and to men who actually do the work in the country. It is no wonder why so many of our young men leave the farms, and should these conditions continue the country's next census will show 75 per cent of our people as living in the cities and towns.

From central Texas, Mr. President, I have the following telegram, sent me by the Hillsboro Chamber of Commerce:

> HILLSBORO, TEX., *December 28, 1920.*
>
> Hon. MORRIS SHEPPARD,
> *United States Senate, Washington, D. C.*
>
> Congratulate you on your stand for emergency tariff legislation for the American farmers. Some relief from some source must come or our whole economic system is threatened with disaster. The farmers can not raise low-middling cotton at 60 per cent of 1913 prices and buy at 100 per cent higher level.
>
> HILLSBORO CHAMBER OF COMMERCE.

From east Texas comes the following telegram:

> TYLER, TEX., *December 28, 1920.*
>
> Hon. MORRIS SHEPPARD,
> *United States Senate, Washington, D. C.:*
>
> Tyler Chamber of Commerce requests your active and hearty support of emergency tariff bill on foreign oils. This emergency tariff necessary to insure confidence and promote agriculture of the South.
>
> TYLER CHAMBER OF COMMERCE,
> By E. GENTRY, *Secretary.*

From Dallas, Tex.—north Texas—I have the following:

DALLAS, TEX., *December 15, 1920.*

MORRIS SHEPPARD,
Senate, Washington, D. C.:

The sheepmen of Texas are expecting you to help pass the Smoot bill, which provides an embargo on wool and woolens. Unlike other industries, they can not curtail production, as there is another crop of wool already on the sheeps' backs and 90 per cent of this year's production still in hands of growers.

TEXAS FARM BUREAU FEDERATION.

From San Antonio, Tex.—southwest Texas—the following telegram has been received by me:

SAN ANTONIO, TEX., *December 17, 1920.*

Senator MORRIS SHEPPARD,
Washington, D. C.:

The wool and mohair growers of Texas, and in fact over entire Nation, are being clubbed into utter ruin with the threat of users to import foreign wool and mohair. By this method prices have been forced down over two-thirds since May. Unless relief is furnished by you they will be forced out of business. Relief to be effective must be prompt. If delayed until stock can be shipped in will be worthless to growers. I have on consignment for customers in Boston 5,000,000 pounds that is impossible to sell. I do not own one pound, but I know conditions and earnestly appeal to you in behalf of growers to support embargo on wool until tariff bill can be passed.

C. D. STOKES.

From Kerrville, Tex.—southwest Texas—comes the following:

KERRVILLE, TEX., *December 23, 1920.*

Senator MORRIS SHEPPARD,
United States Senate, Washington, D. C.:

I urgently request your support emergency tariff bill. In my 50 years close relations with stockmen and farmers they have never been in such a plight. Three-fourths will be absolutely bankrupt if not afforded relief.

CHAS. SCHREINER.

From Uvalde, Tex.—southwest Texas—comes the following:

UVALDE, TEX., *December 28, 1920.*

Senator SHEPPARD,
Washington, D. C.:

Producers ask us to express hope that you will see your way clear to help pass the emergency tariff bill and relieve their distressed condition.

F. A. PIPER CO.

From Weatherford, Tex.—west Texas—comes the following:

WEATHERFORD, TEX., *December 21, 1920.*

Hon. MORRIS SHEPPARD,
Washington, D. C.:

We urge you support the emergency tariff bill now in hand Ways and Means Committee. This bill means much to Texas farmers and Texas people. Without this protection the peanut industry is ruined, and the boll-weevil district will continue to suffer. Millions of dollars are now invested in the industry, which, with reasonable protections, is destined to be the second greatest industry of the South. It should not be a question of politics, but an appeal from your suffering constituents.

WEATHERFORD PEANUT MILLS.

Also from Tyler, Tex., in east Texas, the following:

TYLER, TEX., *December 21, 1920.*

Senator MORRIS SHEPPARD,
United States Senate, Washington, D. C.:

We urge your support of the emergency tariff bill. It is very essential to include peanuts and peanut oil to save the industry in the United States. We suggest tariff of 4 cents a pound on peanuts, shelled or unshelled, and 6 cents a pound on peanut oil. Present situation serious.

ALEX WOLDERT CO.

From Del Rio, Tex.—west Texas—I have the following:

DEL RIO, TEX., *December 30, 1920.*

Senator MORRIS SHEPPARD,
Washington, D. C.:

We respectfully request and urge that you use your influence to pass the tariff bill now before the Senate. This company is owned and controlled by the sheepmen of west Texas; we handle some 3,000,000 pounds of wool per year for which there is no sale. The price has declined to such an extent that wool and mohair have no loan value should we continue without protection.

The sheepmen will be forced to turn their herds loose, as they can not raise funds to pay running expenses. There are thousands of acres of Texas cotton rotting in the fields. Should the tariff bill be passed, it is sure to react and help our cotton; without protection we are facing ruin. We believe that now is the time for us all to work for the good of our constituents and our country regardless of party affiliation.

W. J. TRENT,
Manager Del Rio Wool & Mohair Co.

I also have a number of telegrams to the same effect from San Angelo, Tex., and other places in west Texas, but time forbids the reading of them all.

The present agricultural tariff measure does not involve, in my judgment, any question of permanent tariff policy, but is designed to meet a temporary emergency. As such I shall support it, as I am supporting all other measures now before Congress which seem to offer any reasonable hope of aid to the farmer in a crisis growing out of conditions closely related to the Great War, a crisis of such proportions that every resource and power of the Government should be utilized to remedy it.

In this connection I also desire to insert a copy of a letter I have written the Southern Tariff Advocate, Fort Worth, Tex., in answer to a communication asking my opinion on the subject of taxation of raw materials.

The PRESIDING OFFICER (Mr. CURTIS in the chair). Without objection, it is so ordered.

The letter is as follows:

WASHINGTON, *January 4, 1921.*

SOUTHERN TARIFF ADVOCATE,
Fort Worth, Tex.

GENTLEMEN: You ask me for my views as to a tariff on raw materials. In the past I have advocated the placing of certain raw materials of manufacture on the free list as a means of reducing the tariff on the finished product to a nonprotective, revenue basis. My experience in the Senate has shown me, however, that it is practically impossible to leave any duty on the finished product that does not carry a certain amount of protection.

Being in favor of equal treatment for both finished product and raw materials, I shall favor the equitable distribution of the benefit incidental in a tariff duty to each. If the raw material is to go on the free list, let the manufacturer's finished product go also. If any preference is to be shown at all, it should be shown to agriculture, because agriculture as a paying enterprise is facing disaster at the present time.

Yours, very truly,

MORRIS SHEPPARD.

RECESS.

Mr. WADSWORTH. I move that the Senate stand in recess until 12 o'clock to-morrow.

The motion was agreed to; and (at 4 o'clock and 40 minutes p. m) the Senate took a recess until to-morrow, Saturday, January 8, 1921, at 12 o'clock meridian.

HOUSE OF REPRESENTATIVES.

FRIDAY, *January 7, 1921.*

The House met at 12 o'clock noon.

The Chaplain, Rev. Henry N. Couden, D. D., offered the following prayer:

Eternal God from whose infinite love a thousand blessings issue day by day in the material and spiritual universe. Deeds of kindness, affection, and generosity in the home, society, our Government, and Christianity.

The heart of Thy servant would be indeed callous if it did not pour out its gratitude to Thee and every Member of this House for the splendid record on the pages of history by its action in his behalf and his afflicted wife yesterday. Thy blessings fall copiously upon these Thy servants and follow them all the days of their life. In spirit of the Lord, Jesus Christ our blessed Saviour. Amen.

The Journal of the proceedings of yesterday was read and approved.

ENROLLED BILL SIGNED.

Mr. RAMSEY, from the Committee on Enrolled Bills, reported that they had examined and found truly enrolled bill of the following title, when the Speaker signed the same:

H. R. 12337. An act to provide for the relief of Anthony Sulik, former sergeant United States Marine Corps.

SENATE JOINT RESOLUTION REFERRED.

Under clause 2 of Rule XXIV, Senate joint resolution of the following title was taken from the Speaker's table and referred to its appropriate committee as indicated below:

S. J. Res. 237. Joint resolution to enable the Secretary of the Senate and the Clerk of the House of Representatives to pay the necessary expenses of the inaugural ceremonies of the President of the United States on March 4, 1921; to the Committee on Appropriations.

POINT OF ORDER.

Mr. MANN of Illinois. Mr. Speaker, I rise to a point of order.

The SPEAKER. The gentleman will state it.

Mr. MANN of Illinois. Mr. Speaker, I make a point of order that the bill H. R. 15163, on the Union Calendar No. 373, reported from the Committee on Indian Affairs December 17, 1920, is erroneously on the calendar. The committee had not authority to report the bill. I make the point of order for the purpose of having a decision of the Speaker construing the new rule in reference to reporting a bill which carries appropriations. The rule provides, section 5, Rule XXI:

No bill or joint resolution carrying appropriations shall be reported by any committee not having jurisdiction to report appropriations, nor shall an amendment proposing an appropriation be in order during the consideration of a bill or joint resolution reported by a committee not having such jurisdiction. A question of order on an appropriation on any such bill, joint resolution, or amendment thereto may be raised at any time.

The first part of that rule apparently prohibits a committee from reporting a bill which carries an appropriation. The latter

part of the rule would seem to indicate that though a bill had been reported a question of order on the reporting of an appropriation might be raised as to the part of the bill providing for the appropriation. The bill on the calendar is a bill which as introduced appropriated $100,000. The Committee on Indian Affairs, observing the spirit of the new rule, reported the bill with an amendment striking out that appropriation and inserting an authorization. Of course, that evidences the spirit of the committee. It does not affect, however, the question as to whether they had the right to report a bill, because the bill does carry an appropriation. The amendment proposed by the committee does not change the status of the bill as reported to the House, because the amendment might or might not be agreed to by the House. I call this to the attention of the Speaker. I do not know what his view may be upon the question. I only raise it for the purpose of having a construction, after some consideration by the Speaker, so that the Speaker shall decide it and not have it left to conflicting decisions of chairmen in the House. My own view is that the point of order is not good.

The SPEAKER. The Chair has given consideration to this, and is real to rule——

Mr. MONDELL. Mr. Speaker, I did not suppose the Speaker was ready to rule at this time and I should not have made any observation in regard to the matter under consideration except for the suggestion last made by the gentleman from Illinois [Mr. MANN]. I am inclined to think that the first provision is mandatory—that there is no authority to report a bill which as introduced carries an appropriation. If that could be done, while the spirit of the rule would seem to be carried out by an amendment striking out the appropriation and inserting an authorization, as a matter of fact the spirit of the rule would be violated, because of the fact that the mere defeat of the committee amendment would present the bill to the House in a form prohibited by the rule.

Mr. MANN of Illinois. If the gentleman will permit, it would be still in order, if the bill is reported and properly on the calendar, under the rule to make a point of order against the appropriation and strike it out on the point of order, but if the committee can not report a bill, the result would be that all Senate bills which carried incidentally appropriations and were legislative in character would have to be referred to the Committee on Appropriations, which has no legislative jurisdiction, and where would that end?

Mr. MONDELL. Well, I assume that we are not to have bills presented from the other body that can not be reported in accordance with our rule, and while I realize that the suggestion the gentleman makes presents a difficult and embarrassing situation, on the other hand, if bills may be introduced as they have been in the past and then amended in committee, possibly with the thought that the committee amendment will not be agreed to, we are back to our old practice of reporting appropriations.

Mr. MANN of Illinois. Well, the gentleman will see we are not dependent upon whether the committee amendment is adopted; a point of order can be made against the appropriation without regard to the amendment and the appropriation goes out.

Mr. MONDELL. I want to be very sure about that. That is another question, that is a further step in the development of the proposition. If there were no question in regard to what might occur in a case of that kind, then possibly the matter would be solved; but, on the other hand, it seems to me that a rather peculiar situation is presented when the House having voted down an amendment we are presented with an appropriation. Of course, if the Chair should rule that in that event a point of order would lie against the appropriation that would clear the matter, but that would involve a ruling beyond what is required in the question raised by the gentleman from Illinois.

Mr. GOOD. Will the gentleman yield?

Mr. EDMONDS. May I ask the gentleman what the Claims Committees are going to do with claims coming over from the Senate that both appropriate and direct money to be paid out of the Treasury?

Mr. MONDELL. Well, taking advantage of the Yankee method of asking a question, may I ask the question, What is the House to do, having amended its rules by depriving certain committees of the authority to appropriate, with a construction of that new rule whereby it can easily be made of no effect, by the simple process of an amendment in the committee that may or may not be adopted by the House and may or not be expected to be adopted in the House?

Mr. EDMONDS. The only thing I can see is that the claims bills coming over from the Senate would have to be sent to the Appropriations Committee.

Mr. MONDELL. And following the suggestion of the gentleman from Illinois, if, assuming the House disagrees with the amendment and the bill is restored to its original form, the point of order can then be raised against the appropriation, why, the gentleman is back where he was at the beginning, and is no further along than he would have been if he had not reported the bill at all.

Mr. EDMONDS. I may be back where I started from, but where does the bill go?

Mr. MANN of Illinois. In one case the bill could not be reported to the House at all, and in the other case, if reported to the House with an appropriation, it would go out on a point of order.

Mr. MONDELL. Mr. Speaker, if the Chair has carefully considered the questions involved, I do not desire to take up the time of the Chair in discussing it. I have had in my mind for some time the thought that there were very serious problems involved in the situation presented by the bill as reported in view of the new rule. I am willing to confess that I have not thought the matter out sufficiently to find a satisfactory solution. If the Chair has given the matter careful consideration, I do not care to take up the time of the Chair to discuss it.

The SPEAKER. The Chair has given a good deal of thought to it, but would be glad to be assisted.

Mr. MONDELL. I have said about all I care to say. I think it is exceedingly important that we shall not have a decision in this matter which will tempt an evasion of the new rule. That might be done if the view of the gentleman from Illinois [Mr. MANN] is adopted, by continuation of the practice of introducing bills carrying an appropriation by amendment in committee, so as to evade the rule, by disagreement to the committee amendment, thus restoring the bill to a condition hostile to the rule or at least hostile to the spirit of the rule.

Mr. WALSH. Mr. Speaker, I wish to take issue with the gentleman from Illinois [Mr. MANN] upon his concluding observation on the point of order which he himself made to the effect that he did not think the point of order was good. The rule is very specific and clear in its language. It says that no committee shall report a bill appropriating money. Then, in the latter part of the rule, it says a question of order upon the bill which does carry that appropriation may be raised at any time.

Mr. MANN of Illinois. Will the gentleman permit?

Mr. WALSH. I know it says "upon the appropriation."

Mr. MANN of Illinois. It does not say "upon the bill."

Mr. WALSH. Upon the appropriation. But, Mr. Speaker, the committee has reported the bill carrying the appropriation clearly in violation of the first paragraph or sentence in the rule. Now, of course, in raising a point of order it necessarily involves the appropriation clause of the bill. That is the only point of order that can be raised, namely, that the committee has reported a bill that carries an appropriation. The fact that the committee amendment changes it to an authorization does not cure it. Necessarily in making a point of order you would have to confine it, particularly making a point of order at this time, when the measure is not before the House for consideration, to the appropriating language in the bill. It seems to me if the rule means anything it means that this committee has acted without authority.

I believe the point of order made by the gentleman from Illinois is good, that it was intended to prohibit these committees from doing it. The Senate bills coming over here, of course, are not directly involved in this situation, because this is a House bill. It seems to me when a rule has been drawn in such clear language as this, and the committee brings in a bill which is contrary to the rule, the point of order must be sustained, and I think that in sustaining it now, before we are involved in any questions affecting Senate bills, would be most opportune, because it would give the Rules Committee opportunity to make some needed amendments to the rule, which, if it is to be construed strictly, might raise some very serious situations with reference to Senate bills in the future. But, it seems to me, Mr. Speaker, that the committee has reported this bill plainly contrary to the rule, and that the only point of order which can be raised, of course, is upon the language making the appropriation at this time.

The SPEAKER. The Chair has given a good deal of thought to this question ever since the rule was adopted, because clearly there are two different interpretations which could be given to the language of the rule. The Chair has tried to come to a conclusion by determining which interpretation would better facilitate the business of the House and would be more in accord with the purposes which the Chair thinks were intended by the rule. At first blush, the reading of the rule would make the point of order applicable. It says:

No bill or joint resolution carrying appropriations shall be reported by any committee not having jurisdiction.

The committee in this case, as the gentleman suggested, acted in accord with the spirit of the rule by offering an amendment striking out the appropriation. And if the committee could change the bill and report the bill without the appropriation that would strictly comply with the rule, but a committee only has jurisdiction to report the bill as it originally was, with an amendment. So the bill still remains with the appropriation in, despite the suggestion of the committee to amend by striking it out. A point of order is not prevented by the amendment which the committee has adopted. So this offers the plain case of whether a point of order lies against a bill carrying an appropriation and reported by a committee which has no appropriating jurisdiction. That clearly does violate the language of the first line of the rule. At the same time there is clause 2 of Rule XXI, which has long been interpreted in the House and which provides that—

No appropriation shall be reported in any general appropriation bill, or be in order as an amendment thereto, for any expenditure not previously authorized by law—

And so forth.

That is a rule of long standing, and is the direct converse of this. That forbids the Committee on Appropriations to report legislation, and this forbids a legislative committee to report appropriations.

That has been construed to mean that the point of order should be made not against the bill itself but against the item in the bill; and in the last clause of the new rule it is provided that a question of order on *an appropriation* in any such bill may be raised at any time, which seems to indicate that the intention was that the point of order should be raised against the appropriation.

This is in accord with the long practice of the House on appropriation bills, and so it seems to the Chair that the purpose of the rule—to prevent legislative committees from reporting appropriations—will be effected by ruling that the point of order lies against the item of appropriation, and not against the reporting of the bill. If the committee had reported an amendment striking out the appropriation and that amendment should be defeated, as the gentleman from Wyoming [Mr. MONDELL] suggests, the point of order could still be made against the appropriation, so that the appropriation would go right out.

It seems to the Chair that in that way the purpose which was intended—to prevent appropriations in legislative bills—would be entirely secured, and in that way we should also be operating along the lines we have been accustomed.

The Chair recognizes, however, that either interpretation could be made, and the Chair has no pride of opinion at all in the matter. He would be perfectly content to have his ruling set aside if the House thinks the other way would be better for the business of the House. But for the sake of establishing a course of action the Chair will overrule the point of order and hold that the point of order must be made to the appropriation itself.

Mr. GARNER. Mr. Speaker, may I ask the Chair a question?

The SPEAKER. Yes.

Mr. GARNER. In case the bill was reported from the Committee of the Whole House on the state of the Union carrying an appropriation, would a point of order at that time against the appropriation be good?

The SPEAKER. The Chair does not get the gentleman's point.

Mr. GARNER. Take the bill under consideration, for example. If I understand the rules of the House, when it comes to consideration we resolve ourselves into Committee of the Whole House on the state of the Union for the purpose of considering the bill. Suppose that the Committee of the Whole House on the state of the Union reports the bill back to the House and it carries an appropriation as the result of that action of the Committee of the Whole House. Then the query is, Will the Speaker hold at that time, if a point of order is made, that the bill can not be considered by the House carrying an appropriation?

The SPEAKER. The Chair had not thought of that contingency. At first blush the Chair would think that would be true, that it could be made at any time, even as late as that. But I would not wish to bind myself by that.

Mr. GARNER. I agree with the Chair that I think that ought to be the rule, but I will call the Chair's attention to his reasoning a moment ago, that even as a point of order would lie against an appropriation carried on a bill reported by a legislative committee, so likewise a point of order would lie at any time against any bill reported from the Committee on Appropriations carrying a legislative provision. We would find ourselves in a very difficult position with reference to the consideration of appropriation bills.

The SPEAKER. The precedents are against that.

Mr. GARNER. I know they are.

The SPEAKER. As the Chair stated, the Chair had not thought of this point before, so it is simply a first-blush opinion, by which the Chair would not wish to be bound in the future.

Mr. MANN of Illinois. If the Chair will permit me, there is no rule providing that a point of order can be made at any time against a legislative provision, and the rule has always been that the point of order must be made before the debate begins. This rule provides that the point of order against an appropriation can be made at any time, can be raised at any time. That is the language of the rule, and that is a differentiation, at least.

Mr. GARNER. Mr. Speaker, may I ask the gentleman from Illinois a question?

Mr. MANN of Illinois. Yes.

Mr. GARNER. Would it be the gentleman's interpretation of this rule that if this Committee of the Whole House on the state of the Union reported back to the House a bill originating in the Committee on Indian Affairs, we will say, which carried an appropriation that was reported back to the House, any Member of the House at that time could raise a point of order against the provision carrying the appropriation?

Mr. MANN of Illinois. I decline to answer the question. I have not given it consideration. I do not know, but——

Mr. GARNER. I have always thought that the gentleman from Illinois knew everything about the rules.

Mr. MANN of Illinois. I apprehend that it is a case that will never arise.

Mr. BLANTON. Mr. Speaker, a parliamentary inquiry.

The SPEAKER. The gentleman will state it.

Mr. BLANTON. In the case of the bill in question, where the Committee of the Whole House on the state of the Union begins consideration of a proposed committee amendment and argument is had upon it, under the ruling of the Chair would a point of order still lie against the bill afterwards—after the argument has been had on the committee amendment?

The SPEAKER. The Chair thinks so. The Chair supposes that is the purpose for which the words "at any time" were inserted in the rule.

Mr. CAMPBELL of Kansas. I understand, Mr. Speaker, that the Chair has ruled?

The SPEAKER. Yes.

Mr. MANN of Illinois. I understand the Chair overrules the point of order?

The SPEAKER. The Chair overrules the point of order.

Mr. CAMPBELL of Kansas. Thereby sustaining the court below.

Mr. LONGWORTH. Mr. Speaker, I make the point of order that no quorum is present.

The SPEAKER. The gentleman from Ohio makes the point of order that no quorum is present. It is clear that no quorum is present.

Mr. MONDELL. Mr. Speaker, I move a call of the House.

A call of the House was ordered.

The SPEAKER. The Doorkeeper will close the doors, the Sergeant at Arms will notify the absentees, and the Clerk will call the roll.

The Clerk called the roll, when the following Members failed to answer to their names:

Babka	Dickinson, Iowa	Kelley, Mich.	Rainey, Ala.
Baer	Donovan	Kincheloe	Ramsey
Begg	Dooling	Kitchin	Riordan
Bell	Doremus	Kraus	Robinson, N. C.
Benson	Doughton	Kreider	Rowan
Blackmon	Drewry	Lehlbach	Sanford
Bland, Ind.	Ellsworth	Lonergan	Scully
Bland, Mo.	Emerson	McCulloch	Small
Booher	Evans, Nev.	McFadden	Smith, Ill.
Bowers	Ferris	McKeown	Smith, Mich.
Brinson	Fields	McKinley	Smith, N. Y.
Britten	Gallagher	McLaughlin, Mich.	Steele
Brumbaugh	Gandy	Maher	Strong, Pa.
Caldwell	Ganly	Major	Swope
Candler	Goldfogle	Mann, S. C.	Vare
Cantrill	Goodall	Mason	Volk
Carew	Graham, Pa.	Mead	Walters
Carss	Griffin	Moon	Williams
Clark, Fla.	Hamill	Mooney	Wilson, Pa.
Costello	Hamilton	Morin	Wise
Crisp	Harreld	Mudd	Wood, Ind.
Crowther	Hill	Nelson, Wis.	Wright
Currie, Mich.	Hulings	Nicholls	Yates
Dale	James, Mich.	O'Connell	Young, Tex.
Davey	Johnson, S. Dak.	Olney	
Denison	Johnston, N. Y.	Perlman	
Dewalt	Juul	Porter	

The SPEAKER. On this roll call 324 Members have answered to their names. A quorum is present.

Mr. CAMPBELL of Kansas. I move to dispense with further proceedings under the call.

The SPEAKER. The gentleman from Kansas moves to dispense with further proceedings under the call.

The motion was agreed to.

The SPEAKER. The Doorkeeper will open the doors.

EMERGENCY SHIPPING FUND.

Mr. CAMPBELL of Kansas. Mr. Speaker, I submit a privileged report from the Committee on Rules.

The SPEAKER. The gentleman from Kansas submits a privileged report from the Committee on Rules, which the Clerk will read.

The Clerk read as follows:

House resolution 634.

Resolved, That in the consideration of the bill (H. R. 15422) "making appropriations for sundry civil expenses of the Government for the fiscal year ending June 30, 1922, and for other purposes," it shall be in order, the general rules of the House to the contrary notwithstanding, to consider the following amendments on page 39, after line 8:

"EMERGENCY SHIPPING FUND.

"The expenses of the United States Shipping Board Emergency Fleet Corporation during the fiscal year ending June 30, 1922, for administrative purposes, the payment of claims arising from the cancellation of contracts, damage charges and miscellaneous adjustments, maintenance and operation of vessels, the completion of vessels now under construction, and for carrying out the provisions of the act entitled 'An act to provide for the promotion and maintenance of the American merchant marine, to repeal certain emergency legislation, and provide for the disposition, regulation, and use of property acquired thereunder, and for other purposes,' approved June 5, 1920, shall be paid from the following sources: (a) The amount on hand July 1, 1921; (b) the amount received during the fiscal year 1922 from the operation of ships; and (c) not to exceed $55,000,000 from deferred payments on ships sold prior to the approval of this act, from plant and material sold during the fiscal year 1922, and from ships sold during the fiscal year 1922: *Provided*, That after the approval of this act no contract shall be entered into or work undertaken for the construction of any additional vessels for the United States Shipping Board or the United States Shipping Board Emergency Fleet Corporation.

"No part of the funds of the United States Shipping Board Emergency Fleet Corporation shall be available for rent of buildings in the District of Columbia during the fiscal year 1922 if suitable space is provided for the said corporation by the Public Buildings Commission.

"No part of the funds made available in this act for the Shipping Board or the Emergency Fleet Corporation shall be expended for the preparation, printing, or publication of any bulletins, newspapers, magazines, or periodicals, or for services in connection with same, not including preparation and printing of reports or documents authorized by law."

Mr. CAMPBELL of Kansas. Mr. Speaker, I will ask the gentleman from Tennessee [Mr. GARRETT] if we can arrange for a suitable time in which to discuss the rule.

Mr. GARRETT. I think that can be arranged.

Mr. CAMPBELL of Kansas. What time does the gentleman from Tennessee require?

Mr. GARRETT. I should like to have 30 minutes.

Mr. CAMPBELL of Kansas. Then, Mr. Speaker, I ask unanimous consent that the discussion on the rule proceed for one hour, one-half to be controlled by the gentleman from Tennessee [Mr. GARRETT] and one-half by myself.

The SPEAKER. The gentleman from Kansas asks unanimous consent that the discussion on this rule be limited to one hour, one-half to be controlled by himself and one-half by the gentleman from Tennessee [Mr. GARRETT]. Is there objection?

There was no objection.

Mr. CAMPBELL of Kansas. Mr. Speaker, for the purpose of acquainting the House with the necessity for this resolution at this time I yield five minutes to the gentleman from Iowa [Mr. GOOD].

Mr. GARNER. Will the gentleman from Kansas yield for a question?

Mr. CAMPBELL of Kansas. Not just at this time. I am yielding to the gentleman from Iowa.

Mr. GOOD. Mr. Speaker, the Shipping Board asked for $147,000,000 to carry on its work for the next year. When the officers came before the Committee on Appropriations this year, as in previous years, they were unable to give the committee any information whatever with regard to their operation. They know absolutely nothing with regard to the business that they are trying to perform. They are wasting money unquestionably by the millions of dollars.

A committee of this House has been making an investigation, and before the hearings were instituted the gentleman from Massachusetts [Mr. WALSH], chairman of the committee, stated to members of the Committee on Appropriations that it ought not to report a single dollar of money out of the Treasury for carrying on the work of the Shipping Board and Fleet Corporation next year. It was impossible to tell just what to do. Under the old rules of the House and before we enacted the shipping law this amendment would not have been in order. It would require a rule to make it in order on any bill. I want to say to the Democratic side of the House who oppose this rule that the expenditure of this fund will be under the new administration; but no matter what administration goes into power on March 4, the business is so big, the interests are so involved and in many directions, and there is so much of waste and extravagance that no efficient organization can be perfected by the 1st day of July. If you want the next administration to continue to waste millions of dollars as the present administration has wasted them in the expenditure of this fund, then make available $100,000,000 or more on the 1st of July for all purposes of the Shipping Board. Mind you, that on the 1st day of July every dollar now used—and it aggregates more than $50,000,000 for operation—is covered into the Treasury, and it will be necessary to appropriate at least $50,000,000 for operations alone. And yet, with a board that is bound to violate the law, that is bent upon wasting money, it can take every dollar of it, as it has done in the past, and do what it pleases with it.

Before the Committee on Appropriations were willing to act upon this matter we took up the subject with members of the legislative committee that would have jurisdiction of the legislation, and they told us that the thing we have done is the very thing they would have done if they had been sitting in our place.

Mr. GARNER. Will the gentleman yield?

Mr. GOOD. I have only five minutes.

Mr. GARNER. I know, but this is a very important matter. We still have a Committee on the Merchant Marine and Fisheries functioning in this House.

Mr. GOOD. Oh, yes; but the gentleman knows that the Committee on the Merchant Marine and Fisheries could not bring in a bill like this every time there was an emergency, and it is supposed that the House and the Congress will act as sensible human beings. When it sees a chance to save $50,000,000 or $100,000,000, it will save it. The Democratic side of the House is not bent on saving money. It has been bent on wasting money, and it wants the next administration to follow in the footsteps of the present administration and continue to waste, but we are not going to do it; we are going to conserve the money and when it is necessary to bring in a rule to make in order a proposition of this kind to save the taxpayer money, we are going to do it. That is the object and purpose of this amendment and this rule. What we have done has been in complete harmony and sympathy with the attitude of every Member of this House on this side so far as I know of the legislative committee that would have jurisdiction of this matter.

The SPEAKER. The time of the gentleman from Iowa has expired.

Mr. GARRETT. Mr. Speaker, I yield five minutes to the gentleman from Tennessee [Mr. BYRNS].

Mr. BYRNS of Tennessee. Mr. Speaker, I am opposed to this manner of making appropriations, and, therefore, I am very much opposed to the rule now pending before the House. The weakness of the position of the gentleman from Iowa lies in the fact that this very Congress last June passed the merchant marine act, known as the Jones Act, which provided expressly that upon June 30 of next year receipts from operations and all other receipts coming from the Shipping Board or the Emergency Fleet Corporation should be covered into the Treasury as miscellaneous receipts, and that thereafter direct appropriations should be made by Congress for whatsoever sum is deemed necessary for the use of the board during the fiscal year. That is the position for which I contended a year ago when the current law was before the House, and Members will possibly remember that I introduced an amendment at that time seeking to make a direct appropriation for the Shipping Board, and covering the receipts from operations and from other sources into the Treasury. That is the only way in the world that you are going to correct the situation of which the gentleman from Iowa [Mr. GOOD] complains. That is the only way that you are going to let the people know and the only way in which Congress can know just what this Shipping Board is expending from month to month and year to year.

The Shipping Board appeared before the Committee on Appropriations and they submitted their estimates. They told the committee they needed so much for this purposes and so much for the other purpose, aggregating something like $148,000,000. It was my contention then, it is my contention now, that the Committee on Appropriations should have observed the law passed by Congress and should have recommended to this Congress exactly what they believed the Shipping Board ought to expend during the next fiscal year, rather than to make an indefinite appropriation when no Member knows just how much it will amount to. Do you Members know that one officer of the Shipping Board said that they would have an operating income next year of $95,000,000? If he is correct, and he is one of the most prominent officers of the Shipping Board, then

what will this appropriation mean? This amendment undertakes to appropriate the balance on hand July 1, the income received from the next fiscal year, and also $55,000,000 from the sale of ships and plants. If that officer be correct, then you are appropriating under this bill at least $150,000,000, which is more than the Shipping Board asked in its estimates. Gentlemen on the Republican side talk about economy. The way to have economy is to make an appropriation of a definite fixed sum, so that the Shipping Board when it comes before the Appropriations Committee may be required to explain to the committee and to Congress just how it has spent that money; but under this amendment you leave whatever receipts they may have in their hands during the next fiscal year, which may amount to more than $150,000,000, or it may amount to less, but whatever sum is left with them they are privileged to use just as they please.

I confess that I am unable to follow the reasoning of the gentleman from Iowa [Mr. GOOD] with respect to the question of economy in this particular appropriation. It does do this: It serves to reduce the estimates upon their face, but it does not save to the Treasury of the United States a single dollar in the matter of appropriation. What I am pleading for, what I have pleaded for heretofore, is a direct form of making appropriations out of the Treasury, so that not only the Shipping Board but all of the agencies of the Government shall be required to turn into the Treasury as miscellaneous receipts whatever they may receive during the fiscal year. That is, in my judgment, the only correct way to make appropriations. It is the only businesslike way to appropriate the public money. That is the only way in which you can keep books with this corporation and cure the situation of which the gentleman from Iowa complains, if he is correct in his criticism. [Applause on the Democratic side.]

The SPEAKER. The time of the gentleman from Tennessee has expired.

Mr. CAMPBELL of Kansas. Mr. Speaker, I yield three minutes to the gentleman from Pennsylvania [Mr. EDMONDS].

Mr. EDMONDS. Mr. Speaker, I opposed the concentration of appropriations in the Appropriation Committee. I am opposed to revolving funds, but an investigation of the situation in regard to the Shipping Board shows that no man can tell exactly what they will make next year. They have said that they would make a certain amount from operations, $95,000,000 I think the gentleman from Tennessee [Mr. BYRNS] tells us. I do not believe they will make anything of the kind. If you desire to hold their operations down in a sensible manner until you know how much money they are really going to make from operations and how much they are going to have from other sources, the only way you can do it is by continuing this revolving fund for another year and allowing either this board or a new board to get their bookkeeping in such shape so that there will be really some sense in the proposition as presented to the committees of Congress.

I would call to the attention of the gentleman from Tennessee [Mr. BYRNS] that section 14 of the Jones bill was written in the House; this is the one which authorizes the Shipping Board to retain a certain amount of money for operation. That is absolutely necessary if you are going to operate these ships freely. You can not go through the ordinary methods of Government and handle these ships. You must handle them in a businesslike manner. It also required them to retain a certain amount for insurance and other things in revolving sums. I do not think at this time it is possible for any man on the Committee on Appropriations or on the Merchant Marine Committee to find out exactly where the Shipping Board stands, and until such time comes I do not see how we can make direct appropriations, although I think everybody will agree that the members of the House committee did think from the information given us that they would be able before the 1st of July, 1921, to tell us this; but I doubt very much, looking at their testimony before the Committee on Appropriations, whether that is possible at this time. I do not believe any man for several months yet can tell exactly how much money should be appropriated by direct appropriations to the Shipping Board to conduct its operations fairly and successfully.

The SPEAKER. The time of the gentleman from Pennsylvania has expired.

Mr. GARRETT. Mr. Speaker, I yield five minutes to the gentleman from Alabama [Mr. BANKHEAD].

Mr. BANKHEAD. Mr. Speaker, this question of the regulation of the activities of the Shipping Board and their methods of business procedure has been one of acute controversy not only in Congress but in the country for quite a number of months. The Committee on Merchant Marine and Fisheries of the House, of which I am a member, gave this question very thorough and prolonged consideration, and in the bill which passed Congress and was approved last June it was not only the deliberate judgment of the members of the committee who had this matter under consideration, but also of the Senate of the United States, that in order to assist in solving this question of the nonbusinesslike methods of operation and in order that the Shipping Board should be called to book, so to speak, for an accounting of its operations, it was provided in the law passed in the last session of Congress that the net proceeds of all of its operations, with the exception of certain small revolving funds and not its entire receipts, should be covered into the Treasury as miscellaneous receipts.

Now, the gentleman from Pennsylvania [Mr. EDMONDS], one of the ranking members of the Committee on the Merchant Marine and Fisheries, said under the provisions of the Jones law that the Shipping Board was authorized to reserve certain sums for a revolving fund, but bear in mind, gentlemen, it was not authorized to reserve its entire receipts; it was not authorized to reserve all moneys that came into its hands from the sale of ships, operation of vessels, and salvage of plants. It was only authorized to reserve the sum provided for in section 12; that is, the sum providing for the reconditioning and suitable repair of ships under its control and of the insurance fund as authorized in section 11 thereof.

Mr. EDMONDS. Will the gentleman yield?

Mr. BANKHEAD. I prefer not; I have only five minutes.

Mr. EDMONDS. And operating, section 2.

Mr. BANKHEAD. The statement made by the gentleman from Tennessee [Mr. BYRNS], in my judgment, is sound when he said that the only way in which we were to have a businesslike and systematic accounting in the operations of the Shipping Board was to require them, as we have required them under the exising law, which you are now seeking to set aside, to strike a balance, to produce their ledgers, so to speak, for the benefit of the Congress of the United States and for the benefit of the Committee on Appropriations, and the only way to do that is to require them to pay at a certain fixed date all of their profits, if they have any, into the Treasury of the United States, and by that method, gentlemen, if you are seeking business procedure and economical administration, then you would have a basis upon which the Congress and the Committee on Appropriations could intelligently determine whether or not they were operating at a loss or whether they were operating at a profit. Having all these things in mind—and I confess I voted for the conference report on the Jones bill with grave misgivings as to some of its features—we have provided a method of attempting to call the Shipping Board to an accounting to the country and with the Congress. Now, gentlemen, the chairman of the Committee on Appropriations the other day in his argument said that one of the main purposes he had in mind was to force the Shipping Board to sell these vessels and sell their other property. Well, your bill, gentlemen, for which you are responsible, has declared a policy in reference to the sale of these ships, and if I had time I would like to read the declaration of policy as announced in the bill. It gave to the Shipping Board broad, liberal, and elastic powers in the exercise of plenary discretion in the sale of these ships, providing they should undertake the administration under businesslike methods. They offered a great many ships for sale at reasonably high prices. Remember, there was a great clamor at that time against their sale. Gentlemen, I believe the best method for us to follow in this case is to follow the deliberate law of Congress and require an exact accounting to the Treasury of the United States on the part of the Shipping Board. [Applause.]

Mr. CAMPBELL of Kansas. Mr. Speaker, I yield two minutes to the gentleman from Massachusetts [Mr. GREENE].

Mr. GREENE of Massachusetts. Mr. Speaker, the necessity for this rule is such that I feel that the House ought to adopt the rule. There is no question in my mind that this is an emergency that we must face to-day, and for that reason, the item having been placed in the bill by the Committee on Appropriations after full and fair consideration during my absence from the House on account of illness, I was not able to be present when this bill was being prepared, so I could not appear before the committee; therefore, under the circumstances, the only course I can see is to take favorable action without delay on the special rule, and thus place the matter in proper form so that the Shipping Board may function after the 1st of July, 1921. I certainly hope that the House will agree to the rule providing for the restoration of the legislative provisions, which were stricken from H. R. 15422 on points of order, and which provisions will be provided for by the adoption of the rule. [Applause.]

Mr. GARRETT. Mr. Speaker, I yield five minutes to the gentleman from South Carolina [Mr. BYRNES]. [Applause.]

UMI

Mr. BYRNES of South Carolina. Mr. Speaker, under the general statutory law every department of the Government is required to cover into the Treasury the proceeds of the sale of property. Departing from this general law this Congress in passing the last sundry civil bill instead of making a direct appropriation for the Shipping Board provided that it should secure funds from five or six different sources, the sale of ships, plants, and so forth. I opposed that plan and predicted that as the result of it it would be impossible for the Congress ever to learn anything about the accounts of the Shipping Board, and therefore I am not surprised to learn that as the result of the action of the Congress then, that when the Shipping Board now presents its estimate the members of the subcommittee are unable to secure an intelligent idea of expenditures. The confusion in accounts caused in some measure by the form of our appropriation is now urged as a reason why we should again authorize an indefinite appropriation and thus perpetuate the confusion. Instead of directing now that the Shipping Board shall cover into the Treasury every dollar received from any source and appropriating the amount necessary for the Shipping Board, so that the Congress and the country may know exactly how much is being spent for this purpose, we direct again that they shall spend the unexpended balance on July 1, and in addition such an amount of money as may be secured from operations and from the sale of plants and ships. I challenge any man to say how much you will appropriate for the Shipping Board by the language of this bill. [Applause on the Democratic side.] Are you appropriating the $147,000,000 asked for or $175,000,000? You do not know because you do not know how much they will receive from operations. That is no way to cure confusion by authorizing greater confusion. The other argument was, and the only other argument, that he wants to force the Shipping Board to sell its ships. The bill passed by this Congress directs the Shipping Board to sell as rapidly as may be consistent with sound business methods. If this Shipping Board has not sold as rapidly as in the opinion of the chairman of this committee is consistent with sound business methods, are the Republicans of this House willing to say now to your President elect that you have no confidence in his ability to appoint a Shipping Board who will carry out the mandates of the Congress during the next fiscal year for which these appropriations are asked? Will you tell him in advance that he can not appoint a board that will execute the law and sell these ships in accordance with sound business methods?

And the danger in it is this: We are departing from good business methods and are resorting to a method which will require the people of America hereafter to employ an expert accountant in order to ascertain how much money is being spent by the various departments of the Government. Is it good business judgment? If so, when the Post Office bill comes in here, strike out all after the enacting clause and substitute for it that they shall be authorized to spend from the revenues of the Post Office Department enough money to run its business during the next fiscal year. The real reason is that some gentleman wants to get on the floor and say that the Shipping Board asked for $147,000,000 and we did not give them a cent, and we have saved $147,000,000. That might have been done before the election; but the Lord knows you had such a majority it is useless for you to resort to such methods now at the expense of the people. Let us get through with politics. The election is over. Let us get back to good business, appropriate the money we want them to spend, make them account for it, and make them turn into the Treasury every dollar received from any source whatever. [Applause.]

Mr. CAMPBELL of Kansas. Mr. Speaker, I yield two minutes to the gentleman from New York [Mr. ROWE].

Mr. ROWE. Mr. Speaker, we are all agreed here to-day that a revolving fund is a wrong principle, but we just closed a war, and that shipping business was the greatest business in shipping ever established in the world, many times larger than any shipping company ever in existence. Books were not kept as books should be kept. There has been no accounting made up to this time, and there will be none before July 1 next of any importance, so that you can not know anything about the expenses of the Shipping Board for the coming year. Now, with those facts in existence, we can not appropriate a lump sum, but we must make provision of this kind. I am not, any more than the rest of you, for a revolving fund. The Merchant Marine Committee unanimously put into the Jones-Greene Act the provision which is spoken of here to-day. That should be the policy and that is the policy of the Government of the United States.

You can not put it in force now. You may be able to do it during the year that is to come. To-day we are met with a condition. We must either arrange for an appropriation to keep the Shipping Board in existence after June 30 next, or else have some special Congress provide for it. [Applause.]

Mr. CAMPBELL of Kansas. Mr. Speaker, I yield three minutes to the gentleman from New York [Mr. SNELL].

Mr. SNELL. Mr. Speaker, I am just as much opposed to legislation on an appropriation bill as any man in this House. But here is a special proposition that needs special consideration, and when you have a proposition of that kind it is proper for the Rules Committee to function. That is what the Rules Committee was created for. It is up to the Rules Committee to meet each proposition and decide it on its own merits, and I am willing to meet that situation at this time and take my share of the responsibility as a member of the Committee on Rules for bringing this special rule in to be considered at this time.

Now, the general proposition concerning the position we find ourselves in at this time has been very carefully, concisely, and definitely stated by the chairman of the Appropriations Committee and various members of the Committee on the Merchant Marine and Fisheries, and they are absolutely in accord as to what is best for us to do at this time. And the only opposition that I can find on the part of anyone is the fact that perhaps by doing this we are taking some authority from the Committee on the Merchant Marine and Fisheries in the way of legislation, or in some other way interfere with their prerogatives. But that argument does not apply in this case, because they are agreed, the majority of the committees are, at least, that this should be done at this time, and there is nothing else to do at this time to accomplish what is necessary to be done. Now, I am in favor of it for two reasons. In the first place, that it is necessary to have some legislation of this kind—and as far as I know no one disputes it—and if it came direct from the Merchant Marine and Fisheries Committee, the committee that controls this legislation, it would be necessary for them to go through the same steps and get a special rule to bring it on the floor of the House. We are not only saving time in doing it in this way, but it meets the approval of both committees, and it is the proper procedure in every respect.

Mr. BUTLER. Is not that the argument that is always used for legislation upon appropriation bills?

Mr. SNELL. I think perhaps that is so. It is a question we must meet. It is special, and we must meet each question on its individual merit and decide it. But, above all, and what interests me in this matter—and there has nothing been said to the contrary—is that it will save money to adopt this rule and pass this legislation at this time. If that is a fact, I am for it, regardless of anything else, provided it can be done in an orderly way. And I think it is the opinion of this House that we should do everything we can to save money, and anything orderly in that direction will meet its approval. The question is raised of not making a direct appropriation.

The SPEAKER. The time of the gentleman from New York has expired.

Mr. CAMPBELL of Kansas. Mr. Speaker, I yield one more minute to the gentleman.

Mr. SNELL. I am in favor of doing that every time it is possible, but the reason we can not do it is because we do not know how much to appropriate. The board can give us no definite information. We are not responsible for the people who kept the books of the Shipping Board. If we had a board down there that knew anything of what they were doing and could give us any information on which to base an appropriation, we would be glad to make a lump-sum appropriation. And I further state to the gentleman from South Carolina [Mr. BYRNES] that when the President elect has a board of his own selection, and it has been in office for four years, it will know more about what is going on than the present board, and then we will be willing to take the responsibility, but we are not willing to take the responsibility for the one the present administration has given us. And when we do control that board we will be in position to legislate as we should in this matter.

This rule should be adopted.

Mr. GARRETT. Mr. Speaker, I yield four minutes to the gentleman from Tennessee [Mr. DAVIS]. [Applause.]

Mr. DAVIS of Tennessee. Mr. Speaker and gentlemen of the House, I do not suppose that any of us are opposed to making a proper appropriation for carrying on the business of the Shipping Board, but many of us do oppose the manner in which it is sought to be done here. Those who have spoken in favor of this rule occupy a very peculiar and remarkable attitude in admitting that they are opposed to a revolving fund, and are opposed to grafting legislation on appropriation bills, and yet they are favoring this rule for the reason, as stated by the gentleman from Iowa [Mr. GOOD], that the Shipping

Board has been unable to make any intelligent accounting of their receipts and disbursements. And because of that fact they propose to make "confusion worse confounded" by relieving this Shipping Board, which they have so severely criticized, from paying their receipts into the Public Treasury, and then expending only so much as the Congress says they shall expend.

This rule is unwise and unnecessary, and undertakes to make in order a provision which is not only not authorized by any existing law but which is directly in conflict with the provisions of the shipping act passed last June requiring revenues received by the Shipping Board from sales and operations to be covered into the Treasury of the United States as miscellaneous receipts, as to which provision there was absolute unanimity in the committees and in the House and Senate. While there were controversies as to other provisions of the shipping act, yet every member of the Merchant Marine and Fisheries Committee favored this provision, and there was not a voice raised against it in this House; and yet six months later this extraordinary procedure is invoked to override that plain provision of the law.

Of course, it is palpable that the purpose of it is to delude the public into the belief that the appropriation bill carries less than would appear on its face if a specific appropriation was carried in the regular way, and in order that the Republicans may make another of their threadbare claims of reduction in the estimates submitted by the departments. The insistence that this course is in the interest of economy is absurd; if one-tenth of their charges of extravagance by the Shipping Board be correct, the course they now pursue is just the opposite of economy.

We are opposed to this rule because we are for economy. We are opposed to permitting the present board or any other board to spend so much as they may see proper to spend, and with no limitation except the limitation fixed by the amount of receipts which may be brought in to the board. This is worse than a lump-sum appropriation. It is an appropriation of an unknown, uncertain, indefinable amount, which, as I say, is limited only by the revenues which may be brought in to that board during the next year.

Mr. LAZARO. Will the gentleman yield for a question?

Mr. DAVIS of Tennessee. I will.

Mr. LAZARO. Would it not be a temptation for the board to sacrifice our ships at a time when there is no market for them?

Mr. DAVIS of Tennessee. Yes; and in that connection I call attention to the statement made the other day by the gentleman from Iowa, that they wanted to force this Shipping Board to do what they asked it to do, he intimating that the purpose was to force them to sell these ships.

Mr. LAZARO. At a time when there is no market?

Mr. DAVIS of Tennessee. Yes. Congress enacted the shipping act last June, and it defined the manner and gave the instructions under which these ships should be disposed of. This act stated, in substance, that the Shipping Board should dispose of them "as soon as practicable, consistent with good business methods."

Now, if it is to be the policy of this Congress, if it is the desire of Congress for these ships to be sacrificed at whatever they may bring, regardless of their cost and regardless of their real value, if it is the desire for that to be done, as is being insisted by the private shipping interests, let this Congress manfully walk up and pass a law embodying an instruction to that effect, and not try to pass a proposition of this kind up to the Shipping Board, forcing them to sacrifice ships at any old price in order to raise money to pay current expenses.

I think that the proposition is indefensible. It is admittedly so, generally speaking, and in this particular case I respectfully submit that no reason whatever has been assigned why they should be relieved from covering their receipts into the Public Treasury and then expending only so much as they are authorized to spend. [Applause on the Democratic side.]

The SPEAKER pro tempore. The time of the gentleman from Tennessee has expired.

Mr. CAMPBELL of Kansas. Mr. Speaker, I yield three minutes to the gentleman from Illinois [Mr. CHINDBLOM].

The SPEAKER pro tempore. The gentleman from Illinois is recognized for three minutes.

Mr. CHINDBLOM. Mr. Speaker, when Judge Payne had been appointed a member and chairman of the Shipping Board and appeared before the Committee on the Merchant Marine and Fisheries, his talk before the committee swept through the room like a fresh breeze. It seemed as if finally the Shipping Board would set about making an audit of its accounts and installing an efficient business method of handling its affairs. The committee believed that Judge Payne had started right, that he was about to put the business of the Shipping Board upon a proper basis. Unfortunately for the Shipping Board, perhaps fortunately for the Department of the Interior, of which Judge Payne was soon thereafter appointed the head, he was compelled to abandon his work in the Shipping Board, and, quoting the gentleman from Tennessee [Mr. DAVIS], it seems that upon the appointment of a new board by the President there ensued a condition of "confusion worse confounded." It was the hope of the Committee on the Merchant Marine and Fisheries, when they reported the present merchant marine act, that the affairs of the Shipping Board, and especially of the Emergency Fleet Corporation, would be in such shape by the 1st of next July that a direct appropriation could be made by the Congress to cover its expenditures. I am not willing now to relieve the Shipping Board of the situation in which it and its predecessors have placed it through the unbusinesslike methods which have been pursued. I believe this rule is wise. I believe the proposed method of appropriation at this time is wise, in order that the Shipping Board, the present Shipping Board or a new one, may have an opportunity to come to the Congress with some kind of a financial statement, some kind of a balance sheet, to show just how they stand, in order that we may act intelligently when we dip into the Treasury of the United States and make to them a direct appropriation. [Applause on the Republican side.]

The SPEAKER pro tempore. The time of the gentleman from Illinois has expired.

Mr. GARRETT. Mr. Speaker, I yield three minutes to the gentleman from Texas [Mr. HARDY].

The SPEAKER pro tempore. The gentleman from Texas is recognized for three minutes.

Mr. HARDY of Texas. Mr. Speaker, it seems to me that this rule and the amendment it makes in order is a continuation of the very nice performance of the last session by which it will be remembered the Republicans endeavored to cover up the real appropriation of Congress and make it appear that nothing was appropriated, or but little, whereas there was a vast sum appropriated. [Applause on the Democratic side.]

The Shipping Board presented their estimates to the Committee on Appropriations, showing that the operating expenses of the Shipping Board would be about $147,000,000, for which there ought to be an appropriation. Instead of doing that, this Committee on Appropriations come to this Congress with no appropriation for operations, but a provision by which the sales money of the ships, the operating income for the year 1922, and the money on hand July 1 of this year may all be used by the Shipping Board as a revolving fund. In other words, they give you a vague, nebulous, indefinite sum from which the Shipping Board must be operated, and violate the law which the Merchant Marine Committee of this House reported out by a unanimous vote and which Congress passed by a practically unanimous vote, led by the Committee on Merchant Marine and Fisheries. Under that law the Shipping Board was required to turn into the Treasury all its earnings and receipts of every kind, and come to Congress for an appropriation for its expenditures. The advantage to be derived from this manipulation is that the Republican Party may go before the country with the pretense of appropriating only $460,000 for the Shipping Board, whereas they are really appropriating vaguely possibly $150,000,000. [Applause on the Democratic side.] But the country thinks they are economical. There is absolutely no economy effected, but extravagance may result from the very vagueness of the income which they are authorized to spend under this law. They played that trick last session. They cut down the appropriations for the Shipping Board apparently one hundred and odd million dollars and made a revolving fund of the money they get from the sale of the ships, from operations, and from other sources.

By this means they went before the country with a great claim of reduced appropriations and reduced expenditures when there was really no reduction. What we want is the business system that this Congress has insisted on in other departments, making the Shipping Board turn into the Treasury every dollar it receives and give to the Congress an account of every dollar that it expends. Let the accounting of the Government, the appropriation bills of Congress, show the truth and not hide the truth. [Applause on the Democratic side.]

The SPEAKER pro tempore. The time of the gentleman from Texas has expired.

Mr. CAMPBELL of Kansas. Mr. Speaker, I yield three minutes to the gentleman from Illinois [Mr. MANN].

The SPEAKER pro tempore. The gentleman from Illinois is recognized for three minutes.

Mr. MANN of Illinois. Mr. Speaker, as I understand, this matter is a method of making appropriations for the Emergency Shipping Board. It is a method of appropriation. While ordinarily it is desirable to make appropriations out of the Treasury and require all receipts to be covered into the Treasury, there are emergencies where it is desirable to make a branch of the Government take the money which it has to use for operations out of money which it receives. We have endeavored for a long time to force the Shipping Board to follow a policy in consonance with the opinion of our side of the House. We can only do it now by making the appropriation in the manner suggested by the Committee on Appropriations. I think the emergency is such that we ought to adopt the rule, and adopt the provision that is reported in the bill from the Committee on Appropriations, and compel the Shipping Board to get down to business and respond to the feeling of the Republican side of the House. [Applause on the Republican side.]

Mr. GARRETT. Mr. Speaker, I have left nine minutes.

The SPEAKER pro tempore. The gentleman from Tennessee is recognized for nine minutes.

Mr. GARRETT. Mr. Speaker, we seem to be "getting back to normalcy" all right.

Mr. MANN of Illinois. That is what we want.

Mr. GARRETT. Let me say that in the remarks I shall make about this matter nothing personal is intended. The chairman of the Committee on Appropriations and the several members of that committee have my great respect and sincere regard.

So far the merits of the legislation have been discussed. I want to talk for a minute about the rule.

Near the close of the last session of the present Congress there was adopted an amendment to the rules of the House, more important, probably, than any of the amendments that have been put upon the rules in recent years.

By the adoption of that amendment we reverted to a practice in the House of Representatives with which not a single Member of the House, I think not even the gentleman from Illinois [Mr. CANNON], was personally familiar by experience. We stripped seven committees of this House of all appropriating authority. Under the practice which had grown up, many of the appropriations of those committees had become so intimately connected with legislation that the separation of the two presented very great difficulties. Nevertheless we provided that that excision should be made. There was opposition to it. There had been opposition to all similar efforts for years, and it had been successful up until the last session of the present Congress. But it was privately expressed and publicly stressed, particularly to those members of the committees that had appropriating power of which it was proposed to denude them, that the practice of permitting the Committee on Appropriations to legislate would be absolutely broken up, and that the legislative committees would be left in supreme control of legislative matters.

Upon that theory and with that emphasis a sufficient number of the Members of the House joined in voting for this change in the rules to bring it about. I was one of those who voted for it. I believe the system is worth trying. I want to see it given a fair trial.

And yet what have we here?

On the very first bill presented by the chairman of the Committee on Appropriations personally we find offered a piece of legislation hotly contested, as has been demonstrated here this morning. That piece of legislation goes out on a point of order. Straightway, in exact accordance with the old practice, the Committee on Rules is called together and the word is passed in from somewhere, "Make this in order." [Applause.]

Mr. Speaker, how idle now seems the talk which we heard at the time this amendment to the rules was adopted. Do you say this thing can be done only in this way? Is the Committee on the Merchant Marine and Fisheries willing to admit its incompetency to present a short joint resolution which shall suspend that act which they themselves unanimously reported and urged just a few months ago?

Oh, you gentlemen of the committees that have been stripped of appropriating power, if you permit this rule to be adopted, if you set the precedent that every time it seems a little bit more convenient to permit this powerful Committee on Appropriations to bring in legislation which it is your proper function to pass upon, you will have destroyed all the good effect of this budget rule. And not only that. The Committee on Appropriations had better be guarded, because they are taking here the first step toward their own downfall in regard to that budget matter. [Applause.]

It will be true, as I saw suggested in the public prints by my genial friend from Pennsylvania [Mr. BUTLER], the chairman of the Committee on Naval Affairs, that all excepting the Committee on Appropriations might as well go home, except that they will need here a pliant Committee on Rules to bring in the rules that will enable them to legislate.

Mr. Speaker, it is idle to say that this legislation can not be passed in the orderly way if the majority desire to pass it. Here it is proposed to bring in hotly controverted legislation, and with only 10 minutes' debate—because it is proposed to consider this under the 5-minute rule—to put it on an appropriation bill, in direct contravention of the general rules of the House, in direct contravention of every promise that was made and every pledge that was uttered when the gentlemen were working so hard to secure the passage of this budget rule.

Mr. BUTLER. Mr. Speaker, will the gentleman yield?

Mr. GARRETT. I yield to the gentleman from Pennsylvania.

Mr. BUTLER. Is not this about what has been occurring for the last 20 years?

Mr. GARRETT. Ah——

Mr. BUTLER. A moment ago the gentleman referred to me very civilly, and I want to be entirely civil to him. Is not this just exactly what has been occurring in this House in the last 20 years? Can the gentleman tell me wherein any additional danger lies in adopting this rule? Did I understand the gentleman to say that he voted in favor of the rule which denatured the Naval Affairs Committee of this House and made it impotent?

Mr. GARRETT. Yes; I voted for the rule which, from the gentleman's standpoint, wounded his committee; but I am not here to rub salt in the wounds that have been given the gentleman. [Applause.]

Mr. BUTLER. Mr. Speaker, was it not a good time to think about that before the gentleman gave the wound?

Mr. CAMPBELL of Kansas. Mr. Speaker, the House is confronted with a condition. We are not now discussing a theory. The House finds itself under the necessity of making an exception to the general rules of the House, and it is employing the usual methods when the House has found it desirable to do just that thing. There is nothing unusual about this proceeding.

The rules of the House were made for the convenience of the House. The Committee on Rules was created to enable the House to act when it desired to act with an exception to the general rule. That is what we are doing here this morning.

The Committee on Appropriations, in appropriating for the Emergency Fleet Corporation, found that corporation was in a condition that can not be described in parliamentary language. They were unwilling to make lump-sum appropriations for that activity of the Government, and therefore the committee provided that if that concern desired additional money it might use it as it made it, with certain limitations.

Now, let us get right down to the brass tacks of the thing. The item to be made in order by the rule provides that the expenses of the United States Shipping Board Emergency Fleet Corporation during the fiscal year ending June 30, 1922, shall be paid from the following sources:

First, the amount on hand July 1, 1922. The Lord only knows how much that is, or whether it will be anything or not.

Second, the amount received during the fiscal year 1922 from the operation of ships. Nobody can tell what that will be.

Third, not to exceed $55,000,000 from deferred payments on ships sold prior to the approval of this act, from plant and materials sold during the fiscal year 1922, and from ships sold during the fiscal year 1922.

There is a limitation of $55,000,000 upon the amount even that they shall use or may use on the last items. A reading of the hearings before the Appropriations Committee shows that those who appeared in behalf of the Emergency Fleet Corporation and are responsible for its operation know nothing about how much money they have on hand, how much they have taken in, how much they have spent, what their income may be for the next fiscal year, or what their expenses may be. They do not know how much is coming to them for ships sold; they do not know how much it will cost them to repair ships; and in order to get a bookkeeping account with the corporation that can be passed over to the next administration, which will enable the next administration to begin somewhere, it is necessary that we do just what is provided for in this rule. It can not be done if a lump-sum appropriation of $147,000,000, such as is asked for by the Fleet Corporation, is given by Congress. This is a method of appropriating money. I think the Committee on Appropriations very wisely stated that this Fleet Corporation might have money if they could raise it out of their own resources, out of the business that they were conducting. Does it not look to you like a good business proposition? It certainly looks that way to me, and it will look that way to the

country, and it will look that way to everybody who knows anything about the Emergency Fleet Corporation.

Now as to the question raised by the gentleman from Tennessee [Mr. GARRETT] about this rule being a total violation of the understanding or of the rules of the House as agreed upon when the Committee on Appropriations was given the appropriating power of all of the activities of the Government. The Committee on the Merchant Marine and Fisheries, that has legislative jurisdiction over the subject, knowing the conditions in the Fleet Corporation, knowing the necessity for this legislation, knowing the necessity that the appropriation be made in this way, approve this rule and ask that the appropriation be made in this way. They are not jealous.

Mr. CHINDBLOM. Mr. Speaker, will the gentleman yield?

Mr. CAMPBELL of Kansas. Yes.

Mr. CHINDBLOM. Will the gentleman yield for this suggestion? If the rule passes, it will register the will of the House, will it not?

Mr. CAMPBELL of Kansas. Absolutely. And it will enable the House to do exactly what the House wants to do about this matter.

I regret that this has become a partisan matter. I had hoped that in the closing hours of this Congress the minority Members of the House would join with the majority Members in a policy that would enable the Government to save some money by the practice of economy; but the Democratic minority favor going on in the same old way, giving lump-sum appropriations to incompetent and inefficient functionaries of the Government. I think we are doing the wise thing by bringing in this rule providing that the Emergency Fleet Corporation may in the next year have money with which to pay their expenses if, after having spent over $3,000,000,000, they can use the investment and make a few million dollars with which to pay their own expenses.

Mr. PELL. Mr. Speaker, will the gentleman yield?

Mr. CAMPBELL of Kansas. Yes.

Mr. PELL. Is it the idea to economize by passing utterly indefinite appropriations, the amount of which nobody can tell?

Mr. CAMPBELL of Kansas. It is far better to pass an appropriation of this kind for an incompetent organization than to give it a lump sum of $147,000,000 out of the Treasury.

Mr. PELL. Would one dollar of this be expended by the present board? Every dollar we are appropriating will be expended by the next board.

Mr. CAMPBELL of Kansas. Very much of the Shipping Board organization will be carried over, and the bookkeeping of the next administration will be compared with the bookkeeping of this administration, and we will have an opportunity of knowing why it is that one administration was able to make a success of its business and another was unable to meet expenses out of the operation of the Fleet Corporation.

Mr. Speaker, I move the previous question on the resolution.

The previous question was ordered.

The SPEAKER. The question is on agreeing to the resolution.

Mr. GARRETT. Mr. Speaker, on that I demand the yeas and nays.

The yeas and nays were ordered.

The question was taken; and there were—yeas 190, nays 131, not voting 108.

YEAS—190.

So the resolution was agreed to.

The Clerk announced the following pairs:

Mr. BROWN (for rule) with Mr. JONES of Texas (against rule).

General pairs:

Mr. HARRELD with Mr. WRIGHT.

Mr. BLAND of Indiana with Mr. MCKEOWN.

Mr. MONAHAN of Wisconsin with Mr. BRUMBAUGH.

Mr. PORTER with Mr. CARSS.

Mr. JUUL with Mr. CRISP.

Mr. WOOD of Indiana with Mr. SISSON.

Mr. GRAHAM of Pennsylvania with Mr. STEELE.

Mr. BOWERS with Mr. RAINEY of Alabama.

Mr. WILLIAMS with Mr. DAVEY.

Mr. DICKINSON of Iowa with Mr. MOON.

Mr. COSTELLO with Mr. MEAD.

Mr. EMERSON with Mr. EVANS of Nevada.

Mr. DENISON with Mr. MAJOR.

Mr. CROWTHER with Mr. GRIFFIN.

Mr. MASON with Mr. BELL.

Mr. YATES with Mr. YOUNG of Texas.

Mr. KREIDER with Mr. FERRIS.

Mr. HAUGEN with Mr. WILSON of Pennsylvania.

Mr. GLYNN with Mr. DOUGHTON.

Mr. STEENERSON with Mr. DONOVAN.

Mr. BAER with Mr. ROBINSON of North Carolina.
Mr. SWOPE with Mr. MCKINLEY.
Mr. MORIN with Mr. ASWELL.
Mr. BEGG with Mr. GALLAGHER.
Mr. JAMES of Michigan with Mr. KINCHELOE.
Mr. KLECZKA with Mr. MANN of South Carolina.
Mr. WALTERS with Mr. GANLY.
Mr. JOHNSON of South Dakota with Mr. CANDLER.
Mr. BURKE with Mr. O'CONNELL.
Mr. VOLK with Mr. TAYLOR of Arkansas.
Mr. WHITE of Maine with Mr. CAREW.
Mr. ELLSWORTH with Mr. FIELDS.
Mr. DALE with Mr. MAHER.
Mr. VARE with Mr. GOLDFOGLE.
Mr. HAMILTON with Mr. DOOLING.
Mr. CURRIE of Michigan with Mr. WHALEY.
Mr. NELSON of Wisconsin with Mr. KITCHIN.
Mr. RODENBERG with Mr. BLAND of Missouri.
Mr. FISH with Mr. SULLIVAN.
Mr. STRONG of Pennsylvania with Mr. RIORDAN.
Mr. SMITH of Illinois with Mr. WISE.
Mr. PERLMAN with Mr. MOONEY.
Mr. WALSH with Mr. VENABLE.
Mr. SUMMERS of Washington with Mr. DREWRY.
Mr. RAMSEY with Mr. BABKA.
Mr. SANFORD with Mr. CALDWELL.
Mr. STINESS with Mr. BENSON.
Mr. SMITH of Michigan with Mr. CANTRILL.
Mr. HILL with Mr. OLNEY.

Mr. SISSON. Mr. Speaker, I desire to vote "no."

The SPEAKER. Was the gentleman present and listening when his name was called?

Mr. SISSON. I did not hear my name called. I do not know that I was listening, but I was present and did not hear it.

The SPEAKER. Of course, the gentleman understands the Chair is obliged to put the question to him, and the gentleman must take the responsibility of answering.

Mr. SISSON. I understand. I will tell the facts about it. I was present, but I can not state I was listening and I did not hear my name called. I understand the rule.

The SPEAKER. The purpose of the rule is that a mistake may have been made by the Clerk and the gentleman's name may not have been called. That really is the only purpose——

Mr. SISSON. I understand. I do not know I even was listening. It may have been due to inattention. I desire to say if I were permitted, I would vote "no."

The SPEAKER. The Chair thinks the gentleman does not qualify.

Mr. SUMNERS of Texas. I desire to vote.

The SPEAKER. Was the gentleman present and listening when his name was called?

Mr. SUMNERS of Texas. No.

The SPEAKER. The gentleman does not bring himself within the rule.

Mr. YATES. Mr. Speaker, I desire to vote "aye."

The SPEAKER. Was the gentleman present and listening when his name was called?

Mr. YATES. No; I was not present.

The SPEAKER. The gentleman does not bring himself within the rule.

The result of the vote was announced as above recorded.

SUNDRY CIVIL BILL.

Mr. GOOD. Mr. Speaker, I move that the House resolve itself into the Committee of the Whole House on the state of the Union for the further consideration of the bill H. R. 15422.

The motion was agreed to.

Accordingly the House resolved itself into the Committee of the Whole House on the state of the Union for the further consideration of the bill H. R. 15422, the sundry civil bill, with Mr. WALSH in the chair.

The CHAIRMAN. The House is in Committee of the Whole House on the state of the Union for the further consideration of the bill H. R. 15422, which the Clerk will report by title.

The Clerk read as follows:

A bill (H. R. 15422) making appropriations for sundry civil expenses of the Government for the fiscal year ending June 30, 1922, and for other purposes.

The CHAIRMAN. The Clerk will read.

Mr. BLANTON. Mr. Chairman, a parliamentary inquiry.

The CHAIRMAN. The gentleman will state it.

Mr. BLANTON. Will the matter made in order by the rule be reverted to later on or is it considered as placed back in the bill by this rule?

The CHAIRMAN. The Chair assumes that the gentleman from Iowa will at the proper time make a motion to bring this matter made in order by the rule to the attention of the committee. The Clerk will read.

The Clerk read as follows:

SEC. 3. Any journal, magazine, periodical, or similar publication which is now being issued by a department or establishment of the Government may, in the discretion of the head thereof, be continued, within the limitation of available appropriations or other Government funds, until June 30, 1922, when, if it shall not have been specifically authorized by Congress before that date, such journal, magazine, periodical, or similar publication shall be discontinued.

Mr. MANN of Illinois. Mr. Chairman, I make a point of order against section 3.

The CHAIRMAN. The gentleman from Illinois makes a point of order against the language of section 3. Does the gentleman from Iowa desire to be heard on the point of order?

Mr. GOOD. No; I concede the point of order.

The CHAIRMAN. The point of order is sustained.

Mr. GOOD. Mr. Chairman, by the rule adopted the amendment at page 39, line 8, is made in order, and I offer that amendment at this time.

The CHAIRMAN. The gentleman from Iowa offers an amendment, which the Clerk will report.

The Clerk read as follows:

Amendment offered by Mr. GOOD: Page 39, after line 8, insert:

"EMERGENCY SHIPPING FUND.

"The expenses of the United States Shipping Board Emergency Fleet Corporation during the fiscal year ending June 30, 1922, for administrative purposes, the payment of claims arising from the cancellation of contracts, damage charges and miscellaneous adjustments, maintenance and operation of vessels, the completion of vessels now under construction, and for carrying out the provisions of the act entitled 'An act to provide for the promotion and maintenance of the American merchant marine, to repeal certain emergency legislation, and provide for the disposition, regulation, and use of property acquired thereunder, and for other purposes,' approved June 5, 1920, shall be paid from the following sources: (a) The amount on hand July 1, 1921; (b) the amount received during the fiscal year 1922 from the operation of ships; and (c) not to exceed $55,000,000 from deferred payments on ships sold prior to the approval of this act, from plant and material sold during the fiscal year 1922, and from ships sold during the fiscal year 1922: *Provided*, That after the approval of this act no contract shall be entered into or work undertaken for the construction of any additional vessels for the United States Shipping Board or the United States Shipping Board Emergency Fleet Corporation."

Mr. BANKHEAD. Mr. Chairman, a parliamentary inquiry?

The CHAIRMAN. The gentleman from Alabama will state his parliamentary inquiry.

Mr. BANKHEAD. When this first section of the emergency shipping fund was subjected to a point of order by the gentleman from Tennessee the point of order did not include the three paragraphs on page 40, beginning within line 8 and ending with line 22, so that as a matter of fact those sections of the bill were not subject to a point of order. They were read and passed when we were in Committee of the Whole.

The CHAIRMAN. The Chair will state that the only language in the bill under the title of "Emergency shipping fund" were lines 8 to 11, page 40; all the other language later went out on points of order having been raised and sustained by the Chair.

Mr. BANKHEAD. Well, I heard no points of order except that interposed by the gentleman from Tennessee.

The CHAIRMAN. Well, the Chair did; and sustained the points of order.

The Clerk read as follows:

No part of the funds of the United States Shipping Board Emergency Fleet Corporation shall be available for rent of buildings in the District of Columbia during the fiscal year 1922 if suitable space is provided for the said corporation by the Public Buildings Commission.

No part of the funds made available in this act for the Shipping Board or the Emergency Fleet Corporation shall be expended for the preparation, printing, or publication of any bulletins, newspapers, magazines, or periodicals, or for services in connection with same, not including preparation and printing of reports or documents authorized by law.

Mr. MAGEE. Mr. Chairman, I offer an amendment.

The CHAIRMAN. The Clerk will report the amendment.

The Clerk read as follows:

Amendment offered by Mr. MAGEE: After subdivision (b) of the amendment insert "not to exceed $25,000,000 of."

Mr. GOOD. I have no objection to that amendment.

The question was taken, and the amendment to the amendment was agreed to.

Mr. BLANTON. Mr. Chairman, I offer an amendment.

The CHAIRMAN. The Clerk will report the amendment.

The Clerk read as follows:

Amendment offered by Mr. BLANTON: Page 2, line 19, after the word "Columbia," insert "or elsewhere."

Mr. BLANTON. Mr. Chairman——

The CHAIRMAN. The Chair thinks the page number is in error in the gentleman's amendment.

Mr. BLANTON. I was referring to the page in the resolution. It is after the word "Columbia" in line 14, page 40, of the bill.

Mr. Chairman, the main purpose of this rule and this proposed amendment, as stated by the chairman of the Rules Committee and the chairman of the Appropriations Committee, is economy on the part of the Government. It is to force the Shipping Board to economy, and I ask that that rule be invoked further in the interest of this amendment, which is also in the interest of economy. This Republican House and this Republican Appropriations Committee and this Republican Rules Committee are now permitting the Shipping Board of the United States to contract annually for over $550,000 in rents in Washington and Philadelphia alone every year. They are paying out right now $472,000 a year for buildings rented in Philadelphia, and by my amendment it would stop it, because under the survey that was made of this twin structure known as the New Navy and Munitions Building it has been shown to the Shipping Board by the Navy Department that there is existing right now over 60,000 square feet of available space for housing this Shipping Board in the Navy wing alone, and if utilized would cause it to cease spending this $550,000 annual rent. Why not do it if you want to economize? If your speeches on economy are not camouflaged, why does not the chairman accept my amendment?

The $472,000 rented office buildings in Philadelphia are not needed now. It is not necessary that they maintain their main offices there, now that the war is over. The only reason that they claimed it was necessary to go to Philadelphia in the first instance was that Washington was crowded and that they could not get available office space here in the city. Now that the war is closed, now that two years have passed since it was closed, there is plenty of available office room in Government-owned buildings to house this Shipping Board. And it is foolish for us, as business men, to allow this board to continue to pay out $472,000 for rent in Philadelphia when we have free office room sufficient for it in Washington. I hope the chairman will let this amendment pass.

Mr. GOOD. The gentleman must know that this Shipping Board, handling $3,000,000,000 worth of ships, have offices rented all over the country at various ports, and the gentleman's amendment would deny them the power to rent office space at all and would cripple it so it could not run at all.

Mr. BLANTON. The gentleman preaches economy, but when we have a practical amendment here to put economy into effect he tries to laugh it off. That is his position. That is camouflage to the people of the country. We have given opportunity to have a real economy amendment adopted, one that is practical. He said to-day it was the Democratic side of the aisle that was against economy, and now when a Member on the Democratic side of the aisle proposes to economize in a practical way he tries to laugh it off and tries to make the business men of America believe it is necessary to continue paying $472,000 a year for rent of office buildings in Philadelphia. For the present fiscal year the Shipping Board is renting the following buildings in Philadelphia, to wit: The one at No. 329 South Broad Street for $70,000, the one at No. 140 North Broad Street for $275,000, the one at No. 921 Delaware Avenue for $95,000, and the one at No. 253–255 North Broad Street for $32,000, making in all an annual rental of $472,000 for office buildings in Philadelphia alone that this Shipping Board is binding the Government for in lease contracts. It is simply ridiculous. I am proposing to stop it. I am proposing real economy, not of the lip variety but sure enough economy. But you will not vote with me, because you are camouflaging on the question.

Mr. GOOD. Mr. Chairman, I am rather surprised the President or the Shipping Board has not discovered the practical ideas of the gentleman from Texas and put them into effect and thereby save a good many hundred millions of dollars. The suggestion he has offered here would cripple the board, because it could not spend a single penny for rent outside of the District of Columbia. They may be wasting—and I suppose they are—money in connection with rents. They were wasting money here. But to cut off every dollar of the rent in New York, Philadelphia, San Francisco, and other places would, in my opinion, be a very great mistake.

Mr. BUTLER. Will the gentleman yield?

Mr. GOOD. I will.

Mr. BUTLER. I think there is space on Government ground in the District of Columbia where this might be put.

Mr. ROWE. Not all of it.

Mr. BUTLER. This part of the Shipping Board that is in the District of Columbia.

Mr. GOOD. We have done that. This is a matter in regard to operations outside of the District.

Mr. MURPHY. Will the gentleman yield?

Mr. GOOD. I will.

Mr. MURPHY. Is the statement made by the gentleman from Texas [Mr. BLANTON] that $400,000 is being paid for rent in Philadelphia, correct or incorrect?

Mr. GOOD. I have forgotten what the department did state in the hearings with regard to the payment of rent. They have a large force in Philadelphia, and quite a large force in New York, and I suppose in the operation of $3,000,000,000 worth of ships it is necessary to have some of these offices at ports where ships come in. No ships come into Washington.

Mr. MANN of Illinois. Will the gentleman yield?

Mr. GOOD. Certainly.

Mr. MANN of Illinois. Does not the gentleman think it desirable to bring all the Government activities of all sorts to Washington, to have all the Government activities in Washington, where there is plenty of room at low rent?

Mr. GOOD. I think there are 435 Members of the House that would object to that sort of program.

Mr. BUTLER. Does the gentleman know what available space there is at Hog Island, to which these offices might go? I know something about Hog Island. It is in my district.

Mr. GOOD. It is proposed to sell and salvage Hog Island.

Mr. BUTLER. You are going to do that?

Mr. GOOD. That is the proposition; yes.

The CHAIRMAN. The time of the gentleman from Iowa has expired. All time has expired. The question is upon the amendment to the amendment offered by the gentleman from Texas [Mr. BLANTON].

The question was taken, and the amendment to the amendment was rejected.

The CHAIRMAN. The question is on the amendment offered by the gentleman from Iowa [Mr. GOOD].

The question was taken, and the amendment was agreed to.

Mr. GOOD. Mr. Chairman, I move that the committee do now rise and report the bill to the House with the amendments, with the recommendation that the amendments be agreed to and that the bill as amended do pass.

The motion was agreed to.

Accordingly the committee rose; and the Speaker having resumed the chair, Mr. WALSH, Chairman of the Committee of the Whole House on the state of the Union, reported that that committee had had under consideration the bill H. R. 15422 and had directed him to report the same to the House with various amendments, with the recommendation that the amendments be agreed to and that the bill as amended do pass.

Mr. GOOD. Mr. Speaker, I move the previous question on the bill and amendments to final passage.

The previous question was ordered.

The SPEAKER. Is a separate vote demanded on any amendment? If not, the Chair will put them en gross.

The question was taken, and the amendments were agreed to.

The SPEAKER. The question is on the engrossment and third reading of the bill.

Mr. GALLIVAN. Mr. Speaker——

The SPEAKER. For what purpose does the gentleman rise?

Mr. GALLIVAN. To move to recommit the bill.

The SPEAKER. That will come later.

The question is on the engrossment and third reading of the bill.

The bill was ordered to be engrossed and read the third time, and was read the third time.

Mr. GALLIVAN. Mr. Speaker, I have a motion to recommit, which I send to the Clerk's desk.

The SPEAKER. Is the gentleman opposed to the bill?

Mr. GALLIVAN. I am positively opposed to the bill.

The SPEAKER. The Clerk will report the amendment.

The Clerk read as follows:

Mr. GALLIVAN moves to recommit the pending bill to the Committee on Appropriations with instructions to report the bill back to the House forthwith with the following amendment: Page 118, line 4, strike out the period after the word "Columbia" and insert a colon, and further insert the following language:

"*Provided*, That of the sum herein appropriated not to exceed $200,000 shall be available for assistants to the Attorney General and to the United States district attorneys to enforce the national prohibition act."

Mr. GOOD. Mr. Speaker, I move the previous question.

The SPEAKER. The gentleman from Iowa moves the previous question.

The previous question was ordered.

The SPEAKER. The question is on the motion of the gentleman from Massachusetts [Mr. GALLIVAN] to recommit the bill with instructions.

The question was taken, and the Speaker announced that the noes appeared to have it.

Mr. GALLIVAN. A division, Mr. Speaker.

UMI

The SPEAKER. A division is demanded. Those in favor of the motion of the gentleman from Massachusetts will rise and stand until they are counted. [After counting.] Twenty-five gentleman have risen in the affirmative. Those opposed will rise and stand until they are counted. [After counting.] One hundred and sixty-seven gentlemen have risen in the negative.

Mr. GALLIVAN. Mr. Speaker, I make the point of order that there is no quorum present.

The SPEAKER. The Chair will count. [After counting.] Two hundred and twenty-six gentlemen are present. A quorum is present.

Mr. GALLIVAN. Mr. Speaker, I dislike to dispute the count of the Chair, but I have counted the House, and I have counted only 185 men. [Laughter.]

The SPEAKER. The Chair has counted, to the best of his opinion, conscientiously and accurately.

Mr. GALLIVAN. A parliamentary inquiry, Mr. Speaker.

The SPEAKER. The gentleman will state it.

Mr. GALLIVAN. Is there any appeal from the count of the Chair?

Mr. MANN of Illinois. There is not.

The SPEAKER. I do not know of any.

Mr. GALLIVAN. I ask for tellers.

Mr. MANN of Illinois. There is no authority for tellers. The rule provides that the Speaker shall count. If you can demand tellers, that would be a matter of interminable delay if you wanted to filibuster.

The SPEAKER. The Chair has counted, as he thinks, accurately and, he is sure, conscientiously.

Mr. MANN of Illinois. Not only the Chair, as he thinks, accurately, but every Member of the House except the gentleman from Massachusetts.

Mr. GALLIVAN. Oh, no. Every Member of the House has counted except the gentleman from Illinois, but he knows more than any other Member in the House. [Laughter.]

The SPEAKER. The noes have it, and the motion to recommit is rejected. The question is on the passage of the bill.

The question was taken, and the bill was passed.

On motion of Mr. GOOD, a motion to reconsider the vote whereby the bill was passed was laid on the table.

POST OFFICE APPROPRIATION BILL.

Mr. MADDEN. Mr. Speaker, I call up the Post Office appropriation bill.

The SPEAKER. The gentleman from Illinois [Mr. MADDEN] calls up the Post Office appropriation bill.

EXPENSES OF THE INAUGURAL CEREMONY.

Mr. CANNON. Mr. Speaker, if my colleague will permit for a moment, I believe there is a Senate joint resolution on the Speaker's table. If the Speaker will lay it before the House, I ask unanimous consent for its consideration.

The SPEAKER. The Chair lays before the House a joint resolution, for which the gentleman from Illinois [Mr. CANNON] asks unanimous consent for present consideration. The Clerk will report it.

The Clerk read as follows:

Joint resolution (S. J. Res. 237) to enable the Secretary of the Senate and the Clerk of the House of Representatives to pay the necessary expenses of the inaugural ceremonies of the President of the United States on March 4, 1921.

Resolved, etc., That to enable the Secretary of the Senate and the Clerk of the House of Representatives to pay the necessary expenses of the inaugural ceremonies of the President of the United States, March 4, 1921, in accordance with such program as may be adopted by the joint committee of the Senate and House of Representatives, appointed under a concurrent resolution of the two Houses, including the pay for extra police, there is hereby appropriated, out of any money in the Treasury not otherwise appropriated, $50,000, or so much thereof as may be necessary, the same to be immediately available.

Mr. BLANTON. Mr. Speaker, in the interest of economy, I object.

The SPEAKER. The gentleman from Texas objects.

Mr. CANNON. The gentleman can object. But we ought to pass this resolution.

Mr. BLANTON. I regret I have to object, Mr. Speaker.

Mr. CANNON. Mr. Speaker, one further word. The gentleman from Texas objects. I do not know, but I suppose this joint resolution that the Senate sends ought to be sent to some committee; I suppose the Committee on Appropriations.

The SPEAKER. Does the gentleman from Illinois ask that it be referred to the Committee on Appropriations? The Chair thinks it belongs to the Committee on Appropriations. The Chair refers it to the Committee on Appropriations.

Mr. CANNON. Well, one man may stop a horse that is running away. [Laughter.]

POST-OFFICE APPROPRIATION BILL.

Mr. MADDEN. Mr. Speaker, I move that the House resolve itself into Committee of the Whole House on the state of the Union for the consideration of the Post Office appropriation bill; and, pending that, I wish to ask the gentleman from Virginia [Mr. HOLLAND] or the gentleman from Tennessee [Mr. BYRNS] how much of general debate would be satisfactory to that side?

Mr. BYRNS of Tennessee. The gentleman from Virginia is temporarily out of the Chamber.

Mr. MADDEN. I understood the gentleman from Virginia said he thought he would not require much time.

Mr. BYRNS of Tennessee. He told me something of the same kind yesterday.

Mr. MADDEN. If it is satisfactory to the gentleman, I ask unanimous consent, Mr. Speaker, that general debate extend for a period of three hours, one hour and a half of it to be controlled by the gentleman from Virginia [Mr. HOLLAND] and the other half to be controlled by myself.

The SPEAKER. The gentleman from Illinois asks unanimous consent that the general debate be limited to three hours, one half to be controlled by the gentleman from Virginia [Mr. HOLLAND] and the other half by himself. Is there objection?

There was no objection.

Mr. MADDEN. Mr. Speaker, I move that the House resolve itself into Committee of the Whole House on the state of the Union for the consideration of the Post Office appropriation bill.

The SPEAKER. The gentleman from Illinois moves that the House resolve itself into Committee of the Whole House on the state of the Union for the consideration of the Post Office appropriation bill. The question is on agreeing to that motion.

The motion was agreed to.

The SPEAKER. The gentleman from Oregon [Mr. MCARTHUR] will please take the chair.

Thereupon the House resolved itself into Committee of the Whole House on the state of the Union for the consideration of the Post Office appropriation bill, with Mr. MCARTHUR in the chair.

The CHAIRMAN. The House is in Committee of the Whole House on the state of the Union for the consideration of the Post Office appropriation bill, which the Clerk will report by title.

The Clerk read as follows:

A bill (H. R. 15441) making appropriations for the service of the Post Office Department for the fiscal year ending June 30, 1922, and for other purposes.

Mr. MADDEN. Mr. Chairman, I ask unanimous consent that the first reading of the bill be dispensed with.

The CHAIRMAN. The gentleman from Illinois asks unanimous consent that the first reading of the bill be dispensed with. Is there objection?

There was no objection.

The CHAIRMAN. The gentleman from Illinois [Mr. MADDEN] is recognized for 1 hour and 30 minutes.

Mr. MADDEN. Mr. Chairman, in presenting the bill for appropriations for the Post Office Department for the fiscal year 1922 I call the attention of the House to what I believe to be the most important piece of legislation that comes before the Congress. The Post Office Department is the nerve center of America. It is the artery through which the lifeblood of public sentiment flows. It touches every home, it is a great business institution, and it has been growing by leaps and bounds. The average growth of the service for a number of years was about 5.88 per cent increase annually. During the present fiscal year so far the average increase in the growth of the business has been 20 per cent.

We come to the House to-day with the largest appropriation for the Postal Service that has ever been presented to the country. The Post Office appropriation bill for the current fiscal year, including deficiencies and everything that have already been passed upon, amounts to $504,437,700, but that does not tell the story, because we have several deficiency appropriations pending yet to be acted upon. The Postmaster General in his annual report indicated a deficiency for the fiscal year 1920 of something over $17,000,000, but the truth is that the deficiencies disclosed by the facts in the case amount to something over $93,000,000. The estimates for the coming fiscal year for the Postal Service amount to $585,406,902.

Mr. BLANTON. Mr. Chairman, right there will the gentleman yield?

Mr. MADDEN. I do not want to be interrupted now. I want to complete my statement. The amount reported in the bill is $573,964,721. This is $11,442,181 less than the amount requested

in the estimates, and it is $69,530,021 more than the appropriations for the fiscal year 1921; but it should be stated that the deficiency estimates for the additional appropriations for the fiscal year 1921 are pending before the Committee on Appropriations, and these estimates amount to $20,725,473.32.

In addition thereto the evidence before the committee in the hearings shows that there is a deficiency in the appropriation for electric railway mail pay of $67,000, which will be called for, and another, amounting to $35,500,000, for steam railway mail pay, which has already been asked for. These two items if appropriated, added to the $20,725,473.32, make the total for the fiscal year 1921 of $56,292,473.32, which, added to the $504,434,700, the current appropriation for the fiscal year 1921, would make it amount to $560,727,173.32. In that event, the excess of the amount of the accompanying bill over all appropriations for the fiscal year 1921 would be $13,237,547.68. Including the deficit of $17,270,482.72, reported by the Postmaster General in his annual report dated June 30, 1920, it would appear that for the fiscal years 1920 and 1921 there will be a deficit amounting to $73,562,956.04.

The increase in the compensation for railway mail pay above what the law provided before the case was referred to the Interstate Commerce Commission for adjusted compensation for the period of Federal Control has not been settled. No adjustment has been made, and no payments have been made to the railways. Of this amount approximately $20,000,000 will be chargeable to the fiscal year 1920 and should be added to the deficiency reported by the Postmaster General in his annual report for the fiscal year 1920, which would indicate a deficit of $37,270,482.72 instead of $17,270,482.72, and added to the other deficit to which I have already called the attention of the committee would make an aggregate deficit of $93,562,956.04.

The revenues for the Postal Service for the year ending June 30, 1920, amounted to $437,150,213.33. The rate of increase in the receipts of the department thus far for the fiscal year 1921 average 19.81 per cent. If this ratio of increase continues during the remainder of the fiscal year, the receipts will aggregate $523,649,657.39 to meet the current appropriations and deficit of $560,727,173.32, and if the same proportion of increase in receipts continues for the fiscal year 1922, notwithstanding the fact that this is the greatest appropriation ever proposed for the Postal Service, the $573,000,000 and odd of appropriation will have behind it receipts amounting to $628,379,588.86, or an excess of receipts over expenditures if the anticipated receipts continue, of $54,414,867.86. This much for the financial condition of the service.

Mr. YATES. Mr. Chairman, will the gentleman yield?

Mr. MADDEN. Yes.

Mr. YATES. How was it the past year?

Mr. MADDEN. I just stated that the past two years indicate a deficit of $93,000,000.

Mr. GARD. Mr. Chairman, will the gentleman yield?

Mr. MADDEN. Yes.

Mr. GARD. Could the gentleman advise us briefly of what are the items covered in the estimates that amount to $20,725,473?

Mr. MADDEN. It is mostly all for additional railway mail pay.

Mr. GARD. Possibly the gentleman does not understand me. The deficiency estimates amount to $20,725,473. Are those all railway mail pay?

Mr. MADDEN. All railway mail pay.

Mr. GARD. What about the $67,000 for electric railway pay?

Mr. MADDEN. They are all railway mail pay.

Mr. GARD. The deficiency of $20,000,000 is railway mail pay?

Mr. MADDEN. Unsettled and not submitted to the committee as yet. I might say in this connection, for it might just as well be said here as at any place, that when we enacted the law fixing the space basis of pay to the railways for transporting mail we fixed a line charge of approximately 23.61 cents per car-mile. That included the terminal charges for the transportation of mail, but there was a provision in the law that referred the whole subject matter to the Interstate Commerce Commission with authority to ascertain what the equitable rates should be. I might say also that before we fixed the rate we made a study of about two years of what a fair rate should be. We had consultations with all the railroad heads of the country. We endeavored to get them to disclose the cost of transporting a ton of mail a mile. If they had the information which would enable them to disclose these facts they did not give it to the committee. We then made a study from the standpoint of the transportation of passengers, and ascertained that the railway companies derived about 24½ cents per car-mile from the passenger service; that is, each car hauled a mile yielded a revenue of 24½ cents. We believed that it was less costly to haul a car of mail than it would be to haul a car of passengers, because of the extraordinary number of people employed by the railroads in connection with passenger service that would not be necessary in the mail service. However, the Interstate Commerce Commission in its review of this case, in common with its increase in all freight traffic, increased the rate from 23.61 cents per line car-mile to about 38 cents a car-mile, or about 59 per cent, and it also provided that the side service, known as the messenger service, which required the railroad companies to transport the mail from the station to the post office if the post office was within 80 rods of the railroad station, should be taken away from the railroads and transferred to the Post-Office Department, which is now required to make contracts for the railway mail messenger service. This involves a further expenditure of about $10,000,000 a year.

The air mail service which is included in this bill, and for which we recommend an appropriation of $1,250,000, is a service which has doubtful value, according to my view. I may not be in accord with the advanced opinions of the times, but I have learned, and I have stated this on the floor more than once, that while it costs about 7 cents a ton-mile to carry mail by rail, the cost of carrying a ton of mail 1 mile by air amounts to $5.35. I think it amounts to more, but the post-office authorities admit that it costs $5 a ton-mile. In other words, they say in reply to a question from me that it costs $1 a plane-mile to fly. That does not include the cost of the plane. It does not include the cost of the field. It does include a certain system of fixed charges and depreciation which they have set up, but which I do not believe cover the cost of depreciation. The average quantity of mail carried on an airplane is 400 pounds. Five times 400 pounds are 2,000 pounds, and $1 a plane-mile multiplied by 5 gives you $5 for every ton of mail you carry a mile. I do not believe the people of the United States would justify that expenditure, for if we carried all the mail by air, assuming that we could, at the price indicated, it would cost $10,000,000,000 a year to do a service that yields a revenue of only about $500,000,000.

There is only one justification for carrying any mail by air, and that justification is found in the experience that may be obtained in the line that flies from New York to San Francisco, where we fly the machines in all climatic and altitudinal conditions, and the experience of flying through those conditions may be of some value from a military standpoint at some future period in our history. But from a purely mail standpoint I do not think the expenditure is justified.

The department asked $3,500,000 for this service in this bill. The committee have recommended $1,250,000, which is the amount carried in the current bill. But if the value of the expenditure was the only thing to be taken into consideration, we would not even recommend that.

Mr. HUSTED. I was going to ask the gentleman a question, but he has very nearly answered it. I was going to ask him if any estimate had been made of the actual loss in the airplane mail service.

Mr. MADDEN. The actual loss in dollars?

Mr. HUSTED. In dollars.

Mr. MADDEN. The department does not pretend to give any consideration to the question of loss, but I think it does not require any statement from anybody as to what the loss is when you know that it costs only 7 cents a mile to carry a ton of mail by rail and that it costs $5 a ton to carry it by air.

Mr. HUSTED. How much do they carry per trip?

Mr. MADDEN. They carry 400 pounds at a time—16,000 letters—and what they do is this: The last train that leaves New York at night which makes a Chicago connection for the western territory leaves at 8.40 p. m. The presumption is that that train takes all the mail that comes into the New York post office up to 8.40 p. m. and starts it on its way to Chicago to get there in time to make the western connection. Then the next morning the air mail service picks up the mail received after 8.40 p. m., and the presumption is that it reaches Chicago in time for the same train connection as the train that left New York at 8.40 the night before. But what they really do is that they take the airplane mail as far as Cleveland and connect with a train there. They deposit on the Cleveland train the mail they took from New York. Then they take some mail off the Cleveland train and run it to Chicago, where they overtake the next train, and then they take some mail off the train at Chicago and go to Omaha or some place else in Nebraska. Then they take some mail off the train there and go to Cheyenne, and so on, and they claim to make an advance of 16 hours on a certain amount of mail, but it can not amount to more than 16,000 letters on the whole trip. That is the story.

Mr. GARD. Will the gentleman yield?

Mr. MADDEN. I yield to the gentleman from Ohio.

Mr. GARD. What is the amount of revenue which comes to the Government from the airplane mail?

Mr. MADDEN. There can be no revenue, and I will tell you why.

Mr. GARD. There must be some revenue from the sale of stamps.

Mr. MADDEN. If the gentleman will let me answer him I think I can convince him that there can not be any revenue. In the first place, we pay 38 cents per car-mile for transporting the mail by rail, and we pay that whether there is any mail in the car or not. We pay for the car on its outbound trip loaded and on its inbound trip empty. It does not make any difference how much mail you put in the car, you do not pay one cent more for transporting it than you do when it has two letters in it. Every letter that goes by air is taken off a train, and it does not reduce the train expenses one cent. Now, where do you get your revenue?

Mr. GARD. The way in which I used the word "revenue" is probably indefinite. What I intended to convey was, how much does the United States receive in stamp charges for airplane mail?

Mr. MADDEN. Nobody on earth knows, because there is no separate account of it, any more than there is in the sale of stamps for parcel post. There was a time when we provided by law that we should have a distinct and separate stamp for parcel-post mail. The Postmaster General had the power to abolish that, and he did. We had the same thing in the air mail service. The Postmaster General had the power to abolish that, and he did. So that whatever mail goes into the air service goes by chance. It is not advanced because of any special price paid.

Mr. CLEARY. Will the gentleman yield?

Mr. MADDEN. Yes.

Mr. CLEARY. What is the purpose of transferring from the air service to the cars and from the cars to the air service at Cleveland and Chicago?

Mr. MADDEN. Well, they advanced the mail to the train that left several hours before, the mail that was left behind; that is the point.

Mr. RAMSEYER. Will the gentleman yield?

Mr. MADDEN. I yield to the gentleman.

Mr. RAMSEYER. A year ago when the bill was up the Post Office Department claimed that they could bring about an economy by saving space in the car; that the air mail service by aeroplane would not cost any more than carrying it on cars. Now, has the gentleman discovered in his examination in the preparation of this bill that they have taken off mail cars as the result of the air mail service?

Mr. MADDEN. They have not taken off any mail cars.

Mr. RAMSEYER. Have they saved car space?

Mr. MADDEN. The difference between the system at present and the system when mail transportation was paid by the ton is that now we carry about 12,500 pounds of mail in a car, whereas the average amount of mail carried by the car when carried by the ton was about 2,500 pounds. So we really have less car mileage and transport the mail just the same.

Mr. RAMSEYER. If the gentleman will yield for another question. We passed a law permitting the Post Office Department to contract to carry mail providing it did not cost any more by air than by rail. Has the Post Office Department taken advantage of that?

Mr. MADDEN. Yes; the Postmaster General let a contract—I have not the name in my mind of the concern to whom he let it—but the contract amounted to $685,000. It was on three routes, New York, Pittsburgh, Washington, I think, to Atlanta, if I recall; and Chicago to St. Paul, if I recollect right. I may be wrong in the legs of the journey, but it does not matter much. The contract price at which this contract was let amounts to ninety times what the rail rate is. In other words, $685,000 is the total amount of the contract, and the total amount of expense to the Postal Department for transporting this same mail by rail would be $77,000. And this calculation is figured on giving the Post Office Department credit for the carrying of 1,500 pounds of mail on each plane and the car space on the railroads which they would save.

But the truth is that they say themselves they only carry 400 pounds, and my calculations are fair and favorable to the contract. But I may say also that in the consideration of the bill, in the hearings, or in conversations with the Postmaster General and his assistants they say this contract has not yet become effective, and whether it will be or not I do not know. The law distinctly says that while the Postmaster General may designate routes and let contracts for aerial mail service on such routes as he may think proper and wise, that those contracts shall not be let at a price in excess of the rail rates.

Mr. RAMSEYER. I was just going to suggest, of course, that is not according to law.

Mr. MADDEN. No.

Mr. MONDELL. I desire to ask the gentleman if the committee found time to go to any considerable extent into the question of what benefits might accrue to the development of the science of aeronautics through this air mail service?

Mr. MADDEN. I am afraid we might not be considered as having a sufficient amount of technical knowledge to justify the hope we could reach an intelligent conclusion on that, but we did finally reach the conclusion from the military standpoint that the transcontinental route by air, though useless as a mail proposition, might be justified. Now, I wish to say one more word in connection with the air mail service, to show that it does not expedite the mail, notwithstanding the claims of those who are urging it and who are enthusiastic about it. To illustrate, we will take between Chicago and New York. To send a letter by air from Chicago to New York it is necessary to have that letter in the post office at any time before 3.45 in the afternoon. After 3.45 it would be useless to put it there. That letter or any number of letters that may be placed in the Chicago post office some time after 3.45 in the afternoon will be sent to the flying field, which is 11 miles from the Chicago post office. At 7 o'clock the next morning the mail that goes to the flying field the night before starts on its way to New York. It gets to New York about 6 o'clock in the evening—to the flying field in New York. I do not know how far that is from the post office. It does not reach the person to whom it is addressed until some time the day after, before noon perhaps. That makes substantially 48 hours to get a letter from Chicago to New York by air. You can start a letter on its way from Chicago to New York on the Twentieth Century Limited train that leaves at 12.40 in the afternoon, and it gets to New York at 9.45 the next morning and will be delivered before noon, so the air service is just 24 hours slower from Chicago to New York than the train service.

Mr. BLANTON. Will the gentleman yield?

Mr. MADDEN. I do.

Mr. BLANTON. If the proposed new Postmaster General will permit me, I would like to ask him this question. [Laughter.] He stated that the last fast train—I see how to get recognition [laughter]—that the last fast mail train left New York at 8.40 at night, and the air service had to take mail that comes after that hour?

Mr. MADDEN. That is right.

Mr. BLANTON. I want to ask the distinguished gentleman from Chicago, who is a business man, whether there is much business mail of importance that was going to the post office at 8.40 o'clock in New York.

Mr. MADDEN. I would not consider there was any.

Mr. BLANTON. Why, most of the business mail everywhere is mailed before 8.40 in New York and in every big city.

Mr. MADDEN. I should think so.

Mr. BLANTON. There is one other question I would like to ask. Can the gentleman promise that during the next fiscal year he can get along with the sum of $574,964,721, as provided for in this bill?

Mr. MADDEN. I will say to the gentleman this: That in making up the bill, whoever may have this expenditure in charge—and I am sure it will not be I—ought to get along, for we have not cut out any service. I realize from the long experience that I have had in considering the problems connected with the Post Office Department that service is the thing that is needed, and if there is any place in the United States where you can not afford to cripple the service it is in that department. This bill provides for 2,700 more clerks than are now in the service. It provides for 1,400 more carriers, and it gives $36,000,000 more than the current law does for railroad mail transportation, because otherwise there would be a deficit. It provides $2,000,000 more for compensation to postmasters. Now, the gentleman from Texas [Mr. BLANTON] may be interested in this, as all gentlemen should be, namely, the $2,000,000 more for postmasters.

Now, why? First, we had a classification act, passed on the 4th of last June, that increased the compensation of postmasters. Next, we passed in that connection a provision to fix the compensation of fourth-class postmasters, and in that we provided that when the receipts of a fourth-class post office became $1,000 the office automatically passed into the third class. This has already passed 1,800 men from fourth to third class postmasters. There are 1,200 more that are on the verge of passing, and we figure there will be 3,200 third-class postmasters more to provide for in this bill than there are in the existing law. So we have $2,000,000 more there. And then we provide for extraordinary conditions. Now, an extraordinary condition is something like the gentleman had in Texas

some time ago, when a fourth-class post office went up to a first-class office overnight by reason of an increase in population. And we give enough money here to authorize the Postmaster General to place a post office in any class that is necessary if the conditions justify it.

Mr. HUDSPETH. Will the gentleman yield?

Mr. MADDEN. I will.

Mr. HUDSPETH. We have in my State this condition, growing out of the war, namely, that many rural mail carriers contracted to carry the mail at prewar prices.

Mr. MADDEN. That is, star-route service?

Mr. HUDSPETH. Yes. I wanted to ask the gentleman a question. Many of them have gone broke and the bondsmen have had to complete the contracts. Now, is there any provision in this bill to take care of conditions of that kind?

Mr. MADDEN. There is no legislation in this bill. This bill simply carries the appropriation. We have been religiously opposed to violating the rules of the House. I will say this, that on all contracts for star-route service that were entered into prior to June 30, 1918, the Postmaster General was authorized to readjust them because of the fact that the men who took the contracts before the war took them without notice of extraordinary conditions. But any contract taken after that is taken with notice and there can be no readjustment in cases of that sort.

Mr. HUDSPETH. He stated he had no funds to take care of the war conditions.

Mr. MADDEN. He has funds in this bill to take care of everything.

Mr. ALMON. Will the gentleman yield?

Mr. MADDEN. I will.

Mr. ALMON. The gentleman referred to the recent act of Congress fixing the compensation of fourth-class postmasters. I will ask the gentleman if that was permanent law?

Mr. MADDEN. It was permanent law, but not a very satisfactory law. I do not believe it was exactly scientifically worked out, although it was the intention of the committee when it reported the bill and the House when it enacted it to give a substantial increase in compensation to fourth-class postmasters. In some cases it amounted to a reduction. I believe the Post Office Committee is giving consideration to the modification of that law.

Mr. ALMON. The salary or compensation of rural letter carriers——

Mr. MADDEN. Is $1,800 for a 24-mile route.

Mr. ALMON. It was for the fiscal year fixed in the last appropriation bill. In the absence of additional legislation, would that be their compensation for the next fiscal year?

Mr. MADDEN. The compensation for the next fiscal year.

Mr. ALMON. And in the lump sum here you have based that on the present salary?

Mr. MADDEN. On the present law.

Mr. JONES of Texas. Would the gentleman mind furnishing the information as to the basis of compensation of fourth-class postmasters under the rule that he has had in mind—a general statement?

Mr. MADDEN. I think it is 145 per cent of the first $75 and 120 per cent of the next $75, and 60 per cent thereafter. It worked out badly. If you got 145 per cent of the first $75, and then it went over $75—between that and $100—there was a reduction of compensation. That, I think, was a great injustice and is being considered for modification.

Mr. TINCHER. If the gentleman will yield, I understood him to say there was not any legislation in this bill.

Mr. MADDEN. I do not think there is.

Mr. TINCHER. The proviso on page 6 authorizing the Postmaster General to spend a portion of the appropriation for the carrying of mail by aeroplanes was subject to a point of order a year ago, and there has been no legislation from the legislative committee.

Mr. MADDEN. The gentleman has his remedy.

Mr. TINCHER. I will ask the gentlemen, then, for a little information in view of exercising that remedy. As I understand my friend, the chairman of this subcommittee, he is no more convinced to-day of the efficiency of carrying the mail by aeroplane, or the necessity for it, than he was a year ago?

Mr. MADDEN. Not a bit.

Mr. TINCHER. And the only possible excuse for continuing this expense, that is not authorized by any law, is that it is of some benefit in case of war to have the boys trained as fliers?

Mr. MADDEN. The experience we obtain from flying under different climatic conditions might be of great military value.

Mr. TINCHER. Does not the gentleman think, then, that as a Member of this House it is my duty to make a point of order against that and have it referred to the Committee on Military Affairs? [Laughter.]

Mr. MADDEN. The gentleman is over 21 years of age and is capable of exercising his functions. [Laughter.]

Mr. MOORE of Virginia. Mr. Chairman, will the gentleman yield?

Mr. MADDEN. With pleasure.

Mr. MOORE of Virginia. I think the gentleman has made a perfectly convincing argument against continuing the appropriation for the air mail service, and I would like to suggest to the gentleman, because this seems to be an appropriate time to make such an observation, that if we continue making this appropriation we shall be doing the very thing we are now all fighting against—that is, the duplication and triplication of the service. The Army and the Navy are at work in experimenting in the science of flying, and those two branches of the Government can carry on those experiments better than any other branch. Now, if we are to make a serious effort to eliminate duplication, triplication, and sometimes quadruplication of service, here is a good place to begin.

Mr. MADDEN. Yes. I am glad to see that there is so much sentiment expressed on the floor of the House, following the sentiment which I expressed a year ago, at which time I had trouble in preventing gentlemen from putting an air line in almost every city of the United States.

Mr. TINCHER. I shall make the point of order against the item if the gentleman in conference will not put the item back in again. [Laughter.]

Mr. MADDEN. Now, I want to call the attention of the House, if I may, to another feature of the bill. The Postal Savings Bank System has on deposit $168,174,000, and $105,299,224.62 of that is invested in United States bonds and $54,000,000 is deposited in banks and $8,418,000 is in the redemption fund. I have wondered what they did with the redemption fund. There is no reason in the world why we should not legislate on that question and authorize the Postmaster General or the Secretary of the Treasury or the board that has control under the law of the Postal Savings System to invest this $8,000,000 in Government securities and get 5 per cent interest on it, instead of having it lying idle there. I just call the attention of the committee to the fact that I think it would be wise business to do that, and I propose to introduce a bill to authorize it.

Mr. FESS. Mr. Chairman, will the gentleman yield?

The CHAIRMAN. Does the gentleman from Illinois yield to the gentleman from Ohio?

Mr. MADDEN. Certainly.

Mr. FESS. Have we any source of revenue in the post office at all outside of the sale of stamps?

Mr. MADDEN. No other source of revenue except money orders and registry, and so forth.

Mr. FESS. I notice that according to the estimates we will have, instead of a deficit, a surplus, in all likelihood.

Mr. MADDEN. If the revenues continue to increase as they are now increasing that will be the case.

Mr. FESS. My query was whether the expense is a growing expense?

Mr. MADDEN. I wish to say this, in answer to the question of the gentleman from Ohio, that I am glad that he raised it, because otherwise I would probably have forgotten it. Some time ago I introduced a bill to create a 1-cent postal rate for drop letters. The Post Office Department was in favor of that. Investigation shows, however, that that would reduce the revenues about $28,000,000 a year.

It would increase the volume of business and thereby increase the expense, because of the number of additional men that it would be necessary to employ to do the increased volume of business, and it would not be merely a reduction of $28,000,000 of revenue, but it would be a $50,000,000 increased expense, so that we might say it would involve a loss of $78,000,000. I believe if we can maintain the postal rates as they are, without increase or decrease, we shall get more revenue than if we increased the rate or decreased it.

Mr. FESS. That is what I had in mind.

Mr. BLANTON. Right there, if the gentleman will permit me, in answer to the gentleman from Ohio [Mr. FESS], the gentleman from Illinois is mistaken when he says the Post Office Department has no other source of revenue than the sale of postage stamps, because we have the fees from post-office money orders.

Mr. MADDEN. Of course, that all goes in; certainly.

Mr. ALMON. Mr. Chairman, may I ask the gentleman what his views are now as to the 1-cent postage for drop letters?

Mr. MADDEN. I do not think it ought to be done at this time. Just to show the effect of the 3-cent rate for postage, which yielded $72,000,000 for the period in which it was in effect, I may mention the fact that when we reduced the rate to 2 cents again, which was the normal rate, the increased revenue from the sale of postage stamps was 1⅞ per cent. But

a drop letter means for a city like Chicago, with 200 square miles of territory, that a letter will be carried for 1 cent. It means on every rural route the carrying of a letter for 1 cent. It means in a great city like New York, with its hundreds of square miles of territory, the carrying of a letter for 1 cent. It would mean for the city of Boston, where they have a mail-delivery area of 433 square miles, the carrying of a letter for 1 cent, and it would diminish the revenue so materially that we would not be justified in putting it into effect.

Mr. HUSTED. Mr. Chairman, will the gentleman yield?

Mr. MADDEN. Certainly.

Mr. HUSTED. Does the gentleman think the postal savings banks do enough business to justify their existence?

Mr. MADDEN. I do. I believe it is one of the most beneficent institutions we have established in the United States. There are a great many people in the United States who have not been accustomed to American ways. They are not familiar with the transaction of business. They will not deposit their money in the local banks. If they put that money in the postal savings bank, which they will do, it finds its way into the local banks, and that takes it out of hiding. Then, they learn how to handle money. They learn how to become better citizens. They learn how to buy postal-savings bonds. Then they learn how to transact business generally. If they get used to buying a postal-savings bond, they will later on buy something else. Then they become interested with the activities of the Government. I think it is one of the most beneficent things ever established in the country. When we first introduced it all the bankers in the United States were opposed to it. They thought it would ruin the banking business. Instead of that it has improved the banking business.

Mr. SUMMERS of Washington. Mr. Chairman, will the gentleman yield?

Mr. MADDEN. Yes.

Mr. SUMMERS of Washington. I understand they have taken the deposits out of every bank except the Federal reserve banks.

Mr. MADDEN. Yes; but if there is no Federal reserve bank in the neighborhood any bank that has the security required by law can get the deposits.

Mr. SUMMERS of Washington. I beg the gentleman's pardon——

Mr. MADDEN. Oh, I know it.

Mr. SUMMERS of Washington. They have just taken the postal-savings deposits out of all the banks.

Mr. MADDEN. They did not take them out on that account. I know what the facts are, and I can tell the gentleman the reason. The board believed it would be wiser to take the deposits of the Postal Savings System and earn as much revenue as possible with them. Now, how did they do it? They took $105,000,000 of the $168,000,000 and bought Liberty bonds with them, and this $105,000,000 has a face value of $111,000,000, and besides that, they are getting 5 per cent or 6 per cent interest on the money actually invested, instead of keeping it in the banks at 2½ per cent or 2¼ per cent.

Mr. FESS. Does not the gentleman think that is rather a questionable proceeding for the Government?

Mr. MADDEN. It may be questionable. It may not have been wise if there was stress. At the same time I think it is a justifiable thing to do, for, after all, the management of any institution is justified in doing any legitimate thing that is within the law to make the best possible showing.

Mr. FESS. What I referred to was the Government buying its own bonds at a discount and making money out of the transaction.

Mr. MADDEN. Oh, I think they ought to have paid par. I do not think the Government of the United States ought to buy its own paper for less than par.

Mr. FESS. That is what I had in mind.

Mr. MADDEN. I agree with the gentleman on that.

Mr. HUSTED. Has the gentleman any statement of the total postal-savings banks deposits?

Mr. MADDEN. The total postal-savings bank deposits amount to $168,000,000.

Mr. HUSTED. As much as that?

Mr. MADDEN. Yes.

Mr. BRIGGS. Will the gentleman yield?

Mr. MADDEN. Yes.

Mr. BRIGGS. I presume the gentleman is familiar with the construction given the provision of the last act with reference to the increased salaries of fourth-class postmasters, by the Comptroller of the Treasury.

Mr. MADDEN. Yes.

Mr. BRIGGS. Does the gentleman agree with that construction?

Mr. MADDEN. I just made an explanation of that a few minutes ago. I said I thought it was very unjust, that it did not work out satisfactorily, and that legislation is pending to remedy that difficulty.

Mr. BRIGGS. Does the gentleman think that will pass?

Mr. MADDEN. I hope so. I am in favor of it.

Mr. BRIGGS. Does the gentleman know of any contemplated action to ameliorate the condition of the star-route carriers?

Mr. MADDEN. The gentleman refers to the carriers by contract?

Mr. BRIGGS. Yes.

Mr. MADDEN. I do not believe there is, unless you can pass a law that will authorize the Postmaster General to go into that and readjust it. Under the law that was passed readjustments have been made, and the Post Office Department report to the committee that they have made those readjustments in many cases, and then have let the contracts for less money after the readjustment than they were paying before, and very satisfactorily, too.

Mr. BRIGGS. On a great many of the routes in my district they have threatened the discontinuance of the star-route service on account of the fact that the contractors had bid too low and are unable to carry out their contracts, and their bondsmen are unable to carry them out.

Mr. MADDEN. I suppose there are cases where some great injustice is done, but you can not meet every case by a general law. I am quite sure that if there is anything that can be done you can always get a considerate hearing before the Committee on the Post Office and Post Roads.

Mr. BRIGGS. Is there any legislation now before the committee with reference to that?

Mr. MADDEN. No; the committee did not think it was wise to take it up. It has been pending, but in view of what had been done and the adjustments that had been made, it was believed to be wiser to wait, and as a matter of fact the Post Office authorities themselves say that except in rare instances they are able to let the contracts for less money than was being paid those who claimed they were losing money.

Mr. BRIGGS. There is nothing in contemplation then about extending the discretion of the Post Office Department beyond the period that the gentleman just mentioned, namely, June, 1918?

Mr. MADDEN. I do not think so. I think I had better yield the floor, because if I keep on talking I will consume more time than I ought to. I am very much obliged to the committee for their attention. [Applause.]

The CHAIRMAN. The gentleman has consumed 50 minutes.

Mr. MADDEN. I reserve the remainder of my time.

MESSAGE FROM THE PRESIDENT OF THE UNITED STATES.

The committee informally rose; and the Speaker having taken the chair, the House received a message in writing from the President of the United States, by Mr. Sharkey, one of his secretaries, who also informed the House of Representatives that the President had approved and signed bills of the following titles:

On December 26, 1920:

H. R. 1865. An act for the relief of the Baltimore Dry Docks & Ship Building Co., owner of a dry dock at Baltimore, Md.; and

H. R. 7930. An act to provide for the treatment in hospital of diseased alien seamen.

On December 28, 1920:

H. R. 7900. An act for the relief of Rudolph L. Desdunes.

POST OFFICE APPROPRIATION BILL.

The committee resumed its session.

Mr. HOLLAND. Mr. Chairman, I yield to myself 20 minutes.

It is my purpose to discuss only a few of the main features of the bill, and not to engage in a general discussion of its details. There is no disagreement among the members of the committee as to a single item and any general discussion of the several items is unnecessary.

The report of the Postmaster General shows that for the fiscal year 1920 the receipts of the department amounted to $437,150,212.33, and the expenditures to $454,322,609.21, leaving a deficit at the close of the year of $17,270,482.71.

For the fiscal year 1921 the estimated receipts of the department are $523,649,657.39. The total appropriations for said year will probably amount, including deficiencies, to $560,727,173.32, or approximately $37,077,515.93 more than the receipts, and including the 1920 deficit will leave a deficit at the close of the year 1921 of a little more than $54,000,000. This deficiency will not be due to any lack of economy in the conduct of the service, but will be due largely to increased compensation to employees and the increased cost of mail transportation. The growth in the volume of business will probably absorb this deficit during the year 1922.

The present bill carries no legislation, it makes only such appropriations as are believed to be actually needed for the efficient and economical administration of the Postal Service. Of necessity the sums carried in the bill are larger than were carried in the bill last year. The rapid growth of the service, increased compensation to postal employees as now provided by law and the increased cost of mail transportation of necessity demand larger appropriations.

Mr. BRIGGS. Will the gentleman from Virginia yield?

Mr. HOLLAND. Yes.

Mr. BRIGGS. How does the appropriation carried in this bill compare with the estimate submitted by the department?

Mr. HOLLAND. The bill carries appropriations amounting to the total sum of $573,964,721. This is only $11,422,181 less than the estimates submitted by the department, and proves to what extent the department is cooperating in the effort to make the appropriations only such as are necessary for the efficient conduct of the service. Further reductions could not be made without a probable impairment of the service.

Fortunately the revenues of the service for the year 1921–22 will be more than ample to meet these increased appropriations. The postal income for the year 1920 shows an increase of approximately 20 per cent. If this rate of increase should continue—and with the increased volume of business it should be larger—the receipts for said year should amount to $628,379,588.86, or more than $50,000,000 in excess of the appropriations carried in this bill. This excess, together with the increased volume of business, should be sufficient to cover the deficit for the year 1921.

It is interesting to note that the total appropriations carried in this bill are nearly double the amounts appropriated for the service six years ago, and shows to what extent the necessary expenses of the department have grown within that short period. But it must also be noted that there has been a corresponding growth in the postal income, the estimated receipts for the year for which this bill carries appropriations exceeding $6,250,000. In other words, while the expenditures have increased 100 per cent, the percentage of increase in the postal income has been correspondingly larger. Of necessity the volume of business will grow each year, and the appropriations will show a corresponding increase.

Mr. BRIGGS. Will the gentleman yield?

The CHAIRMAN (Mr. RAMSEYER). Does the gentleman from Virginia yield to the gentleman from Texas?

Mr. HOLLAND. Yes.

Mr. BRIGGS. Are the receipts under the 2-cent postage larger or smaller than they were under the 3-cent postage?

Mr. HOLLAND. If I remember correctly, the receipts under the 3-cent postage were over $71,000,000.

Mr. MADDEN. Seventy-two million dollars, and the receipts under the 2-cent postage are 1⅝ per cent greater than under the 3-cent postage.

Mr. BRIGGS. I was informed that that was the fact, and I wanted to ascertain whether it was really correct or not.

Mr. HOLLAND. That is true. The bill carries, as already provided by law, the increased compensation to the postal employees. The efficiency of the service demanded this increase. The entire force was dissatisfied, and the method of increase, while probably not well-considered, has prevented a greater disruption of the service and has added materially to its efficiency.

There are still many inequities and inequalities in the salary increases, some employees receiving too much and others certainly too little compensation, and such conditions should be promptly corrected by legislation. The Postal Service should be made more attractive to efficient men. To do this it will be necessary to pay the employees wages equal to such as can be secured on the outside. This should be done promptly, for the best service can never be secured from a dissatisfied or inefficient force of employees.

The increased cost of mail transportation provided for in this bill is believed to be in excess of what was anticipated when the "space system" of pay was adopted. But the volume of the mails has increased more than 100 per cent since the change was made, and as there has been no weighing of the mails within that period it is impossible to accurately estimate the difference in cost between the two systems. And yet as the mails are now being moved in "20,000,000 miles per annum less car space" it is believed the Government has sustained no loss by the adoption of the new system of pay. It is safe to assert that the cost, if not less, will be substantially the same as under the old weight basis of pay. The carriers have been subjected to great inconveniences, and their compensation may not be as great as was predicted at the time the new system was being installed.

The increased appropriation asked for the air-mail service is hardly warranted. It is a very expensive service, and handles a very small part of the first-class mail. On long-distance routes, on which much greater expedition of the mails to and from the great commercial centers can be had, its development may be justified. On short-distance routes, on which there can be no such expedition of the mails, the service is too expensive and should be discontinued. It is believed, however, that the service may be of great military value and capable of very rapid expansion in time of war, and the appropriations carried in the bill may well be defended on that ground alone.

Mr. RAMSEYER. Will the gentleman yield?

The CHAIRMAN (Mr. MCARTHUR). Does the gentleman from Virginia yield to the gentleman from Iowa?

Mr. HOLLAND. Yes.

Mr. RAMSEYER. I notice that the gentleman emphasized the military feature. Will it not also help in developing what is known as commercial aeronautics?

Mr. HOLLAND. I hope it may.

Mr. RAMSEYER. I just wanted to call attention to that, and it may justify the small amount that we appropriate for it.

Mr. HOLLAND. Oh, that is hardly the question. We have appropriated the same amount that was appropriated last year. The question is whether or not the appropriation ought to have been increased.

Mr. RAMSEYER. Is it not true that the United States is expending less money for the development of commercial aeronautics than any other first-class power in the world?

Mr. HOLLAND. That may be true, but it is a question as to whether it ought to be done under this particular department and in the way it is now being done.

Mr. RAMSEYER. What other department could take up the work for commercial aeronautics?

Mr. HOLLAND. There might be a separate department of aviation for that particular purpose, if necessary.

Mr. LAZARO. Mr. Chairman, will the gentleman yield?

Mr. HOLLAND. Yes.

Mr. LAZARO. I noticed in the press recently that the French Government had discontinued appropriations for aerial mail service in France and also for commercial development upon the ground that it was too expensive at this time. Has the gentleman given that matter any attention?

Mr. HOLLAND. I have not given that particular matter special consideration, but that was the conclusion that the committee reached—that the service was really so expensive that we did not feel justified in making additional appropriations for its extension. So far as the commercial feature is concerned, about which my friend spoke a few moments ago, that might be carried on possibly by private individuals under contract.

Mr. GARD. Mr. Chairman, will the gentleman yield?

Mr. HOLLAND. Yes.

Mr. GARD. Was the gentleman a member of the old Committee on the Post Office and Post Roads?

Mr. HOLLAND. I was.

Mr. GARD. Is there any cooperation between the members of that committee and the present subcommittee on the post office of the Committee on Appropriations? I ask the question since I notice that of the 20 people who are here present there are but one or two or three of the old Committee on the Post Office and Post Roads present.

Mr. HOLLAND. I happen to be in the minority, and I would prefer to have that answered by the chairman of the subcommittee, Mr. MADDEN.

Mr. BRIGGS. Mr. Chairman, will the gentleman yield?

Mr. HOLLAND. Yes.

Mr. BRIGGS. If the committee does not think that the expense for this service is justified, why is the appropriation carried in this bill?

Mr. HOLLAND. We are giving the department the benefit of the doubt. It is possible that on long-distance routes, where there is great expedition of mail, as from the great commercial centers of the country, it may finally be of value. The gentleman is aware, I have no doubt, that you can have no such thing as night service with aeroplanes, and that the planes that carry the mail fly only in the daytime. Eventually it may be that they can have service at night as well as during the daytime, which will make the service of greater value.

Mr. BRIGGS. Does the Post Office Service in the planes they use make use of the Liberty motors, of which the Government apparently had so many on hand?

Mr. HOLLAND. I can not answer that question.

Mr. LEA of California. Mr. Chairman, will the gentleman yield?

Mr. HOLLAND. Yes.

Mr. LEA of California. I understand that they are using the Liberty motors, and I would like to make a suggestion in

reference to the utility of the Post Office Department for training purposes.

Mr. HOLLAND. I wish the gentleman would confine it to a question. I will be glad to give him time later on.

Mr. LEA of California. I simply wanted to call attention to the fact that in all lines of service of the Government where training is practiced as a training matter they choose the most convenient time to do it, while in the Post Office training it must be continuous and persistent under unfavorable conditions.

Mr. HOLLAND. That is a question.

The volume of parcel-post mail has more than doubled within the past three years. It will continue to expand very rapidly under the present rates provided for handling this class of mail. The increased expense of handling packages exceeding 4 pounds in weight, including the necessity of leasing large areas of floor space at high rental rates at terminals, would indicate that the rates should be increased to cover this increased cost, and also the increased cost of transportation. But the Postmaster General contends in his annual report for the year 1920 that there was a profit of about $10,000,000 derived from the handling of the parcel-post mail during said year, and as long as there is a profit in the service under the present rates no change should be made. The public is entitled to the service at a minimum cost. Certainly the department is entitled to commendation for handling the service under such conditions at a profit. It could not very well be done unless the parcel-post packages were handled in connection with the other three classes of mail matter.

The scale of pay of rural carriers should not be based entirely on mileage. It is manifestly unjust that a carrier who handles 52,000 pieces of mail per month, working 11 hours per day, should be paid exactly the same wage as a person carrying 3,000 pieces per month and who works only a few hours each day. In fixing compensation the weight and number of pieces of mail handled and the hours of service should be considered. The department should be given by legislation some discretionary powers by which increased compensation may be allowed carriers who are required to handle more than the usual amount of mail matter on their routes.

Mr. BLANTON. Mr. Chairman, will the gentleman yield?

Mr. HOLLAND. Yes.

Mr. BLANTON. And should not this also be considered: You might have two rural routes of 30 miles each; one might be over a splendid boulevard road and the other might be a deep sandy road, which would take the carrier four times as long to go over. Should not that be taken into consideration with reference to the pay of rural carriers?

Mr. HOLLAND. There are so many things that might be taken into consideration that it is difficult to say what should or should not be included.

Mr. BLANTON. The character of the road and the country are important elements, just as much so as the weight of the mail.

Mr. HOLLAND. That may be true.

Mr. ALMON. To what hearings does the gentleman refer?

Mr. HOLLAND. The hearings before the subcommittee of the Committee on Appropriations.

Mr. ALMON. Not before the legislative committee?

Mr. HOLLAND. No; there is no legislation in the bill.

There has been an erroneous impression, especially among the critics of the department, that letter mail is being held in terminals in order to reduce car space and save expense, and thereby the dispatch of such mail is delayed. The fact is that the letter mail distributed at terminals is only such mail as can be distributed between trains, and in no case is such mail held. Frequently, when trains are delayed, such distribution results in the more rapid dispatch of such mail matter. The records of the department show that 90.47 per cent of all first-class mail is still distributed on railway postal cars and only 9.53 per cent of such mail is distributed in terminals and transfer offices. And of the second, third, and fourth class mail matter 64.45 per cent is still distributed on the lines and only the residue in terminals. These facts clearly demonstrate that this complaint is not well founded.

There has also been considerable complaint, originating largely with clerks relieved of easy jobs, of what is known as the "closed-pouch system." The lines on which the closed-pouch system is being used are usually short lines and traverse thinly populated territory, involving but few post offices. The amount of mail carried by many of the star routes supplied by closed pouches is much larger than is carried on many of these lines. And the records of the department show that if the postmasters along these lines will follow instructions and do their duty—and if they do not they should be dismissed—the service is just as good as formerly, except that letters can not be dropped in the car. There is little justification, as shown by the hearings before the subcommittee, for clerk service on these closed-pouch lines. Certain it is that the money saved by reason of fewer clerks and much less car space used justified the change.

The administration of the present Postmaster General has been very much criticized. With the large number of improvements and extensions in the service during his administration some of this criticism might have been expected. Progress and changed methods to effect improvements and economies always bring forth such criticism. But it frequently happens when it is subsequently ascertained that such readjustments and improvements have been made in the interest of the service, and in the interest of the public as well, that criticism gives way to commendation. And it may yet happen that the present Postmaster General will be accredited for much of the good work he has so conscientiously performed. The fact that he can not fix the schedules of trains, enforce their maintenance, prevent their frequent delays, nor compel connections between them, is too often forgotten and the department is too frequently blamed for the omissions of the carriers. And we little realize the difficulty of securing the full cooperation of employees in the enforcement of new methods, and also the difficulty of getting rid of inefficient employees, and the department is frequently blamed for their stubbornness and inefficiency. But whatever criticisms may be made of the department the fact can not be well denied that its business has been economically conducted and in accordance with the best business methods. Mistakes, as might have been expected in the administration of such a great department, have been made, but it is not believed that many of the new policies inaugurated by the present administration will be radically changed. [Applause.]

Mr. Chairman, I yield 15 minutes to the gentleman from Louisiana [Mr. O'CONNOR].

Mr. O'CONNOR. Mr. Chairman, one of the most important events in the history of this world was written by the hand of fate when the Battle of New Orleans was fought on the Plains of Chalmette, on the never-to-be-forgotten 8th of January, 1815. Judged by the results that flowed from it and their tremendous influence in the making of a country that now stretches from ocean to ocean, it may be deemed one of the most notable victories obtained by American arms in all of the history of this great Republic. The flower of the British Army, which had withstood on many a battle field in the Peninsular Wars the shock of Napoleon's legions—the legions that had mingled the eagles of France with the eagles of the Alps; the magnificent soldiers who afterwards in the battle of Waterloo earned for themselves the title of the "invincibles"—went down in disastrous defeat on the banks of the Father of Waters below New Orleans before the dauntless courage of American manhood from Tennessee, Kentucky, and what is now Mississippi and Louisiana. This British Army was to have been led by the immortal Wellington, but he was shifted by fortune to other scenes and he had placed in his stead his brother-in-law, Sir Edward Pakenham, who met his death gallantly on that eventful day while leading his brave troops in a futile attempt to beat down the American tigers, who were fired with the patriotic thought that the invader had to be driven from their native land. A statue has been erected in St. Paul's Cathedral in London, a shrine and a sepulcher like Westminster Abbey for England's great and heroic dead, to commemorate his tragic fate and fall while serving his country in foreign lands. Requiescat in pace. It was a victory that redeemed the War of 1812 from a series of calamities, defeats, and catastrophies. It demonstrates to the world that American blood can endure the marches of Xenophon, die as other Thermopylæ, fight and win Marathons. The battle is not to be judged by the number of men involved, but by the consequences that flowed from this extraordinary event in the annals of world history. Maj. Latour fixed Pakenham's army at 14,500, and the lamented Theodore Roosevelt, historian, warrior, patriot, and statesman, gives the number at approximately 10,000 men. The loss sustained by Pakenham's army at New Orleans will in all probability never be accurately known. Read this Spartan-like, yet American, message to history—seven killed and six wounded on Jackson's side of the cotton bales and ditch which he had dug from the Mississippi to the swamps. More than 300 killed, more than 1,400 wounded, and 500 prisoners on the side of the British.

Nothing can better evidence the genius of the American people than this wonderfully novel and perfect defense against an invading army—a ditch, almost a canal, from a great river to a great swamp, with the excavations from the ditch thrown over the cotton bales, placed on one side of it, and which acted as a rampart and protection to the crack shots from the swamps, forest, and woods of America. Before this ditch went down the greatest soldiers that Europe could boast of in that day of great soldiers and captains. As long as the great Com-

monwealths exist whose sons marched over an unbroken wilderness, without compass or guide, for more than a thousand miles, in many instances to meet an invader and defeat him, as long as the American Republic lasts, as long as the Mississippi runs to the sea, will the glorious fight of our countrymen down there on Chalmette be remembered and glorified on each succeeding, recurring 8th of January. Those that went to their death on that never-to-be-forgotten day in our history, and their fellows who marched back in triumph to their homes singing the war songs of our country, and who have passed to that bourne from whence no soldier, sailor, or traveler ever returns, inscribed their names deathlessly on this scroll of their country. They are no more, but their fame is secure—Dum tacent, clamant.

The muffled drum's sad roll has beat
The soldier's last tattoo;
No more on life's parade shall meet
That brave and daring few.
On Fame's eternal camping ground
Their silent tents are spread,
And glory guards with solemn round
The bivouac of the dead.

Their shivered swords are red with rust,
Their plumed heads are bowed,
Their haughty banner, trailed in dust,
Is now their martial shroud;
And plenteous funeral tears have washed
The red stains from each brow,
And their proud forms, in battle gashed,
Are free from anguish now.

Rest on, embalmed and sainted dead,
Dear as the blood you gave,
No impious footsteps here shall tread
The herbage of your grave;
Nor shall your glory be forgot
While Fame her record keeps,
Or Honor points the hallowed spot
Where Valor proudly sleeps.

[Applause.]

That battle, fought on one side by raw and undisciplined but brave and heroic hearts from the wilds of America, and on the other side by tried, disciplined, and courageous troops who had won glory on many a European battle field, should be ranked with the great battles of all times. It determined that this Republic should extend from ocean to ocean, and not have the Mississippi River as its western boundary line with western Canada paralleling the frontier, menacing it from the present northern boundary line to the Gulf of Mexico and the Republic of Mexico on the south and rolling over prairie and mountain westward from the Mississippi to the shores of the Pacific, with the flag of Britain floating proudly over that which we are pleased to call the great West and the Southwest, a different government, different institutions, and with a stranger's life at our doors. One can see from this account what mighty and momentous changes might have taken place if the fortunes of war had gone against us on that memorable day, January 8, 1815. Nations as well as individuals seem at times to have a curious perspective—the great appear small and the insignificant loom large on the horizon of history. As the years move onward into eternity, however, we know that the Battle of New Orleans will take its place with the decisive battles of the world. There are some men who are unbeatable in the larger sense and significance of that word. There have always been and always will be in this world men and women whose deathless purpose must and shall prevail. When men are willing to endure any disaster, suffer any defeat, undergo privation and starvation, meet gloom and catastrophe dauntlessly, knowing, feeling, that they must and shall win, triumph is inevitable. The sheer force of longing to achieve, of desire to attain the goal, of purpose to toil and strain and fight for the end in view, culminates irresistibly in reaching the end of the trail gloriously and triumphantly.

Jackson and his army could not be defeated. He may have been driven from Chalmette, but what of that, in view of a determination that could come only to the boldest hearts and to characters selected by fate to carry out inexorably judgments of the highest degree and lead mankind from the lowlands to the peaks of human existence? Had Jackson been forced to retreat from the plains below New Orleans, consequences as spectacular as any in the history of the world would have resulted. For Old Hickory had intended in the event of such a contingency to burn the city, move up the river with all the inhabitants, and soon as he reached the point where the land begins its incline or upward slope, cut the banks, overflow the city, and annihilate the hopes of the British Army, which could have had one and only one escape, and that would have been by means of rafts with which to make their ships if the swirling tide would permit such an escape. The burning of Moscow, which made its occupancy by Napoleon untenable, would have been nothing compared with the epic that might be written of a city that was destroyed by its people, overwhelmed by the Father of Waters, before they would let it be the prize of an invading foe.

That blood, that spirit, that heroic, unconquerable purpose is still here—no invader could ever remain for any length of time in our country. Other Jacksons would come out of the wilderness to lead their countrymen in death-defying assaults that would, step by step, drive the foe from our native land. What Jackson did and what he would have done will always remain with the American people to inspire them to do noble things, not dream them all the day long, whenever the hour arrives for us to strike for our altars and our fires. That battle was fought 106 years ago, and its memories, though with us, are inscribed without bitterness upon the long and splendid scroll of the United States of America. On January 8, 1915, we celebrated the centennial of that great event. American and English dead are sleeping side by side down there where the bearded oaks rustle their leaves softly as if whispering and murmuring a requiem for the gallant souls that are at rest and forever. Annually that victory is celebrated by banquets and speech making, where men assemble to recount the heroic exploits of Jackson and his magnificent attitude toward life and the courageous manner in which he approached and solved the problems that sprung into existence in his time and had to be met or block the road over which his country was traveling to attain the splendid destiny that is and will be hers. Year after year the greatness and the glory of his followers have been extolled and sung all over our land by fervent, patriotic Americans who have conveyed to listening multitudes the thrill of a victory that will always stand out among America's greatest achievements on land or sea. History can not forget this magnificent record of a momentous event without lessening its appeal to the imaginations of our people. Let me, on this day, speak as one who was born and reared on the banks of the old stream of the Bayou St. John, by the roadside over which Jackson came into New Orleans to make ready to meet the foe, and who in his early youth heard the traditions told by many a fireside when lamps were low and the stillness of night made for recital and rapt attention on the part of those who eagerly drank in the tales of long ago. It is stories heard under such circumstances, the traditions that are handed down from sire to son and which are eschewed by historians, which have in all ages made for ballads that have an undying charm to the ear of him who loves mystery and the far-off glimmer of the stars. Such traditions, stories, and ballads that come down from generation to generation and apparently never lose the original atmosphere show that in so far as history is concerned it is true, indeed, that—

Full many a gem of purest ray serene
The dark unfathomed caves of ocean bear.
Full many a flower is born to blush unseen
And waste its sweetness on the desert air.

How many splendid characters in the story of all time passed out and have been lost because they were wanting a sacred bard to sing them into immortality—"Ignotique longa nocte carent quia vate sacro." Let me recite one of the stories heard when New Orleans was a city of mystery, shrouded in the voodooism of Marie Lavoe, who came from a queenly line of Haiti and whose sway over multitudes was more powerful than that exercised by any princess that ever waved a scepter or wore a diadem:

The Louisiana boys who fought under Jackson were heroes in the strife; were demons of war on that January 8, which meant not only the driving from the soil of one they believed had come for loot and lust, for beauty and booty, but it meant in addition thereto the avenging of a wrong which from their standpoint cried out for revenge and atonement. The fury of their assault, the reckless abandon of their heroism, their blazing eyes and ringing shouts and yells of exultation in a perfect carnage of blood was never forgotten by their splendid comrades in arms from the country north of the lowlands of southern Louisiana. These woodsmen and forest men and crack shots from old Kentucky and Tennessee and dear old Mississippi soon knew the cause of the emotions of the Creoles. It was a story which they carried back with them along the line of march to their own far-away homes.

The story had its beginning on the 10th of September, 1755, about 60 years before the English forces were almost annihilated at Chalmette. On that date and in that year occurred an act the like of which has seldom been paralleled. Seven thousand men, women, and children were taken from Grand Pré and the surrounding country and driven onto England's ships for no other reason on God's green earth than that they loved their native land and scorned to give aught other reason why, and scattered along the Atlantic coast and down along the lower Mississippi River and back of its banks in what has ever since been known as the Teche and Cajin country. Many of those

that had been put ashore on the Atlantic coast wandered back to their own beautiful country in Acadia after heartbreaking trials and indescribable sufferings and sorrows.

But those that were sent into Louisiana created a new Acadia in this far-away country from Nova Scotia and begat generations of splendid men and women who live and toil, dream and saunter through the life that can only be sensed in all of its alluring beauties under starry skies, where rice fields and sugar plantations abound, and where the odor of the magnolia and the perfume of the orange blossom soothe and inspire the people to song and story. For 60 years down there the heart of old Louisiana—the new and much-loved and venerated home of the Acadians, with its magnificent bayous, its grand old oaks flowing with moss and growing along its winding streams—throbbed with the recital of the cruel act that had snatched away their people from the far-away coast of Nova Scotia, along the Bay of Fundy and the Gulf of Minas, and though they loved Louisiana and the United States of America after the purchase of the beautiful Mother of States, the Niobe, that has given 10 Commonwealths to the Union, they chanted the songs that will well up from the throats of exiles, and the tear would come from the eyes of those that thought of the days that were no more. Tears, idle tears!

Let us visit the Teche with Longfellow:

Beautiful is the land, with its prairies and forests of fruit-trees;
Under the feet a garden of flowers, and the bluest of heavens
Bending above, and resting its dome on the walls of the forest.
They who dwell there have named it the Eden of Louisiana!

[Applause.]

Here is the land where the sun from the western horizon, like a magician, extends his golden wand over the landscape. There nature seems to riot in a rainbow of color and beauty, and in this enchanted land, sky, water, and forest seem all on fire and melt and mingle together.

For 60 years the children and grandchildren of the exiles had longed for the time when they might avenge the wrongs their ancestors had suffered at the hands of the destroyer. For 60 years they had thought of the anguish and suffering of those that had been driven from their homes, and whose sorrows and heartaches and tears were symbolized in the beautiful song of Evangeline and her Gabriel. Long years afterwards Longfellow, in his immortal "Evangeline," told the story in unrivaled Homeric verse, the prelude of which is unforgetable—

This is the forest primeval. The murmuring pines and the hemlocks,
Bearded with moss, and in garments green, indistinct in the twilight,
Stand like Druids of eld, with voices sad and prophetic,
Stand like harpers hoar, with beards that rest on their bosoms.
Loud from its rocky caverns, the deep-voiced neighboring ocean
Speaks, and in accents disconsolate answers the wail of the forest.

This is the forest primeval; but where are the hearts that beneath it
Leaped like the roe, when he hears in the woodland the voice of the huntsman?
Where is the thatch-roofed village, the home of Acadian farmers,—
Men whose lives glided on like rivers that water the woodlands,
Darkened by shadows of earth, but reflecting an image of heaven?
Waste are those pleasant farms, and the farmers forever departed!
Scattered like dust and leaves, when the mighty blasts of October
Seize them, and whirl them aloft, and sprinkle them far o'er the ocean.
Naught but tradition remains of the beautiful village of Grand Pré.

Ye who believe in affection that hopes, and endures, and is patient,
Ye who believe in the beauty and strength of woman's devotion,
List to the mournful tradition, still sung by the pines of the forest;
List to a Tale of Love in Acadie, home of the happy.

[Applause.]

Their songs colored the lives of all with whom they came in contact. North and south, east and west of them knew and sung the story. New Orleans and the low country which stretches to the Gulf of Mexico, which contains the most beautiful bays and coast indentations in the world, great oyster banks and reefs, famous bayous, still and trembling prairies that charm the eyes and soothe the senses, were by sympathy, by blood alliances, and by reason of an original common ancestry heart and soul of the Cajin country. Their people wept over the wrongs of their kith and kin and hummed in low and mournful song the rhymings, tintinnabulations, and cadences that expressed their grief for the past and longing for the day when they would strike to the heart in seeking their revenge. Jean Lafitte and Dominick You were of this blood. The pirate's home was in a secluded spot on Barrataria Bay, famous in the history and romance of the Southwest. The Corsair of the Gulf was true to all of the cries of his blood to wipe out the tragedy that begun when Grand Pré was put to the flames and his people sent abroad, never more to see their native land.

Byron wrote of these rovers and riders of the seas—

Left a corsair's name to other times,
Linked to one virtue and a thousand crimes.

Along the littoral of the Spanish Main and on the shores of the Southern States that border the Gulf of Mexico, where the breezes lazily sway the long pendants of Spanish moss festooning the gnarled limbs of venerable oaks, the name and the fame of Lafitte and You live in an atmosphere of romance and adventure more virile and fascinating than that surrounding the exploits of Pizarro, Cortez, Ponce de Leon, or even Columbus himself.

Legend holds that there was a strong tie of friendship between him and Napoleon, and that the mighty Corsican was convinced that without the assistance of Lafitte Jackson could not have won the immortal victory at Chalmette. Story says that it was Lafitte that brought the Emperor from Elba, and that after the "hundred days" it was he who arranged to bring him to America and let him pass his remaining years in the Napoleon House down in New Orleans on Chartres Street, a house that is still there claiming the attention daily of visitors from all parts of the world. Rumor had it that Jean carried to this country a large amount of treasure and had it buried somewhere along the Calcasieu River after Napoleon's flight was intercepted and he entered upon his compulsory voyage to St. Helena, the purpose of the nobleman Jean being to effect the release or escape of the Emperor and let him live in state on this side of the ocean. Tradition whispers that he followed the fleet that bore the great soldier to the rock-bound coast of the isle of exile and that he made many trips to the lonely spot hoping to rescue his great friend. Lafitte and You were really great men. On his visit to New Orleans years after the battle, and when he was entertained like as if he were a king of kings, the first man that Jackson asked for was Dominick You, and requested that he be given a seat of honor at his right.

And it was to the lion-hearted Dominick that the hero of New Orleans expressed his grief and sincere regret at the loss of Lafitte, whose loyalty and courage won the admiration of Jackson, who looked upon him as a man infinitely superior to those around him in Barrataria. True to his ancestry and himself, Lafitte was actuated by high motives and loyal instincts, and rendered an invaluable service to the country which some say is the country of his birth, others claim of his adoption. His was a spirit that craved adventure and peril, and in the fifteenth and sixteenth centuries he would have been a leader of those desperate souls that sought freedom and the prizes of the seas upon the waters that will always be known in story as the Spanish Main. Many story-tellers have it that he was lost in a great storm while on a voyage to St. Helena. Many others hold, true to the call of his wild sea blood, he returned to the pirate home, from which he sallied out in search of that adventure which he could find only on the sea. Now and then would come a story from the southern seas, for some years after the great battle in which he played such a magnificent part, that he was braving the storms of the Caribbean, asking for none and giving no quarter, the demon of the sea, riding into the Gulf and plowing the waters of the Atlantic, but no one knows really what was his end. It is lost in the fables and stories of the time. But down in New Orleans, in the center of St. Louis Cemetery, bounded by the historic names of Conti, Bienville, Robertson, and Claiborne, there is a tomb, which the speaker has stood before on many an occasion, and it bears the legend "Lafitte," and it has been handed down in the Creole section that he was buried there in the dead of night, that he might lie with his people forever and near Dominick You, whose epitaph proclaims him "the intrepid hero of a hundred battles on land and sea, who without fear and without reproach will one day view unmoved the destruction of the world." This goes to show that the first lieutenant was either a lover of Voltaire's immortal 'La Henriade,' or that his friends were. [Applause.]

But whatever the crimes and whatever the sin and the blame of their lives, the American people can never forget that it was Lafitte and his bold and fearless corsairs that turned to the aid and hearkened to the cry of their country and unsheathed the sword and the knife for America, because whatever the lives they lived as men, as Americans they moved up and occupied the high niche that Americans, whatever they be and wherever they be, will always maintain.

He and his fellows were sought by the invader, and with honeyed words and golden promises coaxed into a betrayal of their land. With promises of freedom to loot the seas and lay pirate tribute on all commerce they were sought as partners in this enterprise, which, if successful, might have placed a Canada on the west of the Mississippi River and a threat to the restricted area of the United States.

But Lafitte was true to his country, and he was true to the songs that he had heard sung of the cruel, agonizing days and the terribly lonely and heartbreaking nights of the exiles of 1755. The hour was at hand not only to strike as a patriot but as the son of an exile who could throw away the world for the sake of a sentiment, patriotism, and a love of country that had become a part of his being. They did strike, my country-

men, and tradition has it that next to Jackson, Lafitte and You are the heroes that should be forever enshrined in the hearts and affections of their countrymen for the immortal victory won by American arms in 1815. If Lafitte had accepted the British offer and permitted them to take Barrataria, it would have been an easy matter for Pakenham to have landed above the city and finally forced its surrender. But Lafitte was as true to Jackson as Pythias was to Damon, as constant and fixed in his purpose to his countrymen as the northern star to the firmament. Jackson saw beneath the ruggedness of the sea rover who loved adventure and romance the heart of the American sailor, the tiger of the seas, who for the sake of his country when she was matched against the alien would do and dare everything. And behind Lafitte stood Dominick You, and other bold and fearless corsairs none the less loyal. And there, too, were a brave and valiant people who were willing to put the torch to their city and then obliterate it with the waters of the Mississippi, making it an inland sea that the invaders' march might be stayed and the land saved from conquest by the foe from across the sea. Were the people of old New Orleans in that day a brave, chivalrous people? "Expede Herculem" (from the foot of Hercules build his statue).

Listen to this proclamation of the leading citizens of old Louisiana:

FELLOW CITIZENS: Named by a numerous assembly of the citizens of New Orleans to aid the constituted authorities in devising the most certain means of guarding against the dangers which threatened you, our first duty is to apprise you of the extent of those dangers. Your open enemy is preparing to attack you from without, and by means of his vile agents dispersed through the country endeavors to excite to insurrection a more cruel and dangerous one in the midst of you.

Fellow citizens, the most perfect union is necessary among all the individuals which compose our community; all have an equal interest in yielding a free and full obedience to their magistrates and officers and in forwarding their views for the public good—all have not only their property but their very existence at stake; you have, through your representatives in the convention, contracted the solemn obligation of becoming an integral part of the United States of America; by this measure you secured your own sovereignty and acquired the invaluable blessing of independence. God forbid that we should believe there are any among us disposed to fail in the sacred duties required by fidelity and honor. A just idea of the geographical situation of your country will convince you that your safety, and in a greater degree your prosperity, depends on your being irrevocably and faithfully attached to a union with other States; but if there exist among you men base or bad enough to undervalue their duties and their true interest, let them tremble on considering the dreadful evils they will bring down upon themselves and upon us if by their criminal indifference they favor the enterprises of the enemy against our beloved country.

Fellow citizens, the navigation of the Mississippi is as necessary to 2,000,000 of our western brethren as the blood is to the pulsation of the heart. These brave men closely attached to the Union will never suffer, whatever seducing offers may be made to them, they will never suffer the State of Louisiana to be subject to a foreign power; and should the events of war enable the enemy to occupy it they will make every sacrifice necessary to recover a country so necessary to their existence. A war ruinous to you would be the consequence; the enemy to whom you would have the weakness to yield would subject you to a military despotism, of others the most dreadful; your estate, your persons would be put in requisition, and you would be forced at the point of the bayonet to fight against those very men whom you have voluntarily chosen for fellow citizens and brethren. Beloved countrymen, listen to the men honored by your confidence and who will endeavor to merit it; listen to the voice of honor, of duty, and of nature. Unite; form but one body, one soul, and defend to the last extremity your sovereignty, your property; defend your own lives and the dearer existence of your wives and children.

PIERRE FOUCHER,	DUSSAU DE LA CROIX.
DESTREHAN.	AUGUSTUS MACAETY.
BENJAMIN MORGAN.	GEORGE M. OGDEN.
EDWARD LIVINGSTON.	D. BOULIGNY.

[Great applause.]

This clarion call to duty did not go unanswered; this bugle blast aroused a people in whom the fires of patriotism were but smoldering and ready to burst into a white flame of country love upon the invasion of their native land. It was a blast, as it were, from the bugle of Roderick Dhu, and the valor of that then small city waited impatiently for Jackson to lead them on to defeat or glory; to death or victory. Each murmured to each, "Let all the ends thou aimest at be thy country's, thy God's, and truth's. Be noble and the nobleness that lies in other men sleeping but never dead shall rise in majesty to meet thine own." The women, inspired by the mighty emotions aroused by the memories of 1755, and the patriotism that surged riotously through their hearts at the thought of a conquering foe subjecting them and their city to a soldiery inflamed by the promise of "booty and beauty," whispered into the ears of their kinsmen, "Return with your shield or upon it." "Do noble things in this the hour of your country's needs. Strike for your women and your native land. Strike for your God and your country. Strike for her living and her dead. Do noble things, not dream them all day long, and so make life, death, and that vast forever one grand, sweet song." Oh, what a victory it was! What a night of revelry, of song, and of joy unconfined there was in the old city when the news was carried by shouting riders who announced in stentorian tones, "Victory! Victory! Victoire! Victoire!" The men and women who fought that great fight; the men and women all over this country who celebrated that great event which redeemed the War of 1812 from a series of calamities are no more. That victory came to the people of our country as glad tidings of a great joy, and the school children of that period wept with exultation and cried out in jubilation over the victory of their countrymen. They, too, have crossed to that bourne from whence no traveler has ever returned. Annually since that victory of victories it has been celebrated with appropriate ceremonies, and Jackson Day has its observers in every hamlet, village, town, and city in the Republic. It will be celebrated in the years to come by our children's children until the altars of freedom and the shrine of liberty are no longer reverenced by the people who may dwell in a territory now occupied by free men. Let us hope, though, that that day may never come. Let us pray to Him on high that our people may always reverence the spirit which inspired Patrick Henry and those other gallant and illustrious souls who in the night of despotism foresaw the glories of the coming day, and who, like Demosthenes, shouted from every part of the land, "Let us march against Philip. Let us conquer or die." Let us pray to the God of Nations to ever be with us and make us mindful of the immortals who emulated Washington and Jackson in the dread days when men's souls were tried by the agonies and privations which they had to undergo in order to leave to us, their inheritors, a land free from end to end and where a government of the people, by the people, and for the people obtains. Yea, reverently, we pray, "God of the Nations, be with us yet—lest we forget—lest we forget."

One hundred and six years have run themselves into eternity since the great battle was fought and won. In 1815 the country surrounding New Orleans for miles and miles was given over to farming on a very small scale. To-day the banks of the Mississippi for miles are lined with great, magnificent sugar-cane plantations that extend themselves away back from the great river. Off in the southwest are splendid rice fields which support a vast and growing population. Under near-tropical skies the sugar cane bends and rustles beneath the breeze and the rice bursts through the waters like Venus coming from the foam of the sea. Hundreds of villages and towns dot the landscape of the sugar and rice country. Thousands and thousands of American men and women, boys and girls, loyal to their country, its flag, and its institutions dwell amid these happy surroundings. It is a great agricultural country and cane and rice are the royal products of a bountiful and fertile land. The people are Americans heart and soul, though they love to recite Evangeline and to boast of the mighty victory of their ancestors on January 8, 1815. They are toilers of our country, men and women who sow and reap the products which their country needs. For never let us forget that one of the great lessons taught by the Great War was that we must never more be dependent upon alien lands for our sugar, rice, or any other foodstuff necessary to our welfare.

It is a great and beautiful part of your country, my friends, this rice and sugar section, and should receive always your consideration and protection. The sublime truth of human existence, phrased in many ways and tongues from time immemorial, but never more appealingly than by a gifted American in recent years, "burn down your cities and the country will build them up, but destroy your country and the grass will soon grow in the streets of your cities," should never be lost to the vision of the statesman and legislator, should never be absent from the mind of the Executive who desires to "see plenty scattered o'er a smiling land and read a nation's history in its eyes." The rice fields and sugar plantations must be preserved and with them the great farms on which are brought forth the foodstuffs that sustains the life of the United States of America.

Before Trinity College, in Dublin, is a statue erected to commemorate the literary glory of Oliver Goldsmith. Within its shadow a great speaker once said that similar statues should be before every schoolhouse and college and university in the English-speaking world, and upon the base of each should be inscribed a truth the announcement of which by him was, if he had written that and that only, sufficient to give him immortality:

Ill fares the land to hastening ills a prey,
Where wealth accumulates and men decay.
Princes and lords may flourish or may fade,
A breath can make them as a breath has made.
But a bold yeomanry, their country's pride,
When once destroyed can never be supplied.

[Applause.]

"The desert will rejoice and blossom as the rose" may well, indeed, be applied to the land of rice fields and sugar-cane

plantations that now make up a vast part of the wealth and the glory and the greatness and the grandeur of the Mother of States. New Orleans, too, as a result of the magnificent country behind it, has grown by leaps and bounds. Tried by every calamity apparently that nature could visit it with, it has risen from each fiery ordeal like the fabled Phœnix with a renewed and greater strength. War, famine, pestilence, and disease have visited us and scorched our souls but have never lessened our courage nor altered our determination to be the great city of the lower Mississippi, guarding the valley, and as an entrepôt almost on the shores of the American Mediterranean, which will receive the vast commerce that must come from the littoral of this great inland sea and be distributed over the northern part of the continent. Dauntlessly we will live in every generation and carry the Crescent City to the grand destiny which is hers. Our day of agony is over. We have met the acid test and triumphed over it. We are a great people, with a heart for every fate. We will build up. We are constructing, creating a city of which Americans will be proud to boast of at home and abroad. Once a Latin city with an American quarter, it is to-day an American city with a Latin quarter. Miles and miles of the finest dock facilities in the world, making our river front accessible to the commerce of the seven seas. A public belt road, owned and operated by the people of New Orleans, aiding and adding to the commercial activities and assets of the city, is unique in the life of this country. The mud streets of long ago and open canals and the lack of a sewerage and drainage system, which likened New Orleans to a South American city, have given way to asphalt streets. Well-paved avenues, splendid lighted streets and parks, beautiful squares, one of the greatest and finest water plants in the world, and a sewerage and drainage system that challenges the admiration of the engineering and municipal world, attest the marvelous growth of our city; and that the glory that was of Greece, the grandeur that was of Rome, may soon be ours. There in that splendid city the old and the new have blended, and while we still have the charm, the mystery, the splendor of the long ago, when the coal-oil lamp flickered in the stormy night, when the fig and the pomegranate grew over the garden wall, and the occult mysteries of the West Indies cast a spell over the people, we are responding to the throb and the roar and pulsations of America's militant and aggressive life, where men must be up and doing, and we are acquitting ourselves in such a manner as to secure the salutation of "Well done, thou good and faithful servant."

Down there in old New Orleans, a city that was known for years as a city that care forgot, we teach our boys and girls that each and every American has a part to play in the grand drama of life. That as their ancestors fought and won the notable victory on the Plains of Chalmette, must they in their generation fight and win American victories of peace, and, if necessary, in war upon the battle fields. * * * Annually on the 8th of January splendid citizens speak out to multitudes that they must live their lives as Americans, perform their duties, and discharge their tasks in such a manner as to advance the general welfare—that love of country can be shown in no higher or holier manner than by living the simple life as Americans willing to bravely follow the flag of their country whithersoever it leads, and to be to it even as Ruth was to Naomi—

> Whither thou goest, I will go; and where thou lodgest, I will lodge: thy people shall be my people.

Annually at the foot of the monument that rises in majesty from the Plains of Chalmette and overlooks the lordly Mississippi as it rushes onward to the sea are our people solemnly and patriotically told of the glorious victory won on that holy and sacred soil, and of the duties incumbent upon them as American citizens, and the sublime devotion to the land of their birth which lies in these immortal lines:

> Do well thy work; it shall succeed
> In thine or in another's day;
> And though thou lack the victors' meed,
> Thou shall not want the toiler's pay.

A few moments more, Mr. Chairman, and I am done. My song will have ceased, my theme will have ended, my voice will be with the echoes. Would that my feeble effort were worthy of the great subject which I have endeavored to make as entertaining and instructive as my limitations and circumscribed ability permit. May I not be consoled, however, with the reflection that few of my living countrymen could do ample justice to this great chapter in American history. Intellectuality has its limitations, and there are some events, some peaks in human existence, that defy description. God said, "Let there be light, and there was light," requires no elaboration. It would be a work of supererogation. Until some master mind, some orator of the first rank, some genius of the English tongue and rhetoric comes forward to picture the battle, re-create the men that were the heroes of that great conflict and bring back the long ago, our countrymen will generously allow for the feeble attempts of those whose names will be writ in water a modicum of attention and applause on that January day immortalized by an event that can wait a thousand years for a singer to sing its song. Why paint the lily, perfume the violet, color the rose, or give an additional tint to a sunset or rainbow, may, indeed, be suggested to those who have been assigned or chosen the task of conveying the greatness of the victory and the glory and grandeur of a country made secure by it. May we who live near that battle field hope that some day the Nation will take it over and convert it into a great national military park, and that as time goes on monuments will be erected therein commemorative of the boldness, courage, patriotism, and fame of the gallant souls who followed the imperishable Jackson, Coffee, Lafitte, You, and the other gallant Americans that cast a light upon our history such as was never on land or sea. Gone but not forgotten are they. Their mighty spirits will hover over us while this Nation remains a free people—

> Until the stars are old,
> And the sun grows cold,
> And the leaves of the judgment book unfold.

As a Nation we owe to these dead and gone heroes of 1815 a solemn duty. We should adorn the spot that is or ought to be consecrated in the national life. They fought for a country that must evidence its appreciation and gratitude. They followed a flag which to them was the—

> Rainbow to the storms of life,
> The evening beams that smile the clouds away.

This great park which is to be and the beautiful monuments that shall adorn the Plains of Chalmette will always be in view of the stately ships that come from all ports of the world and ascend the Father of Waters to their haven under the hill, and which go forth as riders of the sea, carrying with them the produce and products of the great Mississippi Valley to the farthermost parts of the earth. For the lordly Mississippi will always be to America what the Nile is to Egypt, the Tigris and the Euphrates to that land of mystery that lies yet farther beyond. What the Seine is to France and the Thames to England, the Rhine to Germany and the lordly Danube to Austria-Hungary and Rumania, is the Mississippi to the United States of America. In the near future, when our transportation system will have adjusted itself to the requirements of our country, and railroads and highways will run at right angles to our rivers instead of paralleling them; when the great barge fleet will have attained its fullest power and development, and docking and terminal facilities are provided for a unified and married transportation plan, the banks of the Mississippi and its tributaries shall be dotted from the far North, from its very headwaters, as it were, down to New Orleans with thousands of towns that will have sprung into existence as a result of the tremendous traffic that will float on the bosom of the Father of Waters and its affluents. Thousands of steamboats will, swan-like, proudly move up and down the rivers, and many of them will go down even below New Orleans.

Once again will palatial river steamers, like the *Lee*, the *Natchez*, and the *White*, churn the waters between New Orleans and St. Louis, and a day that is apparently dead will come back to us. North, South, East, and West will meet in the old city. By ship and steamboat, by rail and highway, thousands and thousands who love the spots on this continent made sacred by heroic valor and immortal achievements will journey to the graves of Chalmette and there with uncovered heads stand before the great white marble shafts or columns commemorative of the greatness and the valor of Kentucky, Tennessee, Mississippi, and Louisiana. Solemnly contemplating the dream and the glory of it all, they will reverently ponder over the closing lines of O'Hara's deathless poem:

> Yon marble minstrel's voiceless tone
> In deathless song shall tell,
> When many a vanquished age has flown,
> The story how ye fell.
> Nor wreck, nor change, nor winter's blight,
> Nor time's remorseless doom
> Shall dim one ray of holy light
> That gilds your glorious tomb.

[Great applause.]

Mr. MADDEN. Mr. Chairman, I yield 40 minutes to the gentleman from Minnesota [Mr. STEENERSON].

Mr. STEENERSON. Mr. Chairman and gentlemen of the committee, as there is no dispute about the items of appropriation in this bill, which simply carries out the estimates of the department, I will not discuss the details of it; but I thought the House and the country might desire some explanation of the situation with regard to the railway mail pay. Upon that subject I think there is some need of light.

In 1916 a report by a joint commission was made to Congress recommending the substitution of space for weight in the payment of railway mail transportation. The commission reported by bill, which was introduced, and it specified rates for each car, or part of a car, per mile. And I might say right here that from the beginning of the railway mail transportation the rates have always, up to this time, been fixed by Congress, and the bill introduced to carry out the recommendation of the Bourne Commission prescribed the rates to be charged. The Postmaster General was not satisfied with the rates, and through the chairman of the Committee on the Post Office and Post Roads introduced another bill, which prescribed lower rates. My recollection is that the lower rates were passed by the House as recommended by the Postmaster General, but when the bill came from the Senate it carried higher rates, and this disagreement went to conference.

The Postmaster General then submitted a compromise proposition by which the Interstate Commerce Commission was given authority to determine three things—first, whether the space or the weight plan should be used; second, what the reasonable rate should be for space if that plan is adopted; and, third, what the rate should be if the old weight plan should continue. And it was provided that in the meantime the Postmaster General might put into effect the space plan upon such routes as he might deem requisite, in order to give it a test. The bill was enacted into law in July, 1916, and thus for the first time in history the Congress parted with its power over rates to be paid railroads for carrying the mail.

The Postmaster General put practically all the railway lines under the space plan for his experiment, so there were only a few small lines that were to be continued in the pouch service and paid by weight. Substantially all the lines were put under the space plan, and the department was to keep the accounts of railway mail pay both under the weight and space plans, in order that whichever plan should be approved by the commission would govern the amount of pay. The space plan was put into effect on the 1st day of November, 1916, and the hearings on the merits of the rates of the space plan were to take place some time thereafter.

There were special weighings of all the mails throughout the whole United States on all the railways. Evidence and arguments were submitted to the commission, and the commission deliberated upon these questions until December a year ago, when they decided the case, but that decision was not promulgated and published so that Congress could find out about it until the latter part of January, 1920.

The decision established the space plan. It increased the rate specified in the law by about 25 or 30 per cent, and this was to take effect on the 1st day of November, 1916. and this increase was to continue until the 31st of December, 1917, a period of two years and two months, the date when the roads went under Federal control, and a further increase of about 25 or 30 per cent to take effect on January 1, 1918. While the commission was deliberating the railroads had all gone under Federal control, on the 1st day of January, 1918, under which there was a guaranteed return, and so forth.

Then the decision as to the rate provided that from January 1, 1918, the rate should be 25 per cent additional. This was on top of the other increase, and the total increase now in force is estimated by some at 58 per cent and some estimate it as high as 68 per cent.

On the 1st day of March, 1920, the railroads were returned to their owners.

Mr. HOLLAND. Mr. Chairman, will the gentleman yield?

Mr. STEENERSON. Certainly.

Mr. HOLLAND. Can the gentleman tell us just exactly how he arrives at the increase of 68 per cent?

Mr. STEENERSON. That is all given in the hearings.

Mr. HOLLAND. There has been no increase in the last year.

Mr. STEENERSON. Mr. Corridon testified in the hearings, page 580, that the increase was 58 per cent, and after that was calculated the commission released the roads of side and terminal service, which costs $4,200,000 additional. This will be about 68 per cent.

Mr. HOLLAND. That is 68 per cent over the old rate existing at that time?

Mr. STEENERSON. Over the rate prescribed in the statute.

Mr. HOLLAND. But as a matter of fact the volume of mail has increased very largely.

Mr. STEENERSON. Yes. But on that point the gentleman will please excuse me; I will come to that later.

I said that on the 1st day of March, 1920, the railroads were returned to private operation. These increased rates were not known until a year ago, so that we could not before that time pay the railroads this increased rate either for the first period or for the second period. The testimony is that they have adjusted the pay from November 1, 1916, to December 31, 1917, at about $16,000,000.

Now, of course, that $16,000,000 is due to the railroads that were operated then under private ownership, and it is testified to that the Auditor for the Post Office Department has settled the amount due to the railroads, each one of these carriers, and that he is going to submit an estimate for a deficiency of $16,000,000 to the Committee on Appropriations to pay for that period from November 1, 1916, to December 31, 1917, that being the amount due the railroads themselves for the period previous to Federal control.

The money due for transportation of the mails during Federal control came due to the Railroad Administration from the Post Office Department, the same as other debts due to the railroads, because the Railroad Administration took over all the assets of the railroad. It is stated that instead of adjusting 38,000 different accounts the department and the Railroad Administration have settled that the amount due for the increased rate for the 26 months is $65,576,822.

In addition to that there has since been tentatively agreed upon $4,000,000 for what they call the side and terminal service. Originally the railroads were to carry the mails to the stations within 80 rods of the depots, and were not to be paid except in a general payment; but since then the commission has decided they must have separate pay for that, and it amounts to about $4,000,000 extra, so that in all it amounts to $69,000,000, or nearly $70,000,000. This lump sum is due to the Railroad Administration for carrying the mail during the Government operation. As the roads went back to private operation March 1, 1920, the increased rates were from then on payable to them directly, and the department resumed paying them. But they soon found that they did not have money enough to pay for the balance of the fiscal year 1920.

So they went before the Committee on Appropriations last May, when the third deficiency bill was under consideration, and stated that the increased rate for the fiscal year 1920 would amount to $30,000,000 additional to the old rates, but inasmuch as only four months of that fiscal year remained, they needed a deficiency appropriation of $8,000,000 to pay the extra rate for the four months. They said that that was one-third of a year and would amount to $10,000,000.

But the original appropriation for railway-mail pay was larger than they had used, and they had an unexpended balance of about $1,500,000, so that they would only ask for a deficiency of $8,000,000, with which to pay the railroads for the balance of the fiscal year.

Now, that $8,000,000 was appropriated as a deficiency, and it is the only sum that has been appropriated or paid on account of the higher rates imposed by the Interstate Commerce Commission since the decision took effect on November 1, 1916. They came before the Committee on Appropriations in the preparation of this bill and asked for some $90,000,000 for the next fiscal year, which represented an increase of $30,000,000 over the ordinary rate of pay.

Now, I want you to understand that this $65,575,832 and this $4,000,000 and this $16,000,000 are sums that are still unpaid and sums which have not been appropriated for.

This makes a total of $85,575,832. It is an indebtedness by the Post Office Department for railway mail transportation under these new rates that is due and unpaid.

Mr. CONNALLY. Will the gentleman yield?

Mr. STEENERSON. Yes.

Mr. CONNALLY. Are those amounts included in this bill?

Mr. STEENERSON. Oh, no. They will have to make a deficiency estimate for them.

I called on the Railway Administration and asked them about this, how much they had settled for, and they told me this $65,575,832 and this $4,000,000, and I said, "Why, have you not got the money?" They said, "Because the Post Office Department has delayed making an estimate for the appropriation, which they should have done, as a deficiency estimate." I will here insert in the RECORD the correspondence between the Railway Administration and the Postmaster General.

UNITED STATES RAILROAD ADMINISTRATION,
DIRECTOR GENERAL OF RAILROADS,
Washington, December 30, 1920.

HON. HALVOR STEENERSON,
Committee on Post Roads, House of Representatives,
Washington, D. C.

MY DEAR CONGRESSMAN: As requested by you at the time of your visit to my office yesterday, I am attaching a copy of Postmaster General Burleson's letter of June 10, 1920, addressed to the Director General of Railroads, and a copy of Director of Finance Sherley's letter of August 10, 1920, addressed to the Postmaster General, both of these

letters referring to the application of the increased rates of mail pay. It was tentatively agreed between the Railroad Administration and the Post Office Department that these increased rates resulted in an additional sum due the Railroad Administration by the Post Office Department, amounting to $65,575,832.03.

The Postmaster General in his letter of June 10 quotes a statement made by Chairman GOOD of the House Committee on Appropriations. Apparently Chairman GOOD misunderstood the statement presented by Director General Hines when the latter was asking for appropriations.

In the balance sheet the amounts due the Railroad Administration from the Post Office Department were set up in connection with other items as assets collectible. In other words, the amount due from the Post Office Department was considered the same as freight charges or any other transportation revenue. Having been set up on the administration books as an asset, it was, of course, not included in the amount asked for under the appropriation, it being expected at that time that the Post Office Department would ask for the sixty-five million and odd dollars as a deficiency appropriation and pay it to the Railroad Administration, as has been done by the War Department in similar cases.

If the Post Office Department does not ask for this appropriation and pay the Railroad Administration, then the latter will probably be compelled at some time in the future to ask for additional appropriations to cover that amount.

Very truly, yours,

E. M. ALVORD.

—

OFFICE OF THE POSTMASTER GENERAL,
Washington, D. C., June 10, 1920.

Hon. JOHN BARTON PAYNE,
Director General of Railroads, Washington, D. C.

MY DEAR MR. PAYNE: On March 1 last Mr. Edward Chambers, formerly director of traffic, on the staff of the United States Railroad Administration, called at this department and made oral recommendation that adjustment of amounts due the Railroad Administration for the transportation of the mails as a result of the application of the increased rates fixed by the order of the Interstate Commerce Commission of December 23, 1919, might be effected through a lump-sum settlement, in order to eliminate the clerical labor which otherwise would be necessary in effecting a detailed adjustment on each mail route, involving approximately 30,000 separate accounts. Representatives of this department have conferred with officials of the Railroad Administration and an understanding has been reached between them that the approximate amount due the Railroad Administration for the 26 months from January 1, 1918, to February 29, 1920, is $65,575,832.03.

The matter of making such an adjustment was referred to by Chairman GOOD, of the House Committee on Appropriations, during recent hearings in connection with the third deficiency appropriation bill. Mr. GOOD made the following statement:

"During the time the roads were under Federal control their compensation was fixed by their contracts, and we have appropriated for the Railroad Administration all the Railroad Administration estimated will be necessary to make final settlement with the carriers. Now, if this money does not go to the railroad companies—and it certainly would not go to them under their contracts—it certainly should not go to the Railroad Administration, because we have given them all they need."

It is suggested therefore that fiscal credit may appropriately be taken in the amount of $65,575,832.03 (should that sum be agreed upon finally) as being balance due the Railroad Administration for the transportation of the mails on railroads which were under Federal control during the period of January 1, 1918, to February 29, 1920, and that all accounts be closed on said basis.

I shall be pleased to confer with you personally with regard to this matter if such course be agreeable to you.

Very truly, yours,

A. S. BURLESON,
Postmaster General.

—

AUGUST 10, 1920.

To the POSTMASTER GENERAL,
Washington, D. C.

MY DEAR MR. POSTMASTER GENERAL: Judge Payne has referred to me a letter to you by Second Assistant Postmaster General Praeger in re the indebtedness due from the Postmaster General to the Railroad Administration. It does not seem to me proper for the Railroad Administration to ask the Congress for an appropriation of the amount of money which the Post Office Department owes to the Railroad Administration. It would seem proper for the Post Office Department to make its own request for an appropriation and in connection with the amount asked, if the indebtedness between the two departments has been agreed as to amount, the Railroad Administration could join with the Post Office Department in a joint statement to the effect that such agreement as to the amount has been reached. The appropriation that was made to the Railroad Administration was made upon an estimate which carried as a collectible asset the moneys due by the Railroad Administration just as it carried as collectible assets the moneys due by various other departments of the Government to the Railroad Administration. The War Department has owed us sums considerably in excess of the indebtedness of the Post Office Department to the Railroad Administration, and they have from time to time been settling the same by cash payments, as have the other departments. These departments estimated to Congress the moneys they needed to pay their indebtedness, including that due the Railroad Administration, and then made settlement with us as any other debtor.

In this connection, I note that Mr. Praeger's letter states that the amount mutually arrived at is $65,575,382.03. I am advised by our comptroller, Mr. Newell, that there is in addition an item which, it is estimated, will aggregate some $4,000,000 covering side and terminal service, but that the latter amount has not as of this writing been agreed to by the Post Office Department. It would seem desirable that any dispute touching this item be settled in order that in asking for the appropriation the Post Office Department might ask for a sum sufficient to embrace it, if it should properly be allowed. We will be glad to facilitate the taking up and settling of this matter in any way practicable, and will be glad to learn your wishes in this regard.

It occurs to me also that you will probably want to submit your estimate in the form of a deficiency estimate and not in connection with the annual Post Office appropriation bill.

Very sincerely,

SWAGAR SHERLEY,
Director Division of Finance.

It should be noted that the Postmaster General claims that this matter can be disposed of by a book credit and the account closed on that basis. He bases this on the alleged statement of Mr. GOOD, the chairman of the Appropriations Committee, at the hearing last May, which he quotes. In this colloquy Mr. GOOD said that this money did not go to the Railroad Administration, because they had been given "all they needed." But Mr. Swagar Sherley, finance director of the Railroad Administration, in answer to Mr. Burleson pointed out that the $65,000,000 was carried as a collectible asset due from the Post Office Department and was deducted from the amount asked for and was not given in their deficiency appropriation. It is undisputed that the Railroad Administration was charged with this $65,000,000 and reduced their request for appropriation accordingly. This was momentarily overlooked by Mr. GOOD when he made the remark relied on by Mr. Burleson. If you will read Mr. Sherley's letter, you will see that this is so, and that he is right in contending that the Post Office Department should make a request for the deficiency appropriation and pay their bills, as the War Department has done in similar cases. The object of the Postmaster General in refusing to ask for an appropriation to pay this bill must be to avoid a record being made. Under the accounting system in the Post Office Department the deficit or surplus is the difference between the audited receipts and audited expenditures, and if this sixty-five or seventy million dollars can be wiped out by a "book credit," it will not appear in the audited expenditures, and hence the public will not be the wiser. It seems to be a shrewd plan to cover up the real deficiency in the postal finances for the last three years. Let us hope that the Appropriations Committee will not allow themselves to be thus used to cover up the real facts in the case.

Mr. JOHNSON of Mississippi. What is the difference in the cost of carrying the mail now under the new law governing the railroads—that is, the Esch-Cummins Act—and the cost before that?

Mr. STEENERSON. The Esch-Cummins Act has nothing whatever to do with the railway mail pay.

Mr. JOHNSON of Mississippi. There has been no new contract with the railroads since that went into effect?

Mr. STEENERSON. The payment is governed by the law of 1916, and the increase, as shown by the testimony of Mr. Corrigan, amounts to $30,000,000 a year more than it was before. We appropriated in round numbers $60,000,000 for last year, and we appropriate $90,000,000 now.

The Postmaster General, in explaining this situation in his annual report, on page 10 says:

In compliance with the decision of the Interstate Commerce Commission, dated December 23, 1919, granting transportation companies increased compensation under the space basis, made retroactive from November 1, 1916, additional payments aggregating $8,103,889.75 were made for transportation of mail in prior years.

But the only eight millions paid by the Post Office Department on account of the increased rates was the eight million carried in the third deficiency bill last year, and that was to pay the increased rate for March, April, May, and June, 1920. That is established by the testimony which I here insert:

TESTIMONY OF MR. CORRIDON ON THE HEARINGS ON THE THIRD DEFICIENCY APPROPRIATION BILL FOR THE YEAR 1920, PAGES 287 TO 288.

The CHAIRMAN. This $8,000,000 will go to the Railroad Administration?

Mr. CORRIDON. No, sir; it is only to pay the carriers. On March 1, 1920, the railroads were returned to their corporate owners.

The CHAIRMAN. You will not need $8,000,000 from March 1 in addition to your regular appropriation?

Mr. CORRIDON. Yes, sir; because the annual rate of increase will be nearly $30,000,000, and one-third of the year (four months) would make it $10,000,000; but on account of the surplus we have anticipated we are asking you for the $8,000,000 only.

The CHAIRMAN. I assume the decision of the Interstate Commerce Commission was rendered in accordance with the provision found in the act approved July 28, 1916?

Mr. CORRIDON. That is the law; yes, sir.

The CHAIRMAN. The appropriation for this year of $59,625,000, you feel, will be sufficient to pay the compensation to the railroads for the transportation of the mail except that during the remaining four months of this year it will require $8,000,000 to pay the additional compensation fixed by the Interstate Commerce Commission?

Mr. CORRIDON. Not exactly; no, sir. We will ask you, perhaps, as the department stated in the letter to you, Mr. GOOD, for a bulk appropriation to pay the Railroad Administration not only the first eight months of this fiscal year, plus the increases, but for the increases for the entire 26 months the roads were under Government control.

The CHAIRMAN. And during the time the roads were under Federal control their compensation was fixed by their contracts, and we have appropriated for the Railroad Administration all the Railroad Administration estimated will be necessary to make final settlement with the carriers. Now, if this money does not go to the railroad companies—and it certainly would not go to them under their contracts—it certainly should not go to the Railroad Administration, because we have given them all they need.

Mr. CORRIDON. I was speaking with Mr. White yesterday, the assistant comptroller of the Railroad Administration, with regard to this matter of financial adjustment, and he told me that in calling upon Congress for their appropriations—I have forgotten the amount, but something like four hundred and some odd million dollars—they took into consideration the sums they were to receive from the Post Office Department. They are expecting $65,000,000 from us. For the 26

months I figure it will be something like that amount. This is, however, separate and apart from the $8,000,000 we are now asking for.

Mr. EVANS. This particular $8,000,000, however, is to pay the carriers for services rendered since March 1, 1920?

Mr. CORRIDON. Yes, sir; for the four months following.

Mr. EVANS. And if the order had not gone into effect, you would have been able to run through the fiscal year on the $59,000,000 that was appropriated?

Mr. CORRIDON. Yes, sir; and have had probably $1,500,000 surplus.

The CHAIRMAN. What about the amounts that will be due the railroad companies after the passage of that act and before the roads were taken over by the Government and operated?

Mr. CORRIDON. I believe we have sufficient funds to pay the adjusted accounts for services performed between July 1 and December 31, 1917. These funds, however, will not be available after June 30 next. The auditor is keeping a record of all the remaining accounts we are certifying to him for the 14 months' period between November 1, 1916, and December 31, 1917, and he will probably ask Congress separately, as he does in case of other deficiencies, for amounts sufficient to meet them.

The CHAIRMAN. You have not paid any of them?

Mr. CORRIDON. We have certified them to the auditor, but I do not know if he has passed them for payment.

The CHAIRMAN. You are satisfied you are going to need this $8,000,000?

Mr. CORRIDON. Yes, sir.

Mr. JOHNSON of Mississippi. Under the Esch-Cummins law the Interstate Commerce Commission, then, has the right to fix these rates?

Mr. STEENERSON. No; the rates are fixed under the act of 1916.

Mr. JOHNSON of Mississippi. The Esch-Cummins law does not change it in any way?

Mr. STEENERSON. Not at all. Now, why the Postmaster General should state that this $8,000,000 is the amount that they paid for extra rates was paid for the transportation of mail in prior years is hard to explain upon any other theory than that he wished the public to conclude that this $8,000,000 was to pay the extra rate back to November, 1916, and thus conceal this deficiency of $70,000,000.

It is consistent with this theory that he now seeks to wipe out by a "book credit" the debt that is admittedly due without it going into the proper account.

Mr. BLACK. Will the gentleman yield?

Mr. STEENERSON. Yes.

Mr. BLACK. If I read the Postmaster General's report correctly, he called special attention to the fact that this deficit was based on the audited expenses and that there would be other expenses that would come in to be audited later.

Mr. STEENERSON. I will print the extract. The gentleman can put his own construction on it. I want to say that there is not a word in the whole report indicating that there is this deficiency of $65,000,000 and $4,000,000 and $16,000,000 anywhere. There is no mention of it; and that ought to be mentioned if this report was to carry out the idea of a departmental report telling the public the truth and the whole truth. This report of the department is filled with self-laudation, half truths, and misrepresentations, so that you can not get the real facts out of it.

He says that the increase was due to the World War. In every annual report of the Postmaster General in 1917, 1918, and 1919 he contended that the rates prescribed in the act of 1916 were too high, and he expected to win on that contention before the Interstate Commerce Commission; but when the decision came, not only was the decision against his contention on that but it increased for the last period from January 1, 1918, estimated at from 58 to 68 per cent over the original amount prescribed in the act of 1916.

Mr. DUNBAR. Mr. Chairman, will the gentleman yield?

Mr. STEENERSON. Yes.

Mr. DUNBAR. What is the estimated loss to the Treasury in the carrying of second-class mail matter over the amount received for postage?

Mr. STEENERSON. The gentleman leads me far away from the items I was going to discuss. The gentleman will excuse me.

Mr. GARD. Mr. Chairman, will the gentleman yield?

Mr. STEENERSON. Yes.

Mr. GARD. Mr. Chairman, I make the point of order that there is no quorum present.

The CHAIRMAN. Does the gentleman from Ohio press the point?

Mr. GARD. No, Mr. Chairman; I do not. I withdraw the point.

Mr. STEENERSON. There is considerable need for information about the cost and earnings of the different classes of mail. The gentleman from Indiana [Mr. DUNBAR] has referred to second-class mail matter. There is one shining light about second-class business which distinguishes it from other mail matter, and that is that we know how many pounds are mailed, and we know how much postage we get per pound. That is something that you can not say of any other class of mail.

The parcel-post law provided that the rates should be adjusted by the Postmaster General so as to make the business self-sustaining. The law required that the postage should be paid in advance by affixing distinctive stamps to the packages, and it further provided that from time to time the Postmaster General may revise the rates so as to make the revenue from the parcel post equal the expense. What was done? The distinctive stamp was abolished by Mr. Burleson soon after he came into office, and since then there has been no way to find out what the revenue has been from that class of mail.

The result is that nobody on earth now knows even approximately either what the volume, the revenue, or the cost of this service amounts to.

In 1913 the Postmaster General said:

Based upon statistics which are believed to be absolutely reliable it would appear that the average cost of handling parcels at this time, exclusive of transportation, does not exceed 2 cents, or 1.185 cents per pound. The average distance which a pound of parcel-post matter is transported is 416 miles, and the average rate of transportation per pound for the United States is 2.08 cents, making a total cost of 3.265 cents per pound. The average postage per parcel is 6.6 cents, or 3.911 cents per pound, leaving a net profit of 6.46 mills per pound. As 1,640,943,240 pounds are handled in a year, the profit at this rate would be $10,600,493.33. (CONGRESSIONAL RECORD, May 14, 1917, p. 2300.)

In his last annual report he gives the following figures:

The number of pieces of parcel post handled during the last fiscal year, 2,250,000,000; the average weight per parcel, 4.9 pounds; cost of handling and delivery of each parcel, $0.0199; revenue derived from parcel post, $150,000,000; profit, about $10,000,000 per annum. Total number of pounds handled, 11,025,000,000.

Applying the 1916 rates to the 1920 business, we have this result:

Number of pieces handled (1920)	2,250,000,000
Number of pounds handled (1920)	11,025,000,000
Revenue per pound (1916)	$0.03911
Total revenue	$431,187,750
Total cost per pound (1916)	$0.03265
Total cost	$359,966,250

The Postmaster General gives no figures for revenue or cost for 1920, but only says that the receipts were $150,000,000 and profits about $10,000,000. If this be true, it only cost 1.27 cents per pound in 1920, as against 3¼ cents in 1916. Railroad and vehicle transportation have gone up at least 50 per cent, as has also clerk hire, so it can not be true that it costs less per pound now than it did then. Applying the postage rates of 1916, we should have had a revenue of more than $431,090,000 last year, as against $150,000,000; and applying cost figures of 1916 to this year's business, we would have almost $360,000,000, or a loss of $210,000,000 on last year's business alone. I have computed the total volume of other mail, based upon the ton-miles given by the Interstate Commerce Commission in 1917, and I find it to be about 2,800,000,000 pounds; and, therefore, if parcel post is 11,000,000,000 pounds, it constitutes 80 per cent of the weight in the mails.

But these figures merely demonstrate the utter darkness that overshadows the whole business. If received, the postage rates of 1916 and the parcel post brought in $431,000,000 of the total $436,000,000 earned by the whole Postal Service, or 99 per cent of the whole. If it cost us the same in 1920 as in 1916 to do this business, which appears probable, we lost $210,000,000 last year. The whole Postal Service should pay for itself, and not only that, but this particular service is by mandate of the law required to be so, and yet the head of the department keeps us in absolute ignorance. If there ever was a business that needed a thorough investigation and overhauling by efficient engineers, it is this. The deficit now and for next year will run at least $36,000,000, and it should be placed on a paying basis at once. The cost of Government owned and operated vehicle service is now $15,000,000, while in 1914 we only spent about $900,000, an increase of 1,500 per cent, mostly due to parcel post.

The parcel-post business has transformed our post offices into freight depots and the clerks are working in cramped places, and we are called upon to appropriate scores of millions of dollars for increased quarters in the large cities. They are needed and it ought to be given, but most of it is directly due to this parcel business.

In the last annual appropriation bill a joint commission was created to investigate the Postal Service. They met together and decided that if they were going to get any benefit from this investigation the inquiry in the Postal Service there must be an inquiry by efficiency engineers, and that work has been undertaken. But it was only begun a couple of months ago and it will take perhaps a year to finish it. It is a vast business.

We hope the inquiry will enable us to deal with these problems understandingly. We should know what each branch of the service costs and what it earns. Each branch should be as

near as possible self-sustaining, and the Postal Service should pay its way. There is here an opportunity to not only improve the Postal Service but to save millions to the taxpayers by the inauguration of reforms based upon knowledge and up-to-date business methods.

If we can again place the service on a paying basis, we can be more liberal with the efficient and faithful employees, and can better the conditions of those engaged in the labor of carrying on this service. The Committee on the Post Office and Post Roads hopes to report legislation to remedy some of these defects. [Applause.]

The CHAIRMAN. The time of the gentleman has expired.

Mr. BLANTON. Mr. Chairman, I think now we ought to have a quorum, and I make the point of order that there is no quorum present.

Mr. MADDEN. Mr. Chairman, I move that the committee do now rise.

The motion was agreed to.

Accordingly the committee rose; and the Speaker having resumed the chair, Mr. MCARTHUR, Chairman of the Committee of the Whole House on the state of the Union, reported that that committee, having had under consideration the bill H. R. 15441, the Post Office appropriation bill, had come to no resolution thereon.

RESIGNATION.

The SPEAKER. The Chair lays before the House the following communication.

The Clerk read as follows:

THE SPEAKER, HOUSE OF REPRESENTATIVES,
Washington, D. C.

DEAR MR. SPEAKER: I hereby offer my resignation from membership of the board of trustees of the Columbia Hospital for Women and Lying-in Asylum, to take effect at once.

Yours, very truly,

H. W. TEMPLE.

The SPEAKER. The Chair appoints Dr. LAYTON, of Delaware, to the vacancy.

DISPOSITION OF PAPERS.

The Chair lays before the House the following message from the President of the United States.

The Clerk read as follows:

To the Senate and House of Representatives:

I transmit herewith, with my approval, for the consideration of the Congress a communication from the Secretary of War suggesting the enactment at an early date of legislation authorizing the Secretary of War to make disposition of the volumes of the "Official Records of the Union and Confederate Armies," which have accumulated in considerable numbers in the office of The Adjutant General of the Army.

WOODROW WILSON.

THE WHITE HOUSE,
7 January, 1921.

The SPEAKER. Referred to the Committee on Military Affairs.

PERMISSION TO ADDRESS THE HOUSE.

Mr. MADDEN. Mr. Speaker, I ask unanimous consent that after the reading of the Journal on the 22d of February the gentleman from Kansas [Mr. CAMPBELL] may be permitted to speak for one hour.

The SPEAKER. The gentleman from Illinois asks unanimous consent that on the 22d of February, after the reading of the Journal, the gentleman from Kansas [Mr. CAMPBELL] be permitted to address the House for one hour. Is there objection?

Mr. BLACK. Reserving the right to object, I assume it is——

Mr. GARD. Reserving the right to object, I assume it is in the event there be no appropriation bills?

Mr. MADDEN. Not to interfere with business.

The SPEAKER. Is there objection? [After a pause.] The Chair hears none.

EXTENSION OF REMARKS.

Mr. STEENERSON. Mr. Speaker, I ask unanimous consent to extend my remarks in the RECORD.

The SPEAKER. Is there objection? [After a pause.] The Chair hears none.

Mr. GRIEST. Mr. Speaker, I ask unanimous consent to extend my remarks in the RECORD on the pending bill.

The SPEAKER. Is there objection? [After a pause.] The Chair hears none.

REFERENCE OF THE PRESIDENT'S MESSAGE.

Mr. GARRETT. Mr. Speaker, did I understand that the message from the President read a few moments ago was referred to the Committee on Military Affairs?

The SPEAKER. Yes.

Mr. GARRETT. I first thought, on hearing the reading, that it would go to the Committee on the Library. I suppose the Speaker gave due thought to that?

Mr. WALSH. Mr. Speaker, is it not about the disposition of documents in the possession of the War Department?

Mr. GARRETT. The Adjutant General's Office.

Mr. WALSH. I do not see how the Library Committee would have jurisdiction.

Mr. GARRETT. Probably not; it does not make any difference.

ADJOURNMENT.

Mr. MADDEN. Mr. Speaker, I move that the House do now adjourn.

The motion was agreed to; accordingly (at 5 o'clock and 1 minute p. m.) the House adjourned until to-morrow, Saturday, January 8, 1921, at 12 o'clock noon.

EXECUTIVE COMMUNICATIONS, ETC.

Under clause 2 of Rule XXIV, executive communications were taken from the Speaker's table and referred as follows:

306. A letter from the Secretary of the Treasury, transmitting supplemental estimate of appropriations required for expenses of the Post Office Department for salaries and expenses, War Savings Division (H. Doc. No. 960); to the Committee on Appropriations and ordered to be printed.

307. A letter from the Secretary of the Treasury, transmitting supplemental estimate of appropriation required by the United States Housing Corporation for the fiscal year 1921 (H. Doc. No. 961); to the Committee on Appropriations and ordered to be printed.

REPORTS OF COMMITTEES ON PUBLIC BILLS AND RESOLUTIONS.

Under clause 2 of Rule XIII, bills and resolutions were severally reported from committees, delivered to the Clerk, and referred to the several calendars therein named, as follows:

Mr. HUSTED, from the Committee on the Judiciary, to which was referred the bill (S. 1551) to amend an act approved March 3, 1891, incorporating the National Conservatory of Music of America, reported the same without amendment, accompanied by a report (No. 1171), which said bill and report were referred to the House Calendar.

Mr. HULL of Iowa, from the Committee on Military Affairs, to which was referred the bill (S. 4572) granting to the city and county of Honolulu, in the Territory of Hawaii, a right of way over and across the Fort De Russy Military Reservation, for the purpose of extending its sewer system, reported the same without amendment, accompanied by a report (No. 1172), which said bill and report were referred to the House Calendar.

PUBLIC BILLS, RESOLUTIONS, AND MEMORIALS.

Under clause 3 of Rule XXII, bills, resolutions, and memorials were introduced and severally referred as follows:

By Mr. FESS: A bill (H. R. 15576) authorizing the Secretary of War to donate a condemned cannon and cannon balls to the Pleasant View Cemetery, Cable, Ohio; to the Committee on Military Affairs.

Also, a bill (H. R. 15577) authorizing the Secretary of War to deliver to the Knights of Pythias Children's Home, Springfield, Ohio, one cannon or fieldpiece with carriage, captured in the war with Germany, together with a suitable number of shells; to the Committee on Military Affairs.

By Mr. MILLIGAN: A bill (H. R. 15578) to provide for the dishonorable discharge of certain persons inducted into the Military Establishment who refused to perform the regular military duties or wear the uniform of the military forces of the United States, and for other purposes; to the Committee on Military Affairs.

By Mr. CHRISTOPHERSON: A bill (H. R. 15579) providing for the construction of a spillway and drainage ditch to lower and maintain the level of Lake Andes, S. Dak.; to the Committee on Indian Affairs.

By Mr. BUTLER: A bill (H. R. 15580) to increase the efficiency of the Medical Department of the Naval Reserve Force; to the Committee on Naval Affairs.

By Mr. NEWTON of Missouri (by request): Joint resolution (H. J. Res. 442) proposing an amendment to the Constitution of the United States; to the Committee on the Judiciary.

PRIVATE BILLS AND RESOLUTIONS.

Under clause 1 of Rule XXII, private bills and resolutions were introduced and severally referred as follows:

By Mr. ANTHONY: A bill (H. R. 15581) granting a pension to Clarissa A. Shanks; to the Committee on Invalid Pensions.

Also, a bill (H. R. 15582) granting a pension to Mathew Dudley; to the Committee on Pensions.

Also, a bill (H. R. 15583) granting an increase of pension to Margaret A. Warren; to the Committee on Pensions.

Also, a bill (H. R. 15584) granting an increase of pension to Louisa E. Schindling; to the Committee on Pensions.

By Mr. BEGG: A bill (H. R. 15585) granting a pension to Louisa May; to the Committee on Invalid Pensions.

By Mr. DUNBAR: A bill (H. R. 15586) for the relief of Isabella A. Burns; to the Committee on Military Affairs.

Also, a bill (H. R. 15587) for the relief of M. Fine & Sons; to the Committee on Claims.

By Mr. FESS: A bill (H. R. 15588) for the relief of Earl Smith; to the Committee on Claims.

Also, a bill (H. R. 15589) for the relief of Marie Patton; to the Committee on Claims.

By Mr. GREENE of Vermont: A bill (H. R. 15590) granting a pension to Ellen L. Barnes; to the Committee on Invalid Pensions.

By Mr. HASTINGS: A bill (H. R. 15591) for the relief of the American Alliance Insurance Co.; to the Committee on Claims.

By Mr. HAUGEN: A bill (H. R. 15592) granting a pension to Jane E. Kernan; to the Committee on Invalid Pensions.

Also, a bill (H. R. 15593) granting a pension to James T. Farrill; to the Committee on Invalid Pensions.

By Mr. KEARNS: A bill (H. R. 15594) for the relief of William Weber; to the Committee on War Claims.

By Mr. KINKAID: A bill (H. R. 15595) for the relief of Herbert Broadhurst; to the Committee on Claims.

By Mr. MUDD: A bill (H. R. 15596) granting an increase of pension to Harriet E. Dennison; to the Committee on Invalid Pensions.

By Mr. TILSON: A bill (H. R. 15597) granting a pension to Mary M. Whitford; to the Committee on Pensions.

Also, a bill (H. R. 15598) granting a pension to Alexander B. Murphy; to the Committee on Pensions.

By Mr. WINSLOW: A bill (H. R. 15599) granting an increase of pension to Antoine Tisdelle; to the Committee on Pensions.

Also, a bill (H. R. 15600) granting a pension to Alberto Murray; to the Committee on Invalid Pensions.

PETITIONS, ETC.

Under clause 1 of Rule XXII, petitions and papers were laid on the Clerk's desk and referred as follows:

4856. By Mr. COLE: Petition of Farmers' Organization of Green Camp Township, Marion, Ohio, urging the defeat of the Ralston-Nolan bill and favoring the truth in fabrics measure; to the Committee on Ways and Means.

4857. By Mr. DYER: Petition of L. C. Marquardt, department of public safety, St. Louis, Mo., favoring the Smith-Towner bill; to the Committee on Education.

4858. Also, petition of William S. Thompson, St. Louis, Mo., favoring the Smith-Towner bill; to the Committee on Education.

4859. Also, petition of Irving National Bank, New York, protesting against the proposed bill to eliminate speculation in grain; to the Committee on Ways and Means.

4860. Also, petition of H. F. Musgrove, 4410 Delor Street, St. Louis, Mo., favoring the Smith-Towner bill; to the Committee on Education.

4861. Also, petition of Blanke Wenneker Candy Co., St. Louis, Mo., protesting against the excise tax on candy; to the Committee on Ways and Means.

4862. Also, petition of Wallace W. Warner, St. Louis, Mo., favoring the Smith-Towner bill; to the Committee on Education.

4863. By Mr. ESCH: Petition of American Association of State Highway Officials, Washington, D. C., urging the passage of House bill 14905, known as the McArthur bill; to the Committee on Appropriations.

4864. By Mr. FULLER: Petition of the National Sheep and Wool Bureau of America, favoring the passage of the French-Capper truth-in-fabric bill (S. 3686 and H. R. 11641); to the Committee on Interstate and Foreign Commerce.

4865. By Mr. JOHNSTON of New York: Petition of Brooklyn Chamber of Commerce, Brooklyn, N. Y., favoring a national budget system; to the Committee on Budget.

4866. By Mr. LUCE: Petition of board of directors of the New Hampshire Daughters' Club, of Boston, urging protection of national parks; to the Committee on the Public Lands.

4867. By Mr. O'CONNELL: Petition of American Association of State Highway Officials, Richmond, Va., favoring the passage of the McArthur bill (H. R. 14905); to the Committee on Roads.

4868. Also, petition of the Merchants' Association of New York, favoring the passage of the daylight saving law (H. R. 11390); to the Committee on Interstate and Foreign Commerce.

4869. By Mr. RIDDICK: Petition of Judith Basin County Bankers' Association, of Stanford, Mont., favoring Government control of grain exchanges; to the Committee on Ways and Means.

4870. Also, petition of farmers of Fergus County, Mont., urging legislation restricting gambling in grains; to the Committee on Ways and Means.

4871. By Mr. SNELL: Petition of common council of the city of Ogdensburg, N. Y., approving of improvement of the St. Lawrence River; to the Committee on Interstate and Foreign Commerce.

4872. By Mr. TEMPLE: Petition of League of Women Voters of Lawrence County, New Castle, Pa., favoring the Sheppard-Towner bill; to the Committee on Interstate and Foreign Commerce.

4873. By Mr. YATES: Petition of Mrs. Frances K. Hutchinson, 2709 Prairie Avenue, Chicago, Ill., in re legislation pertaining to national parks; to the Committee on Water Power.

4874. Also, petition of G. Dougherty, 519 Fullerton Parkway, Chicago, Ill., in re legislation pertaining to national parks; to the Committee on Water Power.

4875. Also, petition of Miss Ida May Joseph, 4218 Calumet Avenue, Chicago, Ill., in re legislation pertaining to national parks; to the Committee on Water Power.

4876. Also, petition of H. B. Vanzwoll, Union League Club, Chicago, Ill., in re legislation pertaining to national parks; to the Committee on Water Power.

4877. Also, petition of Mr. Charles L. Boone, Prairie Club, 1541 Monadnock Block, Chicago, Ill., in re legislation pertaining to national parks; to the Committee on Water Power.

4878. Also, petition of Mrs. Otis M. Smith, 610 Fullerton Parkway, Chicago, Ill., in re legislation pertaining to national parks; to the Committee on Water Power.

4879. Also, petition of Margaret M. Mathews, Chicago, Ill., and John W. Duncan, protesting against granting of water-power rights in national parks; to the Committee on Water Power.

4880. By Mr. ZIHLMAN: Petition of the Women's Club of Chevy Chase, Md., favoring the passage of the Sheppard-Towner bill; to the Committee on Interstate and Foreign Commerce.

4881. Also, petition of Golden Rules Council, Sons and Daughters of Liberty, of Maryland, favoring a bill to restrict all immigration for a period of two years; to the Committee on Immigration and Naturalization.

SENATE.

SATURDAY, *January 8, 1921.*

(Legislative day of Thursday, January 6, 1921.)

The Senate met at 12 o'clock meridian, on the expiration of the recess.

The PRESIDING OFFICER (Mr. CURTIS in the chair). The unfinished business, Senate bill 3390, is before the Senate.

Mr. SMOOT. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The Secretary will call the roll.

The reading clerk called the roll, and the following Senators answered to their names:

Ball	Heflin	New	Smoot
Calder	Johnson, Calif.	Nugent	Sutherland
Capper	Jones, Wash.	Overman	Thomas
Culberson	Kellogg	Phipps	Townsend
Curtis	Kenyon	Pittman	Trammell
Dillingham	King	Poindexter	Underwood
Gerry	La Follette	Robinson	Wadsworth
Glass	Lenroot	Sheppard	Walsh, Mass.
Gore	McKellar	Simmons	Walsh, Mont.
Gronna	McNary	Smith, Md.	Warren
Harris	Nelson	Smith, S. C.	

Mr. McKELLAR. I wish to announce the unavoidable absence of the Senator from Georgia [Mr. SMITH], the Senator from Connecticut [Mr. MCLEAN], the Senator from Nevada [Mr. HENDERSON], the Senator from Nebraska [Mr. HITCHCOCK], the Senator from Florida [Mr. FLETCHER], the Senator from New Hampshire [Mr. KEYES], the Senator from Louisiana [Mr. RANSDELL], and the Senator from Ohio [Mr. POMERENE], who are absent on official business.

Mr. GERRY. I desire to announce the absence of the Senator from South Dakota [Mr. JOHNSON] and the Senator from Oregon [Mr. CHAMBERLAIN] on account of illness.

I also desire to announce that the Senator from Wyoming [Mr. KENDRICK] and the Senator from Tennessee [Mr. SHIELDS] are necessarily absent.

Mr. GORE. I wish to announce that the Senator from Missouri [Mr. REED] is absent from the Senate to-day, as he was yesterday, by reason of illness.

The PRESIDING OFFICER (Mr. PHIPPS in the chair). Forty-three Senators having answered to their names, there is not a quorum present. The Secretary will call the roll of absentees.

The reading clerk called the names of absent Senators, and Mr. BECKHAM and Mr. COLT answered to their names when called.

Mr. FRANCE, Mr. JONES of New Mexico, Mr. WILLIAMS, Mr. MCCUMBER, Mr. FRELINGHUYSEN, and Mr. BORAH entered the Chamber and answered to their names.

The PRESIDING OFFICER. Fifty-one Senators have answered to their names. There is a quorum present.

PETITIONS.

Mr. TOWNSEND presented a resolution adopted by the executive committee of the Jackson County (Mich.) Farm Bureau, favoring the so-called truth in fabric bill, which was referred to the Committee on Agriculture and Forestry.

He also presented a petition of sundry veterans of the Michigan Soldiers' Home, of Grand Rapids, Mich., who served in the Army, Navy, or Marine Corps of the United States during the War with Spain, in the China relief expedition, and in the Philippine insurrection, praying for the enactment of legislation for the relief of soldiers, sailors, and Army nurses of the War with Spain, etc., which was referred to the Committee on Pensions.

DISTRICT OF COLUMBIA APPROPRIATIONS.

Mr. CURTIS. From the Committee on Appropriations I report back favorably with amendments the bill (H. R. 15130) making appropriations to provide for the expenses of the Government of the District of Columbia for the fiscal year ending June 30, 1922, and for other purposes, and I submit a report (No. 677) thereon. I give notice that I shall call the bill up for consideration at the first opportunity.

The PRESIDING OFFICER. The bill will be placed on the calendar.

INTERFERENCE WITH COMMERCE.

Mr. LA FOLLETTE. Mr. President, I desire to give notice that, if the business of the Senate permits, on Monday next, the 10th of January, I shall ask the Senate to consider the pending motion to reconsider the vote by which the bill (S. 4204) to prohibit interference with commerce was passed by the Senate on the 16th day of December last.

BILLS AND JOINT RESOLUTIONS INTRODUCED.

Bills and joint resolutions were introduced, read the first time, and, by unanimous consent, the second time, and referred as follows:

By Mr. GORE:

A bill (S. 4806) amending subdivision B of section 250 of the revenue act of 1918; to the Committee on Finance.

By Mr. NELSON:

A bill (S. 4807) to amend the Judicial Code; and

A bill (S. 4808) to amend the Judicial Code; to the Committee on the Judiciary.

By Mr. ASHURST:

A bill (S. 4809) granting a pension to Frank Hall; to the Committee on Pensions.

By Mr. CAPPER:

A bill (S. 4810) providing for the election of Delegates to the House of Representatives from the District of Columbia, Commissioners of the District of Columbia, a Public Utilities Commission, a Board of Education, and for other purposes; to the Committee on the District of Columbia.

By Mr. FRANCE:

A joint resolution (S. J. Res. 240) authorizing the Secretary of the Navy to receive for instruction at the United States Naval Academy, at Annapolis, Prince George d'Obolensky, a subject of Russia; to the Committee on Naval Affairs.

By Mr. NEW:

A joint resolution (S. J. Res. 241) to provide for the maintenance of public order and the protection of life and property, authorizing the granting of permits to the Committee on Inaugural Ceremonies, on the occasion of the inauguration of the President elect on March 4, 1921, and so forth; to the Committee on the District of Columbia.

By Mr. LA FOLLETTE:

A joint resolution (S. J. Res. 242) restraining all further steps looking to allotment of lands within the Bad River Indian Reservation in the State of Wisconsin until further revision of the tribal roll; to the Committee on Indian Affairs.

AMENDMENT TO EMERGENCY TARIFF BILL.

Mr. JONES of Washington submitted an amendment intended to be proposed by him to the bill (H. R. 15275) imposing temporary duties upon certain agricultural products to meet emergencies, to provide revenue, and for other purposes, which was referred to the Committee on Finance and ordered to be printed.

FORCIBLE ENTRY AND DETAINER.

Mr. FRANCE submitted an amendment intended to be proposed by him to the bill (S. 4746) to amend an act entitled "An act to establish a code of law for the District of Columbia, approved March 3, 1901, and the acts amendatory thereof and supplementary thereto, in relation to forcible entry and detainer," which was ordered to lie on the table and be printed.

ATMOSPHERIC NITROGEN.

The Senate, as in Committee of the Whole, resumed the consideration of the bill (S. 3390) to provide further for the national defense; to establish a self-sustaining Federal agency for the manufacture, production, and development of the products of atmospheric nitrogen for military, experimental, and other purposes; to provide research laboratories and experimental plants for the development of fixed-nitrogen production, and for other purposes.

Mr. LENROOT. Mr. President, with regard to the pending bill, I wish to occupy some time. In the first place, I will say that I very much doubt whether there are many Members of the Senate who know that while the bill pretends to be a measure in the interest of the farmer, while it is said to be one which will result in the manufacture of fertilizer at a reasonable price to the farmer, I doubt whether there are many Senators who have not carefully studied the bill who know that the fact is that there is nothing in the bill that requires the manufacture of one single pound of fertilizer by the proposed Government corporation; that there is nothing in the bill that requires the sale of the fertilizer manufactured by the Government corporation to the users. The bill confers such powers upon the proposed corporation that, with the consent of the Secretary of War, it may never turn a wheel; it may lease the plant for a hundred or a thousand years, if it sees fit to do so, to any one of the members of the fertilizer trust, of which we have heard so much in this debate. There is nothing in the bill that offers any protection to the farmer or any assurance that the farmer will receive one penny of benefit from it if it shall be passed in its present form. Before I get through I shall attempt to demonstrate the correctness of the statement which I have made.

The history of this Muscle Shoals project is an interesting one. It has extended over a good many years, and is familiar to the older Members of the Senate. When I first came to Congress, some 12 years ago, the development of Muscle Shoals at the expense of the Government, at the behest of special private interests, was one of the earliest proposals that attracted my attention, and the project has been advocated through all the years since then. Scarcely a session of Congress has gone by without these special interests being at the doors of Congress asking for the appropriation of millions of dollars for the development of Muscle Shoals for their benefit.

It may, perhaps, not be improper to state, and it may be interesting to know, that while in this debate we hear much about the fertilizer trust, so called, and of condemnation of the American Cyanamid Co., of which Mr. Washburn is the president, in 1915 an attempt was made to get the Government to appropriate some $18,000,000 for the improvement of Muscle Shoals and to lease it to the same American Cyanamid Co., the so-called fertilizer trust; and that every member of the Alabama delegation, including both of my distinguished friends, the present Senators from Alabama, who then were Members of the House of Representatives, supported that proposition. So, Mr. President, I may be pardoned if I do not attach quite so much weight to the attacks of my good friend, the junior Senator from Alabama [Mr. HEFLIN], upon the fertilizer trust, when I can remember that only a few years ago he was seeking to have one of the largest members of this so-called trust secure a hundred-year lease of this same water power.

In that connection, Mr. President, it is interesting to note that a Mr. Worthington, whom I do not think I ever had the pleasure of meeting, but who was stationed here for many years in the effort to get this legislation through, and for aught I know may still be here, after he had failed in the proposition he had tried to get through, turned to the manufac-

ture of nitrates, of fertilizer, as an inducement to secure the enactment of this proposed legislation. In support of that statement I will read merely a paragraph from the report of the Graham committee, which has been referred to a number of times in this debate, quoting from Mr. Worthington's testimony. After detailing the failure to secure the legislation he was here trying to secure, he said:

> I then decided that the only hope for the development of the great possibilities of Muscle Shoals, and at other points on the Tennessee River, would probably be that Congress would have to decide—or the Government would have to decide, certainly so if we went into the war—upon some plan of providing the country with the needed supply of nitrogen.

So from that time on, Mr. President, the efforts of these special interests seeking to secure this great benefit to themselves were shifted from the water power; it was fertilizer that we heard from beginning to end and that we are hearing in this debate.

The American Cyanamid Co. controlled at that time the Alabama Power Co. Up to 1916 Messrs. Washburn and Worthington were the men who were always actively trying to get Congress to appropriate money for this purpose, with themselves to be the beneficiaries, but in the national defense act of 1916 the Senator from South Carolina [Mr. SMITH] had incorporated a provision in section 124 of that act which caused these gentlemen immediately to lose all interest in this proposition. That provision was to the effect that under the $20,000,000 appropriated for the purpose of securing a nitrate plant in order to furnish explosives for the Government in time of war and fertilizer in time of peace the Government should not enter into cooperation with any corporation or private industry in the development and operation of the water power. Thereupon immediately our friends, Washburn and Worthington, lost all interest, although in the testimony of Mr. Washburn in the hearings on this bill he claims credit for bringing about the passage of section 124 of the national defense act of 1916. His proposition then—he was open and above board about it; everybody knew it at the time, and I was surprised to hear some Senators upon the other side of the aisle say they never heard of it—was that the Government should expend $20,000,000, the American Cyanamid Co. should spend $24,000,000, and the American Cyanamid Co. should have the benefit of the water power under lease; but the paragraph to which I have referred prevented that, and then the American Cyanamid Co. lost all interest in it. I rather imagine, Mr. President, that one reason perhaps why this measure has not been so carefully scanned by the members of the Agricultural Committee as otherwise it might have been is that while in the past the American Cyanamid Co., represented by Mr. Washburn, have been urging the passage of legislation of this character, we find them at this time opposing the passage of the bill, and therefore the very natural assumption, perhaps, follows that, inasmuch as the same people who had been trying to get this measure through in the past are now fighting it, therefore, it must be a good bill. However, it is worth noting that back in those days the American Cyanamid Co. controlled the Alabama Power Co., which was in turn controlled by the Alabama Traction, Light & Power Co. (Ltd.). While there is no positive evidence upon it, it is fair to assume from the testimony that we now have that Mr. Washburn and the American Cyanamid Co. have in some way or other lost control of the Alabama Power Co. Mr. Washburn is no longer president of that company. He testifies that he is no longer actively connected with it in any way, and, therefore, it is fair to assume that the Alabama Power Co. is now controlled by interests other than the American Cyanamid Co. If that be true, it could very readily explain Mr. Washburn's present opposition to this bill; but it does not follow that the Alabama Power Co. is not to be the beneficiary of this legislation, as it has always been supposed to be the beneficiary of legislation proposed along this line.

Mr. UNDERWOOD. Mr. President, will the Senator yield?

The PRESIDING OFFICER (Mr. NEW in the chair). Does the Senator from Wisconsin yield to the Senator from Alabama?

Mr. LENROOT. I do.

Mr. UNDERWOOD. I have no interest in the Alabama Power Co., but I have followed this proposed legislation, and, so far as I know and am informed, the Alabama Power Co. has no interest whatever in building the dam at Muscle Shoals or in the plant there. The Alabama Power Co. is a corporation which operates in my State and sells power to the people of my home city and of some other cities. I have never seen anything in the RECORD or outside of the RECORD to show that they are interested in any way whatever, financially or otherwise, in the development of Muscle Shoals or in the operation of the plant there. If the Senator's statement is based on facts, I hope that he will give the Senate the benefit of the facts and not indulge in speculation or theory which may possibly lead to a misconstruction of this proposition and inculcate the idea that some private interest wants to operate the plant and pursue its development. I know of no such interest and have never known of any. So far as I know, the Alabama Power Co. has never taken any interest in this bill, either for or against it.

I hope the Senator will not leave in the RECORD an assumption of this kind without stating the facts—real facts, not theories—on which to base it, because I will say candidly I do not know, and I have never heard of, anything that indicated any possible interest of the Alabama Power Co. in the Government operating the plant at Muscle Shoals. The only interest they ever had was that at one time they owned the banks at Muscle Shoals, and when the Government concluded to build the dam at Muscle Shoals they sold the dam site to the Government on the same basis that all other owners of land that were selling to the Government sold their lands; and when they sold and conveyed their title to the banks of the river the only connection they had with this plant passed out.

I hope the Senator from Wisconsin will do what I think is the fair thing. If there is anything to connect any other interest, especially an Alabama interest, with this development, outside of the general public interest, I sincerely hope he will put it in the RECORD.

Mr. LENROOT. I want to say to the Senator that I propose, before I get through, to give to the Senate exactly what I base my conclusions upon, and then it will be for each Senator to determine for himself the facts of the matter.

Mr. UNDERWOOD. But I ask the Senator to give facts, not theories, not suppositions.

Mr. LENROOT. I will say to the Senator that I will discuss this matter in my own way.

Mr. UNDERWOOD. I am appealing to the Senator, if he has facts to base his statements on, to put them in the RECORD.

Mr. LENROOT. One fact appears in the bill itself, if I may say so to the Senator from Alabama, because one of the things that are authorized to be acquired in the bill is the electric-power unit on the Warrior River of the Alabama Power Co., and I shall have something to say——

Mr. UNDERWOOD. Well, now——

Mr. LENROOT. I want to finish this statement myself. I shall have something to say about the relations of the Alabama Power Co. to the Government in this very project before I get through.

Mr. UNDERWOOD. I am sure the Senator wants to be fair about this matter, and I am sure that if the statement were left as he has just made it, with nothing else said, it would mislead the Senate, and the Senator himself may be misled about the situation. The unit that is referred to in this bill does not belong to the Alabama Power Co.

Mr. LENROOT. Oh, I am going into that. The Senator need not discuss that in my time. I assure him that I shall give all the facts.

Mr. UNDERWOOD. It belongs to the Government. It was built for the Government.

Mr. LENROOT. I do not yield for that purpose, Mr. President.

Mr. UNDERWOOD. The only connection the Alabama Power Co. had with it is that it built the unit for the Government during the war.

Mr. LENROOT. I shall go into that fully, and the facts will be stated before I conclude.

As to the Alabama Power Co. being a beneficiary of this legislation, I have stated that the Alabama Power Co. does not appear anywhere in connection with this legislation, either for or against it. The American Cyanamid Co. does. Mr. Worthington, whenever legislation affecting Muscle Shoals was before Congress, was always very much in evidence. So far as I know, he is not to-day; for if I were to advise the Alabama Power Co. as to their proper attitude if they wanted this legislation put through, in view of the history of the past 12 years, I should advise the representatives of the Alabama Power Co. to keep away from the Capitol at Washington and have nothing to do or say about this bill.

What are the facts with reference to whether the Alabama Power Co. will be a beneficiary of this law?

Mr. President, we find two departments of the Government in this testimony, both urging the completion of the dam at Muscle Shoals. What that is going to cost I shall discuss a little later. We find one department urging at great length in this testimony that the only use for that water power will be for this fertilizer plant that has been erected by the Government. It has gone to great length in attempting to show that

there will be no market for the water power at the Muscle Shoals Dam. On the other hand, the Board of Engineers takes exactly the contrary position—that the advantage to come from the development of the Muscle Shoals Dam will not be in the fertilizer but will be in the sale of water power; and to whom will this water power be sold if it is developed at Muscle Shoals?

It is testified here that if the Government should complete this dam and undertake to distribute the power to users, it would cost $29,000,000 in addition to the estimate. It is stated, without mentioning the Alabama Power Co., that there are other corporations that would purchase this power, and one of them, and I think my friend from Alabama will admit the most prominent one, is the Alabama Power Co. Being the only purchaser unless Congress shall make an additional appropriation of $29,000,000, that power, if we once complete this dam at this expense, must be sold to the Alabama Power Co. at such price as it may see fit to pay, or go to waste.

Mr. UNDERWOOD. Mr. President, the Senator has brought in my name, and therefore I will interrupt him again, though I do not want to interrupt his argument, as he is not giving us the facts on which to base it; but I want to say that my conclusions are just the contrary from his. If this power is sold, I do not think it will go to the Alabama Power Co., which operates in Alabama. If it is distributed it will go to industrial plants, and not to lighting and street car plants. It will go to Chattanooga, Memphis, Nashville, and Birmingham, which lie within a radius of 100 or 120 miles around the plant; and I think the Government would be very foolish to contract this power to any one corporation. I know of no reason why they should, nor do I know of any expectation that they would do so.

That is my conclusion about it. I live in the State, and know something about the facts. I do not think there is a word to base the Senator's suggestion on except a theory of his own. So far as I know, since the Alabama Power Co. sold the dam site at Muscle Shoals they have had no interest in this proposition.

Mr. KELLOGG. Mr. President, will the Senator from Wisconsin permit me to ask the Senator from Alabama a question?

Mr. LENROOT. Yes.

Mr. KELLOGG. Does the Senator from Alabama approve of the principle of the Government building dams and selling power to anybody?

Mr. UNDERWOOD. I will say to the Senator that if it were merely a question of the Government going into private business, I would not. As to building dams generally for the purpose of developing water power, I am not sure that I am not in favor of that proposition—not in relation to Muscle Shoals, because that is a different proposition. I regard Muscle Shoals and the development there as purely a war power, to be held for a war emergency; but as to whether we should continue in the future to let these great dams that are available for the benefit of industry and the people of this country always continue to go into private hands, or, in the development of our river and harbor work for the purpose of making our rivers navigable, whether it would not be a wise policy for the Government itself instead of building a nonpower dam to build a dam that would provide hydraulic power and then dispose of the electricity coming from that dam to carry out a Government purpose for the benefit of the people of the United States where the Government can control it. I am not sure that the future will not lead in that direction.

Mr. KELLOGG. The Senator means where the dam is necessary to improve navigation of the river?

Mr. UNDERWOOD. That is true. I am not talking, of course, about nonnavigable streams. I do not know whether the Government would have the power—I doubt it—to invade nonnavigable streams; but undoubtedly the Government has the power and it is a proper exercise of the power for the Government to make a stream navigable by building a dam, and if it can build a hydraulic-power dam instead of a low-water dam, and at the same time get back the money in the sale of its power, I am rather inclined to think it is a proper exercise of a Government function.

Mr. KELLOGG. I am not talking about powers of that kind. I am talking about the Government building dams simply to create power to sell to private concerns.

Mr. UNDERWOOD. Oh, well, if that is all that is involved in it, I agree with the Senator; but of course that is not involved in this case.

Mr. LENROOT. Mr. President, it so happens that I have before me a report of one of the officers of the Government appearing in the hearings as to the effect of this legislation upon the Alabama Power Co. and all other companies if this power is to be sold commercially in that territory, and I want to read it.

Mr. KELLOGG. What page does the Senator read from?

Mr. LENROOT. Page 86, the report of George J. Roberts. He says:

> Shall this power be sold to large consumers or sold to the general public, including house lighting? If to large consumers, the distribution system in the cities, presuming the usual amount of underground conduits were installed, would probably cost $50 per kilowatt capacity, or $7,500,000, and if to the general public, $140 per kilowatt capacity, or $21,000,000. Therefore, before we begin the distribution of power we will have expended, if to only large consumers, $15,700,000; if to the general public, $29,200,000; in either case a sum larger than that asked for by the bill which you are now considering.
>
> As I read section 124 of the national defense act, the Government must operate this hydroelectric plant and sell the current to the ultimate consumer. It is prohibited from selling to any of the existing electric-power companies. It is realized that Congress may, by enactment, relieve the situation and permit either the lease of the hydroelectric plant to private interest or the sale of the current wholesale to private interest. If such legislation should be enacted the additional machinery, transmission lines, step-up and step-down transformer stations would have to be built either by the Government or by the leasing company, and the lease rental that the Government would be justified in accepting would be the profit that could be made by the operation of the hydroelectric plant in conjunction with the nitrogen-fixation plants, or $2,751,300.
>
> With the working-day becoming shorter and shorter and the Saturday half holiday becoming more common, due to the demands of labor, and assuming that this power would all be sold to industries which would not be in operation Sundays and holidays, the sales from this plant, supplemented by the steam-power plant, would be 450,000,000 kilowatt hours per annum, and 50,000,000 kilowatt hours of the above would have to be produced by the steam plant. Assuming the cost of operation of the hydroelectric plant at three-fourths of a mill per kilowatt hour, the figure used in our estimates of fertilizer costs, and the cost of current generated by the steam plant at 9 mills per kilowatt hour, due to its intermittent operation and small production, and assuming interest, depreciation, and taxes on the substation and transmission lines at 12 per cent and on the hydroelectric units at 8½ per cent, we find that the total cost of production of current per kilowatt hour is 0.464 of a cent and the rental of $2,751,300 means 0.611 of a cent, or a total cost to the lessor of 1.075 cents per kilowatt hour, while the cost of operating to the power company operating its own plants, including interest, depreciation, and taxes, would not exceed 0.7 of a cent per kilowatt hour. It must not be overlooked that the power companies operating in these communities can build their plants near their distribution centers, and $8,200,000 would go a long way toward their construction, and they would own the plants, whereas if they leased this plant from the Government they would have to make this $8,200,000 investment, which is useless except in conjunction with the Government plant, and pay a rental of 0.611 of a cent per kilowatt hour. The outstanding feature here is that if current is sold in bulk to an existing power company the rental of 0.611 of a cent is so large that this power could only be purchased by the power companies as a defensive measure.
>
> If this energy were disposed of to the ultimate consumer, it would displace power stations of the various companies who are now serving their communities and would destroy the value of these companies' power plants, whose replacement cost at present prices would be not less than $100 per kilowatt, or $15,000,000. It would displace $7,500,000 of their distribution system and make it useless. This means that it would make power plants idle whose present reproductive value is $15,000,000 and make distribution systems idle worth $7,500,000 without serving any useful purpose, since these plants are now serving their communities efficiently and cheaply. It would have a very serious effect on the development of utilities throughout the South and would seriously injure the credit of the companies who for the past 25 years have been building up large power companies for the development of manufacturing throughout the South.
>
> If these power plants are not used to manufacture nitrates they will have to be operated as commercial power plants. Shall we destroy industry or promote it?

This bill authorizes the sale of all of the power created by this dam in any way the corporation may see fit to sell it. Does anyone suppose that if the Alabama Power Co. were threatened with ruin, as Mr. Roberts states they would be if this power were sold, the Alabama Power Co. would not be fighting this bill? On the other hand, knowing that it would require an additional appropriation of $29,000,000 from the Government, in addition to this vast appropriation which will still be required, as intelligent and sane men the Alabama Power Co. know that after the Government has completed this dam and generated the power they will be the customer, and they will fix the price, exactly as they did in the present fertilizer plant, which I shall have occasion to refer to later on.

The Senator from Alabama has the premises upon which I make my statement that the Alabama Power Co. is interested. There can be but one conclusion, it seems to me, in the face of this threatened destruction, that they are not in anywise opposing it.

Mr. UNDERWOOD. If the Senator will yield, of course, I have no doubt that the Senator is himself convinced, but after he has reached his conclusions on the fact he has brought it down to the proposition that because the great bulk of the wires which now extend over Alabama are controlled by the Alabama Power Co., necessarily they must buy the power of this Government plant at their own price. That is the only thing he has given to connect the corporation there with this power. The Senator overlooks the fact that the Alabama Power Co.'s business is largely the question of lighting towns and running street cars, and that this great volume of power which is to be consumed must be consumed in industry.

The Senator says that this officer, Mr. Roberts, has reported that it would require a wiring system to the extent of $29,-

000,000 to consume the output of this plant, if it were all absorbed in this territory. But that does not include Alabama alone. It includes a vast territory. He may be in entire error. It may be possible to sell this Government power at the face of that dam to men who will build their own lines. But in my judgment, Mr. President, if the Alabama Power Co. had any interest in this proposition it would be rather in fear of a competitor than it would be concerned with an expectation of getting power. More than that, I think the great bulk of this power should ultimately be used to benefit the agricultural classes of the country, the farmers, and that is what I have been fighting for in connection with this bill, outside of its use to make powder for the Government. But if it has any surplus power to sell, I assume that the officers who will be appointed by the administration to which the Senator belongs will be honest men, and that they will sell the power most advantageously to the Government, and not to the advantage of any special interest.

Mr. LENROOT. Now, I want to ask the Senator a question. If Mr. Roberts's statement is true, that after we complete this dam it will require, if we are going to distribute the power and sell to other than present large users, $29,000,000 more, what is the Government going to do with the power when it is completed?

Mr. UNDERWOOD. I do not take Mr. Roberts's statement as absolutely correct. I have not investigated it, but I assume that if the Government did find it advisable to spend one or twenty-nine million dollars to sell this power, it would sell it to somebody for enough to pay the Government back what it expended.

I ask the Senator this question: If the pending bill becomes a law, this corporation is organized, and the dam is built, and after the use of so much of the power as is necessary to run the nitrate plant either for powder or fertilizer there is a surplus power, would the Senator be in favor of letting the power go over the dam or selling it, so that the Government could be reimbursed?

Mr. LENROOT. If that were done, and this surplus power amounted to 200,000 horsepower or 100,000 over that utilized by the nitrate establishment, if it were utilized, I would be in favor of getting what we could as a business proposition for that excess power.

Mr. UNDERWOOD. I agree with the Senator on that thoroughly.

Mr. LENROOT. Then, if it became a proposition of getting what we could, even though it would be one-half of what would be a proper price, there being only one customer for it, or appropriating $29,000,000 more, coming in competition with industries which were already furnishing power, I as a business man, and the Senator from Alabama as a business man, would decline to appropriate the $29,000,000. The Senator would say, let us give it to the Alabama Power Co. for what it is willing to pay.

Mr. UNDERWOOD. No; not at all. I know more about that situation than the Senator does. I do not think that the Alabama Power Co., if that power is to be sold, would by any means be the only competitor or the principal competitor for it. I know the great development of industry in the district in which I reside is now rapidly being based on the use of electricity, and I know that there would be ample sale for this power, if there is any surplus power, entirely independent of the Alabama Power Co. or any other particular corporation. If this board of directors is appointed by the next administration, I am going to assume that they will be honest men and will take care of the Government's interest and not operate the plant as a favor to any special interest.

As to the sale of the power, I think there probably will be less demand from the Alabama Power Co. for this surplus power than from anybody else, because the Alabama Power Co. has a great dam on the Coosa River now, and the Alabama Power Co. has a 40-horsepower unit next to the Government 40-horsepower unit on the Warrior River. That is owned by them, and the Government has nothing to do with it, and it has nothing to do with the Government unit.

Mr. LENROOT. The Senator does not mean that the Alabama Power Co. has nothing to do with the Government unit?

Mr. UNDERWOOD. It built it, but it has no control over it.

Mr. LENROOT. It happens to own the ground on which it is located, does it not?

Mr. UNDERWOOD. It built it at the Government's request during the war. The Government can do with it what it wants.

Mr. LENROOT. Yes; it can tear it down.

Mr. UNDERWOOD. I do not know about the title to the land, but the Government can condemn that land in an hour if it wants, and operate its plant, which it should do. I do not know whether the Government acquired the title or not. I have always assumed that it did. But if it did not, it can acquire that title by condemnation under existing law, and it ought to do it.

But, more than that, what I was leading up to, the Alabama Power Co. now has an application pending here before the new Water Power Board, and is attempting to get the right to build a dam at Duncans, on the Coosa River, to supply them with such additional power as they need, and it is prepared to go ahead with it. I certainly do not think that that indicates they are expecting to purchase power from Muscle Shoals, when they are preparing right now, if their application is agreed to, to build a dam of their own on the Coosa and to put their money in it.

I have no doubt the Senator is himself convinced that his theory is correct, but I do not believe, and I have never seen anything to indicate, that the Alabama Power Co. are expecting to get a particle of this power. Everything indicates that they are not; that they are going somewhere else to get their power. But I assume that if we have any surplus power this board will sell it in the interest of the Government, and I have no doubt in my own mind that there is going to be ample opportunity for the Government to sell the power to a good many interests.

Mr. LENROOT. Mr. President, there is not a word of testimony, and I have never heard any facts that would indicate, that there would be more than one buyer for the surplus power, and that is the Alabama Power Co. In this connection let us see what the Alabama Power Co., or the Alabama Traction, Light & Power Co., which owns the Alabama Power Co., does control. I read from Moody's Manual of this year:

> The company owns or controls entire capital stock and bonds of the Alabama Power Co. and its subsidiaries—Alabama Interstate Power Co.; the Birmingham, Montgomery & Gulf Power Co.; the Muscle Shoals Hydroelectric Co.; Alabama Property Co.; the Alabama Power & Light Co.; Asbury Electric Power Co.; Selma Lighting Co.; Dixie Construction Co.; Winona Coal Co.; and Coosa Securities Co.

And its assets, as shown by its consolidated balance sheet of last year, were $45,290,000.

It happens to be a corporation organized and having its principal office in Montreal, Canada, and it is currently reported that it is very largely British-owned.

The American Cyanamid Co. is here fighting this bill, because they take the position that the product of this fertilizer plant will come in competition with them, and therefore injure them. They are open and aboveboard about it. Mr. Roberts, an official of the United States Government, says that if we sell this water power it is going to ruin the Alabama Power Co.; yet the Alabama Power Co. sits quietly by and does not care a snap of a finger whether it is ruined or not, according to the Senator from Alabama [Mr. UNDERWOOD].

Mr. UNDERWOOD. The Senator from Wisconsin does not realize the situation in Alabama. What I said a while ago is true, so far as I know. The Alabama Power Co. has not put its finger on this proposition either for or against. What the Senator said about the organization of the Alabama Power Co. now being under British control is true, I think. The Alabama Power Co., like all public-service corporations in any State, is not overly popular at home. The people of Alabama are naturally intensely in favor of the building of this dam and the development of this fertilizer plant. The Alabama Power Co. operates its business, I think, entirely within the State of Alabama. If it were to appear here on the floor of the Senate, through its agents, in opposition to this bill, the reflection of its action going back to Alabama would create a sentiment that would be most disastrous to it. I do not know what their view of it is, but I can realize that no matter what they think about the bill, there is good reason why they should not stand in opposition to the development of Muscle Shoals.

Mr. LENROOT. Mr. President, self-preservation is the first law of nature; and that applies to corporations as well as to individuals. If the Alabama Power Co. feared that this water power was to be sold in competition with the Alabama Power Co., I think there would be some evidence of its opposition. Its enactment would not hurt it, in my judgment, and therefore it is in favor of the bill. I have given the facts, and every Senator can draw his own conclusions as well as I.

Mr. UNDERWOOD. If the Senator will allow me to interrupt him, I realize that; but I ask the Senator now if there is any word or line in this bill which would prevent the surplus power, if there were any, from being sold in competition with the Alabama Power Co.?

Mr. LENROOT. No; but it is going to require $29,000,000 additional money to do it, according to the reports of the Government, and that we are not going to provide.

Mr. UNDERWOOD. I do not think it would do that. It would not require that amount of money to put it in competi-

tion with the Alabama Power Co., according to the Senator's own proposition. They have only $45,000,000 and probably some of that is not reflected in the money that went into the corporation. In addition to their power lines they have great plants. They have a great dam on the Coosa River now, they have a great electrical plant on the Warrior River, all of which absorb this $45,000,000, outside of their wiring lines, and, though I do not know, I think two or three million dollars would probably duplicate the wire lines of the Alabama Power Co. in Alabama. So if that were taken into consideration, it would not be a question of $29,000,000; it would be a question probably of two or three million dollars and probably two or three hundred thousand dollars to carry this power to the vital points of consumption, like Birmingham. So I merely say that the Senator is entitled to his theory. I only point it out to show that I do not think there is a foot on which to rest the theory the Senator is advancing.

Mr. LENROOT. Mr. President, with reference to the assets of the company I wish to say to the Senator, and I am sure he will agree with me, that if the Government had built the property which the Alabama Power Co. now has, instead of it being carried as an asset account of $45,000,000, it probably would have cost the Government $145,000,000 or even $200,000,000.

Mr. UNDERWOOD. If built during the war, but not before the war. Most of their plant was built before the war.

Mr. LENROOT. We hear a great deal about excessive costs due to the war, and I shall have something to say about that, because we will find before we get through that a very considerable percentage of the great cost of these nitrate plants was not due to the war but was due to certain officers in the War Department.

I wish very frankly to state my position with reference to the matter as a whole. We have on the one hand the claim made that we must pass the bill because we are getting the Muscle Shoals Dam, costing $50,000,000, and this will be the only way in which we can utilize that power. On the other hand, we have another branch of the Government insisting that we must go on and complete the dam because there is a great field for power development and a splendid market for power.

We have this other very peculiar situation, that when the officers of the Government come to try to demonstrate a profit from the fertilizer plant under the bill they figure the power coming from the dam at a cost of three-quarters of a cent per kilowatt-hour, but when we come to the engineers endeavoring to demonstrate that the completion of the dam is a good proposition we find that, under instructions of the Secretary of War, instead of three-quarters of 1 cent per kilowatt-hour they fix a basis of 4 mills per kilowatt-hour, or more than five times as much when they try to show a profit for the dam as when they try to show a profit for the plant.

No one can deny that. It is in the record. It is not to be wondered when Senators try to go through the hearings and attempt to reach some conclusion that they feel that it is in a maze, and they do not know at what conclusions to arrive.

But we ought not to go on with the scheme, and that is the first proposition I wish to lay down, unless the Muscle Shoals Dam is to be completed. It is admitted by all that the fertilizer plant can not be run without a loss unless they have the water power. In this very bill it is proposed to devote $3,000,000 of the $12,500,000 appropriated for the purpose of taking care of losses in this very plant in the first three years of its operation. Losses will be necessary because of the high cost of steam power, it being estimated that it will make a difference of $10 per ton in the cost of the fertilizer.

Can anyone say that if the Muscle Shoals Dam is not to be completed we should pass the bill? I think not. Very well, then, ought we not, as a business proposition, to postpone any further consideration of the bill until it is determined whether the Muscle Shoals Dam is to be completed?

Now, what is the situation with reference to that? In the national defense act of 1916 $20,000,000 was appropriated to build and complete a nitrate plant for the purpose of furnishing explosives to the Government in time of war and fertilizer in time of peace. In February, 1918, more than a year after the passage of that act, the President allotted to the Muscle Shoals Dam project $12,000,000 for the purpose of building the dam, out of other war appropriations, out of the lump-sum appropriation for armament and for fortifications of $85,000,000, and this was expended for the two plants, No. 1 and No. 2, at Muscle Shoals, which are run by steam.

Nothing was done under that order of President Wilson of February 8, 1918, except to make some preliminary plans, until long after the signing of the armistice. Nothing was done under that authorization until the summer of 1919, and this is another illustration of the arrogance and autocracy of officials of the War Department, and particularly the Secretary of War, in violating the spirit of laws and appropriations made by Congress. That was passed as a defensive measure. It was known at the time they spent the first money on the Muscle Shoals Dam that it could not be completed for twice the amount of the allotment that was made to it by President Wilson. The war was going on then when that order was made, and the President was justified in making the order.

After the armistice, after the occasion for the appropriation was gone, any official of the Government having any proper respect for the expenditure of money, instead of going in upon the proposition, would have come back to Congress for further authorization; when the immediate occasion of the passage of the act had gone, would have come to Congress for further authorization and advice, and would have permitted Congress, and not the Secretary of War, to fix the policy. That did not happen in this case.

The Secretary of War undertook to say that the Muscle Shoals Dam was needed for water-power purposes when the only legislation that existed prohibited the sale of water power, except for the Government manufacture of explosives and fertilizer. He did it at a time when he knew that the $12,000,000 would only begin the work, and the only purpose in that was to spend so much money upon the proposition that Congress later would be forced, whether it wished to or no, to make whatever appropriation might be necessary to complete the dam, which is exactly what has happened here. The Secretary of War comes before us now and says unless we go on here we will lose $7,000,000.

Mr. KING. Mr. President——

Mr. LENROOT. I yield to the Senator from Utah.

Mr. KING. Will the Senator develop also that feature of the testimony which is conformable to the fact that after the armistice, without, as I conceive, any authority whatever, the War Department, carrying out its autocratic and prussianized policy, went ahead and expended large sums of money on the plant?

Mr. LENROOT. It did. That is what I am speaking of now. What is Secretary Baker's testimony upon this point as justifying the expenditure? I read from page 348 of the hearings, where he said:

> Now, we have already spent $7,000,000 in the building of that dam. The dam was proper to be built, even if we never had a nitrate plant at Muscle Shoals. If there is one thing which this country must do, and do soon, it is to develop its water powers.

Then he goes on and makes an argument for water-power development, not for this fertilizer plant, but for the general industry, when under the law under which he acts, if the dam is completed, he would not have the right to sell one single horsepower for that purpose.

Then he goes on to say:

> If we never had in contemplation the use of any nitrogen for either military or agricultural uses, the development of the water power at the Muscle Shoals Rapids would be a policy of national conservation and economy that only the Government is able to carry out and only large enough to carry out.

Mr. Baker must have known that that very proposition has been pending before Congress for more than 10 years, and Congress had refused up to that time to do the thing which he autocratically assumed the power to do, because, under the letter of the law, but in violation of the spirit, he had the legal right to do it. Then he goes on to say that it would be a good business proposition for the Government in any event.

I wish to say something about the fertilizer plant that we have and its location, not because I wish to bring up the wasteful expenditure for the purpose of showing it, not that, but because officers of the Ordnance Department, in carrying out the contract with the American Nitrates Corporation, were the really guilty parties in a very large percentage in this extravagance, and it is now proposed that officers very largely of the Ordnance Department shall become the directors of the same corporation.

It may be interesting to know in this connection that while the bill purports to be drawn by the War Department, it was in fact drawn under the direction of Mr. Glasgow. I have been trying to get some information concerning Mr. Glasgow, but it is really quite difficult.

The most that I can learn about him is that he is an American citizen, who resided in London before the war, and became a nitrate expert for Secretary Baker, without any information in any of the hearings as to what his qualifications were, though I assume that he had them; and just as soon as he had completed this proposition, even to the extent of suggesting who the directors should be in the corporation—very largely the same gentlemen who have testified in behalf of the bill before the Committee on Agriculture and Forestry—he suggested that he himself would be willing to become one of the directors of the corporation residing in London.

After giving his recommendations in great detail, he says:

24. I have sought advice in numerous quarters, and all of it strongly supports this conclusion in favor of incorporation. To check this conclusion, I have endeavored to sketch a supposititious order by the Secretary of War establishing the fixed-nitrogen administration as a departmental bureau to give effect to the anticipated congressional appropriations. I attach this draft marked "Exhibit A"; but I find myself quite incapable of producing any instrument which is a fit substitute for the accumulated experience of all past corporation management, as now reflected in corporation procedure. Briefly, it seems to me there is nothing to lose and everything to gain by the process of incorporation.

25. I have, therefore, retained Milton Elliott, counsel for the Federal Reserve Board since its inception until last spring, to draft the proposed bill which is presented herewith to your consideration; and I venture to ask you to make time for an immediate discussion of the points involved. I have to be urgent, because I am sailing for London November 1.

The report of the Graham committee shows just whom he did recommend to become directors of the corporation. Three of them were the chief witnesses before the Agricultural Committee on this bill.

In this connection, it may be worth while to note that there is a provision in the bill that officers of the War Department may become directors of the corporation, and the corporation can fix their salaries in addition to the remuneration which they receive as officers of the United States Government.

Mr. GRONNA. Mr. President——

The PRESIDING OFFICER (Mr. McNARY in the chair). Does the Senator from Wisconsin yield to the Senator from North Dakota?

Mr. LENROOT. I yield.

Mr. GRONNA. I wish to ask the Senator if the testimony he has just recited was given before the Committee on Agriculture of the other House? The Senator stated that it was given before the Committee on Agriculture. I can not recollect that Mr. Glasgow ever appeared before our committee.

Mr. LENROOT. No; but the chairman of the committee will remember that Mr. Glasgow was constantly referred to by all the witnesses, and that his letter, from which I have just read, was put into the record; but there does not seem to be any information anywhere in the hearings as to who this eminent gentleman was.

Mr. GRONNA. I am not, of course, attempting even to intimate that what the Senator has recited is not correct, but I am here to state that Mr. Glasgow never appeared before the Committee on Agriculture of the Senate.

Mr. LENROOT. He did not. When I referred to recommendations that certain men who had appeared before the committee be made directors of the corporation, I was referring to officers of the Ordnance Department.

I have said that I wished to refer to the expenditures upon this plant, not for the purpose of giving publicity to the expenditures themselves but because officers of the Ordnance Department were responsible, in very large part at least, for those expenditures. As to the original contract, I take it that the Senate is familiar with that. Perhaps, if there are any who are not familiar with it I may state it in a word.

A contract was made with Air Nitrates Corporation to build these plants. They did build plants No. 1 and No. 2 at Muscle Shoals, and they partially completed plants No. 3 and No. 4 in Ohio. It is rather interesting to note the reason why they went to Ohio to start those plants, upon which they spent $15,000,000. I wish to quote from the testimony of Col. Joyes before the War Expenditures Committee of the other House. When he was asked how he came to locate these plants where they were located, he said:

Col. JOYES. * * * While I liked very much the Kingsport site and thought perhaps the best thing to do, and the best thing we could do, was to go right up to Toledo and Cincinnati and build up there; and, furthermore, I don't mind saying to you that I mentioned to Mr. Stettinius that I thought it would not hurt anything to quiet some of the opposition that was coming from that neighborhood up here to anything that we were attempting to do down South; we could not afford to be handicapped by interruption of everyday business by the attacks that were made.

It so happened, Mr. President, that, perhaps, in the House of Representatives, the leading opponent of the Muscle Shoals project was Representative LONGWORTH, of Ohio. The testimony continues:

Mr. GRAHAM. You refer, I suppose, to the attacks of Congressman LONGWORTH?

Col. JOYES. Not particularly; no, sir. I do not refer to anybody as making attacks that were not advisable, or making attacks at all. But there were attacks of this and that and the other community, you know. The communities claimed that they had everything that goes to make up a plant site; and it takes time when you are busy, as we were at that time, to handle those matters, and it is desirable not to have those things come in.

Mr. GRAHAM. Congressman LONGWORTH was making statements in Congress on the Muscle Shoals plant?

Col. JOYES. Yes, sir.

Mr. GRAHAM. You had that in mind to some extent, I suppose?

Col. JOYES. Oh, yes; undoubtedly.

What is the inference, Mr. President? Can there be but one? As Mr. LONGWORTH had attacked the Muscle Shoals proposition because he believed it was against the interest of the Government and the public, they thought they would quiet his opposition by bribing him with the location of two plants in his own State. I am glad to say they did not accomplish their purpose. They spent $15,000,000 on those two plants and they were abandoned, very properly, when they were but partially completed. However, as to plants No. 1 and No. 2 I wish to read a little from the report of the Graham committee. In that report the testimony is referred to.

Mr. WADSWORTH. Will the Senator give the page of the report from which he is about to read?

Mr. LENROOT. I shall now read from page 32 of the report.

However, I did not quite complete my statement in reference to the Air Nitrates Corporation. The American Cyanamid Co. undertook to furnish the "know how" to build plants 1, 2, 3, and 4 on a percentage basis; the fee not to exceed originally, I believe, a million dollars for the two plants, and afterwards expanded, I think, to a million and a half dollars for the four plants. The American Cyanamid Co. organized a corporation for the purpose of carrying on this work, the Government furnishing all the capital, with capital stock of $1,000, the American Cyanamid Co. owning all of the capital stock. The American Cyanamid Co. owned the patents, and they made a contract for royalties and for operation when the plant should be completed. They furnished the "know how" under the supervision of officers of the Ordnance Department.

Large numbers of employees were on two pay rolls—

Remember, the Government paid every dollar of this—

Large numbers of employees were on two pay rolls, and drawing double compensation. (3212.) Skilled mechanics were used to shovel slack out of railroad cars. In order to make this employment last longer, it was shoveled upon the ground and then from the ground into other cars. This was done at skilled mechanics' wages. (3222.) At times from 500 to 700 carpenters would be idle for periods of a day or more, drawing full pay and overtime. (3277.) On one occasion 100 carpenters were put in a room 30 by 50 feet to construct it. There was hardly room for the workmen to all get into the room. (3279.) Men were paid for full time on the job, who did nothing for periods of two months or more. (3281.) Foremen applied for work for their men at times when there were ample materials and no work was furnished. (3287.) Large numbers of skilled carpenters were required to report for weeks on a job where there was nothing provided for them to do. (3289.) At one time, to provide Sunday work, 500 carpenters were detailed to build a platform 70 by 120 feet in size, and required to put in their time. So many men were thus employed that they were hardly able to keep out of each other's way. (3320.) On one occasion 200 skilled laborers were brought from Detroit and Flint, Mich., consisting of brick masons, millwrights, and other skilled trades. There was nothing for these men to do for fully two months, but they received pay, and overtime, all during that period. (3341.)

Quoting in each case the page of testimony:

Brick masons were employed in wheeling brick into a building for housing purposes. (3341.) An employee in one of the mess halls desired to have a small potato slicer connected up with the electrical current. He notified the proper official to send him an electrician. Seven electricians reported at 5 o'clock on Saturday evening. The motor was small—about 6 inches in diameter—requiring about 10 feet of wire to be laid to connect it up. The seven electricians worked from the time they came on Saturday until 5 o'clock on Sunday evening on connecting this motor. When it was turned on for test, having been wrongly connected, it burned out. These electricians received time and a half, and double time on Sunday. (3355.)

Mr. BORAH. Mr. President——

The PRESIDING OFFICER. Does the Senator from Wisconsin yield to the Senator from Idaho?

Mr. LENROOT. I yield.

Mr. BORAH. Is the Senator reading from the testimony or from the report of the Graham committee?

Mr. LENROOT. I am reading from the report which gives the page of the testimony in each instance.

Mr. BORAH. Who were the officers who were responsible for those expenditures? The Senator says that they were officers of the War Department.

Mr. LENROOT. Yes, sir; they had supervision of this work.

Mr. BORAH. Are they still officers?

Mr. LENROOT. So far as I know, Mr. President, they have been neither court-martialed nor discharged. Later on in the testimony it appears that in the Motor Transport Division complaint was made, and I think Insp. Gen. Chambers insisted upon the discharge of a certain officer. The testimony shows that the matter was taken up to Assistant Secretary of War Crowell, and he gave an excuse and declined to dismiss the officer.

Mr. BORAH. Where can I obtain the names of those officers?

Mr. LENROOT. In the testimony referred to in the report from which I have been quoting. There will be some worse things disclosed before I get through, I will say to the Senator.

Mr. BORAH. What the Senator has disclosed is bad enough.

UMI

Mr. LENROOT. I continue to read from the report:

On one occasion 20 skilled mechanics were employed 30 days unloading cars and wheeling concrete. The skilled labor rates were $2.20 per day in excess of common-labor wage. There were three crews of men on this job, making an approximate excess of labor on this one job of $3,960.

I am not going to read concerning many other similar circumstances, but there are pages and pages showing the same kind of transactions. I wish, however, to refer to one transaction which no one can claim grew out of the exigency of the war. I quote further from the Graham report, referring to plant No. 1 at Sheffield, Ala.:

The nitrates supply committee originally estimated that United States nitrate plant No. 1, at Sheffield, Ala., would cost $3,000,000. (2651.) The complete cost of construction up to December 31, 1919, was $12,689,676.99.

The most extraordinary and unjustifiable expenditure, in the judgment of the subcommittee, made at any of these nitrate plants was an item for housing at No. 1 plant aggregating $1,852,259.99. Almost the first thing that was done in this plant, which was to be largely experimental—

I may say in passing that is all it was, because not a pound of nitrate or explosive has ever been turned out of it or can be turned out of it—

was to build a large number of the most permanent type of houses. One hundred and twelve houses were built altogether—25 of them for officers, 65 for civilians, and a number of other houses. These permanent houses are made of tile, with tile roofs, and of the most durable and costly construction. The officers' houses are grouped about a large circle of parked ground, most expensive walks and terraces, and cost from $6,000 to $19,000 each, according to the rank of the particular Ordnance officer who was to occupy them, a lieutenant's house to cost $6,000 and a lieutenant colonel's house $19,000, with further provisions to be made by building higher-priced houses if higher ranked officers were detailed there.

Mr. President, at a time when drives were being made for subscriptions to Liberty bonds, when the washerwoman was asked to subscribe and did subscribe for a $50 bond, depriving herself of the necessities of life, if it had been known that the money was being used to build officers' houses costing $19,000 apiece, what would have happened in this country?

Mr. KENYON. What rank officer was that?

Mr. LENROOT. A lieutenant colonel, $19,000.

Mr. KENYON. What would it have cost if a general had been assigned down there?

Mr. LENROOT. This report says that further provision was made for more expensive houses if officers of higher rank did get there. I am referring to this, Mr. President, because it is proposed that Ordnance officers—because that is really what is back of it—shall become the directors of this corporation.

The civilians' houses were stuccoed and of the best type of construction and cost from $6,000 to $9,000 apiece. In order to make the Ordnance officers more comfortable a permanent clubhouse of the most durable construction, with 30 suites of rooms, each room having a bath, and with all sorts of reception rooms, was built at a cost of $120,000.

Mr. KENYON. What was the date of the construction of that building?

Mr. LENROOT. This was in 1918, while the war was going on.

What I have been referring to is the No. 1 plant at Muscle Shoals, the experimental plant. Now, let us see what they did at the No. 2 plant, the one they expect to operate under this bill.

An industrial village was built in which there were 122 complete residences and 65 incomplete. These houses cost from $2,500 to $4,600 apiece, and are now occupied by employees of the Ordnance Department, or the Engineer Corps working on the Muscle Shoals Dam. They are substantial houses, built of frame or tile, with slate roofs and tile foundations. There were about 100 semipermanent houses and 300 Negro houses, and barracks sufficient to house 15,000. A clubhouse for officials, known as first quarters, was built at the extravagant and unwarranted cost of $341,806.

Mr. KENYON. Is that another?

Mr. LENROOT. That is another clubhouse, at plant No. 2.

Mr. KENYON. How much did it cost?

Mr. LENROOT. Three hundred and forty-one thousand dollars.

Mr. KENYON. Something like $500,000 was spent for clubhouses, then.

Mr. LENROOT (reading)—

A small building at the gate was built of the finest materials, finished splendidly, and cost probably $10,000 to construct.

I am not going into this any further, Mr. President; but I say that it is pretty nearly time that we stopped all expenditures that are to be supervised or controlled by men who had any such ideas as were carried out in the construction of this plant; and even though the whole $7,000,000 that has been expended on the Muscle Shoals Dam should be lost, we can well afford to lose it if we shall put the fear of Congress into the hearts of some of these officials.

Why, Mr. President, of course there should have been court-martials of some of these officers. We have had privates sentenced to 20 years' imprisonment who have been absent without leave, in some cases not excusably, but with very strong mitigating circumstances. They have been punished. No one is punished here.

Mr. GRONNA. Mr. President——

The PRESIDING OFFICER. Does the Senator from Wisconsin yield to the Senator from North Dakota?

Mr. LENROOT. Yes.

Mr. GRONNA. The Senator is doing valuable service, as he always does, in calling attention to this matter, and I join him most heartily in condemning the waste and extravagance that was going on, not only during the building of this plant but during the building of other plants. The Senator will remember, however, that when it was attempted by some Members of this body and of the other to call attention to extravagance during the time of the war—and I am making this statement for the reason that the Senator asked what would have happened if it had been known by the people of the country that this tremendous waste was going on at the time—the Senator will remember that right here on this floor when Members of this body attempted to ask questions as to the expenditure of money they were immediately termed pro-German. The Senator knows the reason why none of these things were gone into.

Mr. LENROOT. I do; and, of course, Mr. President, at that time, while I think none of us dreamed of things as gross as these, we did know, of course, that there was waste; we did know that there was extravagance; but there was such necessity for unity of action while we were actually engaged in war that everyone, I think, much as he would have liked to speak and get information, closed his mouth, and did so because he believed that it was his patriotic duty to do so.

Mr. OVERMAN. Mr. President, are the names of these men known?

Mr. LENROOT. Yes, sir.

Mr. OVERMAN. Are they still in the employment of the Government?

Mr. LENROOT. I would not like to make that statement definitely, but I have found nothing anywhere that indicates that they are not in the employ of the Government. The only case I have found is where certain officers undertook to secure the dismissal of one of these officers, and Assistant Secretary of War Crowell refused to dismiss him.

This report from which I am reading is public property. Anyone can get the facts just exactly as I have done.

Again, I say, Mr. President, that if we are going to pass this legislation at all—and we should not pass it, very clearly, unless it is determined to complete the Muscle Shoals Dam—but if it is to be passed at all, and we ought to utilize this plant if the Muscle Shoals Dam is to be completed, in my judgment, in view of this record and this testimony, this legislation should make it clear that officers of the Ordnance Department shall not control this Government corporation.

Mr. WADSWORTH. Mr. President——

The PRESIDING OFFICER. Does the Senator from Wisconsin yield to the Senator from New York?

Mr. LENROOT. I do.

Mr. WADSWORTH. The Senator will permit me to say that one of my amendments strikes out that provision of the bill.

Mr. LENROOT. Yes.

Now, Mr. President, I want to touch another subject, and that is the Alabama Power Co., reverting again for a few moments to that famous company.

The Alabama Power Co., while not to be seen even in the far horizon so far as visible presence is concerned in connection with this legislation, had a very important connection with the work that was done at this plant, and I want to read from the report of the committee on that subject. I shall read now from both the majority and the minority reports, because they both agree as to the holding up of this Government by the Alabama Power Co., perhaps in collusion with officers of the Ordnance Department, although as to that the committee does not agree.

About the time it was decided to build nitrate plant No. 2 at Muscle Shoals Mr. Frank S. Washburn, who was at that time a stockholder in the Alabama Power Co., got in conference with James Mitchell, who was president of that company, and from their office at 120 Broadway, New York City, the Alabama Power Co. communicated with Col. J. W. Joyes—

Who is one of the principal proponents of this bill in the testimony—

of the Ordnance Department, proposing to build extensive additions to their plant on the Warrior River in Alabama, and furnish electric power to the Government at Muscle Shoals. In their letter of November

6, 1917, to Col. Joyes, the company proposed to supply 30,000 kilowatts after such station had been built if the Government would loan them $2,250,000, this power to be furnished at 7 mills per kilowatt hour—

Seven mills per kilowatt hour is about $45 a year per horsepower—

three mills of this to be set aside until the Government was reimbursed for the sums advanced. There is no doubt that this proposition originated with Frank S. Washburn, and that he saw the possibility of building up the Alabama Power Co. at the same time the Muscle Shoals plant was being built.

The proposition of the Alabama Power Co. was not accepted by Col. Joyes, but on December 1, 1917, a written contract was made with that company by which the United States authorized the Alabama Power Co. to build at its Warrior River station certain considerable extensions of the building, to acquire the right of way and build transmission lines to the nitrate plant at Muscle Shoals, and to do such other work as was necessary in electrifying certain mines and other facilities, and to generally act as the agent of the United States in all of these matters, for which the United States agreed to pay all cost of every kind and nature made by its agent, the Alabama Power Co., and in addition to pay $60,000 for the use of the agent's lands and a fee of not to exceed $225,000 to the agent for doing this work, and for the power the company was to receive 6½ mills per kilowatt hour, with a minimum monthly charge of $30,000, the United States to retain 2 mills per kilowatt hour until the cost of the Warrior station and Warrior substation should be paid. It will be observed that this contract is much less favorable to the Government than the proposition made to Col. Joyes by the Alabama Power Co. on November 5, 1917. No reason is given for this by Col. Joyes except that he thought the Government had no authority to loan money.

Acting under the authority contained in this contract, the Alabama Power Co. built an extensive addition to their plant on the Warrior River. They also bought or acquired right of way for power transmission line for approximately 90 miles from the Warrior River to nitrate plant No. 2, the title to which is in the Alabama Power Co., and which the United States has no right to acquire by virtue of its written contract. On this right of way was built a transmission line, the only connection between United States nitrate plant No. 2 and the installation made at the Warrior River plant. This line is of flimsy construction, on wooden poles, and would not pay for the expense of taking it down and removing it.

At the Warrior River station the Alabama Power Co. had had a brick building about 100 by 100 feet, with indifferent machinery. The Alabama Power Co., under its aforesaid contract, built an addition thereto 100 by 100 feet and of the most modern construction, installed the most modern machinery, boilers, and appliances, and a 30,000-kilowatt turbogenerator of the most modern and complete construction. This turbogenerator is placed on permanent foundations in the building heretofore described, and the whole is located on land owned by the Alabama Power Co., and with no right in the Government to acquire the same.

The Warrior River station is located at a place called Gorgas, about 100 miles from Muscle Shoals, and a place excessively hard to reach. During construction most of the supplies came by the Warrior River by steamboat from Benoit, 18 miles away. The nearest railroad station is Parish, Ala., about 9 miles from Gorgas. During the construction period the expense and hardships of transporting material to Gorgas were immense.

Now they go into the extravagance of building. But that is not the point I want to make. The point is that the Government has expended here $5,000,000 for the Alabama Power Co., upon land of the Alabama Power Co., the Alabama Power Co. now utilizing that expenditure of the Government, that $5,000,000, and selling for commercial purposes the power generated by this dam, or by the Government at the instance of the officers of the Ordnance Department.

Having made such a contract with the Government, is it any wonder, Mr. President, if these same officers could be in charge of this corporation, if these officers could control this contract, could have the powers that are proposed to be given them in this bill, that the Alabama Power Co. rests back secure in the belief that, inasmuch as the Government has done so handsomely by it in that $5,000,000 expenditure, the Alabama Power Co. would be equally well benefited by the corporation proposed to be created by this bill?

As to this dam, Mr. President, on January 4 last, just this week, the House voted upon an appropriation of $10,000,000 for the further prosecution of work upon this Muscle Shoals Dam, and the appropriation was defeated. The attitude of the House, therefore, is that work should not proceed on this Muscle Shoals Dam at this time. I hope that when we reach that question the view of the Senate will be the same as that of the House. But whether it is or not, if the House maintains its position, who is there who will say that we shall go on with this bill, when it is admitted by everybody that fertilizer can not be manufactured in competition with private enterprise if steam power is to be employed; that the only possibility of successful manufacture will be the utilization of this water power?

So, it seems very clear to me, that what should be done is to recommit this bill to the Committee on Agriculture and Forestry, there to await such action as may be taken with regard to the completion of the Muscle Shoals Dam.

As to that dam, Mr. Baker testified at this hearing that the original estimate was $10,000,000. He said last March they were making a restudy of the subject. They have restudied it. I have a letter here written by Col. Cooper, the engineer in charge, on November 27, 1920, and, Mr. President, I ask leave to insert in the RECORD that letter without reading all of it.

There being no objection, the letter referred to was ordered to be printed in the RECORD, as follows:

NOVEMBER 27, 1920.

Gen. HARRY TAYLOR,
Office of the Chief of Engineers,
War Department, Washington, D. C.

DEAR SIR: 1. You have asked us for a general statement with respect to the value to the general public of the Muscle Shoals project as a water power, and you have also asked us for a statement as to what losses would probably be met with if the construction of the works should be interrupted by the failure of Congress to make necessary appropriations to carry on the work vigorously and thoroughly as now under way.

2. With reference to the first question, we have carried out under your instructions an exhaustive analysis of the value of the power element in this project. Our investigations have included a thorough check of the Florence rating curve, involving 45 separate checked quantitative measurements for different elevations of the gauge. This gauge, as you know, has been the basis for determining accurately the flow of the Tennessee River during the last 21 years. Based upon the flow of the Tennessee at Muscle Shoals thus determined, and based upon the operating heads as they will occur at the Wilson Dam, we find, as previously reported to you, that the average primary power production in the future would be 700,000,000 kilowatt hours per annum, and for the secondary power 1,470,000,000 kilowatt hours per annum.

3. In the territory reachable from the Wilson Dam the present coal consumption in steam-operated industries will be found in excess of 6 pounds of coal per kilowatt hour and is probably more than 8 pounds per kilowatt hour. Assuming 6 pounds, the saving in coal by the complete installation of the works as now planned will amount to more than 6,500,000 tons per annum if this energy is used for standard normal domestic purposes. If the plant is used otherwise than above indicated (for fertilizer, for instance), such other use will not, of course, be adopted unless the resulting benefits are found to be in excess of those incident to the conservation of 6,500,000 tons of coal per annum, and therefore you should be safe in submitting the coal-saving quantities as a basis for congressional determination of future action.

4. In determining the amount of power that should be developed at the Wilson Dam we have carried out your instructions to figure that 10 years of time will be required to load the plant after it is completed, and that after the works are completed interest should be figured until the product of the plant is fully marketed. We have also carried out your instruction to use the unusually low selling price of 1.2 mills per kilowatt hour for the secondary power and 4 mills per kilowatt hour for the primary power at the low-tension bus bars of the generating station, in order that Congress may always be certain that the final results will fully justify the money to be here invested.

5. Under your instructions we have figured that the plant when completed must earn 5 per cent for interest and 5 per cent for depreciation and operation, or 10 per cent of the cost of the power end of the enterprise. Both of these assumptions are conservative. The kilowatt hours in paragraph 2 multiplied by the selling prices in paragraph 4 will produce a gross annual income of $4,554,000, which is 10 per cent of a cost price of $45,540,000. The best estimate that can be made at this time of the total cost of the project, including the two lift locks and all of the navigation facilities, is around $50,000,000, and thus leaves about $4,500,000 as the amount applicable to the navigation account.

6. All of the above quantities are accurate and are not to be considered as assumptions or approximations. The value for the secondary and primary kilowatt hours are about 50 per cent of prewar steam costs in the territory under consideration.

7. On the second question, as to the cost of closing down the work at this time, this is difficult to answer. It is not conceivable that the Government would withdraw from this project entirely in view of the more than $12,000,000 already invested and the showing in the foregoing paragraphs. In order to estimate the cost of a shutdown it would be necessary to have a basis as to the date when work would be resumed, so that the loss in interest might be computed. If the work should shut down at this time, to be resumed, say, in three years, I am of the opinion that the combined losses to the Government would be around $4,000,000, and without any compensation therefor unless the Government might claim there was a compensation to be expected in waiting for a lower interest rate three years from now than can be obtained at this time. This amount of saving would be very small as compared to the $4,000,000 loss. The $4,000,000 would represent a loss of interest during three years on $12,000,000; and on the construction side the loss of all of the cofferdams which are now in place, the loss of the construction bridge, the removal and reerection of a large amount of construction derricks, track, concrete mixers, rock crushers, and other construction equipment. The job would also have to suffer the losses incident to the breaking up of the large construction organization which has been assembled at necessarily large expense, and I feel very certain that collectively the above losses would be a minimum of $4,000,000 and might easily amount to $4,500,000.

8. If the work should be shut down now or at any future time, there would result only a small loss to the Government on account of the engineering division on the Muscle Shoals work being suspended, because of the 30-day cancellation clause in our contract therefor.

Very truly, yours,

HUGH L. COOPER.

Mr. LENROOT. I will read this paragraph:

> Under your instructions we have figured that the plant when completed must earn 5 per cent for interest and 5 per cent for depreciation and operation, or 10 per cent of the cost of the power end of the enterprise. Both of these assumptions are conservative.

I will say in passing, however, that if this computation is to be made with reference to the power that is to be employed in this fertilizer plant, never, never under the statements of the Government's own witnesses could this fertilizer plant become a success for the Government. It is bound to be a losing proposition from the very start if these figures are to be taken.

Mr. WADSWORTH. There is a good deal of the spirit of getting something for nothing in this project, anyway.

Mr. LENROOT. Oh, certainly. Of course, I want to say that really the Representatives from the South have all these years

commanded my admiration for their persistence, because if they can get the United States Government to spend a hundred or a hundred and fifty million dollars down there, the Government taking all chances, or even though the Government knows it is going to be a great loss, it would be a fine thing for somebody down in Alabama.

This letter continues:

The kilowatt-hours in paragraph 2, multiplied by the selling prices in paragraph 4, will produce a gross annual income of $4,554,000, which is 10 per cent of a cost price of $45,540,000. The best estimate that can be made at this time of the total cost of the project, including the two lift locks and all of the navigation facilities, is around $50,000,000, and thus leaves about $4,500,000 as the amount applicable to the navigation account.

So here, Mr. President, we have this situation: Stretching everything to the furthest limit possible, what they can not figure, with their own most liberal estimate, as being a safe investment for the Government, they say we will charge the balance to navigation, when, as a matter of fact, with this dam completed, it will not furnish additional navigation for one single ton of commerce. Other millions will have to be expended upon other dams before this particular dam will have the slightest effect upon navigation.

No, Mr. President; if Senators will simply take a business, common-sense view of this question, it seems to me that there can be but one opinion, and that is that this legislation should not go forward unless the Muscle Shoals Dam is to be completed. The case is gone, completely gone, unless that be done, and what folly it would be to create a corporation, place in their hands twelve and a half million dollars, with an overhead expense here in the city of Washington, as shown by their own figures, of $235,000,000 a year, making a lot of fat offices for some people——

Mr. WADSWORTH. The whole thing outside of the civil-service law.

Mr. LENROOT. Outside of civil-service law entirely—when, unless this Muscle Shoals Dam is completed, this never, never can be run at a profit to this corporation.

Now, a few words as to the bill itself, and the powers that are proposed to be conferred upon this corporation. The first one I note is that although the life of the corporation is limited to 20 years, they are given unlimited power to make contracts. They make contracts for a hundred years or more if they see fit.

They are given authority "to sell any or all of its products not required by the United States to producers or users of fertilizer or to others." This whole debate has been upon the theory that the fertilizer which was to be manufactured at this plant was to be sold to users. The testimony shows they have no such intention. The testimony shows they do not intend to go into distribution. One of the witnesses—I have forgotten now which one—suggested that they can sell part of their product to the Tennessee Copper & Chemical Corporation—I think that is the name—engaged in the manufacture of fertilizer. Out of curiosity I looked up to see what that corporation was, and I found it was owned and controlled by a group of bankers in the city of New York. And mark this, that in the language of the act itself in authorizing the selling of this product "producers" comes before "users." Is this corporation to sell to this wicked fertilizer trust?

Again, may I be permitted to say that with some gentlemen this trust seems to be a bad trust when it is against a bill which proposes to defeat Muscle Shoals, but it is a good trust when it is for a bill with itself the beneficiary.

You may read the bill from beginning to end, and you will not find a word in it which requires the production of a single pound of fertilizer or of nitrates of any kind by this corporation at this plant, because it is expressly provided that this corporation shall have authority "to enter into such agreements and reciprocal relations with others as may be deemed necessary or desirable to facilitate the production and sale of nitrogen products on the most scientific and economic basis."

The day after the bill becomes a law this corporation might make a contract with this very so-called fertilizer trust. It might make a contract with the American Cyanamid Co., whereby the American Cyanamid Co. would produce every pound of nitrates that was produced, or it might make a contract that none should be produced.

Another power given is—

To lease or purchase such buildings or properties as may be deemed necessary or advisable for the administration of the affairs of the corporation or for carrying out of the purposes of this act.

Are you going to give this corporation power, with this $12,500,000 furnished by the Government, to purchase any buildings here in the city of Washington or anywhere in the United States at its own sweet will?

It further is provided, "and with the approval of the Secretary of War, to lease to other persons, firms, or corporations any of its properties not used or needed by the corporation, or to enter into agreements with others for the operation of such properties."

Can anyone say that there is anything in this bill which guarantees the production of fertilizer in behalf of the farmer, when such provisions as these are incorporated in it? In section 124 of the national defense act there is such a provision. It is expressly provided there that the Government shall not cooperate with private industry in the manufacture of fertilizer or the disposition of the product, made clearly a governmental operation there. But what does this bill do? In that act there was some guaranty that the Government would act in the interest of the farmer. But this bill repeals in express terms the very provisions which were put in the national defense act for the benefit of the farmer. The language is:

In the operation, maintenance, and development of the plants purchased or acquired under this act the corporation shall be free from the limitations or restrictions imposed by the act of June 3, 1916, and shall be subject only to the limitations and restrictions of this act.

Yet there are Senators who stand on this floor and would have the Senate believe that this is the bill in the interest of the farmers of the United States, when you propose to repeal the restrictions in the national defense act which were intended for the benefit of the farmers.

Then we come to capital stock. It is made to appear that this is not going to cost the Government anything, because we are going to sell 150,000 tons of Chilean nitrate which the Government now owns, the proceeds to be used for that purpose. As was stated the other day by the Senator from New York [Mr. WADSWORTH], the price of Chilean nitrate has dropped so much that instead of 150,000 tons providing $12,500,000, I think he said it would provide only about seven and a half million now. But the United States, under the terms of this bill, subscribes for twelve and a half million dollars of capital stock, and if the nitrate sells for only seven and a half million dollars, there is only one thing left for the Committee on Appropriations to do, and that is to appropriate out of the Treasury of the United States the difference between what the nitrate does sell for and the twelve and a half million dollars.

Mr. WADSWORTH. Or else, may I say, sell more nitrate.

Mr. LENROOT. Or sell more nitrate. In any event they have to furnish $12,500,000.

Mr. WADSWORTH. And it is the taxpayers' money in any event.

Mr. LENROOT. Three million dollars of it is proposed to be set aside in one fund, the purpose of which is deliberately stated to take care of losses during the first three years.

If we are going ahead with the operation of the plant, I submit first that the management should be in the hands of those who have not been connected in any way with the construction of the plant in the past. In the second place, if the Muscle Shoals Dam is to be completed it should not be placed under the jurisdiction of this corporation. If the Muscle Shoals Dam is to be completed, we have legislation now upon the statute books that automatically places the sale of power from that dam in the hands of the water-power commission, where it properly belongs. The dam, if it is to be completed, should be under the jurisdiction of that commission. If we are to operate the fertilizer plant they should purchase power from that commission, not at a profit to the United States, because I do not claim that. I would not ask that the United States make one penny of profit, but it should be upon such a basis as would make the United States good if it is to be done. We ought not to have a situation where those advocating the fertilizer plant base their figures on three-quarters of 1 mill per kilowatt hour and then, to demonstrate that the Muscle Shoals plant will be profitable, assume that they are going to sell it for 4 mills per kilowatt hour.

In my judgment the Muscle Shoals plant ought not to be completed at this time. This is no time for the Government to undertake the expenditure of an additional $38,000,000. True, there may be some loss, but we can better take the loss of a couple of million dollars, apparently, and save many million dollars in fact, and that can be done if we postpone the completion of the Muscle Shoals Dam.

In the first place, the United States Government to-day is paying 6 per cent interest on its money. The $38,000,000 that would go into the dam, the $10,000,000 that they ask for this year, and which the House has refused to give them, will cost the Government 6 per cent interest. We are borrowing money and paying 6 per cent interest on it for this purpose. In addition to that, I do not think there is anyone who does not know

that in another year or two the cost of the work will be very much less than it is to-day.

It was the height of folly to proceed with it as the War Department did proceed with it, and if we go on and complete the work now we are going to tax the very farmers, for whom some Senators have so much concern, for all time in the price of the fertilizer they buy. If the Government is to come out even, we are going to have to tax them upon the basis of the project—I am speaking of the dam alone, wiping the other off the books—costing twice as much as it ought to cost, and probably twice as much as it will cost a couple of years from now, because the American Cyanamid Co. itself made an estimate on this very dam at $15,000,000, prewar prices, the War Department at $10,000,000, and here it is up to $50,000,000.

From every standpoint the bill ought not to pass at this time. If the bill shall be referred back to the Committee on Agriculture and Forestry, I am very sure that it will never be reported again with the powers that are proposed to be conferred in the bill as it now stands before the Senate. If the Committee on Agriculture and Forestry considers the bill again, there will be some provision in it for the protection of the public and for the protection of the farmer, whom it is sought to serve.

Mr. KELLOGG. Mr. President——

Mr. LENROOT. I yield to the Senator from Minnesota.

Mr. KELLOGG. How much has been spent in the construction of the dam up to the present time?

Mr. LENROOT. I understand about $7,000,000.

Mr. KELLOGG. How much more is it estimated that it will take to complete it?

Mr. LENROOT. About $43,000,000.

Mr. KELLOGG. Forty-three million dollars more?

Mr. LENROOT. Yes; even though it does cost $2,000,000 to conserve and protect the work that has already been done, 6 per cent interest on $10,000,000 is $600,000, and 6 per cent interest on $43,000,000 is about $2,500,000. We save as much in interest in one year, to say nothing of the high cost, as it would cost to preserve and protect the property. If it is to be completed at some future time, we may hope that then it will be completed upon a basis that would mean a very much less cost than it would to-day.

Mr. HEFLIN. Mr. President, the Senator from Wisconsin referred to a measure for which I voted as a member of the House, as did also my colleague [Mr. UNDERWOOD], appropriating $18,000,000. I think the Senator has that proposition mixed up with a bill that we passed through the House granting the cyanamid company the right to build a power dam across the Coosa River at Lock 18 in Alabama.

Mr. LENROOT. Will the Senator yield?

Mr. HEFLIN. I yield to the Senator from Wisconsin.

Mr. LENROOT. I am not at all referring to that. I think the Senator will remember, when I recall it to his mind, that the appropriation which called for $150,000 was to make certain borings in carrying out a proposition which the American Cyanamid Co. made to the Government, whereby the Government was to appropriate $18,000,000, the cyanamid company $3,000,000, and then a contract to be made running over 100 years for the use of the power developed by the American Cyanamid Co. A contest was made in the House and we defeated the appropriation for that purpose, but every member of the Alabama delegation, including both my distinguished friends, supported it and voted for it.

Mr. HEFLIN. If I recall the incident correctly, the river was to be made navigable for quite a number of miles, and the appropriation would have amounted after all to helping to make the Coosa River navigable from Rome, Ga., to the Alabama River at Montgomery. The House passed the bill to which I first referred, granting the cyanamid company the right to build a power dam at Lock 18 on the Coosa River.

President Taft vetoed the measure. By that act the American people, and the farmers in particular, lost the cyanamid company, which is now being operated on the Niagara River in Canada. I think that a great blunder was committed when we lost that great plant to the people of the United States. The dam would have been constructed on the Coosa River in Alabama, and we would have had the benefit of the output of that plant, which, as I said, is now being operated in Canada. It was a shortsighted policy, a piece of folly, to lose that great industry to the United States.

The fertilizer trust in the United States is always on the alert and active when anything is suggested in the interest of cheaper fertilizers for our farmers. That trust was on hand and using its power and influence when the cyanamid company was denied the right and privilege to establish its plant and do business in the United States. It is now opposing the nitrate project at Muscle Shoals, and I am of the opinion that some of its agents are in the gallery each day listening to the discussion of the pending measure, hoping to see it defeated. They would be delighted to have the whole thing junked.

The Senator from Wisconsin says there is no provision in the bill providing fertilizers for the farmers of America. If the bill passes in its present form this concern will have no restrictions upon it, and it can manufacture fertilizer to be used by the farmers of America, and it is our purpose to have that very thing done. I regret that extravagance has been indulged in down there in some particulars, and I condemn it as much as does the Senator from Wisconsin. Of course it was wrong, but it happened during the war and mainly, I think, because of the pressure and hurry for the early completion of the project. The Government felt that it needed the plant completed at the earliest day possible, and that accounts for a great deal of the extravagance complained about. Muscle Shoals, Ala., is not the only place where extravagance was indulged in. It was indulged in, I am sorry to say, at a good many other places in acquiring war materials.

But I submit to the Senate again that there is no good reason in the suggestion for stopping the project or killing it outright, as the Senator from Wisconsin would have us do. He suggests that we refer it back to a committee because the House failed to appropriate $10,000,000 to carry on the work at the Wilson Dam. I submit to the Senator that the House defeated it by a very small vote, a majority of only seven votes, and it was just after the holidays when a great many of the Members who went home had not returned. I feel that with the full membership of the House present they would have passed the measure. But whether the House passed it or not does not justify the Senate in taking the step suggested by the Senator from Wisconsin, which amounts to killing this great project and losing to our farmers the benefits which would surely come from the operation of this great industry.

The farmers of America think that they will be greatly benefited by the completion of the nitrate plant at Muscle Shoals. Every farmer organization of any consequence of a national character in the country has indorsed the very project to provide for which legislation is now pending in the Senate. I am sure that they know as well what they want and what will benefit them as does my good friend, the distinguished Senator from Wisconsin. They are hoping and trusting that this measure will pass, so that they may be supplied with fertilizers from this plant and be somewhat relieved from the high prices which they have had to pay to the Fertilizer Trust in the past.

Mr. President, everything possible should be done to relieve our farmers from the distressing situation which is upon them. They are in distress in Wisconsin as well as in Alabama, and my heart goes out to them whether they are in New York, Wisconsin, Alabama, or in other States of our great American Union. I would vote for this project if it were in the State of Wisconsin just as quickly as I shall vote for it located as it is in my own State. I look upon it as a great American project, and one that will be, when completed, very useful and valuable to our farmers all over the country.

The Senator from Wisconsin says that it will benefit somebody down in Alabama. If the people of Alabama should, as they will, derive some of the benefits which are to flow from this great enterprise, I am sure that the Senator from Wisconsin will not object. I would like to see the people of his State benefit by it, and they will. I want its benefits felt by all the people of the United States. In fact, Mr. President, I want to see the people of every State prosperous and happy.

Mr. LENROOT. Mr. President——

Mr. HEFLIN. I yield to the Senator from Wisconsin.

Mr. LENROOT. The Senator from Alabama has great concern for the farmer; so have I. Would the Senator from Alabama join with me in voting for a tariff that would reduce or prevent the flood of importations of agricultural products, and thereby protect the farmer?

Mr. HEFLIN. I am giving serious thought to that subject just now. I am willing to do what is necessary to protect our farmers from some of the distressing conditions and circumstances which now confront them, but I submit to the Senator from Wisconsin that to-day, when this measure is up for consideration, is the time and the occasion to greatly aid the farmer in another way.

I repeat that the farmers of the United States, through all of their organizations, are beating at the doors of this Chamber and asking us to pass this particular bill, and I trust that the Senate will grant their very reasonable request. Because some extravagance has been indulged in at Muscle Shoals is no reason why the Senate should commit a greater folly and junk the project and make the whole thing a total loss to the Gov-

ernment. The project ought to be completed, and when completed and run by water power, as it will be, it will conserve in the coal supply of the United States substantially 6,500,000 tons per year.

Mr. LENROOT. Mr. President, the Senator from Alabama does not mean that the coal supply can be conserved six and a half millions tons in a year and the fertilizer plant be operated at the same time. One or the other might be done, but both can not be.

Mr. HEFLIN. But it is going to be run by water.

Mr. LENROOT. Yes; but it does not require 6,500,000 tons of coal a year to manufacture 86,000 tons of fertilizer. What the Senator has in mind is what engineers who are opposed to this power being used for fertilizer have said, that its use for other purposes can conserve six and half million tons of coal. On the other side, it is said that there is no market for the power and that it ought to be used for the manufacture of fertilizer. Both propositions, however, can not be true.

Mr. HEFLIN. The record shows that Hugh L. Cooper, one of the engineers, stated:

> The saving in coal by the complete installation of the works as now planned will amount to more than 6,500,000 tons per annum.

Mr. LENROOT. That is, if the power is not used for the fertilizer plant.

Mr. WADSWORTH. Will the Senator from Alabama complete the sentence? There is an "if" following.

Mr. HEFLIN. It reads:

> If this energy is used for standard normal domestic purposes.

That language does not change the proposition.

Mr. LENROOT. Will the Senator not read the next sentence?

Mr. HEFLIN. It continues:

> If the plant is used otherwise than above indicated (for fertilizer, for instance), such other use will not, of course, be adopted unless the resulting benefits are found to be in excess of those incident to the conservation of 6,500,000 tons of coal per annum.

That language does not change the proposition that I am insisting upon.

Mr. President, I submit that we are rapidly exhausting the coal supply of the world. Here is an opportunity to conserve the coal supply; to utilize water power now going to waste; to supply the farmers of the country with fertilizers; to deliver us from a foreign fertilizer or nitrate trust; and to put the country in a position in time of war where it can manufacture its own nitrate and not have somebody in the Senate, after another war, referring to the extravagance indulged in because we were driven to the necessity of buying an essential commodity in a hurry and paying almost any price demanded. Profiteers, as I said on yesterday, advanced the prices on their products, and the Government, which had to have them, had to pay the prices which were demanded. If the pending bill becomes a law, then if war should come again, we would not be dependent on Chile for our nitrate; we would manufacture it ourselves in the plant at Muscle Shoals. We would not be dependent, then, upon the trust that might put its prices sky-high.

If we should have to go to the fertilizer trust for some of our nitrate supply in time of war, the fact that the plant at Muscle Shoals was in existence would enable us to get it at a reasonable price.

So, Mr. President, I am unable to see the force of the argument in favor of returning this bill to the committee, stopping this mighty project where it stands, and permitting all of that high-priced and excellent machinery at Muscle Shoals to stand idle and all of the other machinery that has been assembled there to stand idle and be of no value to the Government. It would be like building a house, and when you get the rafters up and the walls completed and the inside work done, to say, "We shall stop now and leave the house without a cover on it." I can not understand the position of Senators who would pursue such a course.

I trust that Senators enough will support this measure to secure its passage. I shall probably vote for some of the amendments which have been proposed by the Senator from New York [Mr. WADSWORTH]. It may be that there are other amendments which are necessary. However, let us amend the bill and perfect it, if we can, but do not let us kill it. I am of the opinion that there will be a great deal of explaining to do to the farmers of the country if this bill is sidetracked and defeated, as some of our Republican friends have suggested here to-day.

Mr. TOWNSEND. Mr. President——

Mr. HEFLIN. I yield to the Senator from Michigan.

Mr. TOWNSEND. Does the Senator agree with the Senator from Wisconsin [Mr. LENROOT] that nitrate can not be successfully and economically manufactured at the Muscle Shoals plant without water power?

Mr. HEFLIN. No; I do not agree with the Senator from Wisconsin. I think it can be made in abundance by the use of water power, and there will be an ample supply for our needs.

Mr. WADSWORTH. They are not using any water power there at all.

Mr. HEFLIN. I mean when the water-power project is completed.

Mr. TOWNSEND. Does the Senator think it is necessary to complete the Muscle Shoals Dam before nitrate can be profitably and economically manufactured?

Mr. HEFLIN. We can make nitrate with steam now, of course, and are doing it, but we can make it very much cheaper and in greater abundance by the use of water power; that is the point I am trying to make.

Mr. TOWNSEND. Can nitrate be made with steam now profitably and so as to be within reach of the farmers?

Mr. HEFLIN. Yes; and some is being made there now. The Senator from South Carolina [Mr. SMITH] had some here yesterday which had been manufactured by that plant.

Mr. TOWNSEND. I had understood from the Senator's remarks in the early part of his discussion to-day that he was basing his argument on the proposition that water power was to be used in order that the material could be made profitably and sold economically and within the reach of the farmers.

Mr. HEFLIN. It could be made more cheaply in that way.

Mr. TOWNSEND. And, therefore, it would require the completion of the Muscle Shoals Dam.

Mr. HEFLIN. Personally I should like to see the dam completed; I think we ought to complete it. I think the Senator from Wisconsin believes that it should be completed. I understood that to be his position. If it is not completed the money already spent in its construction will be lost.

Mr. TOWNSEND. And the Senator agrees that it will cost at this time about $43,000,000 in addition to the $7,000,000 which have been expended?

Mr. HEFLIN. The highest estimate, I understand, was $45,000,000. Twelve million dollars have already been expended, and $5,000,000 more are available and will be spent by the 1st of next June.

I hope that Senators will take a favorable view of this matter and will not condemn it because somebody under the direction of somebody else in the War Department has been extravagant and, perhaps, wasteful in the expenditure of money. Let us not destroy the project, but let us condemn those who were extravagant and wasteful. Let us save this great project and put it in operation as soon as possible, and by so doing, Mr. President, we will render valuable service to the agricultural industry of the United States in time of peace and provide for the national defense in time of war.

Mr. JONES of Washington. Mr. President, I suggest the absence of a quorum.

The VICE PRESIDENT. The Secretary will call the roll.

The reading clerk called the roll, and the following Senators answered to their names:

Ball	Heflin	McKellar	Sutherland
Borah	Johnson, Calif.	McNary	Townsend
Capper	Jones, N. Mex.	New	Trammell
Colt	Jones, Wash.	Overman	Underwood
Curtis	Kellogg	Phipps	Wadsworth
Dillingham	Kenyon	Sheppard	Walsh, Mass.
Fletcher	Keyes	Smith, Ariz.	Warren
Gerry	King	Smith, Md.	Williams
Glass	La Follette	Smith, S. C.	
Harris	Lenroot	Smoot	

The VICE PRESIDENT. Thirty-eight Senators have answered to the roll call. There is not a quorum present. The Secretary will call the names of the absentees.

The reading clerk called the names of the absent Senators, and Mr. POINDEXTER and Mr. SWANSON answered to their names when called.

The VICE PRESIDENT. Forty Senators have answered to the roll call. There is not a quorum present.

Mr. KING. I move that the Senate adjourn.

Mr. UNDERWOOD. I ask for the yeas and nays on that motion.

The yeas and nays were ordered, and the reading clerk proceeded to call the roll.

Mr. POMERENE (when his name was called). I have a general pair with the senior Senator from Iowa [Mr. CUMMINS]. After conferring with the junior Senator from that State [Mr. KENYON] I think I can vote on this question. I vote "yea."

Mr. UNDERWOOD (when his name was called). I transfer my general pair with the junior Senator from Ohio [Mr. HARDING] to the senior Senator from Tennessee [Mr. SHIELDS] and vote "nay."

Mr. WILLIAMS (when his name was called). I have a general pair with the senior Senator from Pennsylvania [Mr. PENROSE]. He is not present. I transfer that pair to the senior Senator from Louisiana [Mr. RANSDELL] and vote "nay."

The roll call was concluded.

Mr. HARRIS (after having voted in the negative). I have a pair with the junior Senator from New York [Mr. CALDER]. I transfer that pair to the senior Senator from California [Mr. PHELAN] and will let my vote stand.

Mr. SMITH of South Carolina (after having voted in the negative). Has the senior Senator from South Dakota [Mr. STERLING] voted?

The VICE PRESIDENT. He has not.

Mr. SMITH of South Carolina. I have a general pair with that Senator. I transfer my pair to the senior Senator from Nebraska [Mr. HITCHCOCK] and will let my vote stand.

Mr. JONES of New Mexico (after having voted in the negative). I have a pair with the junior Senator from Missouri [Mr. SPENCER], which I transfer to the senior Senator from Arkansas [Mr. ROBINSON] and will let my vote stand.

Mr. GLASS. I have a general pair with the senior Senator from Illinois [Mr. SHERMAN], which I transfer to the junior Senator from Arkansas [Mr. KIRBY] and will vote. I vote "nay."

Mr. NUGENT. I have a pair with the Senator from Connecticut [Mr. BRANDEGEE], which I transfer to the Senator from Arizona [Mr. ASHURST] and vote "nay."

Mr. SMITH of Georgia. I have a pair with the senior Senator from Massachusetts [Mr. LODGE]. I transfer that pair to the senior Senator from Oklahoma [Mr. GORE] and will vote. I vote "nay."

Mr. McCUMBER. I transfer my general pair with the senior Senator from Colorado [Mr. THOMAS] to the junior Senator from West Virginia [Mr. ELKINS] and vote "yea."

Mr. PHIPPS (after having voted in the affirmative). I am informed that a pair was arranged for me with the junior Senator from South Carolina [Mr. DIAL]. I transfer that pair to the junior Senator from Maine [Mr. HALE] and will allow my vote to stand.

Mr. SMOOT. I have been requested to announce the following pairs:

The Senator from New Jersey [Mr. EDGE] with the Senator from Oklahoma [Mr. OWEN];

The Senator from New Mexico [Mr. FALL] with the Senator from Wyoming [Mr. KENDRICK];

The Senator from Maine [Mr. FERNALD] with the Senator from South Dakota [Mr. JOHNSON];

The Senator from Pennsylvania [Mr. KNOX] with the Senator from Oregon [Mr. CHAMBERLAIN];

The Senator from Illinois [Mr. McCORMICK] with the Senator from Nevada [Mr. HENDERSON];

The Senator from New Hampshire [Mr. MOSES] with the Senator from Louisiana [Mr. GAY];

The Senator from Indiana [Mr. WATSON] with the Senator from Delaware [Mr. WOLCOTT]; and

The Senator from New Jersey [Mr. FRELINGHUYSEN] with the Senator from Montana [Mr. WALSH].

I also desire to announce that the Senator from Kansas [Mr. CURTIS] is detained in committee.

The roll call resulted—yeas 24, nays 25, as follows:

YEAS—24.

Ball	Jones, Wash.	McCumber	Pomerene
Borah	Kellogg	McLean	Smoot
Capper	Kenyon	McNary	Sutherland
Colt	Keyes	New	Townsend
Dillingham	King	Phipps	Wadsworth
Johnson, Calif.	Lenroot	Poindexter	

NAYS—25.

Beckham	Jones, N. Mex.	Simmons	Trammell
Fletcher	La Follette	Smith, Ariz.	Underwood
Gerry	McKellar	Smith, Ga.	Walsh, Mass.
Glass	Nelson	Smith, Md.	Williams
Gronna	Nugent	Smith, S. C.	
Harris	Overman	Stanley	
Heflin	Sheppard	Swanson	

NOT VOTING—47.

Ashurst	France	Knox	Ransdell
Brandegee	Frelinghuysen	Lodge	Reed
Calder	Gay	McCormick	Robinson
Chamberlain	Gore	Moses	Sherman
Culberson	Hale	Myers	Shields
Cummins	Harding	Newberry	Spencer
Curtis	Harrison	Norris	Sterling
Dial	Henderson	Owen	Thomas
Edge	Hitchcock	Page	Walsh, Mont.
Elkins	Johnson, S. Dak.	Penrose	Watson
Fall	Kendrick	Phelan	Wolcott
Fernald	Kirby	Pittman	

The VICE PRESIDENT. On the motion to adjourn, the yeas are 24 and the nays are 25, so the motion is lost. The presence of a quorum has been disclosed. The question is on the amendment offered by the Senator from South Carolina [Mr. SMITH].

Mr. WADSWORTH. Let the amendment be read.

The VICE PRESIDENT. The Secretary will read the amendment.

The ASSISTANT SECRETARY. On page 5, at the end of line 19, insert a colon and the following proviso:

Provided, That in the sale of such products not required by the United States preference shall be given to those persons engaged in agriculture.

Mr. WADSWORTH. Mr. President, do I understand that it is the purpose of the amendment to make it mandatory upon this corporation to sell to farmers direct?

Mr. SMITH of South Carolina. My purpose is to require that when they have produced that which is available for use on the farms, they shall give preference in orders to those engaged in agriculture.

Mr. WADSWORTH. Give preference how?

Mr. SMITH of South Carolina. To the orders which come from those actually engaged in agriculture. That is my purpose and object.

Mr. WADSWORTH. Mr. President, I have not any special objection to such an amendment; but, of course, if the corporation is going to do that kind of a business, instead of the kind of a business proposed by its proponents originally, all the estimates presented in the hearings are out of date and of no use. If the corporation is going to do a retail business instead of a wholesale business, it would seem at least wise on the part of the Senate to have some estimate as to what the cost of carrying on a retail business is going to be and an estimate as to what may be obtained from the product.

Mr. SMITH of South Carolina. Mr. President, the Senator from New York knows business too well to raise any such question as that, because the fertilizers sold to the farmers even now are sold in wholesale lots. If the Senator from New York is acquainted with the business at all, he knows that farmers do not buy their fertilizer now in retail quantities, except that a few may buy a few tons from local dealers. The bulk of the fertilizer used by the farmers of this country now come in wholesale lots.

Mr. WADSWORTH. Already mixed?

Mr. SMITH of South Carolina. It is not a ton at a time, or 2 tons. The price is generally predicated upon carload lots, and it is a very easy matter for any concern without any appreciable increase of overhead charges to have orders sent out from their storehouses, and if they want to put it upon a cash basis it is merely a transference of the account. If you are going to sell this product, and you propose to provide that it shall be sold, my object is to provide that the man we are all wanting to benefit, I take it, shall have the preference in the orders. I have not prescribed the manner in which they shall sell it. The fact of the business is that if I had drafted a bill to create this corporation I should have had it based entirely upon the principle that it was to be run, outside of what should go to the Government, for the interest of agriculture alone, because I am quite sure, as a farmer myself and knowing the needs for this ingredient, that all it can produce and all the other nitrogen-producing plants of this country can produce, within a reasonable price, will be absorbed by the agricultural interests of the country. I do not know of anything that could confront us charged with as much importance as trying to get some plan to lower the price as well as to increase the volume of nitrogenous fertilizer, and I want it sold directly to the farmer, just as much so as we are selling the antitoxin for the foot-and-mouth disease and for hog cholera direct to them. It is a mere bagatelle and incidental when it comes to the great question of fertilizing the soil and making it productive.

Mr. WADSWORTH. Mr. President, my only concern in this matter and in relation to the amendment offered by the Senator from South Carolina is that we know what we do here. This bill is predicated upon the statements made by the War Department, and the estimates made by them as to what is to be sold from this plant. Now, the Senator from South Carolina introduces an amendment which completely changes the character of the proposed business operations of the concern. The Secretary of War testified before the committee that it was not the intention or the desire of this corporation to do anything else than to sell not a completed fertilizer but an ingredient of fertilizer to fertilizer manufacturers. All his estimates of cost, income, and outgo are based upon that kind of a business, and we have been discussing that here for a week. If we are going to do a different kind of a business, if we are going to

manufacture a finished fertilizer, a completed fertilizer, let us know something about its cost. No such thing is referred to in the hearings.

Mr. SMITH of South Carolina. Mr. President, I know the Senator from New York does not desire to mislead any Senator here. I took occasion yesterday to make some extended remarks on this subject, and I flattered myself that the Senator from New York paid attention to what I was saying and also examined the samples I had on my desk. I, as a practical farmer, in the very heart, almost right at the geographical center, of the greatest use of fertilizer in this country, state to him here and now that the very first product made by the Muscle Shoals plant is not in itself what you might term an ingredient, but for a great majority of cases a completed fertilizer, ready for the soil, as much so as nitrate of soda, as much so as sulphate of ammonia. The nitrate of soda is dug from the mines and shipped to this country, and I have taken it in my own hands and applied it as a top dressing. I have used it in mixing balanced fertilizer under my own shed.

Mr. WADSWORTH. The Senator does more mixing than applying.

Mr. SMITH of South Carolina. I do not. I do not do one-tenth of 1 per cent as much mixing as I do applying. Every man on this side who comes from the great region on the South Atlantic coast, where the bulk of the fertilizer is used, knows that there is not one pound out of a hundred of nitrate of soda mixed on the farm with other ingredients. It is itself a complete nitrogenous application to the crop; you do not mix it with anything else. A fertilizer company will take these three ingredients and run them through a process and get from $10 to $15 a ton more, when with a shovel and hoe on a rainy day the farmer could do it himself, and not only save the cost of mixing but he saves the cost of hauling a filler that contains anywhere from 1,000 to 1,500 pounds a ton of material that is absolutely worthless.

I tried to show yesterday that the oiled and hydrated cyanamid was ready for immediate application to the soil, as much so as sulphate of soda or cottonseed meal. Cottonseed meal is nothing but a nitrogenous element. We apply that, because there are some soils which do not need phosphoric acid or potash.

The very first process of the Muscle Shoals proposition is a complete fertilizer, so far as the farmer is concerned, for that specific ingredient. It is just like going down to a store and being told that I can not buy a bridle for my horse unless I get a complete set of harness. I might want a wagon harness or a carriage harness, or I might not want the other harness and just want a bridle. A complete harness would include the bridle, but I might have the other parts. So some soils do not want phosphoric acid. This product is complete. Even if I were to buy the phosphoric acid and buy the potash, I could buy this other product and apply it as I saw fit. It is complete and ready.

Look at the terms of the paragraph I propose to amend. It reads:

> To sell any or all of its products not required by the United States to producers or users of fertilizer or to others.

How do I change the estimates, and so forth, and so on, if I specify one of those "others" should be given preference? I do not say how they shall sell it, whether by the sack or by the ton or by the carload lot. I say preference shall be given, under whatever rule they may adopt, to those engaged in agriculture. I hope the Senate will adopt the amendment.

Mr. WADSWORTH. Mr. President, I only have to remind the Senator that the Secretary of War and his assistants testified to the committee that it would be undesirable for the corporation to do the thing which the Senator urges it to do.

Mr. SMITH of South Carolina. I do not recall that the Secretary of War so testified.

Mr. WADSWORTH. He did. He said that it was not the purpose and it was not the desire——

Mr. SMITH of South Carolina. But it is the purpose and desire of the Senate to do it. The Secretary of War is simply a creature of ours, and I maintain that there is not a man here who could find a valid reason why he should not vote for this amendment on the ground that it might increase expense, when you have provided in the very section I seek to amend that it shall be sold to producers, fertilizer manufacturers, and to others. I want to specify what preference shall be given to those others. That is what I am driving at. It need not change the dollar estimate. And even if it did, it is our duty to put this amendment on. We can afford to spend a few more dollars for the benefit of enriching the soil of this country.

Mr. WADSWORTH. Mr. President, I was endeavoring to state my recollection of the testimony of the Secretary of War when I was interrupted by the Senator from South Carolina. The Secretary of War certainly gave the committee clearly to understand that it was not only undesirable, but the corporation would not be in a position to sell direct to the ultimate consumer, and he cut out of all his calculations any such operation and submitted estimates as to the method of doing business by this corporation based upon selling its product only to the manufacturers of fertilizer, and that is all the Senate has before it in the way of estimates of income and outgo. My plea is, and has been all through the consideration of this measure, that, first, it is a strictly business proposal, so far as the manufacture of these products is concerned, and that before we embark upon a commercial business we should safeguard that business against loss; and the only way we can safeguard it against loss is to know where we are going with it. The amendment offered by the Senator from South Carolina completely changes the purpose of this corporation as estimated for by the War Department.

Mr. SMITH of South Carolina. How does it change the purpose of it when the bill gives them the privilege now of doing the very thing I have proposed that it shall do?

Mr. WADSWORTH. But all the estimates are based upon doing only one thing, and the Senator knows it; that is, selling to producers.

Mr. SMITH of South Carolina. That is the farmer.

Mr. WADSWORTH. "Producers or users of fertilizers."

Mr. SMITH of South Carolina. Exactly; "or users."

Mr. WADSWORTH. But the Senator can not get away from the testimony in support of the bill before the committee. It is based entirely upon the proposition of selling fertilizer to the manufacturers.

Mr. SMITH of South Carolina. I did not so understand.

Mr. WADSWORTH. All the estimates are made that way. The estimates were made as to how much of this product the manufacturers of fertilizers can consume.

Mr. SMITH of South Carolina. Mr. President, the Senator from New York does not want to misstate the case.

Mr. WADSWORTH. Will the Senator permit me to continue just a moment?

Mr. SMITH of South Carolina. Certainly.

Mr. WADSWORTH. I sat in those hearings, and I recollect perfectly well what the advocates of the bill proposed. If it is going to do a different kind of business than that announced by the man who is going to appoint the directors and remove them at pleasure, then I want to know what that kind of a business is going to result in financially. The Secretary of War, under the bill, appoints these directors and removes them at pleasure. He has said that it is his purpose, if clothed with this power, to do business in a certain way, and only in that way. Is there anything in the Senator's amendment which would change that other than that it would give a preference? I understand that the Senator's amendment would give a preference to another kind of selling agency.

Mr. SMITH of South Carolina. No.

Mr. WADSWORTH. To another kind of selling business. Is not that true?

Mr. SMITH of South Carolina. I do not want to take the floor in my own time, because we went over this matter yesterday, I thought, sufficiently exhaustively for the Senate to understand that the testimony of everyone who testified, that I myself paid particular attention to—and I think that included most of them—was to the effect that it was to be principally for the benefit of agriculture, so much so that Dr. Whitney came before our committee and placed before it samples showing the possibilities of using the nitrogen furnaces, with their tremendous heat and pressure, for the production of phosphoric acid by the use of common silicate, common red sand, and then under the same pressure and heat to produce phospho-nitrogen, and then by the use of green shale and the green sands of this country to produce potash, saying that they could produce a complete, balanced fertilizer for the farmer, if the farmer or the trade so desired, and put it on the market at practically a minimum of cost. But none of them took the ground the Senator seems to desire to emphasize, that they were going to manufacture ingredients that could not be used or were not available immediately for the farm or for agricultural purposes, and that therefore must be turned over to the manipulator or to the manufacturer to produce a land fertilizer.

However, if the Senator will turn to the table of fertilizer consumption in the country he will see the figures on the use of nitrate of soda, which is not a thing but cyanamid in another form—one has a soda basis and the other has a lime basis; one is a deposit of nature and the other the creation of chemical science; one is 15 per cent of nitrogen and the other 30 per cent, both of them equally available for immediate application to the soil.

Does the Senator pretend to say that this product, being ready in carload lots to ship out to the farmers' organizations, could not be shipped at a great saving to the farmers and a great saving to the agricultural interests of the country, rather than to ship it to a fertilizer manufacturer to be mixed with a worthless filler in conjunction with some other ingredients and then reshipped to the farmer? The whole aim and object of the legislation, so far as I am concerned, is to put it in such shape—and it is now in such shape—that the farmers themselves can get it directly without the intervention of middlemen or any other process.

Mr. SMITH of Arizona. What relief would it be to a farmer in getting this nitrogenous element of the soil if it had to go into the hands of other individuals to be made up into the form of a commercial fertilizer?

Mr. SMITH of South Carolina. So far as the farmers of the country are concerned, and the necessity for an increased supply of nitrogen, and so far as the price is concerned, we might as well destroy the plant. If we are to interpret this proposed law and leave it so that it shall be used to sell the stuff to the fertilizer manufacturers of the country, I for one shall vote against the whole proposition, because the burden that is laid upon the farmer to-day is the result of the absolute control of the price of fertilizer by those engaged in the manufacture and sale in this country. It is that point that I desire to emphasize here without going into any retail business. The retailers are provided for now and can sell it to the users and producers and others. The language of the bill provides for it, and I have simply emphasized who should be the beneficiaries of this vast governmental expenditure, whether the manipulator and manufacturer of fertilizer or the man who puts it in the ground and transforms it into the crops of the country.

There are some other features of the bill that, if it does not work out properly, ought to be amended after a practical test is made. I think there are some things here that may possibly be abused, like the powers under the Federal reserve act, an act splendid in itself, but which can be misused disastrously. There is not a law passed but what may be misused under an unwise administration. I think this bill, with one or two amendments, can be placed upon a workable basis, and then let the good sense of the people of the country take care of it as the plant develops and as the needs of the country demand.

Mr. WADSWORTH. Mr. President, the Government has been in business before of a commercial character. We have had some rather unfortunate experiences with it. Our experiences have been unfortunate, I think, in the first instance, because we have not paid enough attention to the prospects of the business we were authorizing the Government to go into. For example, one is the Shipping Board. No attempt was made by Congress when it authorized the Shipping Board to go into the merchant marine business to set up any business standards to which that board should adhere. No reliable estimates were received from the department as to what could be done in the operation of ships, the cost of operation, the cost of construction, maintenance, and repair. The taxpayers, just as they did in the Muscle Shoals project, dumped millions and millions of dollars into the hands of a governmental agency and said to it, go ahead. Now, we are losing money every day in the operation of ships, and the longer they are operated the more good money goes after the bad, because there is no business principle controlling it.

It is the same with this proposed corporation. There is no business principle set up in the bill which will control it to such an extent that it will earn dividends upon the money that the taxpayers have put in. My concern from the beginning has been, as a business man and a farmer, that we shall not duplicate the ridiculous errors we have made in the last three or four years in governmental operations in business. The bill is shot through with imperfections. It is filled with provisions which give the corporation the right to lose all the money it wants to lose. Not one thing is erected here which will guarantee that it will be run upon businesslike lines. No restrictions whatsoever that are imposed upon an ordinary business concern are to be imposed upon this concern.

We sat in the committee and listened to the estimates of the business which they would do, and the men who drafted the bill and brought it to us and testified in its behalf said that they did not want to undertake the erection of a great selling agency to deliver this product by retail, apparently believing that it would not be profitable or that the money coming from it would not equal the outgo. Now the Senator from South Carolina says that is the way it should be done, regardless of what it costs.

Mr. SMITH of South Carolina. No; I did not say that.

Mr. WADSWORTH. Oh, yes; the Senator did. He has stated it time and again.

Mr. SMITH of South Carolina. I said nothing of the kind.

Mr. WADSWORTH. Regardless of what the outcome is, he said the product should be sold to the consumer.

Mr. SMITH of South Carolina. I did say that.

Mr. WADSWORTH. I desire to know as a business man the prospect for the successful operation of the plant.

Mr. SMITH of South Carolina. Infinitely more for the enrichment of the soil, the encouragement of agriculture, and for the prosperity of the plant than to get in collusion with the fertilizer trusts of the country and sell, as the Senator from New York seems to insist that we shall sell, to the men who manipulate the fertilizer and who have the farming interests of the country by the throat now. That is the reason why.

Mr. WADSWORTH. That is very inspiring oratory.

Mr. SMITH of South Carolina. It is a very discouraging fact.

Mr. WADSWORTH. Let us have some concern for what we are going to do with the $140,000,000 we have already invested.

Mr. SMITH of South Carolina. That is exactly what concerns me.

Mr. WADSWORTH. The Senator only day before yesterday stated that he was entirely willing to see the concern run at a loss. I asked him the question myself, and he replied in that way.

Mr. STANLEY. Mr. President——

Mr. WADSWORTH. I yield to the Senator from Kentucky.

Mr. STANLEY. The hearings seem to indicate, as the Senator from New York has said, that they were left no alternative but to sell the fertilizer to the producer or to install a selling agency and the intricate machinery incident to a detailed sale to the consumer. It developed that the sale of fertilizer is such that the article itself, without any such intervening agency, can be sold in wholesale lots, carload lots, direct to the ultimate consumer.

Mr. WADSWORTH. Where does that develop? That is what I want to know.

Mr. STANLEY. There are thousands and thousands of farmers——

Mr. WADSWORTH. I mean the output of this factory. Where can the output be sold?

Mr. STANLEY. The Senator seems to be under the impression that we can not take the output of this factory and apply it directly to the soil, but that it must be mixed with some other fertilizing ingredient. I would suggest that he is in error in that opinion.

Mr. WADSWORTH. Then the testimony before the committee is in error.

Mr. STANLEY. The testimony before the committee was to the effect that a complete fertilizer consists of phosphoric acid, potash, and nitrogen. There are certain plants, like tobacco, for instance, from the leaf of which you can take the stem and set it afire and it will burn like a firecracker. You will see the saltpeter pop and crackle like a fuse. That impoverishes the soil of the potash, as do all plants that take phosphorus. Many plants consume, like all cereals, the nitrogen of the soil. There are thousands of cases where the one element that is needed can be applied. The patient does not always need the three kinds of medicine.

It is a fact as developed in the hearings, as the Senator will recall, that we are about the only users of fertilizer who use a composite fertilizer at all. The Belgians, the Germans, the English, all the horticulturists of Europe, apply their potash or nitrogen or phosphorus as the exigencies of the case and the character of the soil and the nature of the plant demand. We have an idea here that we save time and labor by getting the three and applying them together with a drill instead of applying them separately by hand. But there is no reason why the fertilizer can not be, as it is, wisely and economically administered directly to the soil without either phosphorus or potash.

Mr. KING. Mr. President, will the Senator from New York permit me to suggest to the Senator from Kentucky that the testimony, as I read it, conclusively establishes that approximately but 10 per cent of the ingredients of fertilizers used in the United States, whether it be four and one-half million, or five million, or seven million, or what not tons, consist of nitrates, sulphate of ammonium, and cyanamid. These is perhaps 1 or 2 per cent of cyanamid, a few per cent of sulphate of ammonia, but in the aggregate there is not to exceed 10 per cent of the fertilizer products as used in the United States which consist of what might be denominated the ammoniates or the nitrates, and the balance consists of phosphates and combinations of which potash is the base.

We have in this country, as the Senator has said, a balanced fertilizer for use by the agriculturists. This is preferred to the separate applications of different kinds of fertilizers, because of the high price of labor; but in the Old World, where

labor is cheap, the nitrates or ammoniates and the phosphates and potash fertilizers are placed separately upon the soil. This course involves extensive labor and greater cost than the plan adopted generally in the United States of placing a balanced fertilizer upon the soil at one time.

Mr. STANLEY. If the Senator from New York will allow me, the Senator from Utah is usually so accurate that I am somewhat surprised at his statement. It is fairly deducible from the statements of some of the witnesses published in the hearings, and I am sure the Senator must have in mind the statement of Mr. Washburn to the effect, that what he is talking about is a complete fertilizer, that is four-fifths filler. One-tenth of a complete fertilizer is nitrogen, but four-fifths of a complete fertilizer is hulls or dirt or tankage or something of that sort. There is no fertilizer that is nine-tenths potash or nine-tenths phosphorus. If it were it would burn everything up that was put into it.

Mr. WADSWORTH. Mr. President, the Senator from Kentucky must realize that the farmers in many sections of the country are entirely accustomed to using commercial fertilizers, balanced or mixed fertilizers. For instance, in the section where I live the product mentioned by the Senator from South Carolina is never used. What is used always is the commercial fertilizer purchased from the manufacturers, mixtures of different ingredients, including the ingredient which can be manufactured at plant No. 2.

Mr. SMITH of South Carolina. I beg to say to the Senator from New York that the apple growers of New York appeared with the Senator from New Jersey [Mr. FRELINGHUYSEN] and myself before one of the numerous boards which were sitting when we were trying to get the embargo lifted on the importation of German products, and one of those apple growers testified before the board that he used nitrate of soda as a top-dressing in his orchard and that it was used also by farmers as a top-dressing in truck farming. I took the trouble to look up the table to ascertain, and I find that it is used almost as intensively in the Senator's section of the country as it is in mine. If he will consult with the farmers of his section, he will find that they use nitrate of soda directly from the gunny sacks that are shipped from Chile and then transported to different farms. The farmers haul it out in their wagons, open the sacks, and throw the fertilizer into the distributor or sow it with their hands. It is either sowed broadcast or put into a drill and sowed.

Most often, however, the application of potash to land is not necessary. Take the red lands of the Carolinas and of the piedmont section, and the very redness of the soil indicates the presence of potash. So potash is not needed; possibly, phosphoric acid may not be needed; but nitrogen is necessary. Nitrogen is the most costly element there is, and it is the hardest to get. The cry of agriculturists the world over is for saltpeter for nitrate. That is what makes barnyard manure valuable; it is what makes the deposits of the birds off the coast of Chile valuable. So far as phosphate is concerned, we have it in abundance in Tennessee, in Florida, and in the Carolinas; it is not very hard to get and is comparatively cheap; but the sine qua non, the life of the plant, is nitrogen.

We have provided in this bill that the corporation proposed to be created shall sell this material to the fertilizer manufacturers if they want it; that if there is enough left over after the preferential orders of farmers are filled, it is provided it shall be disposed of to the manufacturers.

When this material can be produced in carload lots or in trainload lots, if the corporation prefers to sell it in that way, in order to keep their estimates in line with what the Senator says they testified before the committee, let them do that; but let them sell the completed ingredients first to the farmers, just as the Senator when the good old days were here and he wanted his "straight"—need not add any dash of soda or anything else. That is what the farmers want; they want their nitrogen straight; they do not want a fertilizer cocktail. Let us now do the sensible thing, and, so far as we can do so by legislation, restrict the sale of this material directly to the producers, to the agriculturists, because it will be available to them, and they will put it in the ground. Do not restrict the corporation as to whether they shall sell it by the sack or by the ton or by the carload or by the trainload; but when they do sell it, under whatever rules and regulations may be prescribed, let us give the farmer the preference.

Mr. LENROOT. Will the Senator from South Carolina yield to me?

Mr. SMITH of South Carolina. Yes.

Mr. LENROOT. I agree with the Senator as to that; but if any of this product is going to be sold to the so-called fertilizer trust, we ought at the same time to regulate the price which the fertilizer trust shall charge the consumer.

Mr. SMITH of South Carolina. Yes; the price they shall charge the consumer who uses the material should be regulated. I myself am of the opinion that the ingredient which is available as fertilizer should be sold to the farmers alone. For what reason? When the fertilizer manufacturer gets hold of it he is going to sell it to the farmer; but it might be very well to leave a margin, for there might be instances, as in the case of New York, where farmers desire a mixed fertilizer, and the fertilizer manufacturer may be in a better position than the farmer to mix the fertilizer.

Mr. WILLIAMS. Mr. President, I suggest to both Senators that their object might be easily accomplished by providing that when sold to anybody except a person who is engaged in agriculture the product shall be sold under contract not to resell at more than 10 or 15 per cent profit upon the price to the purchaser, plus transportation charges, of course.

Mr. SMITH of South Carolina. That is in line with the suggestion of the Senator from Wisconsin. I think it is a good suggestion. Then let us make it impossible for the corporation to lease the properties to anybody else.

Mr. WADSWORTH. May I resume the floor, Mr. President?

The VICE PRESIDENT. The Senator involuntarily yielded the floor.

Mr. WADSWORTH. I intend to occupy the floor for only a few moments.

The Senator from South Carolina [Mr. SMITH] has mentioned a practice which is prevalent in some agricultural regions, and I have no doubt his description is absolutely correct. That practice, however, does not exist in other regions, and I have believed from the testimony which I have read and to which I listened to during the hearings that for the proposed corporation to go exclusively into retail business would require the setting up of selling agencies and advertising expenditures. That was the very clear understanding before the committee. I know full well that there are large regions in this country where the average farmer or groups of farmers will not buy large quantities of this product, for they are accustomed to using mixed fertilizers. So they will not buy the product unless the corporation establishes selling agencies and advertises its product. It may be that they will buy it in South Carolina and throughout the Cotton Belt, where they are accustomed to using this particular commodity and putting it on the soil just as it comes from the plant. That, however, in other parts of the country is not true to the same extent, and in some parts of the country the practice does not prevail at all.

If it is contemplated to distribute this product direct to the growers and distribute it uniformly over the agricultural regions, it will be necessary to advertise it to those men who have never used it before else it can not be sold. That is what I imagine the Secretary of War and his supposed experts meant when they said it would be unwise for this corporation to attempt to do a business of that kind.

Mr. SMITH of South Carolina. Mr. President, may I venture to suggest to the Senator from New York that in those places where a mixed fertilizer is used there is nothing in this bill to prevent the fertilizer manufacturer from purchasing this commodity.

Mr. WADSWORTH. No; none at all, but it says that preference shall be given to the farmers.

Mr. SMITH of South Carolina. Exactly; and therefore I am carrying out just what the Senator is now arguing for, because if the farmers know nothing about it and will not use it, then my amendment will be of no avail, for if the farmer does not know its use and does not send in any orders, the product will go to the fertilizer manufacturer, and he will then advertise that he has ammoniated goods, the mixed, manipulated goods, for sale. So we are right where we started. If the people of the Senator's State want mixed fertilizer, there is nothing in the bill to prevent their getting it; whereas, if the people of my State want the product direct from the factory, there is nothing under my amendment to prevent them from getting it. So the Senator from New York and the Senator from South Carolina are exactly where they started.

Mr. WADSWORTH. That is hardly so from a business man's standpoint. I do not know that the Senator from South Carolina and I speak the same language when it comes to questions of business; I am afraid we do not; but before I would advise a client if I were a banker—and I am not one—to invest his money in an enterprise I would want to know what kind of an enterprise it was.

Mr. SMITH of South Carolina. We do know.

Mr. WADSWORTH. No; we do not know. The Senate does not know to-day what is involved in this tremendous project, and I venture to say there is not one of us here, even including the Senator from South Carolina, who has had access to information which will enable him to form a reliable opinion as to

whether or not the money of the taxpayer is to get any return. I am tired of seeing government conducted in that way. We have had in recent years, time and time again, instance after instance, of such transactions, and yet new projects are constantly brought up, and there is always some one to support them and to say, "Put in more of the Government money; let it go; it is in the interest of the people."

Mr. SMITH of South Carolina. Mr. President, if the Senator from New York will allow me, I wish to point with considerable pride and satisfaction to a bill which I introduced here, which became a law, and which was administered and executed to the benefit of all the fertilizer users—the farmers. I refer to a bill to appropriate, I believe, $20,000,000 to enable the Government to purchase soda from Chile, bring it to this country, and sell it at cost. Soda was at that time selling for about $110 a ton retail delivery. The Government sent its ships to Chile, bought soda, brought it back, paid all the overhead charges, put into its own coffers $16 a ton freight as against a prewar freight of about $7, and delivered the commodity to the farmers of this country at their local stations from Maine to Florida for $75 a ton, involving a saving of $35 to the farmer, while at the same time the Government did not lose a penny but made sufficient to reimburse itself for all time and expense necessary to transfer and distribute the soda.

Mark you, that was a revolving fund, so that not merely $20,000,000 was involved, but as a certain amount of soda was sold the money was applied to repurchases. I repeat that transaction brought to the farmers of this country a saving of from $35 to $40 a ton, which otherwise would have gone into the pockets of the fertilizer trust.

That is an instance where the Government took charge of a business proposition. I might say in passing that the work under that legislation was performed by the Agricultural Department and not by the War Department.

Mr. WADSWORTH. If I could have my way the War Department would have nothing to do with the project now under consideration.

Mr. SMITH of South Carolina. I do not know but that I might agree with the Senator as to that proposition, because the hardest crowd that I have ever encountered was in the Ordnance Department.

Mr. WADSWORTH. But we are going to pass this legislation, if it shall pass, on their testimony.

Mr. SMITH of South Carolina. Yes.

Mr. WADSWORTH. The Senator voted to report from the committee this bill placing those people in charge.

Mr. SMITH of South Carolina. I was amazed to find that some of the gentlemen who appeared before us, Mr. Gaillard, Col. Burns, and Dr. Whitney, were so splendidly informed, as their evidence shows that they were informed, on this subject. They were men upon whom we could rely both as to their integrity and their knowledge of the thing which they were attempting to do.

Mr. WADSWORTH. Does the Senator think that he can rely upon their business judgment in view of the estimates?

Mr. SMITH of South Carolina. Yes; I do.

Mr. WADSWORTH. Did they not have to revise them shortly after they submitted them?

Mr. SMITH of South Carolina. Yes; and there are a great many things which will have to be revised since the recent slump in prices and industry occurred.

Mr. WADSWORTH. I think so.

Mr. GRONNA. Mr. President, if the Senator will permit me, I think that he will remember that Dr. Lamb and Prof. Whitney, of the Agricultural Department, also appeared before the committee and indorsed this bill. I do not say that I would not be in favor of changing the control of this project from the War Department to the Agricultural Department, but I am not debating that question now. Dr. Lamb and Prof. Whitney rank among the ablest men of our country and nobody will care to challenge their honesty and patriotism. I also want to say while I am on my feet that I consider Maj. Gaillard, Maj. Williams, Maj. Burns, and Col. Joyes high-class citizens and able experts. I do not believe any of them has been guilty of any wrong.

I listened to the speech of the able Senator from Wisconsin [Mr. LENROOT] this afternoon, and while no names were given—the names I have mentioned are the names of the officers and experts of the War Department—they are the men who appeared before the Committee on Agriculture and Forestry and gave expert testimony with reference to this question. They, together with Secretary Baker, indorsed this bill. I do not say that the Senator from Wisconsin even indicated that they were the men who were guilty of wrongdoing, but I think it ought to be said here on the floor of the Senate—in the interest of fairness, at least, I want to say that I believe they are among the ablest men of our country and their testimony is valuable. Maj. Gaillard was at one time employed with the American Cyanamid Co. Nor is it fair to say that it is only the War Department that has recommended this bill.

The Federal Farm Bureau has recommended it, the representative of the Grange has recommended it, and many other farm associations have recommended it, which of course had some influence with the members of the committee.

Mr. WADSWORTH. Let us be perfectly honest about this. I wonder if the Senator from North Dakota believes that the people who have been induced to indorse this bill have read it, that they really know what is in it, or what the history of this transaction at Muscle Shoals has been?

Mr. GRONNA. The Senator asks me if those who have indorsed this bill have really read it, and I shall try to answer him frankly. I do not know whether they have or not; but I must say to the Senator that I do not think the arguments against this bill have been based entirely upon the provisions of the bill. I join with the Senator from Wisconsin in what he said to-day with reference to extravagance and waste, and I just as severely condemn extravagance and waste as he does. There is no question about that; but that really has nothing to do with this bill, because this bill only provides that the Secretary of War shall be permitted to sell Chilean nitrate to the value of $12,500,000 for a certain purpose, which I shall not take the time of the Senator to name now.

That is really all that this bill does, and the Senator from Wisconsin forgot to state that in this bill provision is made to place its administration under the terms of the national defense act of 1916, and section 124 of that act, I think the Senator will agree with me, provides certain things; and, among others, it provides that the Secretary of War shall direct the administration of these things and how the water power shall be sold.

Mr. LENROOT. Mr. President, I am sure the Senator wishes to be correct.

Mr. GRONNA. Yes.

Mr. LENROOT. Section 124 of the national defense act does specifically prescribe that the Government shall manufacture the nitrate and that power shall not be sold; but this bill expressly removes those restrictions.

Mr. GRONNA. As I said to the Senator the other day, so far as I am concerned I should be perfectly willing to have it amended; but, if the Senator will pardon me, the bill which is before the Senate now does specifically provide that the administration of the bill shall come under section 124 of the national defense act. Is not that true?

Mr. LENROOT. Oh, no; not at all. The President may delegate to this corporation the powers reposed in him under section 124, but the bill repeals the restrictions for the protection of the public that section 124 throws around it.

Mr. WILLIAMS. Mr. President, does the Senator mean to say that it expressly repeals that, or does he contend that it does it by implication?

Mr. LENROOT. Expressly. I have the language here:

> In the operation, maintenance, and development of the plants purchased or acquired under this act the corporation shall be free from the limitations or restrictions imposed by the act of June 3, 1916.

It expressly repeals the restrictions so far as this corporation is concerned.

Mr. WILLIAMS. Mr. President, I hope that no part of the Federal legislative body, here or elsewhere, will forget that it is not a function of government to engage for primarily industrial purposes in industrial business. I therefore have no sort of sympathy with the idea expressed by my friend the Senator from North Dakota that he would listen to an amendment to take the administration of this act out of the War Department and put it in the Agricultural Department. Congress did not pass this act with a view of having its primary purpose one of private trade. It passed it with a view of having its primary purpose one of military defense. Now, having fastened this primary purpose to a constitutional purpose, the by-products, the auxiliary beneficences of the plant, can go for agricultural purposes, of course; nor does the fact that they do go that way affect the original purpose.

Mr. President, we have put out millions of dollars upon this plant. About one-twentieth of what we have already put out seems to be necessary in order to make it a paying plant. Some Senators have said that there will be so many new improvements of various sorts that maybe it will not pay, anyhow. That would be a very good reason to cease constructing battleships; it would be a very good reason to cease constructing almost anything we are doing, because maybe something might be invented that would render it helpless in its element, whatever that element is. But we have erected the plant for the purpose of contributing to the national military and naval defense; and, finding that there will be an overflow or surplus

of products of various kinds that might be sold for the benefit of the country in its industries and other respects, Senators choose now to attack the question of the surplus products, and forget the original object of the act.

I should be very much opposed to putting this under the hands of the Agricultural Department. I should be very much opposed to the Federal Government going into the business primarily of manufacturing fertilizers. I do not believe that is a part of the function of government at all, except of a State government, if the State government chooses to do it; but that does not affect the fact that if, incidentally to that, this plant may be of benefit to the agriculture of the country we ought to utilize it, just as fully as a man with a blast furnace ought to utilize the by-products that otherwise would go into the atmosphere.

Mr. President, I have heard a good deal about waste in connection with the last war—the World War—and in connection with this plant. Of course, there was waste, enormous waste, immense extravagance. For every slave freed during the Civil War the United States Government alone, not to count the Confederacy, might have paid one thousand times his value and saved money. But neither the Union armies nor the Confederate armies saved any money. They were fighting for their lives, or in one case the South was fighting for its life and the other side was fighting to keep the South with it for a common life—the Union, as they called it.

Mr. President, if my house is afire I do not stop to see how much I shall promise to pay men to help me put it out, especially if my wife and children are inside of it. I do not doubt that there have been extravagances in connection with this plant, as in connection with nearly everything else that contributed to the winning of the war. But, Mr. President, I have heard things rumored around this morning that, if true, ought to be examined into.

I was out in the cloakroom a few moments ago and I heard a gentleman say that he had heard that $350,000 had been spent for a clubhouse at the Muscle Shoals Dam plant.

That would not be extravagance; it would be malversation. That would be theft, and as this plant has been under the care of Army officers who are usually West Point graduates, and West Point graduates are usually gentlemen, I do not believe that it happened. I do not believe there is a word of truth in it. Why should that rumor have been set afloat in the cloakroom and everywhere else, with a view of hurting this bill?

Mr. LENROOT. Mr. President——

The VICE PRESIDENT. Does the Senator from Mississippi yield to the Senator from Wisconsin?

Mr. WILLIAMS. In just a minute. But if that rumor be true, then there is somebody connected with the Army who has been guilty of the malversation charged, who is subject to court-martial, to reduction to the ranks, to shame and to disgrace, and in due time I shall offer a resolution of inquiry in this body to find out if that be true. There can not possibly be any excuse for him or for any man who knowingly indorsed the requisition for that expenditure. If it be untrue, there can not be any possible excuse for anybody who set the rumor afloat. Now, I yield to the Senator from Wisconsin.

Mr. LENROOT. I wish to state to the Senator that it is not a rumor. I read from a report of a committee of Congress making that statement, and giving reference to the page of the testimony.

Mr. WILLIAMS. What committee was it? Was it a committee of the House?

Mr. LENROOT. A committee of the House.

Mr. WILLIAMS. Did it base it upon knowledge or a rumor behind it?

Mr. LENROOT. No; they quote testimony.

Mr. WILLIAMS. Whose testimony is it?

Mr. LENROOT. I do not know. I was reading from the report.

Mr. WILLIAMS. I know West Pointers as a rule are gentlemen. They do not steal, whatever they do. But if there be thieves amongst them, as there was a bribe taker amongst the Twelve Apostles, we have a military and a summary method of getting at them.

The Senator hands me House Calendar No. 214, a report coming from Mr. GRAHAM of Illinois, chairman of the Select Committee on Expenditures in the War Department, one of the subordinate committees of the House of Representatives, and he marks something on page 58. Now, let me see who is responsible for that something. I will read the language marked. I can not trace it back to its author. It must be a part of the report. It reads:

> A clubhouse of officials known as First Quarters was built at the extravagant and unwarranted cost of $341,866. A small building at the gate was built of the finest materials, finished splendidly, and cost probably $10,000 to construct.

This seems to be the language of the Member of the House who made the report.

Mr. LENROOT. It is a part of the report.

Mr. WILLIAMS. From whom is it quoted? No authority appears for it here.

Mr. LENROOT. The figures show the page of the testimony in the hearings from which the report is taken.

Mr. WILLIAMS. Mr. President, I will read it. It is page 3890 of the hearing.

Mr. LENROOT. Yes.

Mr. WILLIAMS. Has the Senator that before him?

Mr. LENROOT. I have not.

Mr. WILLIAMS. I should be very glad if the Senator would find it and put it in the RECORD.

Mr. GRONNA. I have it here, and hand it to the Senator.

Mr. WILLIAMS. Let me see who was responsible for that statement. Mr. President, I am tired, for one, of people attacking the character and the veracity and the honesty of men, unless it be done with cause and reason and with punishment to follow it.

This seems to be an extract from a special summary report of Special Agent William J. Neale, in charge of the investigation of air nitrates plant No. 2, at Muscle Shoals, Ala. Now, we have it down as far as he is. Let us see what he bases it on. The Senate must pardon me for taking a little time, because all this is absolutely new to me, and I have come upon the floor to discuss it only because I have made up my mind that if this charge be true, somebody shall be punished, and if it be not true, the liar shall be discovered. Here is Exhibit E. It has nothing to do with it. Here are various operative expenses stated, without any detail in the remarks. There is a lot about temporary workmen's houses, commissary and hospital, cost of maintaining and operating offices, commissary and hospital, including minor expenses, such as telegrams, telephone service, expressage, and postage. Ah, here it is. This is at the bottom of page 3890. This is the basis of the statement in the report:

> The report then goes on to deal with additional scope of work, showing that from time to time they were instructed to construct additional buildings, which were not included in the original scheme of construction. Following the interpretation, as had aforesaid been placed upon the contract, a large hotel generally known as First Quarters was constructed at a cost of approximately $341,866.

A hotel; and it has gotten down in this man's official report, as chairman of the House committee, and in the repetition by the Senator, to the language "an officers' club." The word "hotel" and the phrase "an officers' club" are not identical, or in the slightest degree synonymous; nor does this tell what the purposes of the hotel were. It might have been, for all I know, a hotel with 500 or 1,000 rooms, to take care of the employees engaged out in the country at Muscle Shoals. It might have been substantially a barracks; at any rate, a shelter for everybody and everything.

But let us go on and see if there is further light on it. To repeat:

> Following the interpretation, as had aforesaid been placed upon the contract, a large hotel generally known as First Quarters was constructed at a cost of approximately $341,866. This building may be described as a permanent building and does not bear the slightest earmark of a temporary structure such as would be expected to be found at a munition plant constructed to meet war necessities.

If that be true, that ought to be examined into, because while that would not be a malversation, it would be the widest possible lack of good judgment. It goes on:

> This particular piece of construction will be treated of under a separate head later on in this report. It will be observed later on that this same provision was taken advantage of under the contract * * * for the construction of the power house.

Mr. President, I have no connection with this business; I have no feeling about it. I do not know any of the persons who have been engaged in it. I never met one of the men who has been constructing the Muscle Shoals plant, or if I did, I do not know it, or where to place him. But I am an American citizen, and whenever you talk about corruption in high places, I say you must not stop with talk, and if there has been corruption in connection with this or anything else let us have it out and let no guilty man escape. If he be an Army officer, as in this particular case he must be, then let the Senate and the War Department take the first step by striking his shoulder straps off him, saying to him, in effect, "You are a graduate of West Point, the school that furnished Robert E. Lee to the Nation, the school that has always pretended to turn gentlemen out in America, and it turns out that you are an embezzler of public funds, that you are substantially a thief and a corruptionist. We tear your epaulets off of you. We pronounce you a disgrace and later on we will, with God's help, put you in the penitentiary."

But it turns out that this is not an officers' club, which was the language I heard in the cloakroom, which is the language

used in this report; but that it is a hotel, and maybe if the hotel were large enough and if the purposes of it were sufficiently magnitudinous that amount of money may have been needed in its construction. I do not know what it was intended for; certainly not for mere officers.

Let us forget politics for a time and remember that we have just come through the World War when a great people, dedicating and consecrating themselves to their national interest and to the interest of the world peace and world civilization and liberty, have carried their banners upon their bayonets without a stain, and that it is of the very utmost psychological importance to the American people and their descendants in the years to come that no stain should be thrown upon the great work from which we have just come so successfully, unless that stain be altogether deserved and altogether unavoidable.

There never was a war like it. Even the Confederacy did not fight with as little charge of corruption. The Federal Government during the Civil War had a hundred charges of diabolical corruption where there has been one in connection with this Great War. The Spanish-American War, little by-play and skirmish as it was, had forty where there has been one in connection with this Great War.

The greatest tribute to the American people they have ever paid themselves is the fact that while they passed through this gigantic contest with waste, with extravagance, with hurly-burly, with confusion, yet there was no corruption. Not that there was not a man here and there who stole something, but there never was such a gigantic task so magnificently and so superbly performed, such a grand concept so apparently from God Himself fought to an issue so heroically, so purely, so altruistically, so unselfishly, and so incorruptly.

Let rumors about the corridors of the Capitol stop, or let them be substantiated. No one is withheld by any feeling of kindliness from substantiating them. Ah, you hate enough to do it if you could give good cause for it. One of the greatest men known to American history and known to this world, stricken in the heyday of his physical strength and intellectual power, almost stricken to the death, got no sympathy from any politician or any partisan newspaper. If you could prove corruption and bring it next to him somewhere you would not hesitate out of any kindliness. You have shown no kindliness. You have not shown the ordinary pity and sympathy that I would show for a stranger upon the highway who was physically suffering.

Now, Mr. President, I do not believe that $382,000 was spent for an officers' clubhouse at Muscle Shoals. I believe that charge is a falsehood. I believe that it is a falsehood that stains the escutcheon of the officer class in the American Army, especially the Engineers, the first subclass of the officer class. But if it be true let us find the one man out of twelve, the Judas Iscariot guilty of it. Let us not take off but snatch off his epaulets, and let us land him in the penitentiary, where he ought to be, but above all things do not let that interfere with the consideration of the bill.

Now, to recurr to the bill for a moment. I am in hearty sympathy with a part of what the Senator from Wisconsin [Mr. LENROOT] has said. I should be glad to so amend the bill as to secure and safeguard it in those respects. But I submit that to throw all this expenditure into the rapids of the Tennessee River and let it go without any good, either to the munitions department of the Federal Army or to the farmers of the United States, is a piece of madness which could find its justification only in a devotion to private competitive interests of some description, somewhere, who want to see this scheme fail.

The VICE PRESIDENT. The question is on the amendment of the Senator from South Carolina.

Mr. LENROOT. Mr. President, I move to recommit the bill with the amendment to the Committee on Agriculture and Forestry. In support of that motion I will say just a few words.

The chairman of the committee referred a little while ago to the fact that the bill as it is now before the Senate has been indorsed by many farmers' organizations of the country. I think that is true, but I think it is also true that there is not one of those farmers' organizations indorsing the bill that has done so with a knowledge of what the bill is in its details. I make that statement largely upon the strength of the fact that the other day a representative of one of the leading farm organizations in the country came into my office and said that he would like to talk with me about the bill. I spent an hour with him going over the bill, provision by provision, and when we got through with that examination he said the bill never should pass Congress in its present form. I am very sure that as the members of farm organizations become familiar with the bill, as they will have the opportunity to become familiar if the bill is re-referred to the Committee on Agriculture and Forestry, they will be among the first to insist upon changes in the measure that will protect the public and the farmers.

I am in favor of the amendment that is now pending, but even with this amendment while such an assault has been made upon the fertilizer trust so-called, it is proposed that after the Government goes to this very large additional expenditure of over $50,000,000, if the farmers then do not wish to buy this output without any effort upon the part of the corporation to make a retail market, then they can sell to the fertilizer trust, without any provision in the bill for regulating the prices that the fertilizer trust shall charge.

I want to know whether it is proposed that the Government shall expend $50,000,000 to make nitrate for the benefit of the fertilizer trust, to sell the nitrate to the fertilizer mixers, and then they charge whatever they see fit to the user or the farmer. The Senator from South Carolina [Mr. SMITH], in response to that suggestion of mine, at once said that in his judgment there should be a provision that if the product was to be sold to fertilizer manufacturers there should be an additional provision which would insure a reasonable price to be charged by the fertilizer manufacturers. But that is only one feature. The bill, as I tried to point out earlier in the day, is full of things of this kind, and whether the farmer would ever receive one penny of benefit from the passage of the bill, no matter how much the Government might lose in its investment, would depend entirely upon the attitude of the corporation. They could sell every pound of the nitrates they manufacture to the American Cyanamid Co. or any other fertilizer company, and thus increase the profits of the Fertilizer Trust, so called, under the provisions of the bill.

But the stronger reason, the reason that it seems to me should impel every Senator to vote to recommit the bill, is upon the other ground. The House of Representatives has refused by a vote to go on with the Muscle Shoals Dam and refused an appropriation of $10,000,000 for that purpose. It is admitted upon all sides that the nitrate plant can not be successfully operated by steam power for the manufacture of fertilizer. They must have water power or they can not operate. What height of folly under those circumstances for the Government to appropriate $12,500,000, because that is what the proposition means. The nitrate that is proposed to be sold belongs to the Government. If it is sold, the money would go into the Treasury, and it is just as much an appropriation of money as if it went directly out of the Treasury. What folly it would be to appropriate this money to allow the corporation to employ a horde of officeholders, at tremendous expense, upon what everyone admits to be a losing proposition, until such time as Congress determines to go ahead with the Muscle Shoals Dam. That will be determined within the next four weeks undoubtedly. The sundry civil appropriation bill is in the Senate; it came here from the House to-day.

If the Senate shall refuse to go on with the appropriation of $10,000,000 for the Muscle Shoals Dam there will be only one thing to do, and that is to shut down operations for the present upon the Muscle Shoals Dam. If that is done, no one can justify the passage of the bill at this time.

On the other hand, if it shall be concluded to go on with the Muscle Shoals Dam, if the appropriation is to be made for its completion, then I shall be very glad to join with others in so amending the bill that it shall provide for the operation of the plant and its operation in the interest of the farmers of the United States. If it is recommitted to the Committee on Agriculture and Forestry I feel thoroughly satisfied that if the appropriation is made to carry on the Muscle Shoals Dam the committee will go over the bill again, as it should, and will eliminate those provisions which are in the interest, as I view it, of the Alabama Power Co. and the fertilizer manufacturers, and make it a bill in the interest of the farmers, whose interests are intended to be served by it.

Mr. GRONNA. Mr. President, I may say that I have not had anything whatever to do with the drafting of this particular bill. It was introduced by the Senator from New York [Mr. WADSWORTH]; it was recommended by the War Department and it was recommended by certain farm organizations. I wish to call the attention of the Senator from Wisconsin [Mr. LENROOT] to the fact that various farm organizations have indorsed this bill, and to read very briefly from the statement of Dr. T. C. Atkeson, the Washington representative of the National Grange, to be found at page 496 of the hearings. He said:

Mr. ATKESON. Mr. Chairman and gentlemen of the committee, my name is T. C. Atkeson. I am a practical farmer and am at this time the Washington representative of the National Grange, an organization of farmers which has been in continuous operation for 53 years, and is the oldest and most conservative farmers' organization in existence. It has a dues-paying membership of approximately 750,000 and several hundred thousand other members who, from one cause and

another, are temporarily dormant. Personally, and on behalf of this organization, which I have the honor to represent, I desire to make a brief statement in support of the bill now under consideration, or such modification of it as may be deemed necessary to most effectively and efficiently continue the operation of the Government nitrate plant at Muscle Shoals, Ala.

Mr. President, I shall not take the time of the Senate to read further from the statement of Dr. Atkeson, but I wish to read briefly from the statement of a gentleman from the Senator's State, the State of Wisconsin. I refer to the statement of Mr. Charles A. Lyman, secretary of the National Board of Farm Organizations, located at 1731 I Street, NW., Washington, D. C., which will be found on page 500 of the hearings. I read as follows:

Mr. LYMAN. Mr. Bower has submitted the case of the National Board of Farm Organizations. He is chairman of the fertilizer committee which was appointed at the last conference, which we held in Washington on February 19–20 of this year.

Our first resolution bearing on the Muscle Shoals project was adopted August 29, 1918, and is as follows:

The resolution is very brief, and I ask unanimous consent to have it printed in the RECORD in connection with my remarks.

The VICE PRESIDENT. Without objection, it is so ordered.

The resolution referred to is as follows:

Whereas the building of the great nitrate plant at Muscle Shoals, together with the water power which will make these plants available in time of peace for the manufacture of cheap fertilizer, is the one outstanding feature of necessary war development that will have a permanent influence upon the agricultural industry of the country; and

Whereas we hear with regret that work on this dam has been suspended and thus prevents the realization of the hopes of the farmers that the product of these plants might be available during the reconstruction period at the close of the war, when it would be most valuable—

Therefore we most respectfully appeal to the President of the United States that some method be adopted by which this work can be at once resumed, if consistent with the effective prosecution of the war, with priority orders if necessary only for such material as will be required for the construction that can be accomplished at once, so that these plants with their potential possibilities shall not be idle when their product is no longer needed for destruction, but can at once become an asset of the Government and of vital assistance to the farm lands of the Nation that have been and will continue to be called upon to yield and yield again that man may be fed.

Mr. GRONNA. There is a statement in the hearings, following the statement of Mr. Lyman, by Mr. Nat T. Frame, representing the American Farm Bureau Federation—that is a new organization—of which Mr. J. R. Howard, of the State of Iowa, is president. Let us see what that organization has to say about this new bill.

Mr. FRAME. Mr. Chairman, I am speaking in behalf of Mr. Gray Silver, the Washington representative of the American Farm Bureau Federation. At its meeting in March, at Chicago, the American Farm Bureau Federation adopted this resolution:

"We pledge the farmers of America to the largest possible production consistent with good husbandry, with a view to relieving the world's dire necessities, and invite the workers of all other industries to join us in this spirit of conservation."

Then, after a hearing the report of a committee on investigation of the Muscle Shoals plant, read by Mr. D. O. Thompson, secretary of the Illinois Agricultural Association—on this committee were several scientists from the agricultural colleges—the American Farm Bureau Federation passed this resolution.

This is the resolution:

We support the measure pending in Congress looking toward the operation of the nitrate plant No. 2—

That is coming down to the specific proposition which we are now considering—

at Muscle Shoals for the production of ammonium nitrate.

There was also a statement made by Mr. Benjamin C. Marsh, and although we may not always agree with Mr. Marsh's conclusions, I think we all agree that he is a very honest gentleman and a student. He recommends this particular bill.

Mr. LENROOT. Mr. President, the Senator from North Dakota does not mean to say that Mr. Marsh recommended or indorsed the details of this bill? He expressly declined to do so and said he was discussing only the principle of the bill.

Mr. GRONNA. Since the Senator from Wisconsin has raised that question, I ask unanimous consent that certain portions of Mr. Marsh's statement may be printed in the RECORD.

Mr. LENROOT. I should like to have them printed in the RECORD, because Mr. Marsh expressly stated that he would not indorse the bill, but wished to indorse merely the principle of it.

Mr. GRONNA. Very well. I ask that the statements, or excerpts of them, of all these gentlemen be printed in the RECORD.

The VICE PRESIDENT. In the absence of objection, the portion of the statement referred to by the Senator from North Dakota will be printed in the RECORD.

The matter referred to is as follows:

STATEMENT OF MR. BENJAMIN C. MARSH, SECRETARY AND DIRECTOR OF LEGISLATION, FARMERS' NATIONAL COUNCIL, BLISS BUILDING, WASHINGTON, D. C.

Mr. MARSH. The Farmers' National Council, as I think the members of this commitee already know, is a special union of leading National and State farm organizations to carry out their legislative program adopted here at the Farmers' National Reconstruction Conference, held in January, 1919.

In appearing this morning on the pending Wadsworth bill I want to say that this council has not taker a specific vote upon this measure, but their reconstruction program stresses the fact that agriculture has got to be made profitable, which it is not to-day; and in advocating the principles of this legislation I do so on behalf of the Farmers' National Council, because in our judgment the fertilizer question is a very serious one, and we feel that the principles of the Wadsworth bill will help to make farming more profitable.

I would like to read in two or three statements from official reports, if I may, explaining our position, before taking up, only in a general way as a summary, as I can not go into details, the principles of this legislation.

The CHAIRMAN. There is no objection to that. You may proceed.

Mr. MARSH. The Department of Agriculture made a report, Bulletin No. 798, from the Bureau of Soils, of which Mr. Milton Whitney is chief—and I believe that Mr. Whitney appeared before you in favor of this legislation—the said bulletin being entitled "A Survey of the Fertilizer Industry," by Dr. E. A. Goldenweiser, from which the following statement is quoted, the bulletin being issued under date of October 20, 1919 [reading]:

"The fact that from three-fourths to seven-eighths of the mixed fertilizer sold to farmers consist of inert matter which does not contribute to the fertility of the soil, but on which freight must be paid and which must be ground and bagged and transported, is one of the fundamentals in the fertilizer industry. If a means were devised by which farmers could buy practically undiluted plant food and make up their own mixtures, an enormous saving would be effected, and any method that would decrease the amount of inert matter carried in fertilizers would be of great benefit to the agriculture of the country. The quantity of filler used is only a minor phase of this problem, but perhaps the part of it which is most easily susceptible of improvement while the present general methods prevail in the industry."

In the report of the Federal Trade Commission on the fertilizer industry, issued of date August 19, 1916, made to the President of the United States, of course, the statement occurs [reading]:

"The economic importance of the fertilizer industry, which embraces the production and sale of various fertilizer materials, as well as the manufacture and sale of prepared or mixed fertilizers, is shown by the fact that the value of all commercial fertilizers consumed in 1914 was in excess of $150,000,000."

Of course, Mr. Chairman and gentlemen of the committee, prices of labor and material have gone up since then, and the best estimate that we can make is that the price paid for commercial fertilizers—and this an estimate that we do not put out as official—must be in the neighborhood of $300,000,000 to $350,000,000 at present. I think that is correct, but perhaps there are some gentlemen here who have more careful estimates on that matter.

This report of the Federal Trade Commission goes on to say [reading]:

"Farmers' prices of fertilizer materials for cash purchases in carload quantities have compared favorably with wholesale prices, but farmers' credit prices have often been excessively high."

There seems, however, to be virtually a monopoly of this business, or substantially a monopoly, for the Federal Trade Commission reports that while [reading]—

"the most of the fertilizers used in this country are purchased in mixed form and not in the form of materials. In the mixed fertilizer industry there are about 800 concerns operating some 1,200 plants, but the seven largest companies, with their numerous subsidiaries and affiliated concerns, control more than 58 per cent of the total output. The two largest sell annually over a million tons each, and in the aggregate about 34 per cent of the total output.

"The prices paid by farmers for mixed fertilizers have been high in comparison with the cash value of the constituent elements, partly because of credit conditions and the expensive distribution methods of the large fertilizer companies; for these reasons also the profits of the large companies have not been large."

I can hardly harmonize these two statements, but apparently the point is that somebody besides the large companies, which have made a considerable profit, have been making a big profit out of these mixed fertilizers, out of this mixed fertilizer business as it is.

But the commission says [reading]:

"Farmers having the cash and the initiative, by buying the materials and mixing them at home, have usually been able to save from $4 to $8 a ton."

That would seem reasonable if the farmers are paying, as seems to be the case, for fillers for mixed fertilizer the same price that they pay practically for the essential ingredients of the fertilizer.

It is in the possibility of these researches, conducted in a great Government laboratory at Muscle Shoals, connected with the practical application of their discoveries in connection with a Government-controlled and Government-operated plant, with cheap power available, that we believe our greatest benefits are to be obtained. If these benefits are to be secured to the American farmer in producing food they must be the result of research carried on by chemists who are working in the interest of the farmers of America and not in the interest of private industry. As a definite illustration of our thought along this line I wish to quote a paragraph from Robert Kennedy Duncan, late professor in the University of Kansas, who says about this matter in his book entitled "The Chemistry of Commerce":

"The present-day practical lesson of this whole strenuous successful work lies in the little object lesson it affords of the immense importance which technical science is assuming in our daily lives and in all our industrial operations. The substitution of real knowledge and high technical skill for the 'rule of thumb' of our ancestors has created a revolution in industry. This revolution took its rise in Germany, and it is spreading rapidly to every corner. It is spreading silently, too, because it does not pay to tell. During the next five years the small manufacturer who is swept out of existence will often wonder why. He will ascribe it to the economy of large-scale operations, or business intrigues, or what not, never knowing that his disaster was due on the application of pure science that the trust organizations and large manufacturers already are beginning to appreciate."

This is the method of these big chemical industries in maintaining their supremacy in the field. This committee can bear witness as to the difficulty in obtaining costs of air fixation of nitrogen, and at present there is no information in this country as to the cost of manufacturing aluminum and other electric-furnace products. The policy of the aluminum company is absolute secrecy as to their processes and costs. Since the future of this Government depends upon the prosperity of the agricultural interests engaged in producing the food and clothing of the country, this question, so closely related to food pro-

duction, is removed entirely from a consideration in which the interests of private corporations and their profits are paramount.

These great resources of the country—the water powers—can not better be utilized than, through governmental activity, be harnessed for the service of all the people in the production of the necessary elements required for food production, and Theodore Roosevelt must have visualized the problem that this committee is called upon to solve to-day when he wrote in the Outlook of September 7, 1912:

"The Government must cooperate with the farmer to make the farm more productive. There must be no skinning of the soil. The farm should be left to the farmer's son in better and not worse condition because of its cultivation. Moreover, every invention and improvement, every discovery and economy, should be at the service of the farmer in the work of production."

You have a simple decision to make, gentlemen of the committee. The door is open through the operation of this plant to free the American farmer from the burden of paying the high prices of the past for nitrogen compounds, and further to secure results which have been clearly demonstrated to this committee as entirely possible in the matter of producing higher and better grades of phosphate and potash fertilizers, and the choice you must make is whether you will hold this door open and insist that these wonderful possibilities shall be made available to the American farmer in the producing of food, or you will close this door in the face of the need and demand of the public welfare, and hand the key to the corporate interests of the country to maintain their monopoly and their profits.

STATEMENT OF MR. T. C. ATKESON, WASHINGTON REPRESENTATIVE OF THE NATIONAL GRANGE.

Mr. ATKESON. Mr. Chairman and gentlemen of the committee, my name is T. C. Atkeson. I am a practical farmer and am at this time the Washington representative of the National Grange, an organization of farmers which has been in continuous operation for 53 years, and is the oldest and most conservative farmers' organization in existence. It has a dues-paying membership of approximately 750,000 and several hundred thousand other members who from one cause and another are temporarily dormant. Personally, and on behalf of this organization which I have the honor to represent, I desire to make a brief statement in support of the bill now under consideration, or such modification of it as may be deemed necessary to most effectively and efficiently continue the operation of the Government nitrate plant at Muscle Shoals, Ala.

We are in Washington in a spirit of helpful cooperation in our efforts to place before Congress and the various departments the true farmer's viewpoint of the food production problems which are now receiving so much attention, and upon which the welfare of all our people so largely depends. In this spirit of helpfulness we go over these rural problems with the Members of Congress and with congressional committees who have charge of the measures affecting the interest of agriculture, in order that we may, if possible, assist them in arriving at a fair and unbiased understanding of the problems and the points of view of real farmers.

One of the things in which we farmers are always deeply interested is the fertilizer question, as you may see from this action taken by the National Grange at its last session, which was last November, as follows:

"In many sections of the country the use of fertilizers is now a vital need in the production of crops. Any policy which will supply an adequate supply of phosphoric acid, nitrogen, or potash at moderate cost will benefit agriculture and all the people. Already the necessary machinery has been provided, largely at Federal expense. This machinery, if properly turned from war to peace channels, can be made to provide all necessary fertilizer materials cheaper than ever before. The plants used for the production of sulphuric acid for munitions may easily be continued, that the unlimited stores of rock phosphate may be converted into acid phosphate at a minimum of cost. The nitric-acid plants established by the Government for the production of gunpowder should be converted into nitrate plants for the production of nitrogen for fertilizer, thus freeing the Nation from dependency on foreign supply. Of equal importance is the development of methods of securing potash of domestic origin."

This is by no means a farmers' problem only, but is of equal or greater importance to the consumer, for the more farmers pay for their fertilizers the more the consumers must pay for their food products. With the increasing cost of production the price of farm products must continue to increase. Somehow "farming must be made as profitable as any other occupation involving the same amount of investment, business ability, and hard work, or our democracy must fail and our people go hungry."

Any shortage in supply or any increase in the price of nitrogen used for fertilizer must somehow manifest itself in the increased cost of agricultural products, and, judging from the hue and cry about the high cost of living, the people who live in the cities are even more vitally interested in an adequate supply of cheap fertilizers than the farmers are.

All the farmers' organizations in the country favor the continuance of the Muscle Shoals nitrate plant, and, so far as I have seen any expression in the agricultural press, it indorses the same proposition. Numerous editorials have dealt with the question. I shall quote but one, from the American Agriculturist of April 24, as it is typical:

"The queer impression appears to be making headway in Congress that nitrogen is so little needed in agriculture its use should be increased but slowly. At recent hearings it has been emphasized that the improved type of coke oven now saves in the form of sulphate of ammonia the nitrogen which formerly was wasted. 'But any reduction from present high prices of this coke by-product will have to be compensated for by higher prices for iron and steel.' This claim is enough even to make a horse laugh. If steel sold lower when the nitrogen in coal was lost by wasteful coking, steel ought to sell still lower when its nitrogen by-product is secured at so small a cost that any price at which it may be sold ought to represent reasonable profit.

"In the questions and answers before the congressional committee that has been investigating the Government nitrate plant at Muscle Shoals there crops up frequently the apparent fear that this vast nitrate plant, if run on business principles by a Government corporation, free of red tape, may be able to furnish nitrogen at lower prices than in other forms of nitrogenous substances. If fertilizer manufacturers and farmers are thus furnished with cheaper nitrogen, the fear also is expressed at Washington that this may put up the price of steel and iron or result in accumulating nitrogen faster than it can be used. All of which is enough to make even a mule laugh.

"No greater blessing could be conferred upon food producers and food consumers than to have nitrogen become available for plant food in unlimited quantities at low prices. Every pound of it would be quickly used by progressive farmers. They never have been able to get nitrogen enough, regardless of price. Where 1 pound of dear nitrogen is now used for plant food 10 pounds or 100 pounds would be employed if it were cheaper. Instead of arbitrarily restricting the production of nitrogen, whether for the benefit of iron and steel or for exporters of nitrate from Chile, let the United States make every reasonable effort to increase its domestic supply of nitrogen not only by saving the present industrial wastes of nitrogen but also by vastly increasing the fixation of atmospheric nitrogen.

"If Washington would only be as solicitous to upbuild agriculture as it is to safeguard the unprecedented profits of labor and capital in iron and steel, fertilizers would be cheaper, the cultivated area larger, food more plentiful, and food prices lower. Incidentally, too, this policy would insure the United States ample nitrogen for defense or offense in war.

"Why all these obstacles to the nitrogenous independence of the United States in peace or war? Why this effort to align fertilizer manufacturers against cheaper nitrogen? They want cheaper raw material just as much as do the consumers of fertilizers. Lower prices per unit of nitrogen, phosphorus, and potassium would enable manufacturers to double and treble their sales of fertilizer. Indeed, the fertilizer industry is still in its infancy, compared to the insatiable demand that awaits its products."

Now, gentlemen, I had prepared a long statement covering in large measure the ground gone over by Mr. Bower. Practically every word of his statement I want to indorse. With this brief statement I am through, unless you wish to ask some questions. I do not want to duplicate the splendid statement he has made. You have heard a great deal of technical discussion of this subject, which I had intended to inject into the record, but it seems to me it is so absolutely unnecessary I am satisfied to rest here.

Senator RANSDELL. I understood you to say that your association was strongly in favor of this Wadsworth bill?

Mr. ATKESON. Yes.

Senator RANSDELL. You believe it ought to be passed? Or some bill embodying the general idea?

Mr. ATKESON. Either this bill or some modification of it that may be necessary to continue the operation of the Muscle Shoals plant for the production of nitrogen for fertilizer purposes.

Senator RANSDELL. How thoroughly has this matter been presented to the farmers of the country? To what extent have you sought to get their views on it in order to speak intelligently for them?

Mr. ATKESON. Replying to your first question, as to how thoroughly it has been presented, the agricultural press for the last four or five years, since 1916, has been carrying editorials and long discussions. I read a splendid discussion of the subject in the Country Gentleman only a few weeks ago. So I think that in a general way you may say they are pretty thoroughly informed as to the necessity for an increased quantity of nitrogen fertilizer.

The only point on which I have ever heard any doubt expressed was as to whether it was a legitimate Government activity to continue this plant at Muscle Shoals. So far as I know, there has been an almost universal agreement that it is a legitimate Government activity, because of its experimental features, if nothing else. The investment has already been made at Muscle Shoals, and even if it were not possible to produce nitrogen commercially at a price cheaper than it can be secured from some other source this plant should be continued to determine whether it is possible to secure all the supply in that manner. It is still in an experimental stage. It is just possible that the time may come when our entire nitrogen supply for fertilizers will be secured more cheaply from the air than from any other source. If that can be done we need not worry about the waste of the coke ovens or the failure to get Chilean nitrate. And whenever it is demonstrated that it can be produced commercially more cheaply through some of these scientific processes private enterprise will engage in the business; and if they can operate more efficiently than a Government plant, as most of us believe—at least I believe they might do so—I think that on that ground alone practically every farmer in this country who has studied the question at all believes that it is a legitimate Government activity at this present stage of atmospheric nitrate development.

Senator RANSDELL. Doctor, what do you think of the wisdom of having a great chemical research laboratory carried on in connection with this plant? I understand that is part of the scheme for developing these projects which have been stated here to us by Mr. Bower, and possibly many other projects. Do you consider that as of very great importance?

Mr. ATKESON. Yes; it is, I would say, of first importance.

Senator RANSDELL. Why?

Mr. ATKESON. Because we are now in the experimental stage of development of securing nitrogen from the atmosphere. It has only been comparatively a few years, perhaps 25 or 30 years, since it was possible to secure the atmospheric nitrogen which exists around us in such great abundance. By a continuation of these experiments in a great governmental laboratory it is possible we may discover the means by which this atmospheric nitrogen may be secured very much more cheaply than we have been able to secure it up to this time. For that reason, it seems to me, it is of the first importance because of its possibilities.

Senator RANSDELL. How about potash? This sample seems to have been produced from Georgia shale in an electric furnace, using hydro-electric power. Would it not be of immense value to this Nation if we became entirely independent of Germany and of France, too, now, for our potash through development in our own country?

Mr. ATKESON. Unquestionably.

Senator RANSDELL. Mr. Bower stated that the Georgia shale contained this potash and that they were developing it down there by an electrical process, but that it has not yet been demonstrated to be a success; the cost of it has not been brought out.

Mr. ATKESON. That all goes along with the laboratory that you speak of. We can not get potash from the atmosphere, however.

Senator RANSDELL. Not from the atmosphere, of course, but we can get it from the shale. I believe all earth has more or less potash in it, has it not?

Mr. ATKESON. Except sand.

Senator RANSDELL. A rich soil, such as we have where I live, contains lots of potash. Perhaps we may develop a process by which we can take it out of the ground. I understand the aluminum people get aluminum out of practically any soil. They have been developing enormously. Now, the label on this sample says: "Ammonium phosphate, containing 14 per cent ammonia and 30 per cent water soluble phosphoric acid"—which I understand is a very valuable combination—"produced by treating phosphoric from the electric furnace with ammonia." Why can we not develop something of that kind in this great chemical laboratory?

Mr. ATKESON. Possibly we can.

Senator RANSDELL. That is immensely valuable to agriculture, just the same as atmospheric nitrogen, is it not?

Mr. ATKESON. Potash is one of the three essential elements of fertilizer.

Senator RANSDELL. And phosphoric acid is the third. So you believe that the chemical laboratory is the most important thing connected with the whole matter?

Mr. ATKESON. With reference to the future, of course.

Senator RANSDELL. I mean, with reference to the future.

Mr. ATKESON. The possibilities for the future.

Senator RANSDELL. I have no further questions.

Mr. ATKESON. I have consumed my time.

Mr. BOWER. Mr. Chairman, Mr. Lyman, of the National Board of Farm Organizations, desires to present some resolutions.

There are only two of these gentlemen, Mr. Chairman, and they only want to submit some resolutions.

Mr. LYMAN. I just want to put these on record. It will not take more than two or three minutes. I understand the same is true also of Mr. Frame.

The CHAIRMAN. Very well.

STATEMENT OF MR. CHARLES A. LYMAN, SECRETARY NATIONAL BOARD OF FARM ORGANIZATIONS, 1731 EYE STREET NW., WASHINGTON, D. C.

Mr. LYMAN. Mr. Bower has submitted the case of the National Board of Farm Organizations. He is chairman of the fertilizer committee which was appointed at the last conference, which we held in Washington on February 19–20 of this year.

Our first resolution bearing on the Muscle Shoals project was adopted August 29, 1918, it is as follows:

"Whereas the building of the great nitrate plant at Muscle Shoals, together with the water power which will make these plants available in time of peace for the manufacture of cheap fertilizer, is the one outstanding feature of necessary war development that will have a permanent influence upon the agricultural industry of the country; and

"Whereas we hear with regret that work on this dam has been suspended and thus prevents the realization of the hopes of the farmers that the product of these plants might be available during the reconstruction period at the close of the war, when it would be most valuable—

"Therefore we most respectfully appeal to the President of the United States that some method be adopted by which this work can be at once resumed, if consistent with the effective prosecution of the war, with priority orders, if necessary, only for such material as will be required for the construction that can be accomplished at once, so that these plants with their potential possibilities shall not be idle when their product is no longer needed for destruction, but can at once become an asset of the Government and of vital assistance to the farm lands of the Nation that have been and will continue to be called upon to yield and yield again that man may be fed."

That was the first action taken by the National Board of Farm Organizations. The last resolution is shorter than that. This was adopted February 20, 1920:

"Whereas the war emergency needs for nitrogen compounds for explosives resulted in the building at Muscle Shoals, Ala., of an immense plant for fixing nitrogen compounds from the air; and

"Whereas careful estimates of the War Department show that this plant can make an important contribution toward a larger and cheaper supply of nitrogen compounds for fertilizer; and

"Whereas this plant is now idle and action of Congress is required before it can be operated, and whereas a bill has been introduced for this purpose: Therefore be it

"*Resolved*, That the National Board of Farm Organizations appoint a permanent fertilizer committee, with power to call in such additional assistance as may be needed, to support proper legislation providing for well-considered Government operation of the nitrate plants at Muscle Shoals and to look after such other fertilizer matters as may vitally affect the interests of American agriculture."

Mr. Bower is chairman of that committee and I am a member of it. As secretary of the national board I want to emphasize the point that Mr. Bower has stated the views of the farm organizations belonging to this national board.

Senator RANSDELL. You indorse everything he said?

Mr. LYMAN. I indorse what he said, and believe he has made a very valuable contribution to the farmers of the country and to the measure which is before this committee for its consideration.

I thank you, Mr. Chairman.

STATEMENT OF MR. NAT T. FRAME, REPRESENTING THE AMERICAN FARM BUREAU FEDERATION, WASHINGTON, D. C.

Mr. FRAME. Mr. Chairman, I am speaking in behalf of Mr. Gray Silver, the Washington representative of the American Farm Bureau Federation. At its meeting in March, at Chicago, the American Farm Bureau Federation adopted this resolution:

"We pledge the farmers of America to the largest possible production consistent with good husbandry, with a view to relieving the world's dire necessities, and invite the workers of all other industries to join us in this spirit of conservation."

Then, after a hearing the report of a committee on investigation of the Muscle Shoals plant, read by Mr. D. O. Thompson, secretary of the Illinois Agricultural Association—on this committee were several scientists from the agricultural colleges—the American Farm Bureau Federation passed this resolution:

"We support the measure pending in Congress looking toward the operation of the nitrate plant No. 2 at Muscle Shoals for the production of ammonium nitrate."

May I just add that the Government has for a number of years been investing public funds and giving public supervision to this matter of obtaining atmospheric nitrogen, through the work of our experimentations and of the Department of Agriculture, in working out methods of farming which include nitrogen fixing crops—legumes—but that in many large sections of the country the use of legumes is limited by the acidity of the soil, and that in large areas of the country to secure lime to correct that acidity is a very difficult and very expensive matter. Many soils that otherwise would be very productive are now not productive because of the impossibility of getting lime, even under our system of rotation which would take atmospheric nitrogen from the air.

Some of the States have recognized that problem as a proper matter for governmental activity, and the State of Illinois, I understand, operates State lime plants to furnish lime to the farmers at cost of production. The State of Virginia does likewise. The State of Virginia has also fixed a freight rate on lime, looking to the very object that we have in mind in the establishment of this plant to furnish nitrogen. But so many millions of acres can not be put into profitable production through the use of legumes, on account of the impossibility of getting lime, that this atmospheric nitrogen, which can be brought in concentrated form with a comparatively low freight rate and comparatively cheap transportation, will make productive for food purposes millions of acres in what we would call the less productive sections at the present time.

I thank you, gentlemen.

Senator RANSDELL. You indorse the general idea of the bill, I take it?

Mr. FRAME. Yes, sir. The organization that I represent, comprising about 1,061,000 farmers, at this March meeting——

Senator RANSDELL (interposing). Scattered over the country generally?

Mr. FRAME. Twenty-eight States being represented, in all parts of the country—officially indorsed, as I read there, the operation of this plant No. 2. They even had an investigation committee of their own membership who spent some time looking into it, and that committee naturally was listening to the objections that might be raised, and made their report with that in mind.

Mr. BOWER. I might state that that committee visited that plant at Muscle Shoals.

Mr. LENROOT. At this point, if the Senator will yield further, I should like to ask him, as the chairman of the Committee on Agriculture, is he in favor of conferring power upon this corporation to make contracts extending over 100 or 200 years?

Mr. GRONNA. Mr. President, there are many amendments pending to the bill, and I think when we get through with the bill, and after the Senate shall have taken votes upon those amendments, it would hardly be necessary to discuss that question.

I wish to be very frank with the Senator from Wisconsin, and to say that I do not believe that, affecting ordinary business, a State or the Federal Government should undertake to do what private enterprise or private corporations can and will do; but it is my conviction, sir, that every pound and every ounce of explosives used for military purposes should be manufactured by the various Governments of the world, because that would have a tendency to prevent war.

The Senator from Wisconsin will find statements in the hearings in reference to this bill which were made by one of the most distinguished engineers in the world. I refer to Dr. Ernest Kilburn Scott. What does Dr. Scott say with reference to that question? His testimony relative to the matter will be found on pages 283 to 317. He states, in substance, that it was the belief in England that the Boer War was precipitated by the munitions manufacturers. He states further that it is believed by many that it was the German junkers, the Hohenzollerns, and the munitions manufacturers who were largely responsible for the recent World War. That is the statement of a noted Englishman, a gentleman who was a member of the munitions board of Great Britain during the late war. That question, in my judgment, is greater and is of more significance and importance than the economic question whether the Government shall continue to operate plant No. 2 and be permitted to sell a few thousand tons of fertilizer.

Mr. President, I do not wish now to take further time of the Senate. I presume this measure will go over until Monday, and I shall then ask for some time in which to express my position with regard to the bill.

MESSAGE FROM THE HOUSE.

A message from the House of Representatives, by D. K. Hempstead, its enrolling clerk, announced that the House had passed the bill (H. R. 15422) making appropriations for sundry civil expenses of the Government for the fiscal year ending June 30, 1922, and for other purposes, in which it requested the concurrence of the Senate.

ENROLLED BILL SIGNED.

The message also announced that the Speaker of the House has signed the enrolled bill (H. R. 12337) to provided for the relief of Anthony Sulik, former sergeant, United States Marine Corps, and it was thereupon signed by the Vice President.

HOUSE BILL REFERRED.

The bill (H. R. 15422) making appropriations for sundry civil expenses of the Government for the fiscal year ending June 30, 1922, and for other purposes, was read twice by its title and referred to the Committee on Appropriations.

AMENDMENT TO SUNDRY CIVIL APPROPRIATION BILL.

Mr. UNDERWOOD submitted an amendment proposing to appropriate $10,000,000 for a nitrate plant, for continuing construction of locks, dams, power house, etc., authorized by the national defense act approved June 3, 1916, intended to be proposed by him to the sundry civil appropriation bill, which was referred to the Committee on Appropriations and ordered to be printed.

Mr. CURTIS. I move that the Senate adjourn.

The motion was agreed to; and (at 4 o'clock and 20 minutes p. m.) the Senate adjourned until Monday, January 10, 1921, at 12 o'clock meridian.

HOUSE OF REPRESENTATIVES.

SATURDAY, *January 8, 1921.*

The House met at 12 o'clock noon.

The Rev. Charles S. Cole, D. D., of the Brightwood Park Methodist Episcopal Church, Washington, D. C., offered the following prayer:

Almighty God, our Father, we come at this morning hour to ask Thy blessing upon the tasks of this day. That which we find in our hearts to do may it be accomplished through the power imparted by Thy wisdom and Thy love. We ask it through Jesus Christ, our Lord. Amen.

The Journal of the proceedings of yesterday was read and approved.

EXTENSION OF LEAVE OF ABSENCE.

Mr. SNYDER. Mr. Speaker, my colleague, Mr. CROWTHER, desires me to ask unanimous consent that his leave be extended four days on account of urgent business.

The SPEAKER. Without objection, the request will be granted.

There was no objection.

POST OFFICE APPROPRIATIONS.

Mr. MADDEN. Mr. Speaker, I move that the House resolve itself into the Committee of the Whole House on the state of the Union for the further consideration of the bill H. R. 15441, the Post Office appropriation bill.

Mr. GARD. Mr. Speaker, I make the point that there is no quorum present.

The SPEAKER. The gentleman from Illinois moves that the House resolve itself into the Committee of the Whole House on the state of the Union for the further consideration of the Post Office appropriation bill, and the gentleman from Ohio [Mr. GARD] makes the point that there is no quorum present. It is clear there is no quorum present.

Mr. MONDELL. Mr. Speaker, I move a call of the House.

The motion was agreed to.

The SPEAKER. The Clerk will call the roll.

The roll was called, and the following Members failed to answer to their names:

Ackerman	Emerson	Kraus	Ransley
Andrews, Md.	Evans, Nev.	Kreider	Riordan
Babka	Ferris	Layton	Robinson, N. C.
Baer	Fields	Lesher	Rodenberg
Bell	Fish	Linthicum	Rowan
Benson	Gallagher	Lonergan	Sanders, Ind.
Blackmon	Gallivan	McCulloch	Sanders, La.
Bland, Ind.	Gandy	McGlennon	Sanders, N. Y.
Bland, Mo.	Ganly	McKeown	Sanford
Booher	Godwin, N. C.	McKinley	Scully
Brumbaugh	Goldfogle	McLane	Siegel
Burke	Good	Maher	Small
Butler	Gould	Major	Smith, Ill.
Caldwell	Graham, Pa.	Mann, S. C.	Smith, Mich.
Candler	Griffin	Mason	Smith, N. Y.
Carew	Hamill	Mead	Steagall
Carss	Hamilton	Monahan, Wis.	Steele
Casey	Harreld	Montague	Steenerson
Coady	Hawley	Moon	Stiness
Copley	Hicks	Mooney	Strong, Pa.
Costello	Hill	Morin	Sullivan
Crisp	Howard	Mudd	Swope
Crowther	Huddleston	Neely	Taylor, Tenn.
Cullen	Husted	Nelson, Wis.	Thomas
Currie, Mich.	Hutchinson	Newton, Minn.	Vare
Curry, Calif.	Ireland	Newton, Mo.	Venable
Dale	Jacoway	Nicholls	Volk
Davey	James, Mich.	O'Connell	Ward
Dempsey	James, Va.	O'Connor	Watkins
Denison	Jefferis	Olney	Welling
Dewalt	Johnson, S. Dak.	Overstreet	Wheeler
Donovan	Johnston, N. Y.	Parker	Williams
Dooling	Juul	Patterson	Wilson, Pa.
Doughton	Kahn	Perlman	Wise
Drewry	Kelley, Mich.	Porter	Wood, Ind.
Eagan	Kennedy, Iowa	Purnell	Wright
Eagle	Kiess	Radcliffe	Young, N. Dak.
Edmonds	Kincheloe	Rainey, Ala.	Young, Tex.
Ellsworth	Kitchin	Rainey, H. T.	

The SPEAKER. Two hundred and seventy-four Members have answered to their names, a quorum.

Mr. MADDEN. Mr. Speaker, I move to dispense with further proceedings under the call.

The motion was agreed to.

POST OFFICE APPROPRIATIONS.

Mr. MADDEN. Mr. Speaker, I renew my motion.

The SPEAKER. The gentleman from Illinois moves that the House resolve itself into the Committee of the Whole House on the state of the Union for the further consideration of the Post Office appropriation bill.

The motion was agreed to.

Accordingly the House resolved itself into the Committee of the Whole House on the state of the Union for the further consideration of the Post Office appropriation bill, H. R. 15441, with Mr. MCARTHUR in the chair.

The CHAIRMAN. The Clerk will report the bill by title.

The Clerk read as follows:

A bill (H. R. 15441) making appropriations for the service of the Post Office Department for the fiscal year ending June 30, 1922, and for other purposes.

The CHAIRMAN. The gentleman from Virginia [Mr. HOLLAND] has 53 minutes remaining.

Mr. HOLLAND. Mr. Chairman, I yield 15 minutes to the gentleman from Texas [Mr. JONES]. [Applause.]

Mr. JONES of Texas. Mr. Chairman, I ask unanimous consent to extend my remarks in the RECORD.

The CHAIRMAN. The gentleman from Texas asks unanimous consent to extend his remarks in the RECORD. Is there objection? [After a pause.] The Chair hears none.

Mr. JONES of Texas. Mr. Chairman, on January 1 a remarkable statement was made by the gentleman from Illinois [Mr. MADDEN]. Inasmuch as it was furnished to the Associated Press and sent hurtling over the United States, I assume it was deliberately made. It was so unusual in its makeup and character that I desire to read it into the RECORD and to make some brief comments in reference to the same. The statement starts as follows:

For the first time in history the territory which pays the bulk of Federal taxes will have full working control of the House of Representatives after March 4.

That statement seems to have been uttered eagerly by one who believes that money and property rights should be the basis of suffrage in this country. And the gentleman seems to be elated by the fact that, as he sees it, those who have the most money will have absolute control of the Government.

Now, if that is the view of the gentleman from Illinois he should pursue it to its logical and desperate conclusion—that money and wealth should be the basis of control of this Government and therefore of the suffrage in the Government. And if that policy is adopted it would lead inevitably to the conclusion that the man who has $100,000 should have ten times as many votes as the man who has $10,000, a hundred times as many votes as the man who has $1,000, and that the man with $1,000,000 should have a thousand times as many votes as the man with a thousand dollars. I do not believe in such a doctrine. I believe that every citizen of this Republic, regardless of where he may live or in what section of the country he may make his home, should have an equal voice in the affairs of this Government and in the control of the policies of the Nation. On that basis this Government has grown from simplicity and honor to the proud heritage of freedom and power, and on no other basis can its greatness be maintained, and if it ever deserts that principle the greatness of our country will be its history.

I want to read further:

Checking up the new list yesterday, Representative MADDEN, Republican, of Illinois, found that with the opening of the new session the section east of the Mississippi and north of the Ohio Rivers would have a solid Republican voting strength of 228. The House majority is 218.

In the vernacular of the street, that is "some" statement. In my brief experience in the House of Representatives I have heard some remarkable statements made. I have heard some peculiar expressions uttered by the Members of this House, but never, so far as I have been able to learn in all the glorious history of this country, has a Representative in Congress ever intimated that patriotism, love of country, brains, or ability were to be gauged or determined by the meanderings of the Ohio River or the sluggish flow of the Mississippi. [Applause on the Democratic side.]

Mr. CHINDBLOM. Mr. Chairman, will the gentleman yield for a question?

The CHAIRMAN. Does the gentleman from Texas yield to the gentleman from Illinois?

Mr. JONES of Texas. I will.

Mr. CHINDBLOM. Are the figures with reference to the membership in the next House correct?

Mr. JONES of Texas. I have not taken the time to determine that. I assume the gentleman from Illinois, inasmuch as it was evidently a prepared statement and given to the Associated Press, had tabulated those figures correctly.

Mr. CHINDBLOM. That is what the gentleman stated, is it not, that these are the figures?

Mr. JONES of Texas. Yes.

Mr. CHINDBLOM. The gentleman from Illinois did not——

Mr. JONES of Texas. Mr. Chairman, I can not yield further. I expect to read the whole statement before I finish, and I wish to assure the gentleman that the further I proceed the worse it gets, so far as the gentleman's statement is concerned.

Mr. MADDEN's statement indicated:

This section pays 84½ per cent of all taxes, with the South and West by joint action paying the balance. This will give the Republicans from the tax-paying belt a fair majority hereafter over all combinations.

The gentleman from Illinois is an influential member of the Republican organization. He is a member of the steering committee of the House of Representatives, which practically controls the legislation brought before the House. I wonder if he expresses the sentiment of that great organization? And if he does, I wonder what the people from the West and the Representatives from the section west of the Mississippi River think of that utterance of the gentleman from Illinois.

Oh, you people from the great grain belt, from the great farming and stock-raising parts of this country, who are proud and have a right to be proud of your accomplishments, what do you think of that expression?

During the recent campaign hundreds of representatives were sent out by the Republican organization throughout the great West, and they told those people in that section that their interests, as well as the interests of the country generally, would be furthered and promoted by the election of Republican Representatives and of those who adhered to the Republican faith. But hardly had they gotten the dust brushed from the elephant that they used in the campaign before this influential member of the steering committee comes forward with the statement that we are to have a sectional control, and by the geographical delineation which he utters he excludes all those people who live west of the Mississippi River and south of the Ohio from his charmed circle.

I am surprised that a man of the ability of the gentleman from Illinois would take such a position. I want to say here that I do not believe the South should control the affairs of this Government, although she has many brilliant men who are capable of doing anything that this Government may need to have done. I do not believe that the West should control this Government, although there are many men who have gone to reclaim that great country and to develop it, and who, toiling in its adverse possessions, have grown strong in its sturdy environments, and who are abundantly fitted to do their part and a large part in the future of this land of ours; and neither do I believe that the people north of the Ohio and east of the Mississippi River should control this Government. But I believe that every man and every citizen of this great Republic, whether he be rich or poor or in moderate circumstances, wherever he may live, North or South, East or West, from Lakes to Gulf, and from sea to sea, should have an equal voice in the affairs of our common country. [Applause on the Democratic side.] That is the basis on which we have grown great. I believe that the American people will indorse that sentiment everywhere.

Now, I do not begrudge that part of the country to which the gentleman from Illinois refers its prosperity or its accomplishments, but I do resent the statement that because of that prosperity or for any other reason it should have the exclusive control of the affairs of this Nation.

Now Mr. MADDEN declared:

And I believe we will soon begin to see a change in sectional or class legislation.

Now, that statement was evidently made in irony, because it conflicts with all the rest of the statement. It is a little like the story I heard of a doctor who recommended to an old darky friend that for a certain illness he should eat plenty of chicken and not go out after night. The darky replied that that remedy was contradictory and impossible of application, as it was impossible to eat plenty of chicken without going out after dark. [Laughter.]

In one breath he says he does not wish sectional legislation, and in the next glories in the fact that he has calculated a way in which a section is to control. It looks like an effort to polish over a viewpoint which should quicken his sense of shame. I have no fears but that everyone will see through this thin veil of subterfuge.

I read again:

Under Democratic administration the South has been in the saddle, and the South pays only 6 per cent of all the taxes.

As everyone knows, many of the securities held in New York and other cities of the North and East have as their basis physical properties in the South and West and over the country generally, and the incomes of the wealthy men in these cities are in a great measure derived from the country at large and from all sections of the United States. In other words, these concentrated profits are chiefly the product of the great industries throughout the Nation, and I deny the right of wealth anywhere to segregate itself and then upon the plea of segregation to exempt itself from its fair share of taxes.

When one considers the fact that many of the intangible securities of this country are held in the North and East and that these securities represent investments all over the Nation and that the income from these nation-wide activities flows into the commercial centers, and when alongside this is placed the further fact that a great portion of the national revenue is derived from the income tax, it will be readily seen that the mere percentage of taxes paid by any one portion of the country will not furnish a fair estimate either of the activities, the industry, the development, or resources of the various sections. I do not know and have not taken time to calculate the portion of the taxes that is paid by the South. I know that whatever taxation has been levied in this country since I have been a Member of Congress, and the only kind which could have been enacted under our Constitution, provided for a uniform application all over the country, and if the South has paid only 6 per cent, or any other percentage of the taxes of this country, it is the South's misfortune, and not the misfortune of that portion of the country to which the gentleman refers. And if the West, according to the gentleman's statement, has paid only 9½ per cent of the taxes, that is the West's misfortune, and I am sure the people of the South and the people of the West would be surpassingly glad to pay an additional portion of the taxes if they could develop an additional portion of the wealth.

Mr. REAVIS. Mr. Chairman, will the gentleman yield?

The CHAIRMAN. Does the gentleman from Texas yield to the gentleman from Nebraska?

Mr. JONES of Texas. Yes.

Mr. REAVIS. If the people south of the Ohio and west of the Mississippi were to lie down on the job and destroy the market of those in this favored section, how long would they be paying so large a percentage? [Applause.]

Mr. JONES of Texas. I am glad the gentleman suggested that point, because I intended to touch on it a little later anyway. As a matter of fact the sections to which my friend from Nebraska [Mr. REAVIS] refers, and which according to the ukase of the gentleman from Illinois are to be under the ban in the peculiar economy of this Government, are the agricultural and stock-raising sections, and they furnish the products out of which and from which in large measure the section to which the gentleman refers has grown rich and powerful.

Some laws have been enacted by the Congress of the United States, whether right or wrong I will not go into a discussion, and because of those peculiar laws that portion of the country to which the gentleman refers has grown rich and powerful, and yet the other day when some emergency legislation was drafted which had for its purpose the giving of a measure of the same rights to some of the agricultural sections which his particular industries have enjoyed he voted against and fought against that legislation.

The West is a great country. Within its confines are located much of the Nation's resources, and its potential wealth is almost unlimited in its possibilities. Much credit is due the hardy pioneer who forsaking many comforts and conveniences toiled to transform it in such a way as to make it blossom with the fruits and products of the soil that have done so much to sustain the civilization of this country. In fact, the South and the West are the complements of the other parts of the country. Without us they could not flourish, without their markets we could not prosper. Surely our rights in the Government should not be denied. How much finer if we all join hands to build up the resources of all this broad land.

As a matter of fact the South has not been in the saddle. I have made a list here of the various States in the South, and their Representatives, and they have 113 Representatives in the United States Congress. Now, since it takes 218 to constitute a majority, it would be impossible for these 113 to control the affairs of this Government in the House, even though they all voted in a solid block, and I have known no measure on which they have voted in absolute accord. It would take 105 other Members joining with them to constitute a majority.

I suppose my friend from Illinois might base his accusation on the fact that several of the chairmen of committees were from the South.

The CHAIRMAN. The time of the gentleman from Texas has expired.

Mr. JONES of Texas. May I have five minutes more?

Mr. HOLLAND. I yield five minutes more to the gentleman from Texas.

Mr. JONES of Texas. The gentleman from Illinois might base his statement on the fact that from the South there were several committee chairmen, but as a matter of fact that was by virtue of the seniority rule. I have always doubted the wisdom of the strict enforcement of the seniority rule, but the gentleman from Illinois [Mr. MADDEN] will be one of the

beneficiaries of the seniority rule, and I wonder if he would join in a fight to abolish that rule?

Mr. MADDEN. Yes, indeed.

Mr. JONES of Texas. I will be glad to join him if he will, though I do not often find myself in accord with his views. As a matter of fact, I will state to the gentleman that in the last two years two-thirds of the committee chairmen have been from north of the Ohio and east of the Mississippi River, so that section has been in control all the time on that basis; I cite these facts simply to show the utter absurdity of the gentleman's position.

Mr. LANHAM. Will the gentleman yield?

Mr. JONES of Texas. Yes.

Mr. LANHAM. I should like to ask the gentleman if it is not a fact that all the members of the present Republican steering committee, of which the gentleman from Illinois [Mr. MADDEN] is himself a member, live within the limits that the gentleman from Illinois has prescribed?

Mr. JONES of Texas. That is my information. I understand that Mr. MADDEN of Illinois, Mr. DUNN of New York, Mr. LONGWORTH of Ohio, Mr. WINSLOW of Massachusetts, and Mr. DARROW of Pennsylvania constitute the committee, with, perhaps, the speaker, Mr. GILLETT of Massachusetts, and Mr. MONDELL of Wyoming as ex officio members. However, the membership of that steering committee has been so difficult to ascertain, and its proceedings have been so secretive, that the membership and personnel of the same might have been changed since I last heard from it. [Applause.]

The gentleman from Illinois says:

> Most people have imagined that the landslide put the West on top in the House, but that is wrong.

How does the statement strike you gentlemen from the West? You gentlemen from the West who imagined you had a part in the Republican victory, what think ye of the ideas of the distinguished member of the steering committee of your organization.

The gentleman from Illinois further says:

> By their vote in November the people decree that the tail no longer wags the dog in Congress.

According to the gentleman's statement, north of the Ohio and east of the Mississippi River make up the dog and the rest of the people constitute the tail. If that is true that dog has a tail as big as a Persian sheep.

Now, my friends, the whole statement of the gentleman from Illinois [Mr. MADDEN] breathes a spirit that is narrow and sectional, and that should be gotten away from. If I had time I would read a statement from Alexander Hamilton in this connection, but in view of the limited time I have I will not undertake to do so. I would also like to read a statement from Thomas Jefferson. I think both would be for the edification of the gentleman from Illinois.

I believe that the people of this great country should as far as possible get away from sectional lines and from sectional ideas. I believe in the United States Government, in her history, her institutions, and her people. Knowing the glory of her past, I have implicit faith in her future. Knowing her accomplishments, her triumphs, the things she has done, I believe her glory is in the dawning, but I know that nothing will interfere with her prosperity so much as the attitude of Members of Congress or others in authority who undertake to invoke sectional ideas and sectional thoughts. Since my boyhood days I have been taught a love of country—this whole country, with her broad plains, her fertile fields, her matchless rivers, and her varied industries, and above all a reverence for our great organized Government with its foundation principle of equal rights to all, in which all citizens stand on the same dead level of equality, with the glorious privilege of aspiring to any honor within the gift of a free people; a country of liberty, opportunity, manhood, and fair play and freedom from every form of Old or New World caste and privilege. I believe the American people and the American Congressmen, regardless of party affiliation, will repudiate any such doctrine as that suggested by the statement of the gentleman from Illinois, and that for that reason we will go forward along national lines, and that our future therefore will be triumphantly secure. [Applause.]

MESSAGE FROM THE SENATE.

The committee informally rose; and the Speaker having resumed the chair, a message from the Senate, by Mr. Crockett, announced that the Senate had passed the following concurrent resolution, in which the concurrence of the House of Representatives was requested:

Senate concurrent resolution 36.

Resolved by the Senate (the House of Representatives concurring). That the President of the Senate and the Speaker of the House of Representatives be, and they are hereby, authorized to sign a duplicate copy of the enrolled joint resolution (S. J. Res. 191) to create a joint committee on the reorganization of the administrative branch of the Government, and that the Secretary of the Senate be directed to transmit the same to the President of the United States in compliance with his request.

The message also announced that the Vice President had appointed Mr. FRANCE and Mr. WALSH of Montana members of the joint select committee on the part of the Senate, as provided for in the act of February 16, 1889, as amended by the act of March 2, 1895, entitled "An act to authorize and provide for the disposition of useless papers in the executive departments," for the disposition of useless papers in the Department of Labor.

POST OFFICE APPROPRIATION BILL.

The committee resumed its session.

Mr. HOLLAND. I yield 20 minutes to the gentleman from Texas [Mr. BLACK]. [Applause.]

Mr. BLACK. Mr. Chairman, in discussing this Post Office appropriation bill I do not intend to confine myself to the particular items themselves, because, so far as I know, there is no particular controversy about any of them. It was particularly fortunate that in the reorganization of the Appropriations Committee under the rule that the House passed at the last session of Congress, the framing of this Post Office appropriation bill fell largely to two experienced former members of the Committee on the Post Office and Post Roads, the gentleman from Illinois [Mr. MADDEN] and the gentleman from Virginia [Mr. HOLLAND]. The fact that there are no controverted items in the bill shows that these members have done their work well, and also that the Post Office Department was careful in submitting its estimates.

Mr. RAKER. Will the gentleman yield for a question?

Mr. BLACK. Yes.

Mr. RAKER. The gentleman has made a very remarkable statement. Will he submit to a question on it?

Mr. BLACK. Yes.

Mr. RAKER. That is that this bill was prepared by two distinguished gentlemen, the gentleman from Illinois [Mr. MADDEN] and the gentleman from Virginia [Mr. HOLLAND]?

Mr. BLACK. Very largely prepared under their direction.

Mr. RAKER. They sat with a subcommittee of five—that is, five altogether—on this Post Office appropriation bill?

Mr. BLACK. Yes. I do not mean that the other members of the committee did not discharge their full responsibility in the consideration of the bill, but what I wanted to emphasize was that on account of the long experience on the Committee on the Post Office and Post Roads of the gentleman from Illinois [Mr. MADDEN] and the gentleman from Virginia [Mr. HOLLAND] their services were especially valuable.

Mr. RAKER. Does the gentleman know how much time was devoted to the bill by the Committee on Appropriations, outside of the subcommittee?

Mr. BLACK. I could not answer that question.

Mr. RAKER. Not over 25 or 30 minutes.

Mr. BLACK. I am not a member of the Committee on Appropriations, and of course would be unable to answer the question.

The discussion of facts and figures and the dry details of a great business service, such as that which is rendered by the Post Office Department to the American people, does not lend itself to flights of imagination or well-rounded periods of rhetoric, but nevertheless presents an interesting story when studied by comparison with former periods of our national development.

The present appropriation bill, which covers the next fiscal year, which begins July 1, 1921, carries a total appropriation of $573,964,721. That is a very large amount. We can better appreciate the largeness of it when we stop to think that we do not have to go any further back than the first two years of President McKinley's administration, 1897 and 1898, to find that the entire expenses of the Federal Government for each of those years were less than the total of this single appropriation bill. The per capita revenue from the Postal Service in 1897 was $1.15. In 1920 it was $4.10 and is considerably more than that at the present time. A contrast between the amounts carried in this bill and the Post Office appropriation bill in the first year of Mr. Burleson's administration will show the remarkable growth and expansion of the service during the eight years of the present Democratic administration. In 1914 the expenditures of the Post Office Department were in round numbers $283,000,000, as against the $573,000,000 which we provide in this bill. In other words, the present bill carries $290,000,000 more for the next fiscal year than the Post Office appropriation bill did for 1914, and yet, notwithstanding this very remarkable growth in expenditures, if the present rate of increase in the Post Office receipts is maintained during the

fiscal year 1922, for which this present appropriation is made, there will be no deficit, but, on the contrary, if the incoming administration is as careful and economical in the expenditure of public funds as Postmaster General Burleson's has been, there should be a comfortable surplus to turn into the Treasury. It is true that there will be a very considerable deficit for the present fiscal year 1921, on account of the salary increases provided in the Post Office salary reclassification bill, which we passed June 5, 1920, and the increase in pay to railroads for carrying the mails, which has resulted from the decision of the Interstate Commerce Commission in the railway mail pay case decided several months ago.

It is not my purpose to criticize the salary increase bill which we passed for the benefit of the postal employees or to question the justice of the decision of the Interstate Commerce Commission awarding the railroads higher pay for transporting the mails, but merely to call attention to the fact that these things happened and it could not be expected that the postal receipts would absorb these very large additional expenditures in one year, especially when there has been no increase in postage rates on mail matter, except the third-year increment of the increase on second-class matter. If the Post Office Department does absorb all of these very large increases in expenditure and comes out at the end of the fiscal year 1922 with a surplus it will be a very good showing, indeed, and one that should be pleasing to everybody, especially the taxpayer. If Mr. Burleson was scheduled to be our Postmaster General during such time I would feel very sure that such would be the result.

It remains to be seen whether our President elect, Mr. HARDING, will appoint a good business administrator as Postmaster General and thus give us that efficiency which our Republican friends have talked and written so much about.

SOME FIGURES SHOWING HEAVY INCREASE IN OPERATING COST OF POST OFFICE DEPARTMENT.

I think that if the public were very generally aware of the heavy increases which there have been in the operating expenses of the Postal Service by reason of salary increases and the increase in the transportation cost of carrying the mail by railroad they would be more keenly appreciative of the excellent showing which has been made by the Post Office Department under Mr. Burleson's administration. It has been able to absorb the larger amount of these high costs without the rates of postage being increased, except on second-class matter, and without any very considerable deficit for either the fiscal year 1920 or 1921, the year in which we are now working.

In order that we may have some better understanding of what these increased items of expense have been, I will give some concrete illustrations which I have taken the trouble to compile. The amount of salaries paid to postmasters of all classes for the fiscal year 1917, the year in which we declared war with Germany, was, in round numbers, $32,000,000. In this bill is carried $42,300,000 for that item, or an increase of $10,300,000. In 1917 the appropriations for assistant postmasters, for clerks, supervisory officials, substitutes, auxiliary and temporary clerks here, and so forth, was, in round numbers, $58,500,000. In this bill these same items aggregate $127,528,600, or an increase of $69,000,000. In the same year, 1917, the total appropriation for the City Delivery Service was, in round numbers, $43,000,000. In this bill it is $80,700,000, an increase of $37,700,000. The amount for Railway Mail Service for that year, 1917, was $29,000,000, and in this bill it is $48,000,000, or an increase of $19,000,000. In 1917 the amount for defraying cost of Rural Carrier Service was $53,000,000, and in this bill $86,800,000, or an increase of $33,800,000. The transportation of mails cost $63,000,000 in 1917. In this bill there is carried $96,000,000 for that purpose, or an increase of $33,000,000 over 1917.

There are other items of increase of more minor nature which I could mention in this detail, and which aggregate a very considerable amount. But to recapitulate the ones which I have mentioned, they show:

Increase in amount paid postmasters	$10,300,000
Increase in amount paid clerks, supervising officials, assistant postmasters, etc	69,000,000
Increase in amount paid carriers, city, etc	37,700,000
Increase in amount paid Railway Mail Service	19,000,000
Increase in amount paid rural carriers	33,800,000
Increase in amount paid railroads transporting mails	33,000,000
Increase of 1922 appropriation bill over that of same items in 1917 bill	192,500,000

The reason I pick out the fiscal year 1917 for comparison with the present year is because that year was one before the war period set in, and was when we were working on the old basic-salary scales, before we began paying the bonuses and increases in compensation to take care of the increase in the cost of living. Of course, I will readily admit that a considerable amount of the $192,500,000 increase of present expenditures over the same items in 1917 is due to the growth of the service, the additional number of employees required to take care of the increased business, and the larger amount of mail hauled by the railroads; but after making all due allowance for these factors, I think it is a safe and conservative estimate to say that at least $110,000,000 of the $192,500,000 I have mentioned is due to increases in salaries of postal employees and to higher rates of pay which the railroads are receiving for hauling the mails. The only excuse I have to give for taking up the time of the House in reciting these dry figures and statistics is to emphasize that notwithstanding this very heavy increase of expenses in the Postal Service is due to no fault or extravagance on the part of the Postmaster General or his subordinate officials, but to general causes which have operated to increase the expenses in almost every line of industry, the people are still getting their letters carried for 2 cents and parcel-post rates remain the same, and this in the face of the fact that the railroads and express companies have had to add very heavy increases to their rates. To accomplish this result there must have been some good administrative ability somewhere; and at a time when we have been hearing so much criticism of extravagance and waste and inefficiency in Government service, and so much about the killing of time among Government employees, I want to call attention to the fact that here is one department whose executive head and able assistants and loyal employees have "carried on," and although the railroads and express companies have at times declared embargoes because of insufficient equipment and congestion in their service, due to strikes and other causes, the Postal Service has been uninterrupted and is to-day taking in receipts at the rate of more than one-half billion dollars per year and giving the people of the United States the best mail service they have ever had in their history. This much Mr. Burleson is entitled to have said of his administration.

Mr. HUDSPETH. Mr. Chairman, will the gentleman yield?

Mr. BLACK. Yes.

Mr. HUDSPETH. Is there any increase in the appropriation for carrying the star-route contracts?

Mr. BLACK. Probably there is some increase, though I have not followed that particular part of the bill, because the law is that the star-route contracts are divided up into four sections of the country, and the department awards one section one year, another another year, the other a third, and the other a fourth year. Of course, those sections of the country cover a different amount of territory and where conditions vary widely. The appropriation amounts are not the same in each bill. I presume the gentleman wants to know whether or not there has been any appropriation made to readjust contracts that have been heretofore made.

Mr. HUDSPETH. Yes.

Mr. BLACK. In answer to that I will say that the bill carries no such amount and would not be authorized to do so unless there was legislation on that subject, because the Post Office Department would have no right——

Mr. HUDSPETH. I understood a bill had passed providing that readjustment might be made for contracts made prior to June 30, 1917.

Mr. BLACK. That is correct, but that, of course, would not authorize readjustments of contracts made at a later date than that.

Mr. HUDSPETH. A great deal of money has been lost through the increase in traffic, the increase in the mail packages, and so forth, all over the western part of Texas in these star-route contracts, and bondsmen have had to carry the mail.

The CHAIRMAN. The time of the gentleman from Texas has expired.

Mr. BLACK. Mr. Chairman, I ask the gentleman from Virginia to yield me two minutes more.

Mr. HOLLAND. Mr. Chairman, I yield the gentleman two minutes more.

Mr. BRIGGS. Mr. Chairman, will the gentleman yield?

Mr. BLACK. Yes.

Mr. BRIGGS. Just to make an explanation of the statement referred to by my colleague from Texas [Mr. HUDSPETH]. The relief that is afforded these contractors applies only to those contracts prior to June 30, 1917, for the act was not passed until 1918.

Mr. BLACK. In respect to this matter, I will quote from the report of the Postmaster General, which can answer the question much better than I would be able to do:

Under the act of July 2, 1918, which authorized the Postmaster General to investigate conditions arising from contracts in the star-route service, entered into prior to June 30, 1917, with a view to determining whether readjustments should be made in the compensation rendered, allowances amounting to $323,970.63 were made during the fiscal year covering 1,274 star routes.

The department goes on to say, of course, that this authority only extends to contracts entered into prior to June 30, 1917, and that it has only a small number of cases that are seeking readjustment at the present time.

Mr. BRIGGS. Mr. Chairman, will the gentleman yield?

Mr. BLACK. Yes.

Mr. BRIGGS. Is it not true that these star-route contracts are ordinarily entered into for a period of about four years?

Mr. BLACK. Yes.

Mr. BRIGGS. And they are entered into in four zones in the United States?

Mr. BLACK. Yes.

Mr. BRIGGS. And if they did not happen to renew the contracts prior to June 30, 1917, and renewed them later than that, the contractors who entered into contracts at that time would get no benefit at all because of the increase in the cost by reason of the war.

Mr. BLACK. There are probably star-route carriers who have been hard hit by war conditions, but the Committee on the Post Office and Post Roads would have to take that up as a separate piece of legislation and it would not be a matter that the Appropriations Committee could deal with under the rules of the House.

The CHAIRMAN. The time of the gentleman from Texas has again expired.

Mr. HOLLAND. Mr. Chairman, I yield the gentleman one minute more.

Mr. OLIVER. Mr. Chairman, will the gentleman yield?

Mr. BLACK. Yes.

Mr. OLIVER. The statement of the gentleman is most interesting and informing. Has the gentleman made any statement showing the great saving resulting to the people through the increase of the Parcel Post System?

Mr. BLACK. Yes; I really intended to devote some of my time to discussion of parcel-post matters, but my time has expired, and I shall discuss it in an extension of my remarks. Mr. Chairman, I ask unanimous consent to extend my remarks in the RECORD.

The CHAIRMAN. Is there objection?

There was no objection.

Mr. BLACK. Mr. Chairman, under leave given me to extend my remarks in the RECORD, I take up the other matters which I was about to discuss where I left off when my time expired.

I have already stated that the Post Office Department is rendering a better and more comprehensive service to the American people at the present time than at any other time in our history, and the proof that I offer for that assertion is the way the people are using it. The present rate of increase in postal receipts over those of a similar period for last year is about 20 per cent, and the same period last year was about 20 per cent more than the year before. The usual average in the increase in postal receipts for a good many years past has been 5.88 per cent. Therefore the best evidence that the people are well pleased with the Postal Service is that they are using it more than ever before.

The railroads are pulling out of their deficit operations because there have been large increases in freight and passenger rates, but the Post Office Department is absorbing its increased cost of operation by economies and increase of business. As an example of the growth in the service, let us take the parcel-post mail matter, which was discussed quite at length yesterday by the chairman of the Committee on the Post Office and Post Roads [Mr. STEENERSON] and about which the gentleman from Alabama [Mr. OLIVER] has just asked me.

PARCEL POST.

The parcel post law was passed by Congress as part of the Post Office appropriation bill for the fiscal year 1913, and therefore has been developed under the present administration. At the time it was passed the weight limit was fixed at 11 pounds, but in 1916 a law which Congress passed gave the Postmaster General authority, with the consent of the Interstate Commerce Commission, from time to time to increase the limit of weight of parcels carried in the mails. Under this authority the present Postmaster General has from time to time increased the limit of weight on parcels, until now parcels weighing up to 70 pounds may be carried in the first, second, and third zones and up to 50 pounds in all other zones. During the last fiscal year there were carried 1,250,000,000 parcels, and the average weight of each parcel was 3½ pounds. Thus at least one-half of the weight of mails now carried is parcel-post matter, and the amount of revenue derived therefrom is, I should say, about 30 per cent of the total revenue of the Post Office Department. The revenue on fourth-class matter—that is to say, merchandise—carried in the mails was $12,000,000 at the time parcel-post rates were established. Mr. Koons, First Assistant Postmaster General, in the hearings before the committee in charge of this bill, says that the revenues from parcel-post matter is now approximately $140,000,000 per annum.

The Postmaster General in his annual report, on page 21, says of this service:

> Although embargoes were placed on both freight and express from time to time in different sections of the country, the Parcel Post Service continued to function properly without a break. As a result new business gained in such emergencies is being retained and business men who formerly used freight and express almost exclusively are now shipping by parcel post all packages weighing not more than 50 or 70 pounds.

AIRPLANE SERVICE.

The Air Mail Service has been established under this administration, and there are now airplane routes operated by the Government between New York and Washington, between New York and Chicago, and from Chicago on to San Francisco, via Omaha and Salt Lake City, and between Chicago and St. Louis. There are also some contract routes of this service. The Postmaster General says, on page 61 of his annual report, as follows:

> The cost of operating the Air Mail Service, including interest on investment, the writing off of losses for planes and equipment damaged beyond repair, and including every conceivable expenditure in connection with the flying of the planes, was $553,156.10. For this expenditure the air mail advanced the delivery of 23,463,120 letters 16 to 24 hours, and at a less expenditure than it would have cost to transport and distribute them on the trains.

Of course, no one can tell just what the future of this branch of the service will be, but it seems to me that its worth and utility have already been thoroughly demonstrated, and, while I would not favor its development along extravagant and impractical lines, I shall be glad to see it have such a progressive development as conditions warrant. In the development of aerial commerce the Post Office Department is leading the way, and I have no doubt that before many years hence the airplane mail carrier will be a very familiar figure. I expect to see before many years our National Capital at Washington connected by airplane route with Ottawa, capital of Canada, to the north of us, and Mexico City, to the south of us.

SUGGESTIONS FOR FURTHER DEVELOPMENT OF THE POSTAL SERVICE.

While the story of the development and growth of the Postal Service from its small beginning in the early days to the present time is a very interesting one, it is by no means a concluded one, and there are many things which can and will be done to increase its usefulness to the people. Some of these things the Postmaster General has suggested from time to time in his reports. The Rural Carrier Service, for example, while doing a very fine work under the present conditions, undoubtedly can be made to yield larger and more satisfactory results. At the present time rural delivery is not giving to its patrons the service which could be given them, particularly in the transportation of parcel-post matter, embracing food products from the farmer to the consumer. These average only about two pieces per route per day, whereas the farmer himself receives packages of merchandise from the city to a very much larger extent than that. I am not attaching any blame to the rural carrier employees for that situation but am simply suggesting these facts because they present a condition of affairs which offers a very interesting field for development. We have heard much during the last few years relative to the need of bringing the producer and the consumer into closer trading relations with each other. Undoubtedly our present system of retail distribution as to some commodities is a very wasteful and extravagant one, and is susceptible of great improvement. The bringing of producer and consumer together can never be accomplished as long as the individual producer undertakes to deal with the individual consumer. That plan is unworkable. Worth-while results can only be accomplished through cooperative organizations of producers who transact their business through competent leadership and where there is standardization of quality and of measurement and where there is responsibility for any unfair dealings.

On the other hand, it will probably be necessary, though possibly not so urgent, that the consumers also deal through cooperative organizations. The Postal Service will then offer the best medium to bring the two together. I am not asking that the Post Office Department act as a selling agency for the producer or as a buying agency for the consumer, for I do not believe that would be wise or practical. The present law governing Rural Delivery Service is entirely too rigid to permit its proper development along the lines which I have suggested. Under the present law a standard route is fixed at 24 miles in length, the compensation at $1,800 per annum, regardless of whether the route is in a dry, arid country where the roads are nearly always good, or in a section of country where there is heavy rainfall and the roads are frequently almost

impassable. Also there is no difference in compensation whether the carrier delivers 5,000 pieces of mail per month or 40,000.

Mr. Blakslee, Fourth Assistant Postmaster General, in his testimony in the hearings, gave a concrete illustration of the situation which now prevails. He says:

For instance, we have a route near Kansas City of 24¼ miles that carries 52,000 pieces of mail per month, and the carrier receives $1,860. And that route can not be lengthened under any conceivable circumstances, because the man is now working 11 hours per day.

Again he says:

We have up in Connecticut quite a number of routes 16 miles in length which have a large number of patrons and carry a large amount of mail, and it takes the carriers all day to make their deliveries.

Yet notwithstanding the carrier spends his whole day delivering a large quantity of mail on a thickly populated route of 16 miles in length, he only receives $1,260 per annum, and the carrier who puts in his day in traveling a route of 24 miles in length and does no more work than the man who serves the 16-mile route of the kind I have mentioned, and perhaps not as much, receives $1,800 per annum.

I submit that these figures present an unfair situation and should be corrected. The Postmaster General and his Fourth Assistant Postmaster General, Mr. Blakslee, have recommended from time to time that administrative discretion be given the department in the establishment of rural routes from 36 to 50 miles in length and of routes 50 miles or more in length on which motor vehicles can be used with reasonable regularity for at least 10 months, and that the minimum rates of compensation of rural carriers shall be those prescribed by the present law, and that the maximum compensation of such employees shall be based on the length of their routes, the time required to serve them, and the number of pieces and weight of mail transported.

I believe that the adoption of some such plan as this would aid the development of the service, would tend to bring about more equitable compensation among the employees, and in all probability would result in some reduction in the appropriation for expenditures in the Rural Delivery Service. I think that Congress at its next session should give serious consideration to this phase of the matter, having in view the improvement of the service.

CONCLUSION.

I do not know that I shall remain on the Committee on the Post Office and Post Roads during the Sixty-seventh Congress. If I decide that I can render better service there, then I will ask to be assigned to it, but I will say this much: If I should be a member of such committee, I shall expect to render all the helpful assistance I can to the incoming Postmaster General under the new administration in making the Post Office Department useful to the American people.

If the next administration conducts the service as well as Mr. Burleson and his able coworkers have done, I for one will be quite well satisfied.

Mr. HOLLAND. Mr. Chairman, I yield the remainder of my time to the gentleman from Texas [Mr. Box].

The CHAIRMAN (Mr. SNELL). The gentleman from Texas is recognized for 12 minutes.

By unanimous consent, Mr. Box was granted leave to extend and revise his remarks in the RECORD.

Mr. BOX. Mr. Chairman, recently by a vote of 295 to 41 a bill suspending immigration was passed by this House, in which vote the will of the American people spoke, and party lines disappeared. But powerful influences oppose restriction. Two of these are:

First. A demand by the foreign born among us that their kinspeople and racial comrades be admitted freely.

Second. Individual and corporate greed which disregards the present and future welfare of the mass of Americans and their children, because it wants money and power over labor.

The Inter-Racial Council is a mouthpiece of the opposition of these two groups. To it I invite your attention. The membership of that organization is not negligible from the standpoint of numbers, wealth, ability, or influence. That membership consists of three classes, which are:

Individual, racial, and industrial.

Among its individual members are: Coleman F. Du Pont, Cleveland H. Dodge, Philip T. Dodge, Pierre S. Du Pont, Louis Marshall, and many others holding similar views as to immigration and its control.

Among its racial members are very many names which I can not pronounce. I am including some of them here: Samuel S. Auerbach, New York; Gustav Amlund, Canton, S. Dak.; John Aspegren, New York; Arpad Baroti, Chicago; John Budilovsky, Chicago; Jock K. Chung, Brooklyn; S. Dadakis, New York; Udaldo Guidi, Boston; Sophus Hartwick, San Francisco; Clement Ihrisky, New York; G. Poy Lee, New York; Isaac Mikkal, Philadelphia; P. Norkus, Brooklyn; Constantin Norkus, South Boston, Mass.

These are but a trifling fraction of the list of their racial membership, taken from here and there at random.

A partial list of their industrial membership, which I shall give later, is very remarkable indeed.

I want to speak now briefly of their activities and plan of work.

I now hold in my hand a letter from Mr. Coleman Du Pont, chairman of the board of directors of the Inter-Racial Council, which I received several months ago. The first sentence in this letter is:

America is about 4,000,000 workmen short in its basic industries, and at least a million immigrant workmen are planning to return home as soon as passport and food conditions will permit.

The second sentence is as follows:

There are over 100 bills pending in Washington which if passed will not only shut out the future supply of workmen, but will prevent many from returning to this country who will go back to attend to their affairs.

In a recent communication, to be released January 3, 1921, Mr. Du Pont as chairman of the board of directors of the Inter-Racial Council attacks the measure which recently passed the House and is now pending in the Senate, saying that "it fails to apply scientific treatment to immigration," and that "it would shut out the immigration of able-bodied unskilled workers," and urging other objections to it. Under date of April 22, 1920, the Inter-Racial Council said:

In view of the attempts made in Congress to suspend immigration for periods varying from 2 to 50 years, it is interesting to notice that some corporations are beginning to consider the possibility of erecting plants in foreign countries, where they can secure the labor which has been in the habit of migrating to America.

The threat by these corporations and their mouthpiece, the Inter-Racial Council, in these words is not even veiled. In another letter, dated May 26, 1920, the Inter-Racial Council says:

Already they are talking about the hordes of laborers that are going to swamp this country and about the dangers that threaten us.

In the same letter they say:

If every ship available to-day were packed to its capacity on every trip for the next two years, they could not bring over here more than a million and a half of workers for factory, farm, or household, all of which the country needs.

In another letter, dated New York, December 8, 1920, the president of the Inter-Racial Council says:

If there has been any danger to America, it has not been from the immigration of foreign born to this country. The danger has been from the departure of foreign born, from the lack of sufficient numbers of foreign-born workmen in the industries that depend upon foreign-born labor, from the restrictionist attitude of some of our people.

These quotations show the drift of this stream of letters sent to Members of Congress. I have a considerable collection of them. They are in line with the following quotation from a recent letter from the Federation of Construction Industries:

The business men of the United States will need to exert themselves actively, both individually and as associations, if the disaster to the country arising from the stopping of immigration is to be averted.

The Inter-Racial Council is a concern of some magnitude. Some months ago it had 40 or 50 executives and other full-time paid employees in its offices in New York, and an unascertained number of other agents and employees. It is financed, in part at least, by its industrial or subscribing members, numbering several hundred. The following are some of its subscribing members, whose names I get from its printed literature and from the testimony of Mr. Mayper, its executive secretary:

Phelps Bros. & Co., "owners of an Italian steamship line"; the International Mercantile Marine Co., Barber Steamship Lines, Cosmopolitan Shipping Co., Downey Shipbuilding Corporation, France & Canada Steamship Co., Green Star Steamship Co., Pacat Steamship Co., Pacific Steamship Co., Todd Ship Yards Corporation, Standard Oil Co. of New Jersey, Allegheny Steel Co., American Beet Sugar Co., American Locomotive Co., American Woolen Co., Armour & Co., Atlas Powder Co., Chattanooga Coke & Gas Co., Colt's Patent Firearms Manufacturing Co., General Electric Co., Henderson Shipbuilding Co., Hillman Coal & Coke Co., Indiana Pipe Line Co., Inland Steel Co., Kelly-Springfield Tire Co., Lackawanna Steel Co., National Sugar Refining Co., National Shipping Co., New Home Sewing Machine Co., Oliver Iron & Steel Co., Pennsylvania Coal Co., Pennsylvania Coal & Coke Corporation, Pennsylvania Textile Co., Phelps-Dodge Corporation, Southern Cotton Oil Co., Standard Steel Car Co., Studebaker Corporation, Underwood Typewriter Co., Worthington Pump & Machinery Co., Bethlehem Steel Co., Cudahy Packing Co., Dold Packing Co., Du Pont de Nemours & Co., General Motors Co., Libby, McNeil & Libby, Swift & Co.

These are only a few of the several hundred big financial, industrial, and steamship concerns whose money is financing the propaganda of the Inter-Racial Council. It will be noted that many steamship companies are among them. One list of these subscribing or industrial members will be found in the committee hearings of April 22, 1920; another list, containing some names not given in the testimony, will be found printed on the literature of the Inter-Racial Council.

These subscribing members pay annual membership fees amounting to as much as $2,500 for some concerns, and more than that for a few, and smaller sums for each of many others. "It runs from $100 a year to $2,500, as an average. A few are larger." (Testimony of Maypen, executive secretary, p. 167.)

The expenditures of the Inter-Racial Council in certain of its activities, which manifestly do not cover all of them, amounted to $213,955.19 for the period beginning March 1, 1919, and ending March 31, 1920. (See testimony, Mayper, p. 167.) That was the first year of its existence. Its activities have continued with apparently increased magnitude, but I am without information as to later expenditures.

Mr. BLANTON. Mr. Chairman, will the gentleman yield?

Mr. BOX. Yes.

Mr. BLANTON. Is it any wonder, then, that this splendid piece of legislation has been sidetracked and held up?

Mr. BOX. It is not any wonder, but it is an ominous thing if the will of the American people is to have to give way to influences like these. Nothing but a sense of duty prompts me to present these facts as they have been disclosed. The statement that I have made is based upon testimony. I have the hearings. They have not yet been printed, but I can refer any gentleman to the testimony if he wishes to see it.

These facts show—

First. That hundreds of big financial industrial and shipping concerns, such as those named, are financing the activities of the Inter-Racial Council.

Second. That an important part of the work of that concern is to advocate the abolition of the literacy test, to open wider the door of immigration, and make it easier for illiterates and others to get in, and to procure the admission of millions of illiterate laborers.

Members of Congress and the people who wonder why we are unable to procure satisfactory legislation on this subject will find in the facts stated a showing of the attitude of certain groups, and in that at least a partial explanation of the difficulties met by the Congress in its efforts to protect the Nation against the peril which alarms the people and is real.

People representing these powerful groups came before your Committee on Immigration and Naturalization, gentlemen, and requested an arrangement be made to admit as many as 4,000,000 laborers, stating that it would be best for them to bring their families with them. The gentlemen whom I have named have been actively identified in a propaganda for admissions and against restriction and have a powerful organization, as shown by the testimony, a full copy of which I would like to have inserted in the RECORD but for the fact that it is so voluminous. I say these things, gentlemen, not because I want to be sensational or to take up the time of the committee with unimportant matters. My judgment is that the measure which we passed was too weak rather than too strong. I believe it represented America's natural, intelligent impulse of self-preservation. I believe it represented the will of the American people. [Applause.] I believe that will is being defeated or in danger of it. To you and such people of America as will read these words I appeal for hearty, energetic, vigorous, and unrelenting support of what America feels is a necessary protective measure. [Applause.]

The CHAIRMAN. The time of the gentleman has expired; all time has expired, and the Clerk will read.

The Clerk read as follows:

Office of the Postmaster General: For gas, electric power and light, and the repair of machinery, United States Post Office Department equipment shops building, $7,000.

Mr. NEWTON of Minnesota. Mr. Chairman, I move to strike out the last word. Mr. Chairman, I ask unanimous consent to proceed out of order for five minutes.

The CHAIRMAN. The gentleman from Minnesota asks unanimous consent to proceed out of order for five minutes. Is there objection?

Mr. MANN of Illinois. On what subject?

Mr. NEWTON of Minnesota. On the subject of the Department of Labor and visé control.

Mr. GARD. I have no objection, if there is to be a like attitude to be shown on this side to gentlemen to proceed out of order. I have no objection.

The CHAIRMAN. Is there objection? [After a pause.] The Chair hears none.

Mr. NEWTON of Minnesota. Mr. Chairman, several days ago this House gave several days to the question of immigration restriction. I think it was the consensus of opinion that additional legislation was needed, but that we would have much less of an immigration problem if there was a better administering of the provisions of existing laws.

As I said a day or two ago, the Immigration Service has some very conscientious and efficient workers. This is especially true at Ellis Island, but it must be remembered that the Immigration Service is a bureau in the Department of Labor and is subject to the policy of the head of that department.

The Department of Labor has announced and is putting into effect a policy relating to certain immigrants that is in clear and direct contravention of the laws of our land. The violation is so clear that it merits the attention of the law-enforcing officers of our Government.

Mr. Chairman, during the war, for the purpose of better regulating the entry into this country of people from other countries, especially from Europe, Congress, in May, 1918, made it unlawful for an alien to enter this country except upon a passport viséed by a United States consul. The President was authorized to put the act into effect by proclamation and to prescribe therein the necessary rules and regulations, and to provide for such exceptions as he might deem advisable. On August 18, 1918, the President issued his proclamation, thereby putting the act into force and effect.

The act and proclamation continued in force and effect, and on October 19, 1919, Congress, appreciating the continued necessity of carefully scrutinizing many of those seeking to enter this country following the cessation of hostilities in Europe, passed the passport control extension bill, which became a law in default of the President's signature on October 29, 1919. This law extended the provisions of the passport control act to March 4, 1921. This law is in force and effect to-day, or rather it is the law, and would be in force and effect to-day if certain officers of the Government were not violating it.

The proclamation of the President likewise continues to be the authority as to the rules and regulations and the providing for exceptions in certain cases.

Now, then, the Secretary of Labor is permitting aliens to enter this country without the necessary viséed passport and in spite of explicit refusals from the State Department, under their power, delegated by the President, to make exceptions, to waive the question of the visé.

Mr. TEMPLE. The Secretary or the Assistant Secretary?

Mr. NEWTON of Minnesota. The Department of Labor, acting through the Assistant Secretary, Mr. Post. I do not know what is the personal attitude of the Secretary of Labor. However, it is certainly the policy of the department of which he is the head. I therefore take it that it is his policy.

In the law mentioned it is made unlawful—

(a) For any alien to enter or attempt to enter the United States except under such reasonable rules, regulations, and orders and subject to such passport, visé, or other limitations and acceptance as the President shall prescribe.

It will be noted, therefore, that it is made unlawful to enter except upon a viséed passport, with provisions for exceptions to be prescribed by the President. There can be no question, then, as to the law applicable.

I now quote from the proclamation by the President setting forth certain rules, regulations, limitations, and exceptions:

SEC. 2. No alien shall receive permission to * * * enter the United States unless it shall affirmatively appear that there is reasonable necessity for such * * * entry, and that such * * * entry is not prejudicial to the United States.

SEC. 3. * * * nor shall anything contained herein be construed to suspend or supersede any rules or regulations issued under the Chinese exclusion law or the immigration laws, except as herein expressly provided; but the provisions hereof shall, subject to the provisions above mentioned, be regarded as additional to such rules and regulations.

In other words, these rules and regulations are to be considered as in addition to and supplementary of the existing immigration laws. This would seem to make them a part of those laws. The provision certainly enjoins on the officers charged with the responsibility of enforcing our immigration laws the duty of enforcing the passport control law and these rules and regulations.

I quote further from the President's proclamation:

SEC. 4. I hereby designate the Secretary of State as the official who shall grant, or in whose name shall be granted, permission to aliens to depart from or enter the United States; * * *.

I hereby direct all departments of the Government to cooperate with the Secretary of State in the execution of his duties under this proclamation and the rules and regulations promulgated in the pursuance hereof.

* * * The Secretary of Labor shall, at the request of the Secretary of State, * * * appoint a representative to render to the Secretary of State or his representative such assistance and advice as he may desire respecting the administration of this proclamation and of the rules and regulations aforesaid.

It will be noted that the President expressly enjoins the Secretary of Labor to assist and cooperate with the Secretary of State in the enforcement of these provisions. Has the Secre-

tary of Labor done this? No. He has, on the other hand, done exactly the contrary.

This proclamation is followed by an Executive order, a portion of which reads as follows:

SEC. 1. * * * The Secretary of State is hereby authorized, in his discretion, to prescribe exceptions to these rules and regulations governing the entry into and departure from the United States of citizens and subjects of the nations associated with the United States in the prosecution of the war.

It will be noted, therefore, that the power to provide exceptions resting with the President was delegated to the Secretary of State, and the Secretary of State alone. The Secretary of State then alone has the power to waive these visé requirements.

Congress deemed the enforcement of this act of such importance that it provided a severe penalty for its violation, as follows:

That any person who shall willfully violate any of the provisions of this act, or of any order or proclamation of the President promulgated, or of any permit, rule, or regulation issued thereunder, shall upon conviction be fined not more than $5,000, or if a natural person, imprisoned for not more than five years, or both.

A violation, therefore, of the act, or of the proclamation, is made a crime with a severe penalty.

It is perfectly clear, therefore, that every entering alien must have a viséed passport issued under the regulations of the State Department, unless the State Department expressly waives the provision.

Now as to the facts substantiating my statement: The Department of Labor is to-day, and has been for some time, I do not know how long, admitting aliens from Europe into America who do not bear viséed passports, and that they are doing this in instances where the State Department has expressly refused to waive the requirements. I know of several such instances.

This, then, is the situation: This law and the accompanying regulations makes a certain entry unlawful and subjects the alien entering to a severe penalty of fine or imprisonment, or both. Yet we find the Assistant Secretary of Labor assisting, aiding, and abetting these men in entering this country in violation of our law. Without his help they could not enter. Knowingly and willfully he is not only permitting them but is aiding them to enter this country.

Mr. BLANTON. Will the gentleman yield there?

Mr. NEWTON of Minnesota. I will.

Mr. BLANTON. I have been calling the attention of the gentleman for two years to just such acts on the part of this official, and yet the gentleman's party having power has taken no steps whatever to get rid of him.

Mr. NEWTON of Minnesota. Yes; the gentleman's party has taken steps, because his party went out before the country this last fall and the people sustained the position of the gentleman's party, and there is going to be a change after the 4th of March in reference to the official in question.

Mr. BLANTON. Why wait until the 4th of March? We have had a number of resolutions pending, and if passed it would not be necessary to wait.

Mr. NEWTON of Minnesota. It seems to me the Secretary is either violating the law of the land or at least is coming perilously close to subjecting himself to criminal prosecution under the statute.

Mr. FESS. Will the gentleman yield?

Mr. NEWTON of Minnesota. Yes.

Mr. FESS. Does the gentleman know whether the Secretary of Labor contends that there is no law or is he openly disregarding it?

Mr. NEWTON of Minnesota. The Secretary of Labor is openly disregarding the law and holds that the law does not pertain to him; that he has nothing whatever to do but the enforcing of the immigration law, and that this is not an immigration statute.

The CHAIRMAN. The time of the gentleman has expired.

Mr. NEWTON of Minnesota. May I have two minutes more?

The CHAIRMAN. The gentleman from Minnesota asks unanimous consent to proceed for two additional minutes. Is there objection? [After a pause.] The Chair hears none.

Mr. NEWTON of Minnesota. And may I say in this connection that section 3 of the proclamation as read refers to the immigration laws, and then provides that the proclamation shall be regarded as additional to such immigration rules and regulations. It certainly is the duty of the Secretary to enforce immigration laws.

Mr. CHINDBLOM. Will the gentleman yield?

Mr. NEWTON of Minnesota. I promised to yield to the gentleman from Texas.

Mr. FESS. Will the gentleman yield further?

Mr. NEWTON of Minnesota. Yes.

Mr. FESS. In reference to whether it is ignoring the law or not, the gentleman will recall the very heated contest between the Department of Justice and the Department of Labor in the last session, in which there were continued hearings. In that case the Department of Labor seemed to contend that they had a latitude in interpreting the law, and the two were widely different, but each claimed that they were still under the law.

Mr. NEWTON of Minnesota. My understanding is that they admit this is the law, but that the State Department in deciding whether or not they will visé or waive a visé, consider whether or not the applicant would be desirable under our present immigration laws. That the State Department in this way would absorb their jurisdiction.

Mr. CONNALLY. Will the gentleman yield?

Mr. NEWTON of Minnesota. I will.

Mr. CONNALLY. I would like to know whether or not there are, in this particular, instances of the abuse of this power in the mind of the gentleman? I have heard these general charges made, and I do not take issue with the gentleman in that.

Mr. NEWTON of Minnesota. I will cite to the gentleman the case of Arthur Chogres, as near as I can make out his name. He was one of four stowaways. I have been at Ellis Island, as perhaps the gentleman has, and I have seen some of the stowaways. Some of the worst characters on earth come in in that way. Here was a stowaway that was permitted to come into the country without a viséed passport, in violation of the law. The Department of Labor let him in despite the refusal of the State Department to make an exception in his case. I know of other cases as well.

Mr. TEMPLE. Will the gentleman yield?

Mr. NEWTON of Minnesota. Yes.

Mr. TEMPLE. Does the gentleman know of any instance in which the Assistant Secretary of Labor has defaced or erased any provisions from the formal paper prepared for use in such cases?

Mr. NEWTON of Minnesota. Yes. I know of this in a particular case that came to my attention. It is the Geitz case. I requested to see the file, and after some difficulty saw it and examined it. The opinion prepared for the Secretary to sign provided for the immigrant's admission, provided the State Department waived the visé provision. The typewritten portion containing this proviso was stricken out with a big, broad pen line through it, and the opinion was signed by the Assistant Secretary of Labor, Mr. Post.

Mr. BYRNS of Tennessee. I was wondering whether or not the gentleman was certain that the individual to whom he has referred has been finally admitted, or whether he was simply admitted pending a final decision as to whether he should be permitted to remain in this country or not.

Mr. NEWTON of Minnesota. I do not know whether he is at this time actually in the United States. I do know the order was made and signed by the Assistant Secretary of Labor unconditionally permitting him to come in, regardless of the action of the Secretary of State. How long is this department to be permitted to aid and abet in the violation of a criminal statute, and how long is a Cabinet officer to be permitted to violate the explicit directions of his chief, the President of the United States? [Applause.]

The CHAIRMAN. The time of the gentleman from Minnesota has again expired.

The Clerk read as follows:

For traveling expenses of inspectors, inspectors in charge, and the chief post-office inspector, and for the traveling expenses of four clerks performing stenographic and clerical assistance to post-office inspectors in the investigation of important fraud cases, $447,000.

Mr. GARD. Mr. Chairman, I move to strike out the last word of the paragraph contained between lines 12 and 16, on page 2, for the purpose of making an inquiry of the chairman of the subcommittee on post-office appropriations of the Committee on Appropriations, of the manner of the establishment of the different grades in which they receive the pay of post-office inspectors. I notice in reading the hearings there are grades characterized as grades 3, 4, 5, 6, and 7. This is a very important branch of the service, inasmuch as it has to do with the work of facilitating the mail to the people of the United States.

Mr. MADDEN. In the act of June 4, 1920, there was a complete reclassification of all the Postal Service. It reached to the supervisory officials and to the postmasters all over the United States. A different system of receipts was provided in fixing the compensation of a postmaster and a different system of receipts for assistant postmasters than had theretofore existed. And up to that time clerks and carriers had always been classified in various grades of 1, 2, 3, 4, 5, and 6. The inspection was never had. That law provided the grades and

fixed the compensation, and this appropriation is being made in compliance with that law.

Mr. GARD. Is there a provision for automatic advancement?

Mr. MADDEN. Yes; one year's service in a grade entitles the man in that grade to the next highest grade automatically, provided his record justifies it.

Mr. MANN of Illinois. Mr. Chairman, I move to strike out the last word. I notice the appropriation for traveling expenses of inspectors seems to be increased manyfold. I believe it is now $91,000, and this proposes to make it $447,000. Of course, there has been some increase in railroad fares, but that is such a large increase I wondered why it was.

Mr. MADDEN. The per diem allowance for inspectors in the field up to this time was $363,500, and that is consolidated with another item, which together makes $447,000 and some odd dollars.

Mr. MANN of Illinois. The traveling expenses at present, under the present appropriation, are simply for the railroad fare and Pullman, and there is a separate appropriation for per diem?

Mr. MADDEN. Per diem; yes.

Mr. MANN of Illinois. And this is a consolidation?

Mr. MADDEN. Yes. The per diem amounted to $363,500, and we added the other item to that, which makes the greater amount. We put them all in one item.

The CHAIRMAN. Without objection, the pro forma amendment is withdrawn, and the Clerk will read.

The Clerk read as follows:

For compensation of a special assistant to the Attorney General to assist in the defense of cases against the United States arising out of the transportation of the mails, and in other cases and matters affecting the postal revenues, $6,000.

Mr. GARD. Mr. Chairman, reserving a point of order against the paragraph just read, covering lines 5, 6, 7, and 8, I beg leave to inquire of the chairman why the necessity for this item carrying $6,000 for a special assistant, in view of the fact that the Post Office is well supplied with legal advice through its solicitor and the assistant solicitors of the department? What is there that requires a special appointment in this case?

Mr. MADDEN. The gentleman who occupies this position is Mr. Stewart, formerly Second Assistant Postmaster General. He tried all the divisor cases through the courts, representing the Post Office Department in all of the cases. A good many years ago the question came up whether the pay for railroad mail carriage should be founded on a basis of six days' carriage per week or seven days per week, and later on, after Mr. Stewart was relieved of his position as Second Assistant Postmaster General and the railway mail pay question was referred to the Interstate Commerce Commission for adjustment, he was retained by the Postmaster General under a law providing for his appointment to try those cases, and he tried before the Interstate Commerce Commission the cases which have just been concluded, but against the judgment of which there is an appeal pending, and the gentleman's services will be necessary in the trial of the cases on appeal.

Mr. GARD. I notice that the gentleman states that the provision is authorized by the act passed June 28, 1916. That is this special provision for the appointment of this man?

Mr. MADDEN. Yes.

Mr. GARD. Have we been continuing this appropriation all the while for Mr. Stewart since he ceased being Second Assistant Postmaster General?

Mr. MADDEN. Since he was released from his services as Second Assistant Postmaster General he has been occupying this position.

Mr. GARD. I take it that this authorization just refers to the fact of the authorization, and the appropriation continues it from year to year.

Mr. MADDEN. No. The appropriation was not made as a perfunctory matter. It was made because of the knowledge of the facts possessed by this man in the cases. It was made because the committee knew that litigation was pending, and the committee also knew the conditions on which the appeal was taken. For example——

Mr. GARD. Do I understand that it is just on account of the appeal of these cases that Mr. Stewart is being retained?

Mr. MADDEN. No. It is on account of his special knowledge of the cases and because of the fact that he is really the only man who understands all the complications connected with the cases.

Mr. GARD. Is it the policy of the committee to retain him year after year, or——

Mr. MADDEN. It would be hard to say what the policy of the next committee would be, but I would say if I were in charge of this work next year and the facts disclosed the necessity for his employment because of the interests of the Government, or because the interests of the Government might be conserved by his employment, I would unquestionably employ him; otherwise I would not.

Mr. GARD. I thoroughly agree with the gentleman. The inquiry I was making was whether there was any special interest, or whether Mr. Stewart had greater knowledge than anybody else with respect to these appeals, which I hope will be disposed of in a short time.

Mr. MADDEN. Unfortunately, they have not been disposed of yet.

Mr. GARD. Are there any other cases that would warrant the gentleman's continuance?

Mr. MADDEN. I am not advised as to that. My answer is that his employment is based on his knowledge of these cases and what I believe to be the necessity for his employment.

The CHAIRMAN. Does the gentleman from Illinois wish to be heard on the point of order?

Mr. MADDEN. It is not subject to a point of order, Mr. Chairman. This appropriation is made in accordance with law.

The CHAIRMAN. The Clerk will read.

The Clerk read as follows:

For compensation to assistant postmasters at first and second class post offices, $7,000,000.

Mr. PARRISH. Mr. Chairman, I move to strike out the last word of the paragraph just read, lines 13 and 14, for the purpose of asking the chairman of the committee a question.

The CHAIRMAN. The gentleman from Texas moves to strike out the last word.

Mr. PARRISH. Are the salaries under this appropriation of $7,000,000 for assistant postmasters at first and second class post offices fixed by law?

Mr. MADDEN. They are fixed by law.

Mr. PARRISH. When were they fixed, or by what law?

Mr. MADDEN. By the act approved June 5, 1920, known as the reclassification act.

Mr. PARRISH. Mr. Chairman, I withdraw my pro forma amendment.

The CHAIRMAN. The gentleman withdraws his pro forma amendment. The Clerk will read.

The Clerk read as follows:

For unusual conditions at post offices, $250,000.

Mr. BLANTON. Mr. Chairman, I move to strike out the last word as a pro forma amendment.

The CHAIRMAN. The gentleman from Texas moves to strike out the last word.

Mr. BLANTON. Mr. Chairman, yesterday, when the chairman of the committee was making his statement, and about a week ago also, when he was upon the floor, he also made the statement that in order to take care of war conditions with respect to carriers on star routes we passed a law authorizing the Postmaster General to take into consideration unusual conditions arising from the war with respect to such contracts that were entered into prior to June, 1918, and the chairman could not understand why there were cases in my district and in other districts where star-route contractors had been almost ruined financially because of their contracts.

Mr. MADDEN. Mr. Chairman, will the gentleman yield?

Mr. BLANTON. I yield.

Mr. MADDEN. I think I quite understood, and I do not want to be understood as saying anything that I did not say. I understand that there were difficulties.

Mr. BLANTON. Oh, yes; but the gentleman thought that the Postmaster General could have readjusted all those matters under existing law if he had seen fit.

Mr. MADDEN. No. I beg the gentleman's pardon. I want to have him straightened out on that.

Mr. BLANTON. The gentleman means that he will beg my pardon. If I have misquoted him, I beg his pardon.

Mr. MADDEN. I beg the gentleman's pardon; I want to be properly understood. What I said was that the Postmaster General had said, and his assistants also had said—those in charge of the star-route service—that they had trouble with some of the star-route contractors where they were unable to carry on the work, and that in such cases in many instances they had released them from their obligations, since the time had passed when they were able to adjust, and that they had readvertised for bids, and in many cases they had been able to get lower bids than those where the contracts had been released.

Mr. BLANTON. The gentleman stated it was June, 1918, when, as a matter of fact, it was the contracts entered into prior to June, 1917, that the law applied. I call the gentleman's attention, however, to the fact that most of these unusual war conditions with respect to contracts on star routes had not taken place in June, 1917. In other words, the war had not

been in progress long enough to make gasoline go up as high as it did, to make automobile tires go up as high as they did, or to make various parts of the automobiles which are used on these routes to go up as they did; to make many of those parts go up so enormously as they did during the war, or to make the cost of getting these cars repaired in shops go up as it did, and as well as various other items which enter into the expense of star-route mail carriage. These raises and increases in cost had not occurred in June, 1917. The contracts were made after June, 1917, with respect to the four years that embraced the war and the period that is on at this time and part of which is yet to come in the future. As I stated to the gentleman at that time, I have in my district several contractors under bonds who, besides having carried the mail at a tremendous loss for some months, and having been almost bankrupted and in danger of losing the small amount of property that they possess, in order to prevent further loss have taken the full amount of their bond, in one instance $3,000 in cash, have gone to the department with it and said, "Here is the amount of my bond. Please release me." Yet the Postmaster General, after having had the full amount of the bond delivered to him in cash, has said, "No, sir; you must go on and deliver that mail according to your contract for the full four years or you are going to be held responsible. We will employ somebody, no matter how much it costs, and hold you responsible." It seems to me he ought not to insist on that. Many of these men are poor, and there are a number of them affected by these conditions. The distinguished gentleman from Illinois [Mr. MADDEN] could render a very great service to a number of poor and deserving men throughout the country if he could get put upon this bill an emergency measure that would give some relief, that would permit the Postmaster General to readjust these contracts not according to June, 1917, but according to the war conditions that later on prevailed.

Mr. MADDEN. If I said June, 1918, it was unintentional and not with a view to misstate the date.

The CHAIRMAN. The time of the gentleman has expired. Without objection, the pro forma amendment will be withdrawn, and the Clerk will read.

The Clerk read as follows:

For pay of letter carriers at offices already established, including substitutes for letter carriers absent without pay, City Delivery Service, $70,000,000.

Mr. ROSE. Mr. Chairman, I move to strike out the last word for the purpose of asking the chairman of the committee a question. My understanding is that the letter carriers' salaries have already been fixed. Am I correct in that?

Mr. MADDEN. Yes.

Mr. ROSE. So this bill does not attempt to raise the salary of any official of the department?

Mr. MADDEN. It does not.

Mr. ROSE. I notice that the increase in this item for the pay of letter carriers is $10,000,000 over that of last year. Does that mean to provide for additional carriers besides those already employed?

Mr. MADDEN. The annual rate is in effect as of June, 1920, and the pay before that rate was fixed was $62,484,400. The increased annual rate for filling 820 vacancies was $1,089,000 more and the increase in the annual rate for appointing 861 additional carriers is $1,124,248 more, and the automatic promotions will amount during the year to $300,000 more. The estimated annual rate in effect June 30, 1921, will be $65,221,850. Fourteen hundred additional carriers will be necessary during the coming year, and that will cost $2,030,000 more, and the estimated cost of automatic promotions during the fiscal year 1922 will be $1,500,000 and the estimated cost for overtime is $800,000 or a total of $69,551,850. The item in the bill carries $70,000,000, which will leave a leeway of almost $500,000 for any emergency that may arise in a case, for example, like that which we had last year when there was a strike on the American Railway Express and all their business was turned over to the Post Office Department, and we had to take men from the streets everywhere in the United States to transact the business. We believe that the department ought to have sufficient money to meet an emergency of that sort. If they do not need it, of course, they will not use it, but that is how the difference between the $62,000,000 and the $70,000,000 is made up.

Mr. ROSE. I do not find any fault whatever with the amount of money carried in this appropriation, but I feel as does the gentleman from Texas [Mr. BLANTON]. I believe the letter carriers of the country do not receive a sufficient sum for the labor they perform. I think they are the hardest worked and poorest paid employees in the service of this Government, and I should like to be in a position to raise the salaries of the men who carry the mail. They have made insistent demands for increase in their salaries, but it has always been denied them. When I observed the increased amount provided for in this section I presumed that it was in the minds of the committee to pay the letter carriers more money, but I find that I am disappointed in that and that they will receive the same rate that they have always received.

Mr. MADDEN. No; not the same rate they always received.

Mr. ROSE. Under the existing law.

Mr. MADDEN. Yes; under the existing law, which went into effect on the 1st of July, 1920.

Mr. ROSE. The Postal Service is breaking down all over the country. We can not get men to do the work for the salaries we pay, and I am one of those who believe that the salaries of the letter carriers should be made commensurate with the services performed.

Mr. BLACK. Will the gentleman yield?

Mr. ROSE. Yes.

Mr. BLACK. Does the gentleman realize that the average pay of a letter carrier is now about $1,750 per annum?

Mr. ROSE. I do not know whether that is the average or not.

Mr. BLACK. That is the average.

Mr. ROSE. I am sure that the great majority of the carriers whom I have spoken to do not receive that much; and if they do, they are unable to provide for themselves and their families on account of the increased cost of living.

Mr. MADDEN. If the gentleman will yield to me I will tell him what the facts are.

Mr. ROSE. I yield to the gentleman from Illinois.

Mr. MADDEN. Before the 1st of July, 1918, the compensation of letter carriers was $800 per annum in the initial grade and went up to $1,100 automatically in first-class offices and to $1,000 in second-class offices. It went up to $1,200 for a certain percentage of the men in first-class offices and up to $1,100 for a certain percentage of the men in second-class offices.

On the 1st of July, 1918, there became effective a new classification which made the initial salary $1,000 and the maximum salary $1,500.

In accordance with joint resolution 151, passed in October, 1919, as I recollect, which was retroactive to the 1st of July, 1919, $200 were added to the salaries of all men receiving not to exceed $1,500, $150 to the salaries, temporarily, of those above $1,500 and up to a certain other point, and $125 to salaries of those receiving not less than $2,200. Then, on June 5, 1920, came the classification act, reported by the Postal Salaries Commission, which made the initial salary $1,400 and the maximum salary $1,800, and that is what they are getting now. That is what is being provided for in this bill.

Mr. GARD. Mr. Chairman, I move to strike out the last word. I notice in the hearings, at page 141, of the gentleman's committee a statement by Mr. Cantwell, the secretary of the National Association of Letter Carriers, as I read it, evidences of inequality in the opportunity of promotion from substitutes to regular letter carriers. I know that the gentleman's committee is now purely a committee of appropriation and that this might properly be a matter of legislation, but since this inquiry was made by the secretary of the National Letter Carriers' Association, this being an organization which renders a very excellent service to the people of the United States, I am asking the gentleman if as chairman of this subcommittee he has investigated the table of inequality presented by Mr. Cantwell at the office at Cincinnati, Ohio, with reference to relief from such inequalities of those who have had military service and those who have had no advancement through different grades of substitution to the position of permanent carrier?

Mr. MADDEN. Yes. I am very happy to say to the gentleman that I have and that as a result of my investigation and from the information I was able to obtain I have prepared a bill, H. R. 15447, embracing all of these inequalities. That bill was introduced on the 30th of December, and it is now under consideration by the Committee on the Post Office, with a view to remedying these difficulties.

Mr. GARD. The gentleman has in his bill, then, the idea of correction of these inequalities?

Mr. MADDEN. Yes.

Mr. GARD. I ask, because, unfortunately, I am not familiar with the bill.

Mr. MADDEN. I shall be very glad to send the gentleman a copy of the bill.

Mr. GARD. It takes care of everything?

Mr. MADDEN. Of the period of military service and substitute service, so that these men who have been in the military service and who have been out for some time may have the advantage of the credit of that military service in their advancement from the position of substitute to that of letter car-

rier. It covers everything along the line to which the gentleman calls attention.

Mr. GARD. The gentleman's bill is, I suppose, to correct these inequalities which are made manifest in the statement of Mr. Cantwell?

Mr. MADDEN. It will correct them, if it is enacted into law, and, as I understand it, the Committee on the Post Office and Post Roads is having hearings on the bill now or on a similar bill.

Mr. GARD. I will ask the gentleman from Kentucky [Mr. ROUSE] if his committee is having hearings on the bill or a similar bill?

Mr. ROUSE. Mr. Chairman, I understand the committee has had some hearings, but I have not been present. If the gentleman will yield, I desire to ask the gentleman from Illinois, the chairman of the subcommittee, a question.

Mr. GARD. I yield to the gentleman.

Mr. ROUSE. Did the gentleman consider the objection the clerks have to the compensatory time provision of the reclassification act?

Mr. MADDEN. That is all covered in this bill also. If the gentleman will permit me to state informally, I would say that of course our committee, knowing we had no legislative powers, nevertheless accumulated the information that showed legislation to be necessary, and, anxious as we were to comply with the rules of the House and to report no legislation on this bill, we prepared the bill, or I did, and introduced it for the information of the Post Office Committee, so that they could report the legislation.

Mr. BLACK. Mr. Chairman, I move to strike out the last word, for the purpose of saying, in reference to this matter of giving the letter carrier credit for his substitute service, I would not wish it to be understood that the department has administered the law in any different way from that which Congress intended or that any injustice has been done these men. The truth of the matter is this: When we passed the act of June 5, 1920, we provided that thereafter, whenever a substitute should be appointed to the position of regular carrier, there should be counted up the time which he had served as a substitute, and that he should be given credit for a year if he had served 306 days at eight hours per day. Therefore, if he had served a year all told as a substitute he would enter class 2 instead of class 1. That is now being done. I have heard of no complaint that the Post Office Department is not administering the law properly. What the employees want is to amend the reclassification bill and give it a retroactive effect and go back and take up all letter carriers who had been appointed before the passage of the law and figure up their substitute time and advance them accordingly. The committee had no such intention when it originally framed the bill, and as one member of the committee I do not mind stating that I am opposed to it now and expect to vote against it in the committee, if it is brought up. Every time we pass a bill in Congress to have effect from and after the time of its passage, we can not stop to go away back and figure how it would have operated if we had passed it two years ago or four years ago or five years ago, and try and make it fit to that kind of a situation. As I understand it, that is the kind of grievance that the employees are complaining about. They are not complaining that the Post Office Department is failing to give any substitute who is now appointed full credit for the time he has served as a substitute, but we ought to go back and take a history of all these substitutes who have been appointed before the law went into effect and figure up the time they served and advance them accordingly. I do not think that is logical. I do not think it is the proper thing to do. I think we passed a good and liberal reclassification bill for the employees and I supported it and voted for it, but I do not favor amending it to try and adjust every imaginary grievance.

The CHAIRMAN. Without objection, the pro forma amendment will be withdrawn, and the Clerk will read.

The Clerk read as follows:

For pay of letter carriers, substitute and auxiliary letter carriers at offices where City Delivery Service is established during the year, $200,000.

Mr. FESS. Mr. Chairman, I move to strike out the last word. Some years ago there was inaugurated a policy of attempting the carrier service in towns below a certain size.

Mr. MADDEN. Yes.

Mr. FESS. I think it was a sort of experimental service. Is that service being carried on now?

Mr. MADDEN. Yes; that is being carried on now, and this is the way it is being operated. When it was originally started there were, I think, about $200,000 appropriated to experiment in villages.

Mr. FESS. Yes.

Mr. MADDEN. They did start some service in villages of as low as 1,000 population. It was afterwards thought that it was unwise, and a limit of 1,500 population was fixed by the regulations, and requirements were made to have house numbers and sidewalks and all that, so that the carriers could make delivery readily.

And to-day the service has been extended to a large number of villages, and this appropriation has been increased by about $300,000, so as to furnish the service to further villages, and the reports from the department are to the effect that it is one of the most popular services the Government can give. We have in most villages only one carrier, in some villages they have two, and the compensation of those men is something like $1,200 per annum. It does not go up to the standard of carriers in larger places.

Mr. FESS. It must have 1,500 population.

Mr. MADDEN. That is the low limit, and the receipts must be $5,000.

Mr. FESS. I would say to my friend in my district there are two such, and there are other towns making application, and I was not sure as to what the law was.

Mr. MADDEN. There is no law on the subject; it is simply a regulation which is to the effect that there must be $5,000 receipts or 1,500 population.

Mr. FESS. I thank my friend; that is the information that I wanted. They state that such and such a town has the service, and why can not they have it?

Mr. MADDEN. It was instituted in some towns of a similar population who were afraid they were going to be passed over, hence the regulation regarding it.

Mr. WALSH. Mr. Chairman, I rise in opposition. Did I understand the gentleman from Illinois to say this village delivery has now gone beyond the experimental stage?

Mr. MADDEN. I do.

Mr. WALSH. And that they are expending money from appropriations without any law, simply upon a regulation?

Mr. MADDEN. Oh, no; the regulation only goes as to the number of people who shall be in a village and the amount of receipts; that is all.

Mr. WALSH. Where does the law authorize them to make any such regulations or to expend any money on such a delivery service?

Mr. MADDEN. The law is carried in this bill, but we have not reached that point.

Mr. WALSH. I beg the gentleman's pardon. I understood the gentleman to say this item under consideration carried an increase to take care of it.

Mr. MADDEN. No; not at all. This is not the item at all. The question was asked me at this point, but we have not reached the other.

Mr. DOWELL. Mr. Chairman, I move to strike out the last word. I desire to inquire of the chairman: As I understand, this item covers the expense of offices established during the last year?

Mr. MADDEN. Which item does the gentleman refer to?

Mr. DOWELL. The item on the bottom of page 4 that has just been read.

Mr. MADDEN. No; that item is auxiliary service, and new territory is being added to already established free-delivery territory. For example, there may be on the outside line of a city quite a settlement that does not come under the free-delivery range of the city post office but might be taken in and made part of the free-delivery territory from the post office.

Mr. DOWELL. May I inquire is it the policy of the department to establish a village delivery of a certain population?

Mr. MADDEN. The policy is to establish up to the extent of the money they have at their disposal in all villages of 1,500 population and receipts of $5,000.

Mr. DOWELL. Is it automatic that when a village arrives at a population of 1,500 free delivery is established?

Mr. MADDEN. No; I would not say automatic. They will have to apply for it, because they would not have money enough in this fund to do that automatically.

Mr. DOWELL. A certain value of postal receipts are necessary?

Mr. MADDEN. Five thousand dollars.

Mr. DOWELL. Under this provision?

Mr. MADDEN. Under the regulations of the department.

The CHAIRMAN. Without objection, the pro forma amendment is withdrawn, and the Clerk will read.

The Clerk read as follows:

For vehicle allowance, the hiring of drivers, the rental of vehicles, and the purchase and exchange and maintenance, including stable and garage facilities, of wagons or automobiles for, and the operation of, screen-wagon and city delivery and collection services, $15,000,000: *Provided*, That the Postmaster General may, in his disbursement of this

appropriation, apply a part thereof to the leasing of quarters for the housing of Government-owned automobiles at a reasonable annual rental for a term not exceeding 10 years.

Mr. GARD. Mr. Chairman, I move to strike out the last word. Mr. Chairman, I note that this appropriation is for $15,000,000 for vehicle allowance, the hiring of drivers under the rental of vehicles, and so forth. I note that the appropriation for 1920 was $5,750,000 and $10,250,000 for the fiscal year 1921. It is $15,000,000 now for the next fiscal year, 1922. Is this advance due to an increased number of automobiles and motor-propelled vehicles for the purpose of collecting and distributing mail, or what is the reason for the great increase of nearly $10,000,000 between 1920 and 1922?

Mr. MADDEN. Is the gentleman asking me?

Mr. GARD. Yes.

Mr. MADDEN. Part of the increase—the increase itself is not quite as large as it appears. There is $4,000,000 deficiency in this item now, and that deficiency has been requested from the Appropriations Committee; the department says it is due to the increased cost of labor and increased volume of mail.

Mr. GARD. There is nothing in this here about a deficiency.

Mr. DOWELL. Should not the deficiency come on the regular deficiency bill?

Mr. MADDEN. I am simply explaining why this does not provide for a deficiency. I want simply to say there is not so much difference in last year's appropriation as seems on its face, because the appropriation for the current fiscal year is $4,000,000 less than the cost of the service. That is disclosed in the request of the department for a $4,000,000 deficiency. Now, this service has been established in about 200 cities. It takes over the screened-wagon service; it takes over what used to be the horse-drawn vehicle collection service; it takes over what used to be horse-drawn vehicle service of all kinds in all cities in which it is established. There are now more than 3,800 automobiles in this service. That, of course, involves the employment of a large number of men. All those men are mechanics. It involves the establishment of a great many garages. It also involves the establishment of machine shops in connection with those garages.

It involves the payment of rent for garages. The department has dispensed with all the screen-wagon contract service heretofore existing, and this service has been substituted, and it is the policy of the department, I understand, to dispense with whatever yet remains of the screen-wagon contract service and take it over under the department jurisdiction.

Mr. GARD. Is the deficiency which the gentleman refers to included in his report, that deficiency of $20,725,000, or is it still another deficiency of $4,000,000?

Mr. MADDEN. I would not undertake to say offhand now just whether it is or not.

Mr. GARD. I think it is very important for the country to know whether a part of this great increase in two years of practically $10,000,000 is a deficiency carried in this item.

Mr. MADDEN. The deficiency is not in this item.

Mr. GARD. Not in this item?

Mr. MADDEN. Certainly not. But with the last year's appropriation of $5,750,000, and $4,000,000 deficiency added to it which would come in the next deficiency bill, it would be $9,750,000, whereas this provides for $10,450,000. The gentleman from Ohio would lead the House to believe, without any intention to do it, that we are increasing this appropriation by $4,500,000, whereas we are only increasing the appropriation by $500,000.

Mr. GARD. That is carrying the gentleman's idea of the deficiency.

Mr. MADDEN. It is not my idea. It is the fact.

Mr. HOLLAND. The gentleman will find that on page 36, referred to by Mr. Koons.

Mr. MADDEN. That is simply carrying the state of facts that exists. The department found itself short $4,000,000 in this service in the expenditures of the last year's appropriation, which was $5,750,000. They go to the Appropriations Committee and ask for that. An appropriation will probably be carried in the next deficiency bill, and that will make the appropriation for 1921, $9,750,000, and this bill is carrying $10,750,000 for 1922.

Mr. GARD. In view of the fact that there are now, according to the statement of the First Assistant Postmaster General, 3,800 vehicles, an inquiry of my colleague, the gentleman from Missouri [Mr. IGOE] seems opportune, as to whether there is any provision carried in this appropriation bill for the payment for injuries inflicted by drivers of these Government-owned automobiles or these automobiles in the Postal Service?

Mr. MADDEN. Certainly not.

Mr. GARD. Because it certainly must be apparent to the gentlemen on this subcommittee that this great increase in motor-propelled vehicles, and the number of accidents that will result therefrom everywhere, there should be some recognition of the rights of those who are injured without fault of their own, by negligence of those who are employed to drive these motor-propelled vehicles in the mail service of the United States.

Mr. MADDEN. I hope the gentleman from Ohio does not think we ought to give to the Postmaster General carte blanche to use a large appropriation to settle personal-injury cases.

Mr. GARD. No; I do not. I was merely making inquiry whether you had made any arrangement to that end or not.

Mr. MADDEN. We certainly have not carried anything in this bill, and we ought not to do so. I apprehend the gentleman would be the first man to object to it, on the ground that we have no authority to legislate for or to anticipate injuries. If injuries happen, there is a remedy which can be applied in their adjudication. That remedy ought not to be an appropriation in this bill, giving the power to the Postmaster General to adjust such claims. The law provides the method by which these claims can be adjusted.

Mr. WALSH. Do I understand the gentleman from Illinois to say that for any injuries resulting from the operation of post-office automobiles there is a remedy existing now?

Mr. MADDEN. Yes; the same remedy that exists for all injuries of a like nature that could happen to persons through negligence of Government employees. They must come to Congress. [Laughter.]

Mr. GARD. You mean by the presentation of a private claim?

Mr. MADDEN. Yes. The gentleman from Ohio, I am sure, would not undertake to ask the Congress to pass a blanket appropriation bill to cover anticipated injury cases.

Mr. BLANTON. The gentleman intimates that there is no legislation in the bill. There is important legislation on the next page, and on succeeding pages, is there not?

Mr. MADDEN. I hope there is not any legislation.

Mr. BLANTON. The gentleman knows that there is, does he not?

Mr. MADDEN. Well, I will not admit anything until I get to it.

The CHAIRMAN. The time of the gentleman has expired.

Mr. PAIGE. Will the gentleman yield?

Mr. MADDEN. I will.

Mr. PAIGE. Is this increase due largely to the fact that automatic tubes have been discontinued in the cities and automobiles have supplanted them at increased cost?

Mr. MADDEN. I am afraid I would have to answer no to that, for this reason: The pneumatic tubes only existed in Boston, Chicago, St. Louis, and New York, and I think there were only about 36 miles of tubes, if I recall. We spent a total of $976,000 a year for the service of the tubes. Now we have instituted automobile service in 200 cities. When the Postmaster General made his report there were 2,615 automobiles in service. When the First Assistant Postmaster General gave his testimony there were about 3,200 or 3,300. Since that time they have been increased until there are nearly 4,000 now. It is still going on.

Mr. PAIGE. Will that not add to the appropriation?

Mr. MADDEN. It is all provided for in this bill.

Mr. ROUSE. Will the gentleman state how many of these machines were turned over by the War Department to the Post Office Department?

Mr. MADDEN. I can not say how many, but I think about 1,400.

Mr. ROUSE. Is there anything in the hearings to indicate how many will be turned over?

Mr. MADDEN. Yes; the information is that 799 more will be turned over.

Mr. DOWELL. Mr. Chairman, will the gentleman yield?

Mr. MADDEN. I yield.

Mr. DOWELL. I want to inquire if the Post Office Department has made an effort to secure from the War Department the surplus automobiles and trucks that were purchased during the war and which are now of no use to the War Department?

Mr. MADDEN. A great many trucks have been turned over by the War Department to the Post Office Department. I have just given the number, and to the extent that the Postmaster General can secure that facility from the War Department he is doing it as rapidly as possible.

Mr. DOWELL. Now, does the gentleman know what per cent has been purchased from the War Department or assigned?

Mr. MADDEN. I can not answer that question.

Mr. DOWELL. Was not that investigation made by your committee?

Mr. MADDEN. No; we did not ascertain the percentage.

UMI

Mr. DOWELL. Is there any difference in the price in preparing these automobiles for service in the Postal Department and the purchase price of new vehicles from the factory?

Mr. MADDEN. Oh, yes; there would be, of course.

Mr. DOWELL. How much?

Mr. MADDEN. I think it costs an average of about $800 to fit out each machine received from the War Department.

Mr. DOWELL. Now, is there any reason why the Postal Department can not secure a sufficient number of vehicles from the War Department, of the surplus, to entirely fit out the Post Office Department for the delivery of mail?

Mr. MADDEN. We have a table here showing that the number of motor trucks that have been made available to the Post Office Department through receiving them from the War Department is 1,431 in use now——

Mr. DOWELL. And how many altogether are there in use?

Mr. MADDEN. And 799 more will be delivered.

Mr. DOWELL. How many altogether are there in use?

Mr. MADDEN. About 3,800.

Mr. DOWELL. Is there any reason why these automobiles that are now surplus in the War Department can not be used for this purpose?

Mr. MADDEN. Not a bit of a reason in the world.

Mr. DOWELL. Then why is the Post Office Department purchasing so many new machines from the factory when the gentleman says that it can be fitted up more cheaply in this way than by the purchase of new machines?

Mr. MADDEN. I am not, I regret to say, able to give the viewpoint of the department.

Mr. DOWELL. In making this appropriation should not the committee have determined whether or not the department could have done with less money? And if by taking these from the War Department it could have saved many millions of dollars, should not this committee have investigated this question and be able to say to the House what could be saved by this process?

Mr. MADDEN. This appropriation is not being made to buy machines. This appropriation is being made to operate machines.

Mr. DOWELL. As I understood the gentleman a moment ago, he stated that the department was casting off the horse vehicles and taking on the motor trucks.

Mr. MADDEN. I said the department was casting off horse-vehicle contract service and all-screen wagon contract service.

Mr. DOWELL. That means, if it means anything, that the department is taking on new machines.

Mr. MADDEN. Yes; that is what it means.

Mr. DOWELL. Then how does the department get these machines without an appropriation through this committee? That is why I am inquiring. The gentleman has just stated that this makes an appropriation for the purchase of new machines.

Mr. MADDEN. Here is the basis of the estimate for motor-vehicle service: "Estimated cost of expenditure by postmasters under allotments granted quarterly. This covers the purchases under local orders and garage equipment and embraces rent and heat, fuel, power, telephone service, tools, garage equipment, gasoline supplies, cleaning, and preservation."

Mr. DOWELL. I know, but what I am asking of the gentleman is——

Mr. MADDEN. I am answering the gentleman. The gentleman does not have to catechize me in such a way as prevents me from answering the question.

Mr. DOWELL. Mr. Chairman, I have asked a straight question, and I am trying to get some information, and I do not want the gentleman to read in my time another bill which has no application to this part. He can do that in his own time. What I want to know is what this means, on page 5, "for allowances."

Mr. MADDEN. The gentleman is asking the question in his own time. I will answer in my time.

Mr. DOWELL. If the gentleman does not desire to answer the question——

Mr. MADDEN. I think the gentleman is unfair. I am anxious to answer all questions.

Mr. DOWELL. If I am, I would like to have the gentleman explain it.

Mr. MADDEN. The gentleman refuses to allow me to do it in his time, as he says.

Mr. DOWELL. I asked the gentleman what it means here with reference to the item for vehicle allowance, the item recommended.

Mr. MADDEN. The gentleman refuses to let me answer. I am going to answer in my own way if I answer it.

Mr. DOWELL. I have no objection to the gentleman answering in his own way, but I want this definite question answered. I want to say further that if this means, as I apprehend it does mean, the purchase of automobiles or vehicles of this type for the purpose of carrying mail, and if the committee has not made a careful investigation of this subject with reference to the price that is paid for the reconstruction of the cars that are taken from the War Department and also the prices that are being paid to the manufacturer, then it seems that the committee should make a further investigation of this matter and give to this committee full information as to what is necessary for the purchase of these motors.

Mr. BLANTON. Mr. Chairman, a point of order.

The CHAIRMAN. The gentleman will state it.

Mr. BLANTON. For the benefit of the rest of us, we would like to have the gentleman repeat his question. We did not get it all. [Laughter.]

The CHAIRMAN. The point of order is overruled. [Laughter.]

Mr. DOWELL. Mr. Chairman, the gentleman from Illinois has not answered the question.

Mr. BLANTON. Mr. Chairman, I call the Chair's attention to the fact that the gentleman from Illinois [Mr. MADDEN] ought to answer the gentleman from Iowa aye or no. [Laughter.]

Mr. MADDEN. Is this a hypothetical question that the gentleman is asking?

Mr. DOWELL. I am trying to get information in response to my question. I think my question was a fair one, and I think $15,000,000 ought not to be voted away by the committee, without a full explanation. [Laughter.]

Mr. MADDEN. Now, is the gentleman through?

Mr. DOWELL. My time having been taken up by interruptions, I see the Chairman is about to state that my time has expired.

The CHAIRMAN. The time of the gentleman has expired.

Mr. MADDEN. Mr. Chairman, I will try to answer the gentleman's hypothetical question. I thought he was going to present a hypothetical question as they do where a man pleads insanity in a murder trial, and that he was like one of these expert doctors and was trying to muddle the thing up as much as he could, so that the witness would not understand what he was talking about.

Mr. DOWELL. I fear the gentleman understood me all too clearly.

Mr. GARD. Mr. Chairman, a point of order lies to the language used by the gentleman from Illinois to his colleague, in suggesting that he is insane. The language is unparliamentary. [Laughter.]

Mr. MADDEN. Now, if the gentleman will allow me——

Mr. BLANTON. I move that the House take a recess long enough to permit the gentleman from Iowa to compel the gentleman from Illinois to answer his question.

The CHAIRMAN. The gentleman's motion is clearly out of order. [Laughter.]

Mr. MADDEN. If the gentleman will just permit me for a few minutes, I will try to answer. I read from page 36 of the hearing:

Estimated cost of expenditures by postmasters under allotments granted quarterly: This covers purchases under local orders and embraces rent, light, fuel, water, telephone service, power, tools, garage equipment, gasoline, supplies for cleaning and preservation, repairs and accessories, material, supplies, and overhead charges, salaries (chauffeurs, garage men, mechanics, and office force), $12,043,835.39.

So far that does not include the purchase of any machines.

Increase in parcel post: Additional 5 per cent to cover anticipated increase in parcel post and other mails to be handled during the fiscal year 1922, $602,191.77.

That is expected to cost $602,191.77.

Expenditures under motor-vehicle orders or purchases made through the purchasing agent's office: This covers expenditures involving the purchase of tires, tubes, tire patches, tire rims and parts, rubber boots, soap, rags, sponges, skid chains, graphite, grease, oil, fire extinguishers, cotton waste, spark plugs, $750,000.

Then freight charges on Government bills of lading, $170,096.76.

Mr. DOWELL. Will the gentleman yield now for a question?

Mr. MADDEN. I shall be glad to yield, but let me answer the question. The gentleman has asked a long question. Let me answer it, please.

Freight charges on Government bills of lading in consequence of the shipment of the supplies enumerated, $170,096.76. Then there is the motor-vehicle maintenance plant at Elkridge, Md.; output estimated at nine truck bodies per week. That is where we build the bodies for the equipment received from the War Department. It is estimated that it will cost $288,288 for that.

Then traveling expenses of special agents, $4,000; and contract vehicle service, $4,500,000.

All this aggregates $18,358,411.92.

Now, there is nothing in here for the purchase of automobiles, and we believed that $15,000,000 would do the work, and that is what we report as the appropriation here.

Then there is another thing that helps to make up the cost. The act of June 5, 1920, classifying the postmasters and employees of the Postal Service and readjusting their salaries, provided that mechanics in charge of day tours shall be paid $1,900, $2,000, and $2,100 per annum. Mechanics in charge of afternoon and night tours had their salaries fixed and increased, and so on all the way down the line, and all these things are taken into consideration in making this appropriation. Now have I answered the gentleman's question?

Mr. CONNALLY. Mr. Chairman, I make the point of order that the gentleman from Iowa lives west of the Mississippi River and therefore has no right to ask the gentleman from Illinois any question. [Laughter.]

The CHAIRMAN. The Chair overrules the point of order. [Laughter.]

Mr. DOWELL. I want to read the paragraph here and to ask the gentleman what it means.

Mr. MADDEN. All right.

Mr. DOWELL. The gentleman has just stated that it is not for the purchase of automobiles or vehicles of that character. Now, what does this language mean—

And the purchase and exchange and maintenance?

What construction can the gentleman place on that language?

Mr. MADDEN. Of course, the gentleman must understand that when equipment is worn out there must be some means by which it can be replaced, and this provides for the exchange and purchase of equipment to meet the necessities of the service.

Mr. DOWELL. But the bill does not state that this is to supply or replace worn-out service, but it says it is for the purchase of automobiles, and any part of this sum under this language can be used for the purchase of automobiles.

Mr. MADDEN. If it can, I think it is a very salutary purpose, I am very happy to say.

The CHAIRMAN. The time of the gentleman has expired.

Mr. MADDEN. I think it is a service that is well worth while establishing. I think it is performing a very satisfactory function, and that the investment of the money that is appropriated in this bill is well spent when it is spent for this purpose.

The CHAIRMAN. Without objection, the pro forma amendment will be withdrawn.

Mr. BLANTON. Mr. Chairman, I offer the following substitute amendment which I send to the desk.

The Clerk read as follows:

Amendment by Mr. BLANTON: Page 5, line 9, after the word "rental," strike out the words "for a term not exceeding 10 years."

Mr. MADDEN. Mr. Chairman, I make the point of order against that.

Mr. BLANTON. This is merely to strike out certain language.

Mr. MADDEN. That would be a change of law.

Mr. BLANTON. I want to be heard on the point of order.

The CHAIRMAN. The Chair will hear the gentleman on the point of order.

Mr. BLANTON. The law does not provide that the Postmaster General shall enter into contracts to expend part of $15,000,000 for garages under 10-year leases. It merely authorizes him to lease buildings for carrying on his business.

Mr. MADDEN. Mr. Chairman, I withdraw the point of order.

Mr. GARD. Mr. Chairman, will the gentleman from Texas yield?

Mr. BLANTON. In just a moment. Mr. Chairman, I understand the gentleman from Illinois withdraws the point of order, and I ask for recognition upon the amendment.

The CHAIRMAN. The gentleman from Texas is recognized.

Mr. BLANTON. Mr. Chairman, this provides that of the $15,000,000 the Postmaster General can expend any part he wants to for making 10-year leases of garages to hold these cars. Of course, he should lease garages, but why should he lease them for 10-year periods? I believe every colleague of mine in this House will agree with me that right at this particular time rents are higher in the District of Columbia than they have been at any time during the war. I have lately leased a residence for the next year, and for a roof to cover the heads of my family and automobile have been forced to pay $131 a month, the house being unfurnished, I having to furnish it myself, to furnish my own gaslight and electric light and telephone and heat and everything else. Why should we permit by this clause in this bill the Postmaster General, when rents are higher than they have ever been known before, to lease garages for 10-year periods? I say that it is not good business; it is not good practical economy on the part of this House. If you strike out these words you still permit him to lease garages by the year.

I want gentlemen to look at the list of buildings leased by this Government in Washington, which I inserted in the RECORD two or three weeks ago, and they will see that there are some departments of the Government here in Washington that are paying as high as $1,000 a year for little old garages located in some back alley. It is outrageous; it is simply ridiculous; and it ought to be stopped.

Just a word now in response to the gentleman from Iowa [Mr. DOWELL]. I come from the Southwest and he comes from west of the Mississippi, and I think he is entitled to an answer to his question. I think the distinguished gentleman from Illinois [Mr. MADDEN] ought to show a man who comes from that section of the country sufficient consideration to answer his question. He wanted to know where the Post Office Department got its cars. I will tell him where it does not get them. It does not get them from that big bunch of passenger-carrying cars that the War Department has had down there at Kelley Field, near San Antonio, Tex., for two long years, without being moved, out in the weather, with practically nothing over them, all the time the people were ready and willing to buy them at reasonable cost. The War Department has held them there, and at many other places, for two years. I want to tell you something right now. One of two things is true. Either the War Department has had some kind of secret understanding and contract with automobile manufacturers of this country that they would not put all these cars on the market; that they would not flood the market with them when the war was over, or else they are of such mental caliber that they should be tried by this lunacy commission which was mentioned here a few moments ago in the running debate between the gentleman from Iowa [Mr. DOWELL] and the gentleman from Illinois [Mr. MADDEN]. One of those things must be true. They are either foolish because of the lack of sense or they have a contract with the automobile manufacturers that will not let them sell those cars, for no new cars have been sold to the public, only cars condemned by the War Department. I hope the gentleman from Illinois [Mr. MADDEN], who is not only a member of this appropriating committee but a member of the steering committee of this House, will take action soon to make the War Department jar loose from that proposition and put those cars on the market and let the people salvage something out of them. Thousands of them, scattered all over the world, have been wasted, junked, and ruined by the War Department. And I charge that it was done to protect the big automobile manufacturers of the country. On a number of occasions during the past two years I have called attention to this, but yet no action has been taken.

Mr. GARD. Mr. Chairman, I rise in opposition to the amendment of the gentleman from Texas. The amendment, as I understand it, strikes out the words "for a term not exceeding 10 years." It seems to me the amendment should not be adopted for this reason. The gentleman complains about giving authority to the Postmaster General to rent a garage for a term of years, whereas if he strikes this out it must be apparent even to the gentleman from Texas that he confers a much wider discretion upon the Postmaster General, because he then would permit him to lease quarters for the housing of Government-owned automobiles at a reasonable annual rental for a term not merely not exceeding 10 years but for a term of 20 or 30 or 40 years.

Mr. BLANTON. I should think that he would have more sense.

Mr. GARD. I am very glad to have the gentleman's idea of the capacity of the Postmaster General, but what I am trying to get to the minds of the committee and of the gentleman from Texas is that the amendment defeats its own purpose. Therefore I have risen to speak against it.

Mr. MADDEN. Mr. Chairman, I rise in opposition to the gentleman's amendment. I hope it will not prevail. It must be apparent that if the department has not the power to rent for at least a period of 10 years it will have difficulty in getting reasonable rentals, and experience shows that it can get a better rent basis on a 10-year lease than on a 5-year lease, and certainly much better than on a 1-year lease. I hope the amendment will not prevail.

Mr. DUNBAR. Mr. Chairman, will the gentleman yield?

Mr. MADDEN. Yes.

Mr. DUNBAR. When the Post Office Department rents the building for 5 or 10 or 20 years is it not a fact that the Government can at any time nullify the contract?

Mr. MADDEN. Yes; there is a cancellation clause in every lease.

Mr. DUNBAR. Therefore, there would be no advantage in striking out the clause respecting a 10-year period.

Mr. MADDEN. None at all.

The CHAIRMAN. The question is on agreeing to the amendment offered by the gentleman from Texas.

The amendment was rejected.

Mr. FESS. Mr. Chairman, I move to strike out the last word. I desire the attention of the gentleman from Illinois [Mr. MADDEN]. Under the construction of the word "purchase," would not the Post Office Department be permitted to purchase these automobiles from the War Department if the War Department has them for sale?

Mr. MADDEN. Yes; it would; and they are doing that.

Mr. FESS. Does the gentleman know anything about the statement made by the gentleman from Texas that there are so many automobiles lying out?

Mr. MADDEN. No; I regret to say that I do not; but the report shows that there are some 5,600 and odd automobiles altogether in the War Department to be delivered. That so far the Post Office Department has received 1,431, and that there are yet to be delivered to the Post Office Department under its allotment 799.

Mr. FESS. The gentleman would not think it wise, then, to eliminate under the law the purchases from the War Department?

Mr. MADDEN. No; I think it would not. I think it would be very unwise.

Mr. FESS. A great many of us have been impressed by these general statements about the number of automobiles purchased and sold by the War Department that seem to be going to waste.

Mr. MADDEN. In the meantime——

Mr. BLANTON. Will the gentleman permit me right there?

Mr. MADDEN. In the meantime the Post Office Service must go on, and if we are going to limit the thing to a condition where they can not transact the postal service if they do not do the other it will be embarrassing.

Mr. BLANTON. Will the gentleman yield?

Mr. FESS. I yield to my friend from Texas.

Mr. BLANTON. If the gentleman from Ohio would go to Kelley Field, near San Antonio, and see the number of automobiles out there in the weather and mud and have been so since the armistice, he would be astounded.

Mr. FESS. I am ready to confess that there have come to me very numerous statements not only in regard to the Kelley Field but other places, and it appears to be absolutely incredible. I do not see why the War Department permits such waste.

Mr. PARRISH. Will the gentleman yield?

Mr. FESS. I will.

Mr. PARRISH. I will state in line with the suggestions that have just been made I had occasion in October of this last year to go through Fort Sill, in Oklahoma, and I saw dozens and dozens of big, fine trucks simply rusting out in the weather there, with no pretense to use them and no pretense, with the exception probably of an occasional canvass, to cover them, but they were there in the weather simply rotting out.

Mr. FESS. What is the gentleman's explanation that such is permitted by the War Department?

Mr. PARRISH. I think it is just negligence and failure to take care of public business by the department responsible for it.

Mr. TINCHER. Will the gentleman yield?

Mr. FESS. I yield to the gentleman from Kansas.

Mr. TINCHER. Does the gentleman know, according to the official investigation report, which is an official document, that we took far more automobiles back on the transports that brought the boys home from France after the signing of the armistice and junked them than there are now wasting in the United States in these cantonments?

Mr. FESS. I did not know that.

Mr. TINCHER. If the gentleman would just read the Johnson report, which is authentic, he would be startled to know what few automobiles there are wasting throughout these different cantonments.

Mr. FESS. Can the gentleman from Kansas give any explanation of why in the first place the War Department permits this; and if they permit it, why the Congress does not take some action to correct it?

Mr. TINCHER. Congress has taken action. Congress passed a resolution ordering the sale. I spent three months last summer explaining to the people that there is no explanation for this unwarranted maladministration of public affairs.

Mr. DOWELL. Will the gentleman yield for a question?

Mr. FESS. I will yield to my friend from Iowa.

Mr. DOWELL. If the gentleman has read the report that the investigating committee made, and if it be true, as stated by the gentleman from Kansas, is it not up to the chairman of the committee to investigate this question and find out what is in the department and see to it that the War Department turns over to this department these vehicles?

Mr. FESS. I am of the opinion it is the business of the Congress, if the War Department does not do it, rather than any particular committee or chairman of a committee, to take action for summary proceedings if we know how to do it.

Mr. GARD. Will the gentleman yield?

Mr. FESS. I will.

Mr. GARD. Does the gentleman know that the subcommittee, of which the gentleman from Nebraska [Mr. REAVIS] was chairman, investigated the matter of automobiles in the western posts and described them as being trucks which had been disabled and found they were disabled and useless trucks which were now out in the condition described by these gentlemen here?

Mr. FESS. I understand that it was the frequent practice when an automobile had been used once that it was found in a condition of disuse under the term "disabled."

Several gentlemen rose.

The CHAIRMAN. To whom does the gentleman yield?

Mr. FESS. I yield the floor.

Mr. DONOVAN. Mr. Chairman, I move to strike out the last word. Mr. Chairman, I was a minority member of the committee which investigated the automobile proposition. We started out, and it was reported to me that the condition which you gentlemen now describe prevailed throughout the country, and that the condition was disgraceful. I frankly said to my colleagues on the committee that if the evidence bore out that statement I, of course, would subscribe with them to immediate action of a drastic character. I was informed that at Camp Holabird, in Baltimore, there was a great field of machines that should be put on the market for sale. It was also stated that Dodge machines could be bought for $100 or $200. We went to Holabird and there we found, as the report will disclose, that the War Department had taken all machines and classified them. There was, to be sure, what I termed an isolation ward over there of all these machines which were absolutely useless. Critical reference has constantly been made to it, but the explanation as to their being declared useless has frequently been omitted. Holabird was the clearing house for the country, and those machines were brought there from all parts of the country. The parts of the machines which could be salved, such as batteries, magnetos, and so forth, were taken off, carefully stored or attached to other machines. The rest of them were gone over in this particular encampment and stored, some under cover and some in the open. The other machines, such as the trucks which are spoken of, were in some instances under cover; in all instances where they were not they were jacked up from the ground, tires taken off, the mechanical parts, such as differentials, were slushed in grease and were well taken care of, and inspection by officers of the Motor Corps was regularly made. It was testified that a truck in its operation is frequently 12 to 20 hours out in all sorts of weather.

The bodies of these trucks were removed from the chassis. The differentials and sensitive mechanical parts were encased. The War Department had classified all passenger cars, motor cycles, and trucks as standard and nonstandard. I recall the Cadillac, the Dodge, and many others were so classified. The War Department, as I further recall, by certain legislation was to allocate or distribute these standard cars and trucks to the several departments, among which were the Post Office and Agricultural Departments. Owing to a conflict at that time as to the interpretation of the law, the judge advocate in the War Department rendered one opinion and the solicitor of the Agricultural Department another, which caused delay, until the Attorney General rendered his opinion, when there was a distribution of these trucks and cars and the remaining nonstandard usable trucks and cars were offered at public auction.

Now, so far as the selling of passenger cars was concerned, I myself was interested on behalf of inquiring constituents to know if a good touring car could be bought at a reasonable figure. As to the declared nonstandard cars, as a matter of fact, the Government was asking prohibitive prices for passenger cars that you or I or anyone else could go into the market in this country and do much better in the buying of them than we could in buying any of these cars. They had for the Hudson car, as I remember, an upstanding price of $1,200 minimum, and half of the amount had to be paid at the time the bid was accepted, the balance within 48 hours, when the car had to be taken possession of by purchaser. I want to say frankly as to the criticisms that have been laid against the Government and the War Department as to its dereliction in

the performance of its duty in regard to automobiles that it has, in my opinion, been most unjust, unreasonable, and frequently made without any regard to the facts.

Mr. IGOE. The gentleman's committee made a very exhaustive investigation. What legislation did it recommend to Congress?

Mr. DONOVAN. There was a majority and a minority report. We made no suggestion other than hoping and urging that this conflict that existed by reason of the legal interpretation of these several departments would be wiped out and the distribution of what was called the standard trucks and cars would go to the several departments.

In the city of New York the underground pneumatic tube was abandoned, as you recall. That alone was going to take a great many of these cars and trucks for the distribution of the mail, but they were held up because of this conflict. I will be frank with you by saying since we have filed the report, although I have not followed it up closely so as to talk intelligently on this subject, I assumed after that decision was rendered a distribution of these cars and trucks to the Agriculture Department, to the highway departments of the various States, as well as to the Post Office and Public Health Departments, that everything was peaceful and lovely until I just heard this matter referred to and the discussion which the reference has provoked.

Mr. RAMSEYER. Did the gentleman's committee investigate the field down there at San Antonio, Tex., referred to by the gentleman from Texas [Mr. BLANTON]?

Mr. DONOVAN. Our committee did not go there. We did go to Holabird, which is a sort of clearing house for the whole proposition, and we had, of course, from the War Department information pertaining to the other camps.

The CHAIRMAN. The time of the gentleman has expired.

Mr. BLANTON. Mr. Chairman, I ask unanimous consent that the time of the gentleman be extended one minute.

The CHAIRMAN. The gentleman from Texas asks unanimous consent that the time of the gentleman from New York be continued for one minute. Is there objection? [After a pause.] The Chair hears none.

Mr. BLANTON. Does not the gentleman from New York know that the only passenger cars which the War Department has sold to the public since the armistice are the cars which the War Department has condemned, and that the unused cars have not been sold? Now, I want to ask the gentleman if he can state to the Congress now that the War Department has not had some kind of secret understanding with the automobile manufacturers that after the war it would not place passenger-carrying cars on the market and flood the market with them?

Mr. DONOVAN. In reply to that question, my best answer is that the evidence disclosed there was no such understanding, as I recall it. There were at Holabird over 500 new Dodge cars, and there was a criticism made in regard to their standing out in the open, but when the investigation came it showed that these cars were confined in tongue-and-groove cases, that the machinery was slushed with the right ingredients, and that they were wrapped about with two thicknesses of tar paper within this tongue-and-groove casing.

The CHAIRMAN. The time of the gentleman from New York has again expired.

Mr. TINCHER. Mr. Chairman, I move to strike out the last three words. Mr. Chairman, I do not know just what bearing it has on the item in this bill, but there is not any mystery about the way the automobiles were handled by the War Department. I would not take the time of this committee to mention this except for the question of the gentleman from Missouri [Mr. IGOE] seeking to know whether the investigating committee had recommended any legislation. When the facts disclosed that the Secretary of War insisted on shipping 28,000 automobiles to France after the signing of the armistice and that report contains the letter from Dodge Bros. which disclosed why they were shipped there; when the committee did not ascertain those facts and did not have that information for nearly a year—it not being appointed for nearly a year after the transaction—what legislation could cure it? Now, the matter was taken up——

Mr. DONOVAN. Will the gentleman yield?

Mr. TINCHER. No; not now. The matter was taken up and considered quite fully by over 100,000,000 people in this country last November, and by a majority of something like 8,000,000 they denounced the conduct of the War Department more effectively than even my friend from Texas [Mr. BLANTON] can denounce it now.

I know my friend from Missouri is a great lawyer and a great lawmaker, and he would not approve of this. He has the same access to this report that was filed by the committee that any of the rest of us have. If there was some law that could do something to remedy that I would be glad to support it. Why, the evidence showed that they even destroyed those automobiles in France; that in digging around in the rubbish——

Mr. DONOVAN. Will the gentleman yield?

The CHAIRMAN. Has the gentleman from Kansas yielded to the gentleman from New York?

Mr. TINCHER. I have not. I do not know just how that pertains to this measure. I am waiting here until we read about half a page further on in this measure, and then I will take it up. The Johnson report was a public report, and it was filed in this House and was published and sent all over this country last fall. There is not any mystery as to why the transports carried automobiles back to France every month after the signing of the armistice up to the following May. There is not any mystery about that, because the Dodge Bros. letter to Newton D. Baker disclosed the reason for it.

Mr. CHINDBLOM. What was the reason?

Mr. TINCHER. They simply called attention to the fact that the department had to take these cars, and that they must not be put on the market. What power they had over Mr. Baker to make him do that no living man can be expected to tell you.

The CHAIRMAN. The time of the gentleman from Kansas has expired.

Mr. DONOVAN. Mr. Chairman, I ask to be permitted to proceed for three minutes in order to answer the question of the gentleman from Kansas.

The CHAIRMAN. The gentleman from New York asks unanimous consent to proceed out of order for three minutes. Is there objection?

There was no objection.

Mr. DONOVAN. Mr. Chairman, I will say to the gentleman from Kansas [Mr. TINCHER] that I think I am prepared to answer the inquiry that he has just propounded. The automobiles that were sent to France after the signing of the armistice were sent there for the army of occupation. When Gen. George W. Goethals was Quartermaster General of the Army, when Maj. Gen. Harbord was chief of the S. O. S., he cabled for these cars in great volume. Gen. Goethals cabled back and asked if it was positively necessary that these cars should be shipped, and Gen. Harbord replied yes. Then Gen. Goethals again cabled if it was necessary to send the total amount requisitioned and Gen. Harbord again cabled that they were most urgently needed. These statements are in the hearings had before our committee and were testified to by Maj. Gen. Burr, and the copies of the cablegrams as well. There is nothing in those hearings that refers to any letter such as the gentleman from Kansas [Mr. TINCHER] refers to.

Mr. DOWELL. Mr. Chairman, will the gentleman yield?

The CHAIRMAN. Does the gentleman from New York yield to the gentleman from Iowa?

Mr. DONOVAN. In a moment. We, the subcommittee, thought it was unusual and quite out of the ordinary to ship trucks and cars to Europe after the signing of the armistice, but when we learned—this at least is my opinion—when we learned that a man of the type of Gen. Goethals, who first of all is an American, a great general, and a strong man, and whose integrity has never been questioned, with his care, with his scrutiny, and his thoughtfulness for his country, its finances, and its administration, took such great interest and care and forethought as he did in this instance; it seems to me the criticism in the indictment that was laid throughout the country by irresponsible and misinformed people was ill-founded, and I should think that their disregard for the necessities and conveniences that were demanded for our army of occupation over yonder that they would be ashamed of the despicable effort to not only harass the War Department but impeach the integrity of creditable men like Goethals and Harbord. So the committee was satisfied with their answer and explanation. [Applause.]

Mr. DOWELL. Now will the gentleman yield?

Mr. DONOVAN. I yield.

Mr. DOWELL. The question that was asked—and I want to follow that with another question—was what became of the automobiles that the gentleman described a few moments ago as having been so carefully packed and preserved?

The CHAIRMAN. The time of the gentleman from New York has expired.

Mr. DOWELL. I ask unanimous consent that the time of the gentleman from New York may be extended one minute.

The CHAIRMAN. Is there objection to the gentleman's request?

There was no objection.

Mr. DONOVAN. Those cars were of the standard type that were to be allocated to the several departments, and I assume that, consistent with that decision, they have been distributed to the several departments.

Mr. DOWELL. The gentleman does not know, except upon his assumption?

Mr. DONOVAN. I know it was in evidence that the Dodge cars and the Cadillacs and one or two of the Mack truck type and others were of the kind that were not to be disposed of to the public for sale.

Mr. DOWELL. I want to ask the gentleman this question: When he knew the standing of the gentleman at the head of this department he became finally satisfied with reference to everything going on in the department, and took it for granted that it required no further investigation, so far as he was concerned?

Mr. DONOVAN. That is true, so far as Gen. Goethals is concerned, and I stand absolutely on that statement.

The CHAIRMAN. The time of the gentleman from New York has again expired.

Mr. SUMMERS of Washington. Mr. Chairman, I move to strike out the paragraph.

The CHAIRMAN. The gentleman from Washington moves to strike out the paragraph.

Mr. SUMMERS of Washington. Mr. Chairman, the gentleman from Kansas [Mr. TINCHER] did well to say that the 105,000,000 people of this country had passed upon the management of the War Department, and I believe it is now time for the Congress of the United States to take action in accordance with the action of the people. I am reasonably certain, as I think every other Member of this House is, that there are hundreds, perhaps thousands, of usable automobiles and trucks still held by the War Department, and I am opposed to the purchase of new automobiles for any department of the Government until those are utilized that are owned by the Government of the United States and standing out in the weather falling into decay. I think it is time for this Congress to take action, and the committees reporting out bills, it seems to me, should make it possible for us to take action along this particular line.

Mr. JOHNSON of Mississippi. Mr. Chairman, will the gentleman yield?

Mr. SUMMERS of Washington. Yes.

Mr. JOHNSON of Mississippi. This is all water that has passed over the wheel—what you are talking about now. As I understand, to-day the General Staff is before the Committee on Appropriations asking for $9,000,000 of appropriations to feed 20,000 horses for the next year. If that appropriation is allowed there will be a waste of at least $5,000,000, according to the figures prepared by certain reputable gentlemen. I think Congress ought to take action to stop some of the waste, instead of complaining about what has been wasted heretofore.

Mr. SUMMERS of Washington. I quite agree with the gentleman as to the future, but let us also take care of what we have already on hand and salvage it. There can be no excuse or reason for purchasing new automobiles for any department while hundreds of automobiles of the War Department are going to decay.

Mr. NEWTON of Minnesota. Mr. Chairman, I ask unanimous consent to extend and revise in the RECORD the remarks I made some moments ago.

The CHAIRMAN. The gentleman from Minnesota asks unanimous consent to revise and extend in the RECORD the remarks he recently made. Is there objection?

There was no objection.

Mr. WHITE of Kansas. Mr. Chairman, I move to strike out the last word.

The CHAIRMAN. The gentleman from Kansas moves to strike out the last word.

Mr. MADDEN. Mr. Chairman, I ask unanimous consent that all debate on this paragraph and all amendments thereto close in five minutes.

The CHAIRMAN. The gentleman from Illinois asks unanimous consent that all debate on this paragraph and all amendments thereto close in five minutes. Is there objection?

There was no objection.

Mr. CHINDBLOM. Mr. Chairman, a parliamentary inquiry.

The CHAIRMAN. The gentleman will state it.

Mr. CHINDBLOM. What became of the motion to strike out the paragraph?

The CHAIRMAN. That was defeated, as the Chair understands. The gentleman from Kansas [Mr. WHITE] is recognized for five minutes.

Mr. CHINDBLOM. I asked what became of the motion to strike out the paragraph?

The CHAIRMAN. The Chair misunderstood the gentleman's question. The motion is pending, and the gentleman from Kansas [Mr. WHITE] is recognized in opposition to it.

Mr. WHITE of Kansas. Will the chairman of the committee allow me to ask him a question?

Mr. MADDEN. Certainly.

Mr. WHITE of Kansas. Is the gentleman able to state whether it is the policy of the Post Office Department to secure automobiles and trucks from the War Department rather than to buy new vehicles?

Mr. MADDEN. Under the law directing the Secretary of War to turn over these automobiles to the other departments, the allotment to which the Post Office Department is entitled has already been made, and out of that allotment 1,431 cars have been delivered and there are 799 cars yet to be delivered under the allotment, and they are being delivered as rapidly as possible.

Mr. WHITE of Kansas. But is it the policy of the Post Office Department to secure these automobiles from the War Department?

Mr. MADDEN. In preference to anything else, yes; just as fast as they can get them.

The CHAIRMAN. The question is on the motion of the gentleman from Washington [Mr. SUMMERS] to strike out the paragraph.

The question being taken, the motion was rejected.

The Clerk read as follows:

For car fare and bicycle allowance, $1,100,000.

Mr. DOWELL. Mr. Chairman, I move to strike out the last word. I desire to inquire of the chairman of the committee with reference to this bicycle allowance. Is that for ordinary bicycles or for motor cycles?

Mr. MADDEN. This is the car fare and bicycle allowance—$1,100,000.

Mr. DOWELL. Is that an allowance for ordinary bicycles?

Mr. MADDEN. It includes car fare for all the letter carriers, and the increase in the appropriation is due to the increase in car fare. In some places we employ bicycles for the letter carriers.

Mr. DOWELL. Are these ordinary bicycles or are they motor cycles?

Mr. MADDEN. Bicycles and motor cycles.

Mr. DOWELL. Is there not a great supply of motor cycles now in the War Department that are of no use to that department, and has the Committee on Appropriations made any investigation with reference to whether or not any of those have been turned over to the Post Office Department?

Mr. MADDEN. This is an allowance for the use of bicycles owned by the carriers.

Mr. MANN of Illinois. This is not for the purchase of bicycles. This is an allowance made to men who furnish their own bicycles.

Mr. DOWELL. With that understanding, the question is answered.

Mr. MADDEN. These are equivalent to car fares.

Mr. DOWELL. The question is answered.

Mr. GARD. I move to strike out the last word, for the purpose of asking about the appropriation for the pay of special-delivery messengers. I notice that the appropriation this year is $6,000,000, and for the last year it was $5,000,000, which would indicate a very substantial increase in the volume of special-delivery messages. I remember also—probably not as accurately as the gentleman from Illinois [Mr. MADDEN] can express it—that there was some change in the law adopted at the suggestion of the commission of which the gentleman is a member, which provided that instead of employing boys men should be employed, substitute mail carriers preferred, whenever opportunity offered for their employment in the delivery of special-delivery messages. Since there is a special stamp sold for use on special-delivery mail, I wish to ask what amount of revenue is received from the special-delivery mail in the United States?

Mr. MADDEN. Each special-delivery messenger is paid 8 cents for the delivery of a letter.

Mr. GARD. I know; and the stamp is 10 cents. The inquiry I make is how much money is realized from the sale of special-delivery stamps?

Mr. MADDEN. It is considerably more than the amount of the appropriation, but I do not know exactly how much more.

Mr. GARD. I thought the gentleman with his usual accuracy for figures could tell me the amount.

Mr. MADDEN. I can not. During the year 1920 the appropriation of $5,000,000 was expended, and in addition to that there is a deficiency of $505,454, so that as a matter of fact the total appropriation for the current fiscal year should be

$5,505,454. The volume of the business has grown to such an extent that all the information in the possession of the committee led to the conclusion that we should appropriate at least $6,000,000. This branch of the service is more than self-sustaining and is a profitable part of the Postal Service. There is no expense attached to it.

Mr. GARD. The inquiry I sought to make was as to what was the net profit from special-delivery messages. The messenger is paid 8 cents, as I understand.

Mr. MADDEN. Yes.

Mr. GARD. There still remain 2 cents in addition to the regular 2-cent postage. My inquiry was as to the amount of net profit.

Mr. MADDEN. There is no record in the Post Office Department that will indicate that. It is not segregated to show what the profit is.

Mr. GARD. With a special-delivery stamp selling at 10 cents, I did not know, and therefore made the inquiry, as to whether there was any record of the amount of money received from the sale of special-delivery stamps.

Mr. MADDEN. There is not.

Mr. DUNBAR. May I ask the chairman of the committee if it is necessary to put a special-delivery stamp on a special-delivery letter?

Mr. MADDEN. No; you can put on 10 cents' worth of stamps and then write on the letter the words "Special delivery."

Mr. DUNBAR. Then there would be absolutely no way to determine the amount received from the sale of such stamps.

Mr. MADDEN. There is no way, except that we know that the first-class mail is more than self-sustaining and the special-delivery service is more than self-sustaining.

Mr. BLANTON. If the gentleman will permit me, there is a way of finding out exactly.

The CHAIRMAN. Does the gentleman from Ohio yield to the gentleman from Texas?

Mr. GARD. Yes.

Mr. BLANTON. I so understood or I would not have proceeded. There is a very simply way to ascertain, by adding 20 per cent to the full amount that the Post Office Department pays out for these messengers. By obtaining that, you have the exact revenue that the Government derives from the special delivery service. Is not that so?

Mr. MADDEN. I suppose that would tell the story.

The CHAIRMAN. Without objection, the pro forma amendment will be withdrawn, and the Clerk will read.

The Clerk read as follows:

OFFICE OF THE SECOND ASSISTANT POSTMASTER GENERAL.

For inland transportation by star routes in Alaska, $230,000: *Provided*, That out of this appropriation the Postmaster General is authorized to provide difficult or emergency mail service in Alaska, including the establishment and equipment of relay stations, in such manner as he may think advisable, without advertising therefor.

Mr. SCHALL. Mr. Chairman, I ask unanimous consent to extend my remarks in the RECORD.

The CHAIRMAN. The gentleman from Minnesota asks unanimous consent to extend his remarks in the RECORD. Is there objection?

There was no objection.

Mr. JEFFERIS. Mr. Chairman, I move to strike out the last two words for the purpose of discussing a succeeding proposition contained in this bill. I wish at this time to draw the attention of the committee to the proposed appropriation of $1,250,000 for the air mail service. As I understand it, there is a disposition to raise a point of order against the item. Whether or not that point will be well taken I do not undertake to say. The gentleman from Illinois [Mr. MADDEN] yesterday referred to the Post Office Department as the nerve center of the United States. If that be true, then any progressive invention or achievement on the part of the people should be encouraged for the purpose of advancing the mail service and thereby bringing the whole of the United States into closer relation from one end of the country to the other.

What is the fact in regard to the air mail service? It is not propaganda in favor of it that is being put forth, as I understand it, but an earnest desire is being expressed by the business men of the great commercial centers of the United States. If you will refer to the report of the Postmaster General you will find that different cities of the country are raising, or have raised, through subscription, large sums of money for the purpose of furnishing to the postal authorities landing fields and hangars for the operation of these air mail planes. In the city of Omaha the report says that the commercial interests there have cooperated splendidly with the air mail service by furnishing a large air mail field and perhaps the largest civilian hangar in the United States. It further says that the citizens of St. Louis have created at Forest Park a large public airdrome or hangar for the exclusive use of the mail service. It goes on to refer to citizens of North Platte, Nebr.; Cheyenne; Rock Springs, Wyo; Salt Lake City, Utah; Reno, Nev.; and San Francisco, Calif., who have laid out large public landing fields and have erected thereon for the exclusive use of the air mail service extensive hangars.

The CHAIRMAN. The time of the gentleman from Nebraska has expired.

Mr. JEFFERIS. Mr. Chairman, I ask unanimous consent for five minutes more.

The CHAIRMAN. Is there objection?

There was no objection.

Mr. JEFFERIS. I take it because of those activities on the part of business men that there is a well-settled conviction that the air mail service will greatly expedite the advancement of mail from the extremes of this country, from ocean to ocean, with side lines extending to other cities in other parts of the country. I realize that the opposition to this is upon the ground that the air mail service is expensive; that it is in excess of what the Government pays for the transportation of mail by railroad trains. I grant that. It is expensive as compared to that, but I maintain, on the other hand, that to utilize this service for the mail is in the interest of economy. Why?

Everybody here seems to be in favor of developing the air mail service, but they want to centralize it in the War Department or the Navy Department or in some other department. In other words, they would have the Government place all of its eggs under one hen. If it is placed in the War Department, and we spend millions and millions of dollars for experimentation on different fields, what advantage will be gained by the people? What useful purpose will be served outside of the War Department in the preparation for war? Whereas a part of the money that is expected to be spent to carry on this development, if spent in the Post Office Department, will render some service to the commercial interests of the country and at the same time bring about a development in invention, and so forth, and experience gained. The way I look at it, instead of centralizing this in one department—the War or the Navy Department—it would be wise to spend whatever millions we are going to spend in different departments, and thus gain the interest, activity, and ingenuity of all of the departments and all of the men connected therewith. Take this trip just made under the Navy Department the other day of some men into northern Canada, who have been lost. That gives us really no benefit from a commercial standpoint. It does not help anything. It is just an experiment, probably a foolhardy thing, but the carrying of mail to the amount of 64,000 letters during the last year across this continent from San Francisco to New York, bringing about a saving of 24 hours of time, and bringing California from a business standpoint just 24 hours closer to New York, is something of real benefit to the commercial interests of the country, and at the same time that we were getting that benefit from a commercial standpoint we were getting the experience of all of the atmospheric conditions from one end of the country to the other in flying machines.

I hope in the interest of progress in the future, if we are going to spend millions in any department of the Government for aeroplanes, that no one will make points of order against this proposition, but will permit it to be retained in the bill.

Mr. TINCHER. Mr. Chairman, I rise in opposition to the pro forma amendment. In reply to the gentleman who just left the floor, I expect to make the point of order against the appropriation that he mentioned. The proposition of carrying mail by aeroplane has been tried, and if this Government has the right to pronounce an experiment a failure in any case, we not only have that right in this matter but we have that duty to perform. The proposition of carrying mail by aeroplane is a failure from the standpoint of efficiency in the service and from the standpoint of economy. The best friends of that proposition now rely upon the argument that carrying mail by aeroplane will train some boys and be a benefit in the military way to this Nation. It was upon that argument that the item, without a vote, was left in the appropriation bill last year. It went out on a point of order in the House and was put on again in the Senate and by the conferees, but without any separate vote. Under the rules of the House now, I understand that will not be possible, and this year we will vote directly as to whether we mean what we say when we say that we are going to stop duplication, and that we are not going to train soldiers in the Postal Department, or in the Agricultural Department, or in the Naval Department, but in the War Department. There is really more excuse for the aeroplane service in the Agricultural Department than in the Post Office Department, because it has not been proven a failure in the Agricultural Department and it has been proven a failure in the Post Office Department.

Mr. MANN of Illinois. We might get fresh eggs in the city in that way, the gentleman thinks.

Mr. TINCHER. Yes; and, according to the chairman of this subcommittee, it has been proven a failure in the Post Office Department. I am not going to criticize the chairman of the subcommittee for putting this legislation in the bill, although I do hope that under our new rule, which gives one great committee the power to appropriate money, there will not be a disposition to legislate very much.

I voted conscientiously for the new rule, thinking legislative committees should not appropriate, and I am just as firm in my belief that the Appropriations Committee should not legislate.

The CHAIRMAN. Without objection, the pro forma amendment is withdrawn, and the Clerk will read.

The Clerk read as follows:

For inland transportation by railroad routes, $96,000,000: *Provided*, That not to exceed $1,500,000 of this appropriation may be expended for pay of freight and incidental charges for the transportation of mails conveyed under special arrangement in freight trains or otherwise: *Provided further*, That the Postmaster General may contract with any individual, firm, or corporation for an aeroplane mail service between such points as he may deem advisable and designate, in case such service is furnished at a cost not greater than the cost of the same service by rail, and shall pay therefor out of the appropriation for inland transportation by railroad routes.

Mr. TINCHER. Mr. Chairman, I make the point of order against lines 10, 11, 12, 13, 14, 15, and 16.

Mr. MADDEN. Mr. Chairman, I concede the point of order.

The CHAIRMAN. The point of order is sustained.

Mr. EVANS of Nebraska. Mr. Chairman, I move to strike out the last words for the purpose of asking the chairman a question. Referring now to the last words in line 9, "or otherwise," will it not be possible for the Postmaster General under the authority there given to institute an aeroplane mail service?

Mr. MADDEN. It would not be possible for him to do that.

Mr. EVANS of Nebraska. Not under the words "or otherwise"?

Mr. MADDEN. Freight trains, express trains, and passenger trains, that is really what it means.

Mr. EVANS of Nebraska. But it does not say so.

Mr. MADDEN. That is the language that has been carried for years, and that is the way it has been exercised.

Mr. RAMSEYER. Line 5 says that it is limited to railroad routes.

Mr. MADDEN. This has been carried for years and there has been no abuse of it.

The CHAIRMAN. Without objection, the pro forma amendment is withdrawn, and the Clerk will read.

The Clerk read as follows:

For the operation and maintenance of aeroplane mail service between such points as may be designated by the Postmaster General, including necessary incidental expenses and employment of necessary personnel, $1,250,000.

Mr. TINCHER. Mr. Chairman, I make the point of order against the paragraph.

Mr. MADDEN. Mr. Chairman, I concede the point of order.

Mr. JEFFERIS. Is that within the power of the Chairman, just to concede it?

The CHAIRMAN. The Chair will hear the gentleman from Nebraska on the point of order.

Mr. JEFFERIS. Mr. Chairman, last year a certain mail route was established by the appropriation bill of a year ago. Now the people along that line, cities along that line, have established at great expense and have provided these landing fields and hangars. The service is established. It has been fairly successful. It was known that it would be more expensive than railroad transportation when the law was enacted a year ago. It seems to me we are not dealing fairly with the people who have gone into this matter and spent their money and now realize, after a year's experience, that the money they expended for the purchase of fields, hangars, and so forth, is for all practical purposes wasted. Now, these fields and hangars would be a great benefit for this country from the standpoint of war in addition to the commercial benefits now being received from this mail service. These fields and hangars will be ready at any time in case of war for the landing of our airmen, for the repair of their machines, and for Congress at this time on a point of order, rather than to meet with direct vote the question as to whether or not the air mail service will be maintained, seems to me to be unfair to the Congress and unfair to the people.

Mr. MANN of Illinois. Mr. Chairman, as I recall this item was stricken out of the bill on a point of order last year, and I do not recall the decision or the argument upon the question. I just want to make this suggestion: This service is now in the Post Office Department. It is an existing service. I apprehend that a great deal of the Postal Service service is continued by appropriations as existing service on the ground that it is not subject to a point of order that there is no express authorization of law for it. Whether the ruling will permit the application of that proposition to the Post Office Department I do not know. Of course, that is the invariable ruling connected with the Navy Department; that is the ruling largely in some cases, at least, connected with the military department, the Army. The service in the Army which has been created by authority of appropriation may be continued by appropriation.

Mr. BLANTON. Will the gentleman yield?

Mr. MANN of Illinois. Certainly.

Mr. BLANTON. Suppose the Postmaster General should see fit during this present year to put in a telegraph or telephone service in connection with his letter and parcel-post service and should create a deficiency which Congress should by appropriating money cover in an appropriation bill. Would that be such a service unauthorized by law that would be good against a point of order on an appropriation bill?

Mr. MANN of Illinois. If the Congress appropriates for a telegraph service in the Post Office Department and it was established, I do not feel at all confident that appropriations for that purpose could be stricken out on a point of order, it being an established service. I only make the suggestion so it will receive consideration by the Chair. I confess I have not examined either the decision of last year, and I do not recall it, or the decisions upon that point. I think very much of the service, such as inland transportation by steamboat or by power boat, which is the item just read, is a service that is continued because it is in existence and has been created under appropriations of Congress.

Mr. EVANS of Nebraska. Will the gentleman yield?

Mr. MANN of Illinois. I will.

Mr. EVANS of Nebraska. Does not the gentleman think that the point of order is in effect well taken?

Mr. MANN of Illinois. Well, I am not very lucid, evidently. I am trying to argue the proposition to the Chair, and I am glad the gentleman from Nebraska is not in the Chair, because clearly he does not understand the point I am making.

The CHAIRMAN. The Chair is listening to the gentleman. Does the gentleman from Kansas desire to be heard?

Mr. TINCHER. Mr. Chairman, I simply want to call the attention of the Chairman to the fact that the statute authorizing the carrying of mail on post roads, section 3965, does not mention carrying mail through the air, so there is no authority upon the statute for carrying mail in this manner. The only legislation upon the subject was the act of 1917 when there was a law passed authorizing the expenditure of $100,000 in the experiment of carrying mail by aeroplane. A very learned and distinguished chairman of this committee went into the subject quite fully, and I am quite sure the present chairman was on the floor at that time and is more familiar with the argument than I am, being a new Member of this body, but it is clear to my mind that it is an attempt to appropriate money for the Postmaster General to spend in a way not authorized by any existing law at this time.

The CHAIRMAN. The Chair is ready to rule.

Mr. JEFFERIS. Mr. Chairman, I would like to have just a word. The gentleman from Kansas [Mr. TINCHER] just said that there is no authorization for carrying mail by air mail planes now in existence; that there is no permanent law for so doing is, as I understand, his position. Now, what is the function of the Postmaster General's office and of the Post Office Department? The function is to carry and expedite the advancement of mail, as I take it, and the function of the Post Office Department can not be that it shall be carried in any particular manner or form unless the law providing therefor has excluded all other manners and methods. In other words, I take it, there must be a large discretion given to the Postmaster General, especially when we consider that Congress has in years past, and especially in the last year, not only provided money for carrying the mail by aeroplane but also provided and pointed out the particular route upon which it should be carried. Now, as suggested by the gentleman from Illinois [Mr. MANN], the department itself, with the sanction and approval of Congress, which a year ago established this service along particular routes, has gone to work and expended the money that was appropriated then for carrying out the purpose of Congress, and it would seem to me that under those conditions a point of order should not be sustained and this item go out. Otherwise Congress could take and provide the manner and method and in what kind of sack or box mail was to be carried from one point to another. Surely no one would claim that Congress should go to that extent. So we have in the air mail service an established service. Money has been expended out of the Public Treasury and by people along the

routes. Consequently to now undertake by any stretch of parliamentary usage to exclude this item is to reverse the decision of Congress of a year ago and do away with an established service, which I think would be detrimental and injurious to the progressive advancement of this country in mail service.

The CHAIRMAN. The Chair is ready to rule. This paragraph under consideration, commencing in line 20 and ending in line 23, gives the Postmaster General authority to go beyond existing work in progress. Therefore, in the judgment of the Chair it is merely a legislative provision, and the point of order raised by the gentleman from Kansas [Mr. TINCHER] is sustained.

The Clerk read as follows:

Railway Mail Service: For 15 division superintendents, at $4,200 each; 2 assistant superintendents, at $3,100 each; 15 assistant division superintendents, at $3,200 each; assistant superintendent in charge of car construction, $3,000; 121 chief clerks, at $3,000 each; 121 assistant chief clerks, at $2,500 each; 60 clerks in charge of sections in the offices of division superintendents, at $2,500 each; 4,495 clerks, grade 6, at $2,300 each; 7,623 clerks, grade 5, at $2,150 each; 3,750 clerks, grade 4, at $2,000 each; 1,618 clerks, grade 3, at $1,850 each; 716 clerks, grade 2, at $1,700 each; 3,449 clerks, grade 1, at $1,600 each; 181 laborers, grade 1, at $1,450 each; 43 laborers, grade 1, at $1,350 each; 13 joint employees, grade 1, at not exceeding $300 each; in all, $45,000,000; and the appointment and assignment of clerks hereunder shall be so made during the fiscal year as not to involve a greater aggregate expenditure than this sum; and to enable the Postmaster General to reclassify the salaries of railway postal clerks and make necessary appointments and promotions he may exceed the number of clerks in such of the grades as may be necessary.

Mr. HUDSPETH and Mr. MADDEN rose.

The CHAIRMAN. The gentleman from Illinois [Mr. MADDEN] is recognized.

Mr. MADDEN. Mr. Chairman, I desire to offer an amendment, to strike out the word "one," in line 15, page 7, and substitute the word "two."

The CHAIRMAN. The gentleman from Illinois offers an amendment, which the Clerk will report.

The Clerk read as follows:

Amendment offered by Mr. MADDEN: Page 7, line 15, after the word "grade," strike out the word "one" and insert in lieu thereof the word "two."

The CHAIRMAN. The question is on the amendment offered by the gentleman from Illinois.

The amendment was agreed to.

Mr. HUDSPETH. Mr. Chairman, I desire to offer an amendment, on page 7, line 14, by striking out the figures "$1,600" and inserting "$1,650."

Mr. MADDEN. I make a point of order against that, Mr. Chairman.

The CHAIRMAN. The Clerk will report the amendment.

The Clerk read as follows:

Amendment offered by Mr. HUDSPETH: Page 7, line 14, strike out the figures "$1,600" and insert in lieu thereof the figures "$1,650."

Mr. MADDEN. Mr. Chairman, I make a point of order against the amendment. The law fixes the compensation at $1,600, and the amendment would change the law. Under this bill we would have no right to do that.

The CHAIRMAN. The point of order is sustained. The Clerk will read.

The Clerk read as follows:

For rent, light, heat, fuel, telegraph, miscellaneous and office expenses, schedules of mail trains, telephone service, and badges for railway postal clerks, including rental of offices for division headquarters, and chief clerk, Railway Mail Service, in Washington, D. C., and rental of space for terminal railway post offices for the distribution of mails when the furnishing of space for such distribution can not under the Postal Laws and Regulations properly be required of railroad companies without additional compensation, and for equipment and miscellaneous items necessary and incidental to terminal railway post offices, $1,032,156.

Mr. DOWELL. Mr. Chairman, I move to strike out the last word. I notice a reference here in this paragraph to expenditures which I take it would be paid by the railroad company—items of expense of railroad companies. Is this a reimbursement or an advance to the company with reference to that?

Mr. MADDEN. This is for light, heat, fuel, telegraph service, and office expenses, schedules of mail trains, telephone service, badges of railway postal clerks, and so forth, in terminal stations.

Mr. DOWELL. I understand that. But in the railway transportation?

Mr. MADDEN. Inland transportation of mail by electric trains.

Mr. DOWELL. Yes.

Mr. MADDEN. That is mail that is hauled by electric railways, interurban railroads, and the price per unit is fixed by the Interstate Commerce Commission. For instance, now the space is decided to be so many feet in a car, according to the number of mail pouches carried.

Mr. DOWELL. This is an estimate?

Mr. MADDEN. No; it is not an estimate. It is an actual appropriation.

Mr. DOWELL. It is on an estimate?

Mr. MADDEN. On the basis of the estimate of what we will need for the coming year. All these are estimates of that kind.

Mr. DOWELL. Not all of that kind.

Mr. MADDEN. There is no railroad performance there. All this work is done by the Post Office Department—the rent of space, the lighting, the heating, and the fuel, and all that, and the badges are furnished to the clerks at division headquarters of the Railway Mail Service, and so on; and some of this work is to be done by the railroad companies, and they are reimbursed for their expenditure.

Mr. DOWELL. What I particularly refer to in this item can be found in lines 13, 14, and 15, namely:

For such distribution can not under the postal laws and regulations properly be required of railroad companies without additional compensation.

What does that refer to?

Mr. MADDEN. That refers to this, namely, that the railroad companies are required to handle the mail within the stations. They were required to handle all the mail not only within the station, but 80 rods beyond the station, until the Interstate Commerce Commission changed the law. If they handle any of this work for the Government where the law does not require them to handle it, of course they have to be reimbursed.

Mr. DOWELL. That, as I understand, is fixed by the Interstate Commerce Commission and not by the railroad company?

Mr. MADDEN. Not by the railroad company.

Mr. DOWELL. But only upon the order of the Interstate Commerce Commission?

Mr. MADDEN. Yes.

Mr. MANN of Illinois. This item has been carried for years, without regard to the Interstate Commerce Commission.

Mr. MADDEN. Notwithstanding, the Interstate Commerce Commission fixed this under the space basis compensation act.

Mr. MANN of Illinois. Yes; but there are many cases under the law and under the contracts where the railroad companies can not be required to do certain things in connection with the mail that have to be done. This is to cover those cases where the duty can not be imposed on the railroad company, either under the law or under the contract?

Mr. MADDEN. Nothing can be imposed on the railroads now except work within the station itself. That work outside of the station which formerly was performed by the railroad company through its messenger service is let by contract. If the railroad does it, it is an additional contract over and above the rate charged for the regular service.

The CHAIRMAN. The time of the gentleman from Iowa has expired.

Mr. DOWELL. Mr. Chairman, I ask unanimous consent for one minute more.

The CHAIRMAN. Is there objection to the gentleman's request?

There was no objection.

Mr. DOWELL. Is this item, then, on a fixed contract between the Post Office Department and the railroad companies?

Mr. MADDEN. No; you can not have a fixed contract. This is work that they may do from time to time. We can not tell what it is.

Mr. DOWELL. But does not the department know in advance just what there is to be done?

Mr. MADDEN. No; you can not always tell. It depends on the volume of the mail.

Mr. DOWELL. It is not on a contract, but for service rendered?

Mr. MADDEN. Yes; at a rate fixed.

The CHAIRMAN. The pro forma amendment will be withdrawn. The Clerk will read.

The Clerk read as follows:

For payment of limited indemnity for the injury or loss of pieces of domestic registered matter, insured, and collect-on-delivery mail, $4,500,000.

Mr. MANN of Illinois. Mr. Chairman, I move to strike out the last word.

The CHAIRMAN. The gentleman from Illinois moves to strike out the last word.

Mr. MANN of Illinois. I understand the indemnity appropriation is increased from $3,000,000 to $4,500,000. I apprehend there is a deficiency appropriation?

Mr. MADDEN. There is a deficiency of $1,200,000.

Mr. MANN of Illinois. It really seems at first blush, at least, as though there was a very large amount of mail matter lost or destroyed in the mail—$4,500,000 worth. I do not know how much we pay for either domestic registered matter or for

insurance, but it does seem as though to lose in the course of a year registered or insured parcel-post mail to the extent of $4,500,000 would indicate a necessity for much more care in the handling of the mails. I can not understand myself how it is possible to lose mail to the extent of $4,500,000.

Mr. MADDEN. I will just say to my colleague, if he will permit, that these parcel-post packages, when they go through the Post Office Department, pass over a carrier, drop through a chute, and finally on the floor where the stuff is handled, and between the top end of the chute and the top of the floor there is a space of 8 or 10 feet, and the packages come down one after another, and a keg of nails may fall on a woman's bonnet.

Mr. MANN of Illinois. That is extremely poor handling of the mails.

Mr. MADDEN. I agree that it is, and it ought not to be permitted.

Mr. MANN of Illinois. To lose $4,500,000 in that way means that somebody has to pay it. The Post Office Department, it seems to me, either ought to change its method of handling the parcel post or else change its method of accepting parcels and require them to be properly packed. Of course I understand the American public and the American manufacturer and the American storekeeper are not disposed to pack anything properly.

Mr. MADDEN. I do not think anything could be packed to save it under that kind of handling.

Mr. MANN of Illinois. Well, if we undertake to transport a lady's bonnet, which I do not know that we do, and a keg of nails, which I do not know that we do——

Mr. MADDEN. That was just descriptive——

Mr. MANN of Illinois. I know; we certainly ought to have sense enough not to drop a keg of nails on a woman's bonnet. It would be far wiser not to accept the woman's bonnet than to destroy the bonnet and pay for it. I am not disposed to criticize the Post Office Department. It is on the whole very efficient. I am not at all disposed to criticize the parcel post, which, as a whole, is very beneficial. But I must say there ought to be some system devised by which we do not undertake to pay such an amount for loss or damage.

Mr. BLANTON. Mr. Chairman, a point of order.

The CHAIRMAN. The gentleman will state it.

Mr. BLANTON. It being Saturday afternoon, I think we ought to have a new shift, and I make the point of order that there is no quorum present.

The CHAIRMAN. The gentleman from Texas makes the point of order that there is no quorum present. The Chair will count. [After counting.] One hundred and one gentlemen are present, a quorum. The Clerk will read.

Mr. BLANTON. Mr. Chairman, I usually have high regard and high respect for any man that sits in the chair and presides over this body, either over the House or the committee; but when it is so apparent to every man on this floor——

The CHAIRMAN. The gentleman is not in order.

Mr. BLANTON. I make the point of order that there is no quorum here, and everybody here knows it.

Mr. HICKS. Mr. Chairman, I make the point of order that the gentleman from Texas is out of order.

The CHAIRMAN. The gentleman from Texas is out of order, and the Clerk will read.

The Clerk read as follows:

For payment of limited indemnity for the loss of registered articles in the international mails, in accordance with convention stipulations, $50,000.

Mr. MADDEN. Mr. Chairman, I offer an amendment.

The CHAIRMAN. The gentleman from Illinois offers an amendment, which the Clerk will report.

The Clerk read as follows:

Amendment offered by Mr. MADDEN: Page 9, strike out lines 18, 19, and 20, and insert in lieu thereof the following: "For payment of limited indemnity for the injury or loss of international registered, insured, and collect-on-delivery mails, in accordance with convention stipulations, $50,000."

Mr. BLANTON. Mr. Chairman, I move that the committee do now rise.

The CHAIRMAN. The gentleman from Texas moves that the committee do now rise.

The question was taken.

Mr. BLANTON. I ask for tellers, Mr. Chairman, and pending that I ask for a division on the count.

The CHAIRMAN. The noes seem to have it.

Mr. BLANTON. I ask for a division, Mr. Chairman.

The committee divided; and there were—ayes 3, noes 67.

Mr. CHINDBLOM. I ask that those be counted as present who did not vote.

Mr. BLANTON. I make the point of no quorum present, Mr. Chairman.

The CHAIRMAN. The gentleman from Texas makes the point of no quorum present. The Chair will count. [After counting.] Eighty-three Members present, not a quorum. The Clerk will call the roll.

The Clerk called the roll, when the following Members failed to answer to their names:

Ackerman	Ellsworth	Linthicum	Roden
Andrews, Md.	Emerson	Lonergan	Rowan
Andrews, Nebr.	Evans, Nev.	Luhring	Rowe
Ayres	Fairfield	McCulloch	Rubey
Babka	Ferris	McGlennon	Rucker

Dunn	Langley	Reavis	
Dyer	Layton	Riordan	
Edmonds	Lesher	Robinson, N. C.	

The committee rose; and the Speaker having resumed the chair, Mr. MCARTHUR, Chairman of the Committee of the Whole House on the state of the Union, reported that that committee having had under consideration the Post Office appropriation bill, H. R. 15441, found itself without a quorum, whereupon he caused the roll to be called, when 245 Members, a quorum, responded to their names, and he handed in the names of the absentees for printing in the Journal and RECORD.

The SPEAKER. The committee will resume its session.

The committee resumed its session, with Mr. MCARTHUR in the chair.

The CHAIRMAN. At the time the point of no quorum was made an amendment was pending offered by the gentleman from Illinois [Mr. MADDEN].

Mr. MADDEN. Mr. Chairman, I simply desire to say that this amendment only incorporates the word "injury" for the purpose of conforming to the provision in the postal convention. The convention is a treaty and is therefore the law of the land, and this complies with its provisions.

Mr. GARD. Will the gentleman yield?

Mr. MADDEN. Yes.

Mr. GARD. I am interested in knowing what is meant by the phrase "in accordance with convention stipulations"?

Mr. MADDEN. This country and about 30 other countries of the world are joined in a postal convention. They hold sessions once a year and fix the rate of postage between the different countries. They provide for the transportation of the mails after they are landed on either side of the ocean. For example, the United States transports all American mail to European ports——

Mr. GARD. Do they provide for the rates of payment for registered-mail losses?

Mr. MADDEN. Everything of that kind is provided for in the convention, and this is to comply with the convention.

The CHAIRMAN. The question is on the amendment of the gentleman from Illinois [Mr. MADDEN].

The amendment was agreed to.

The Clerk read as follows:

For traveling and miscellaneous expenses in the service of the Postal Savings System, office of the director, $500.

Mr. SUMMERS of Washington. Mr. Chairman, I move to strike out the last word. Yesterday during the general debate there was some discussion between the chairman of the committee and myself as to whether postal savings funds could be

deposited in banks that were not members of the Federal reserve system. In that connection I wish to read from yesterday's RECORD:

Mr. SUMMERS of Washington. Mr. Chairman, will the gentleman yield?

Mr. MADDEN. Yes.

Mr. SUMMERS of Washington. I understand they have taken the deposits out of every bank except the Federal reserve banks.

Mr. MADDEN. Yes; but if there is no Federal reserve bank in the neighborhood any bank that has the security required by law can get the deposits.

Mr. SUMMERS of Washington. I beg the gentleman's pardon——

Mr. MADDEN. Oh, I know it.

Mr. SUMMERS of Washington. They have just taken the postal-savings deposits out of all the banks.

Mr. MADDEN. They did not take them out on that account. I know what the facts are, and I can tell the gentleman the reason. The board believed it would be wiser to take the deposits of the Postal Savings System and earn as much revenue as possible with them. Now, how did they do it? They took $105,000,000 of the $168,000,000 and bought Liberty bonds with them, and this $105,000,000 has a face value of $111,000,000, and besides that, they are getting 5 per cent or 6 per cent interest on the money actually invested, instead of keeping it in the banks at 2½ or 2¼ per cent.

Mr. FESS. Does not the gentleman think that is rather a questionable proceeding for the Government?

Mr. MADDEN. It may be questionable. It may not have been wise if there was stress. At the same time I think it is a justifiable thing to do, for, after all, the management of any institution is justified in doing any legitimate thing that is within the law to make the best possible showing.

Mr. FESS. What I referred to was the Government buying its own bonds at a discount and making money out of the transaction.

Mr. MADDEN. Oh, I think they ought to have paid par. I do not think the Government of the United States ought to buy its own paper for less than par.

Mr. FESS. That is what I had in mind.

Mr. MADDEN. I agree with the gentleman on that.

Mr. HUSTED. Has the gentleman any statement of the total postal-savings bank deposits?

Mr. MADDEN. The total postal-savings bank deposits amount to $168,000,000.

For the information of the chairman of the committee [Mr. MADDEN] and other members of the committee, I wish to read a letter from the Third Assistant Postmaster General:

POSTAL SAVINGS SYSTEM,
THIRD ASSISTANT POSTMASTER GENERAL,
Washington, December 29, 1920.

Hon. J. W. SUMMERS,
House of Representatives, Washington, D. C.

MY DEAR MR. SUMMERS: With reference to your telephonic inquiry of this morning, concerning recent withdrawals of postal savings funds from depository banks, I have to inform you that withdrawals have been made upon a percentage basis from all banks, members of the Federal Reserve System, qualified to receive postal savings funds, and they do not reflect in any degree whatever upon the integrity of the banks. They have been made in a gradual manner so as to disturb the banks as little as possible and not to cause them any more inconvenience than necessary.

Under the provisions of the law creating the Federal Reserve System and subsequent amendments made thereto, the Postal Savings System is without authority to make deposits with nonmember banks. At the time of the passage of the act all banks were informed that postal savings funds would be allowed to remain on deposit with their institutions a sufficient length of time to enable them to become members of the Federal Reserve System. As six years have now elapsed it was decided to withdraw the balance on deposit with banks which had not become members of the Federal Reserve System.

Postal savings deposits are subject to withdrawal on demand at any time. The board of trustees of the Postal Savings System is vested with authority to withdraw funds for transfer from one depository to another, for increase of the lawful reserve fund to the amount fixed by law, for payments to the Postal Service, and for investments under provisions of the organic law creating the system and subsequent amendments.

Respectfully,
W. J. BARROWS,
Acting Third Assistant Postmaster General.

Mr. Barrows stated to me personally that in the future there would be no deposits made with any banks that were not members of the Federal Reserve System. In fact, under the law the department has no authority to do so. There have been some complaints along this line. The argument is set up that these funds originated in the various local communities and that they should be kept on deposit in the communities in which they originated. With this argument I am much in sympathy, but evidently the department has acted only under authority of law.

The Clerk read as follows:

For inland transportation by star routes (excepting service in Alaska), including temporary service to newly established offices, $13,000,000.

Mr. BRIGGS. Mr. Chairman, I move to strike out the last word. Considerable has been said here during the debate upon this bill relative to the injustice being done a great many star-route contractors. In a debate on the floor of the House on Tuesday, December 28 last, a colloquy occurred between the gentleman from Illinois [Mr. MADDEN] and the gentleman from Texas [Mr. BLANTON] about the sufficiency of legislation which would enable the Post Office Department to grant redress to a good many of the star-route contractors who have suffered particularly through the advance in the cost of living. I had occasion to take that matter up with the Postmaster General and asked him just what the facts were in connection with the existing legislation. I have a letter from him here, which reads as follows:

OFFICE OF THE POSTMASTER GENERAL,
Washington, D. C., January 5, 1921.

Hon. CLAY STONE BRIGGS,
House of Representatives.

MY DEAR MR. BRIGGS: In answer to your letter of the 3d instant, in which you quote from statements made by Congressman MADDEN on the floor of the House of Representatives concerning authorization of law for the Postmaster General to adjust contracts for star route service entered into prior to the war and up to a certain date after the war began, and requesting a statement why the department has declined to readjust the compensation of contractors on certain star routes in Texas and the law upon which adverse action was based, I beg to call attention to the fact that, inasmuch as contracts for this class of service are awarded to lowest bidders after public advertisement, as provided for by law, and as the law specifies the general terms of the proposal, bond, and contract by which the contractor binds himself to perform the service for a specific term at the rate named in his proposal and gives bond guaranteeing the fulfillment of the contract, there is no authority of law whereby the department can readjust compensation under such a contract.

Congress evidently recognized this situation when, in the act of July 2, 1918, making appropriation for the service of the Post Office Department for the fiscal year ended June 30, 1919, the following provision was inserted:

"That the Postmaster General is authorized to investigate conditions arising from contracts in the star route, screen wagon, and other vehicle service entered into prior to June 30, 1917, and from contracts for furnishing envelopes, blanks and blank books, and the Official Postal Guide, for contracts entered into prior to June 30, 1917, with a view to determining whether any adjustment should be made in the compensation and to adjust the same for materials or services hereafter to be furnished or rendered in cases where the facts disclose the necessity for such adjustment, or, in his discretion, with the consent of the contractor and his bondsmen, the Postmaster General may cancel such contracts."

Acting under this legislation, the contracts entered into prior to June 30, 1917, for the class of service named have been investigated and adjustments made in all cases where the contractor has made application therefor and the facts disclosed the necessity for such action.

All contracts for star route service in the State of Texas expired by limitation on June 30, 1918, and all existing contracts for service in that State were entered into subsequent to March 15, 1918, and do not therefore come within the provisions of the act of July 2, 1918, as above quoted, and it might be proper to add that where contracts were entered into subsequent to July 1, 1917, the contractors must have been aware of the unusual conditions prevailing as a result of the European war and that their bids were submitted in the light of those conditions.

Sincerely, yours,

A. S. BURLESON.

The contracts in my district have been made since June 30, 1917, and therefore, the Postmaster General asserts, can not be considered for relief under existing law. They run for four years, I understand, and were made early in 1918, along with similar contracts in what is known as the western postal zone. Contracts in other zones were made a year or two earlier, and therefore have enjoyed relief that has not been accorded to Texas and the West. The star-route contractors and their bondsmen have been suffering intensely from heavy financial losses brought on by the war, particularly in my district and elsewhere in the State of Texas, and, I understand, all through the West. A bill was introduced in this Congress for their relief by the gentleman from Oregon [Mr. SINNOTT], and I have been often urging some such relief, but I understand that bill was unfavorably reported by the Committee on the Post Office and Post Roads. This condition is one that is of greatest moment to the rural districts, districts which are not able to make a sufficient showing to have rural routes established, and which must depend on the star-route service for their mail.

Mr. CHINDBLOM. Mr. Chairman, will the gentleman yield?

Mr. BRIGGS. Yes.

Mr. CHINDBLOM. Does the gentleman contend that these contractors should be reimbursed for the increased cost of living or only for the increased cost of carrying the mail?

Mr. BRIGGS. Only for the increased cost of carrying the mail; only for the increased cost of the service which they could not reasonably anticipate.

Mr. MADDEN. Mr. Chairman, will the gentleman yield?

Mr. BRIGGS. Yes.

Mr. MADDEN. The testimony in the hearings, at page 110, shows that Mr. Wood, who is in charge of the star-route contracts, says that a number of these contracts have been adjusted, from July 1 to October 31, 1920. From July 1 to October 31, 1920, they seem to have adjusted 230 contracts. The average increase allowed on the adjustment was $307.80. I do not know whether all of the contracts that had a right to be adjusted were adjusted.

Mr. BRIGGS. That is the point I make, that those adjustments relate only to certain contracts entered into prior to June 30, 1917, and to no others.

Mr. MADDEN. There were other contracts.

Mr. BRIGGS. But the letter I have just read contains a statement to the effect that the Postmaster General, acting under the legislation which he quotes in the letter, investigated

and adjusted losses only as to contracts entered into prior to June 30, 1917, and that such adjustments were made in all cases where the contractor had made application therefor and the facts disclosed the necessity for such action. He did not, and apparently, under the law cited, could not, adjust losses on contracts made after June 30, 1917.

The CHAIRMAN. The time of the gentleman from Texas has expired.

Mr. BRIGGS. Mr. Chairman, I ask unanimous consent to proceed for three minutes more.

The CHAIRMAN. Is there objection?

There was no objection.

Mr. BRIGGS. Facts show that the highest cost of living came after 1917 and went forward by leaps and bounds, and the people who made these star-route contracts in my district do not profess to be great, keen, experienced contractors who keep posted on what is likely to occur far in the future during a great war. The contractors in my district are men of very modest means and many of them have exhausted all of their resources to carry out these contracts. I have one case in mind in particular where the man killed about six head of stock in trying to carry not only the ordinary mail every day but also wagonloads of implements and heavy mail shipped by parcel post about three times every week, which had to be carried 20 miles or more over very bad roads, and yet he got in return only $900 a year. The sureties could not even get anyone to carry on the work for $1,200 a year after the contractor finally failed, and they have been losing $30 a month and their man has given it up; so that unless they pay more the mail can not be carried. That condition has prevailed for some time now, and the facts recited justify some relief at the hands of this Congress. Provision was made for the contractors who constructed Government buildings and for the losses sustained by them due to the increased cost of living and other costs, but these little fellows have had no relief, and the contractors and sureties have not only suffered but the public service has suffered. The Postmaster General is in error when he says in his letter that contractors making star-route contracts after July 1, 1917, must have been aware of the losses which would be encountered as a result of increased war costs and abnormal increase of parcel post and ordinary mail matter. No one at that time either did or could have foreseen it.

Mr. PARRISH. Mr. Chairman, will the gentleman yield?

Mr. BRIGGS. Yes.

Mr. PARRISH. In connection with what the gentleman has said, I would state that in sections of the country where oil excitement has prevailed, as it has in many sections of Texas, congested conditions have put unusual work on such carriers, and they have been forced to carry the mail over roads that were almost impassable. In this way many of these people have become bankrupt and are now carrying the mail at the expense of their bondsmen.

Mr. BRIGGS. It is true that in most of the counties in my district the same condition obtains. It seems impossible to get any relief unless this Congress will consent to extend the provisions of the act referred to, so that the Postmaster General may have some discretion to adjust losses in cases under contracts entered into subsequent to June 30, 1917. This has not been done, and now ought to be passed without delay.

There has been several statements by the gentleman from Illinois [Mr. MADDEN] that the Post Office Department has said that in a number of cases it had been able to relet such contracts for less than the original contract price. I want to say that the Post Office officials have not had any such experience as that in my district if the way they fight against and refuse to release present star-route contractors and sureties is any indication of the facts in the matter. Surely our great Government is as generously inclined to the poor, hard-working, struggling star-route carrier as it is to the great railroad carriers, to which Congress has so recently granted enormous increases and guaranties against losses.

The CHAIRMAN. The time of the gentleman from Texas has again expired.

The Clerk read as follows:

For pay of rural carriers, substitutes for rural carriers on annual and sick leave, clerks in charge of rural stations, and tolls and ferriage, Rural Delivery Service, and for the incidental expenses thereof, $86,800,000.

Mr. DOWELL. Mr. Chairman, I move to strike out the last word. It occurs to me that this item of $86,800,000 should have a more specific statement. The items are enumerated in the paragraph, but it occurs to me that as the items for this amount of expenditure are expressed that this committee can know absolutely nothing about it from the statement in the bill.

Mr. MADDEN. I will be delighted to inform the gentleman.

Mr. DOWELL. Now, I notice there are a number of items in the paragraph "Pay of rural carriers, substitutes for rural carriers on annual and sick leave, clerks in charge of rural stations," and so forth. Does not the chairman of the committee believe that this should be set out in the bill, that the committee having it under investigation should have told us more about where this money is going?

Mr. MADDEN. The reason why it has not been set out in the bill is that the law passed June, 1920, fixed the compensation and the conditions, and the committee thought it would be unwise to clutter up the bill with a lot of language by carrying all of that in it when the actual law is on the books.

Mr. DOWELL. But it does not hurt the appearance of the bill to place in the item, for instance, of annual sick leave; it does not hurt the appearance of the bill to place in there what the rural substitutes cost, and it would not destroy the appearance of the bill to have what the rural carriers are paid.

Mr. MADDEN. Here is the whole story: There were established 333 new routes last year. The average mileage of each route is 26. The standard route is 24 miles, for which the average pay is $75 per mile. The travel beyond 24 miles of standard route is paid for at the rate of $30 per mile per annum, and the average number of people served on each route is 500. The total number of routes were 43,462 on November 30 and the pay is based on the act of June 5, 1920. The provision for men on sick leave is a new provision, never carried in the law before, because we never had men in the Postal Service who were allowed sick leave before.

Mr. DOWELL. But the committee now, I understand, has made allowance for that very item?

Mr. MADDEN. Yes.

Mr. DOWELL. Should it not be set out here so that the committee may know what the investigation has shown? We are unable here, at least I am, to know anything about the $86,000,000 item. It seems to me an item of that character, of that size, ought at least to have some consideration here, and I do not believe that there is a Member, outside of those who have investigated it, who can tell for what purpose this $86,000,000 is in bulk.

Mr. MADDEN. Well, I have given the gentleman the number of routes and the pay; $1,800 for a 24-mile route and $30 a mile from 24 miles on, and no route can be paid more than $2,300. If the route runs below 24 miles, we pay less than $1,800. It can not be said with definite certainty how much it will cost for substitutes for sick leave, because we do not know how many men will have sick leave.

Mr. DOWELL. But you have made an allowance?

Mr. MADDEN. We have; but it must be an estimated allowance.

Mr. DOWELL. Could not you tell the committee just what you have allowed for that item? Is not that fair to the House and the committee?

The CHAIRMAN. The time of the gentleman has expired.

Mr. MADDEN. I think the gentleman understands it is impossible to say how much.

Mr. BRIGGS. Mr. Chairman, I ask unanimous consent to revise and extend my remarks.

The CHAIRMAN. Is there objection? [After a pause.] The Chair hears none.

Mr. RAMSEYER. Mr. Chairman, I make the same request.

The CHAIRMAN. Is there objection? [After a pause.] The Chair hears none.

Mr. HOCH. Mr. Chairman, I rise in opposition to the pro forma amendment. Mr. Chairman and gentlemen, I do not want to detain the committee, but while we are upon this item dealing with the Rural Mail Service I desire to make an observation or two, particularly with reference to the basis of pay to which the chairman of the committee has just referred, and also relative to the initial cost and the maintenance of the equipment necessary to do the work.

As members of the committee generally are aware, I assume, the rural carrier receives no promotions. He is paid $1,800 a year for a standard route of 24 miles and $30 a mile for each additional mile, and this regardless of length of service and regardless of the amount of mail carried. While I realize we can not correct that on this appropriation bill under the rules, I believe there is a legitimate complaint on the part of the rural carrier with reference to the absence of promotion in rural carrier service, such as exists in other branches of the Postal Service. A promotion system such as others enjoy would furnish encouragement and incentive and promote the interests of the service.

I want to call attention to another thing with reference to the rural carrier's pay. He must pay for all of his equipment

and maintain it out of his pay. It is a very heavy expense, and particularly under conditions which now prevail and have prevailed for several years. In order to have definite information on the subject I have secured itemized statements from a large number of carriers in my district covering the actual initial cost of their equipment and the actual maintenance cost. I have the items in a table, made by 30 carriers from their books, covering a period of one year. The actual average initial cost of equipment was $835.55. The average depreciation figured is about 24 per cent. The average actual operating expenses for a year was $751.25. It is all itemized. Now, $725 of actual outlay for maintenance, not including depreciation, taken from $1,800, as you can see, does not leave the pay of the rural carriers anything like that which a great many people think they receive. I believe we ought to get a more equitable basis for pay of rural carriers, and perhaps provide a separate maintenance allowance, or in some other way adjust this phase of the matter. It ought not to be carried simply as a fixed sum, without promotions and with no allowance for equipment and maintenance. The rural carrier does not now receive fair credit for the expenditure which he must make in maintaining his service.

Mr. Chairman, I ask unanimous consent to include in my remarks this table, because I believe it will be of interest to Members as showing the actual expenditure as itemized by these 30 carriers.

The CHAIRMAN. The gentleman from Kansas asks unanimous consent to revise and extend his remarks. Is there objection? [After a pause.] The Chair hears none.

The following is the table referred to:

Rural carrier equipment.

No.	Original cost.				Annual cost of maintenance.									
	Horse-drawn equipment.		Automobile cost.	Total cost.	Horse-drawn equipment.				Automobile.					Grand total.
	Kind.	Cost.			Hay.	Grain.	Repairs and miscellaneous.	Total.	Gas.	Oil.	Tires.	Repairs and miscellaneous.	Total.

[1] Hay and grain. [2] Gas and oil. [3] Includes repairs. [4] Hire of equipment. [5] Hire of horses.

NOTE.—Depreciation not figured in cost of maintenance. Average depreciation reported, about 24 per cent.

The CHAIRMAN. The Clerk will read.

The Clerk read as follows:

For travel and miscellaneous expenses in the Postal Service, office of the Fourth Assistant Postmaster General, $1,000.

Mr. STEENERSON. Mr. Chairman——

The CHAIRMAN. For what purpose does the gentleman rise?

Mr. STEENERSON. I rise to offer an amendment.

The CHAIRMAN. The gentleman from Minnesota offers an amendment, which the Clerk will report.

Mr. STEENERSON. I was about to rise, but the Chairman did not see me, when we finished reading the other section. The amendment comes in after line 17, but, of course, it does not make any difference.

The CHAIRMAN. The gentleman was on his feet. The Clerk will report the amendment.

The Clerk read as follows:

Mr. STEENERSON offers the following amendment: Insert, after line 17, page 13, the following:

"SEC. 2. That the joint commission authorized under section 6 of the act approved April 24, 1920, entitled 'An act making appropriations for the service of the Post Office Department for the fiscal year ending June 30, 1921, and for other purposes,' is hereby continued until June 30, 1922, to complete the investigation and to prepare a detailed report containing a summary of its findings thereof, and such recommendations as to legislation as it may deem to be proper."

Mr. GARD. Mr. Chairman, I make a point of order on that.

Mr. STEENERSON. Will the gentleman reserve it? I would like to explain the reason for the amendment.

Mr. GARD. Yes; I will reserve the point of order.

Mr. STEENERSON. The point of order is, of course, good, but the reason this is offered is that the chairman of the commission, Senator TOWNSEND, requested that this be done. I took the matter up with the Committee on the Post Office and Post Roads, and they passed a resolution authorizing me to present this amendment to the House. I also explained the matter to the chairman of the subcommittee of the Appropriations Committee, the gentleman from Illinois [Mr. MADDEN]. Therefore, the legislative committee, that has control of this, has requested that this amendment be offered. The joint commission was created by the last Post Office appropriation bill. They did not have any meeting except to organize until after Congress adjourned. They were authorized to appoint an advisory council. This advisory council consisted of eminent men mostly from large cities like Boston, New York, and Philadelphia. They met in New York and decided that there should be a thorough investigation of the whole Postal Service by efficiency engineers, which engineers have been employed. They have been at work now about two months, and it is manifest it will take at least a year more to finish the work. And it is the unanimous wish of the members of the commission, of both parties——

Mr. GARD. Will the gentleman yield?

Mr. STEENERSON. Yes.

Mr. GARD. The gentleman is still chairman of the Committee on the Post Office and Post Roads, is he not?

Mr. STEENERSON. Yes.

Mr. GARD. Can it not bring in a bill for this purpose?

Mr. STEENERSON. I will explain that the chairman of the joint commission requested the presentation of this, for unanimous consent, and in deference to his desire I imagined if it was not put on now, and the House given a chance to consider it, it might come back here by being inserted by the Senate on this same bill.

I thought we might as well face the question at once, and in deference to the chairman of the commission I promised to submit it to the House. I think it very desirable that the work of this commission should be continued, and inasmuch as both the appropriating committee and the legislative committee having to do with this bill have now agreed that this should be done, I hope that there will be no objection.

Mr. GARD. Mr. Chairman, I make the point of order against the amendment proposed by the gentleman from Minnesota.

The CHAIRMAN. Does the gentleman from Illinois [Mr. MADDEN] wish to be heard?

Mr. MADDEN. I do not.

The CHAIRMAN. The Chair sustains the point of order.

Mr. MADDEN. Mr. Chairman, I move that the committee do now rise and report the bill to the House.

The CHAIRMAN. The gentleman from Illinois moves that the committee do now rise and report the bill to the House. The question is on agreeing to that motion.

The motion was agreed to.

Accordingly the committee rose; and the Speaker having resumed the chair, Mr. MCARTHUR, Chairman of the Committee of the Whole House on the state of the Union, reported that that committee, having had under consideration the bill (H. R. 15441) making appropriations for the service of the Post Office Department for the fiscal year ending June 30, 1922, and for other purposes, had directed him to report the same back to the House with amendments, with the recommendation that the amendments be agreed to and that the bill as amended do pass.

Mr. MADDEN. Mr. Speaker, I move the previous question on the bill and amendments to final passage.

The SPEAKER. The gentleman from Illinois moves the previous question on the bill and amendments to final passage.

The previous question was ordered.

The SPEAKER. Is a separate vote demanded on any amendment? If not, the Chair will put them in gross.

Mr. TILSON. I understand, Mr. Speaker, there is but a single amendment.

The SPEAKER. There are two amendments. The question is on agreeing to the amendments.

The amendments were agreed to.

The SPEAKER. The question is on the engrossment and third reading of the bill.

The bill was ordered to be engrossed and read a third time, was read the third time, and passed.

On motion of Mr. MADDEN, a motion to reconsider the vote whereby the bill was passed was laid on the table.

LEAVE OF ABSENCE.

Mr. LONERGAN, by unanimous consent (at the request of Mr. GLYNN), was granted leave of absence for three weeks, on account of illness.

ADJOURNMENT.

Mr. MADDEN. Mr. Speaker, I move that the House do now adjourn.

The motion was agreed to; accordingly (at 5 o'clock and 4 minutes p. m.) the House adjourned until Monday, January 10, 1921, at 12 o'clock noon.

EXECUTIVE COMMUNICATIONS, ETC.

Under clause 2 of Rule XXIV, executive communications were taken from the Speaker's table and referred as follows:

308. A letter from the chairman of the Federal Trade Commission, transmitting report on country grain marketing; to the Committee on Agriculture.

309. A letter from the Secretary of War, transmitting letter from the Chief of Staff in connection with the disposition of useless executive papers; to the Committee on Disposition of Useless Executive Papers.

310. A letter from the Secretary of the Treasury, transmitting report from the accounting officers of the Treasury Department showing what officers of the Government were delinquent in rendering their accounts for the fiscal year 1920; to the Committee on Expenditures in the Treasury Department.

311. A letter from the Secretary of the Treasury, transmitting supplemental estimates of appropriations required for the public schools for the District of Columbia for the current fiscal year (H. Doc. No. 962); to the Committee on Appropriations and ordered to be printed.

REPORTS OF COMMITTEES ON PUBLIC BILLS AND RESOLUTIONS.

Under clause 2 of Rule XIII, bills and resolutions were severally reported from committees, delivered to the Clerk, and referred to the several calendars therein named, as follows:

Mr. SIEGEL, from the Committee on the Census, to which was referred the bill (H. R. 14498) for the apportionment of Representatives in Congress amongst the several States under the Fourteenth Census, reported the same without amendment, accompanied by a report (No. 1173), which said bill and report were referred to the Committee of the Whole House on the state of the Union.

Mr. HULL of Iowa, from the Committee on Military Affairs, to which was referred the bill (H. R. 13040) authorizing the Secretary of War to grant to Lloyd E. Gandy, of Spokane, Wash., his heirs and assigns, the right to overflow certain lands on the Fort George Wright Military Reservation at Spokane, Wash., on such terms as may be prescribed by the Secretary of War, and for other purposes, reported the same without amendment, accompanied by a report (No. 1174), which said bill and report were referred to the Committee of the Whole House on the state of the Union.

Mr. TOWNER, from the Committee on Insular Affairs, to which was referred the bill (H. R. 15476) to amend an act entitled "An act to declare the purpose of the people of the United States as to the future political status of the people of the Philippine Islands, and to provide a more autonomous government for those islands," approved August 29, 1916, reported the same without amendment, accompanied by a report (No. 1176), which said bill and report were referred to the House Calendar.

Mr. VENABLE, from the Committee on Naval Affairs, to which was referred the joint resolution (H. J. Res. 428) to repeal section 8 of the act entitled "An act making appropriations for the naval service for the fiscal year ending June 30, 1921, and for other purposes," approved June 4, 1920, reported the same with an amendment, accompanied by a report (No. 1177), which said joint resolution and report were referred to the House Calendar.

CHANGE OF REFERENCE.

Under clause 2 of Rule XXII, the Committee on Pensions was discharged from the consideration of the bill (H. R. 14925) granting a pension to Margaret Whelan, and the same was referred to the Committee on Invalid Pensions.

PUBLIC BILLS, RESOLUTIONS, AND MEMORIALS.

Under clause 3 of Rule XXII, bills, resolutions, and memorials were introduced and severally referred as follows:

By Mr. JOHNSON of Washington: A bill (H. R. 15601) to amend the act entitled "An act to regulate further the entry of aliens into the United States"; to the Committee on Foreign Affairs.

By Mr. FORDNEY: A bill (H. R. 15602) to provide for the erection of an addition to the post-office building at Saginaw West Side, Mich.; to the Committee on Public Buildings and Grounds.

By Mr. JOHNSON of Washington: A bill (H. R. 15603) to amend the act entitled "An act to establish a Bureau of Immigration and Naturalization, and to provide for a uniform rule for the naturalization of aliens throughout the United States," approved June 29, 1906, as amended, and the act entitled "An act in reference to the expatriation of citizens and their protection abroad," approved March 2, 1907, and for other purposes; to the Committee on Immigration and Naturalization.

By Mr. KNUTSON: A bill (H. R. 15604) to provide for an additional judge of the district court of the United States for the district of Minnesota; to the Committee on the Judiciary.

By Mr. KELLY of Pennsylvania: A bill (H. R. 15605) to provide for the transfer of certain officers of the Medical Reserve Corps, United States Navy, to the regular Navy service; to the Committee on Naval Affairs.

Also, a bill (H. R. 15606) to provide for the exchange of Liberty bonds and Victory notes for Liberty gold notes of the United States; to the Committee on Way and Means.

By Mr. BUTLER: A bill (H. R. 15607) to place the direction and management of all vessels in the service of the Government under the control of the Secretary of the Navy in case of war or national emergency; to the Committee on Naval Affairs.

Also, a bill (H. R. 15608) to equalize the rank, pay, allowances, and other benefits of warrant officers in the Marine Corps with warrant officers in the Navy; to the Committee on Naval Affairs.

By Mr. KRAUS: A bill (H. R. 15609) to extend the benefits of the naval appropriation act of June 4, 1920, to chief pharmacists and pharmacists of the United States Navy; to the Committee on Naval Affairs.

By Mr. LUFKIN: A bill (H. R. 15610) for the establishment of marine schools, and for other purposes; to the Committee on Naval Affairs.

By Mr. McPHERSON: A bill (H. R. 15611) to establish the grades of pay clerk, chief marine gunner, chief quartermaster clerk, and chief pay clerk in the United States Marine Corps; to the Committee on Naval Affairs.

By Mr. DARROW: A bill (H. R. 15612) to provide for the retirement of certain officers of the United States Marine Corps on account of disability contracted in line of duty; to the Committee on Naval Affairs.

By Mr. PETERS: A bill (H. R. 15613) to recover the value of public property lost by persons in the naval service through abuse or negligence; to the Committee on Naval Affairs.

By Mr. LUFKIN: A bill (H. R. 15614) to authorize the President of the United States to classify and name the vessels of the Navy; to the Committee on Naval Affairs.

By Mr. SUMNERS of Texas: A bill (H. R. 15615) authorizing and directing the Secretary of Agriculture to establish a farm-produce exchange, and for other purposes; to the Committee on Agriculture.

By Mr. VAILE: A bill (H. R. 15616) for the relief of volunteer officers and soldiers who served in the Philippine Islands beyond the period of their enlistment; to the Committee on Military Affairs.

By Mr. LEHLBACH: Resolution (H. Res. 638) providing for a janitor to the Committee on Reform in the Civil Service at $720 per annum; to the Committee on Accounts.

PRIVATE BILLS AND RESOLUTIONS.

Under clause 1 of Rule XXII, private bills and resolutions were introduced and severally referred as follows:

By Mr. CAMPBELL of Kansas: A bill (H. R. 15617) to correct the military record of Alonzo Rich; to the Committee on Military Affairs.

By Mr. CARSS: A bill (H. R. 15618) granting an increase of pension to Charles N. Ashford; to the Committee on Invalid Pensions.

By Mr. COLE: A bill (H. R. 15619) granting a pension to Lida Haskill; to the Committee on Invalid Pensions.

By Mr. FORDNEY: A bill (H. R. 15620) granting a pension to Jetora E. Anderson; to the Committee on Invalid Pensions.

By Mr. HILL: A bill (H. R. 15621) granting an increase of pension to Alice M. Thompson; to the Committee on Invalid Pensions.

Also, a bill (H. R. 15622) granting a pension to Nelson H. Henry; to the Committee on Invalid Pensions.

By Mr. KELLEY of Michigan: A bill (H. R. 15623) granting a pension to Mary Marshall; to the Committee on Invalid Pensions.

By Mr. McDUFFIE: A bill (H. R. 15624) for the relief of J. E. Hendrix; to the Committee on Claims.

By Mr. RAMSEYER: A bill (H. R. 15625) granting a pension to Susan E. Allgood; to the Committee on Invalid Pensions.

By Mr. RICKETTS: A bill (H. R. 15626) granting a pension to Sarah Barnett; to the Committee on Invalid Pensions.

Also, a bill (H. R. 15627) granting a pension to Tillie Parkhurst; to the Committee on Invalid Pensions.

By Mr. WHITE of Maine: A bill (H. R. 15628) granting a pension to Lizzie J. Levensaler; to the Committee on Invalid Pensions.

Also, a bill (H. R. 15629) granting a pension to Annie T. Lamarche; to the Committee on Invalid Pensions.

Also, a bill (H. R. 15630) granting an increase of pension to Amanda M. Bailey; to the Committee on Invalid Pensions.

Also, a bill (H. R. 15631) granting a pension to Selden E. Brann; to the Committee on Invalid Pensions.

By Mr. WINSLOW: A bill (H. R. 15632) granting an increase of pension to Josiah B. Hall; to the Committee on Invalid Pensions.

Also, a bill (H. R. 15633) granting a pension to Emily D. Mitchell; to the Committee on Invalid Pensions.

PETITIONS, ETC.

Under clause 1 of Rule XXII, petitions and papers were laid on the Clerk's desk and referred as follows:

4882. By the SPEAKER (by request): Petition of American Association of State Highway Officials, of Richmond, Va., favoring the McArthur bill (H. R. 14905); to the Committee on Roads.

4883. By Mr. DARROW: Petition of Presbyterian Ministerial Association of Philadelphia, Pa., urging legislation to prohibit importation of morphia and exportation of opium, etc.; to the Committee on Interstate and Foreign Commerce.

4884. Also, petition of National Association of Purchasing Agents, advocating legislation against commercial bribery; to the Committee on Interstate and Foreign Commerce.

4885. By Mr. JOHNSON of Washington: Petition of citizens of Tacoma Wash., favoring the Sheppard-Towner bill (H. R. 10925); to the Committee on Interstate and Foreign Commerce.

4886. By Mr. MOONEY: Petition of Gerber Camp, No. 88, Department of Ohio, United Spanish War Veterans, urging the appointment of Frederick A. Royse as Deputy Commissioner of Pensions; to the Committee on Pensions.

4887. By Mr. MORIN: Petition of American Flexible Bolt Co., Union Steel Casting Co., the McConway & Torley Co., and Robert H. Blackall, all of Pittsburgh, Pa., urging legislation which will direct the Treasury Department to honor Interstate Commerce Commission partial-payment certificates; to the Committee on Interstate and Foreign Commerce.

4888. By Mr. O'CONNELL: Petition of D. Nusbaum & Co., of New York, urging the Federal daylight-saving law; to the Committee on Interstate and Foreign Commerce.

4889. Also, petition of Civitas Club, of Brooklyn, N. Y., favoring the Sheppard-Towner bill; to the Committee on Interstate and Foreign Commerce.

4890. Also, petition of New York organization of the American Legion, New York City, protesting against the proposed Sunday blue laws; to the Committee on Interstate and Foreign Commerce.

4891. By Mr. OSBORNE: Memorial of Society Sons of the Revolution in the State of California, opposed to lessening the defensive branches of the fighting forces of the United States; to the Committee on Military Affairs.

4892. By Mr. HENRY T. RAINEY: Petition of war risk insurance patients in San Angelo Sanatorium, protesting against treatment received and favoring the law providing for home treatment; to the Committee on Interstate and Foreign Commerce.

4893. Also, petition of president and faculty of Illinois College, to amend water power act so that it will not apply to our national parks, and to defeat the Fall River Basin bill, the bill for the privilege of damming the Yellowstone Lake, and all other bills of similar purpose affecting any of our national parks should they be introduced; to the Select Committee on Water Power.

SENATE.

MONDAY, *January 10, 1921.*

Rev. J. J. Muir, D. D., offered the following prayer:

Our Father, we thank Thee for the sanctities of yesterday. Grant that the spirit of those sanctities may be carried through the week with its responsibilities and privileges. And so help us live that even the commonplaces of life become very sanctuaries of fellowship with Thyself, enabling us to do better service, to the glory of Thy name. Amen.

LAWRENCE Y. SHERMAN, a Senator from the State of Illinois, appeared in his seat to-day.

The reading clerk proceeded to read the Journal of the proceedings of the legislative day, Thursday, January 6, 1921, when, on request of Mr. CURTIS, and by unanimous consent, the further reading was dispensed with and the Journal was approved.

COUNTRY GRAIN MARKETING.

The VICE PRESIDENT laid before the Senate a communication from the chairman of the Federal Trade Commission, transmitting, pursuant to law, a report on country grain marketing, being volume 1 of the commission's report on country grain marketing, which was referred to the Committee on Agriculture and Forestry.

LUMBER ASSOCIATIONS.

The VICE PRESIDENT laid before the Senate a communication from the chairman of the Federal Trade Commission, transmitting, pursuant to law, data in re lumber associations, which was referred to the Select Committee on Housing and Reconstruction.

DISPOSITION OF USELESS PAPERS.

The VICE PRESIDENT laid before the Senate a communication from the Secretary of War, transmitting, pursuant to law, a schedule of useless papers devoid of historic interest accumulated in the files of the department and asking for action look-

ing to their disposition, which was referred to a Joint Select Committee on Disposition of Useless Papers in the Executive Departments, the members on the part of the Senate to be selected by the Chair. The Vice President appointed Mr. WALSH of Montana and Mr. FRANCE members of the committee on the part of the Senate, and directed the Secretary of the Senate to notify the House of Representatives thereof.

CREDENTIALS.

Mr. TRAMMELL. Mr. President, I present the credentials of my colleague, Mr. FLETCHER, elected a Senator for the term beginning March 4, 1921. I ask that the credentials may be read and placed on file.

The credentials were read and ordered to be filed, as follows:

To the PRESIDENT OF THE SENATE OF THE UNITED STATES:

This is to certify that on the 2d day of November, 1920, DUNCAN U. FLETCHER was duly chosen by the qualified electors of the State of Florida a Senator from said State to represent said State in the Senate of the United States for the term of six years, beginning on the 4th day of March, 1921.

Witness his excellency our governor, Cary A. Hardee, and our seal hereto affixed at Tallahassee, this the 5th day of January, A. D. 1921. 1921.

[SEAL.] CARY A. HARDEE, *Governor.*

By the governor:

A. J. CLAY CRAWFORD,
Secretary of State.

MESSAGE FROM THE HOUSE.

A message from the House of Representatives, by D. K. Hempstead, its enrolling clerk, announced that the House had passed the bill (H. R. 15441) making appropriations for the service of the Post Office Department for the fiscal year ending June 30, 1922, and for other purposes, in which it requested the concurrence of the Senate.

The message also announced that the House had agreed to the concurrent resolution (S. Con. Res. 36) directing the Secretary of the Senate to transmit to the President a duplicate copy of the enrolled joint resolution (S. J. Res. 191) to create a joint committee on the reorganization of the administrative branch of the Government.

The message further announced that the House had passed the joint resolution (S. J. Res. 237) to enable the Secretary of the Senate and Clerk of the House of Representatives to pay the necessary expenses of the inaugural ceremonies of the President of the United States on March 4, 1921.

HOUSE BILL REFERRED.

The bill (H. R. 15441) making appropriations for the service of the Post Office Department for the fiscal year ending June 30, 1922, and for other purposes, was read twice by its title and referred to the Committee on Post Offices and Post Roads.

PETITIONS AND MEMORIALS.

Mr. MYERS presented a resolution adopted by the Lewistown Chamber of Commerce, of Lewistown, Mont., in favor of the enactment of legislation providing for a 1-cent drop-letter postage in cities, towns, and rural routes, which was referred to the Committee on Post Offices and Post Roads.

Mr. McCUMBER presented a resolution adopted by the Commercial Club, of Larimore, N. Dak., in favor of the enactment of legislation to extend credit to farmers, which was referred to the Committee on Finance.

He also presented a resolution adopted by the Rotary Club of Devils Lake, N. Dak., in favor of the enactment of legislation to extend credit to the Central Powers, which was referred to the Committee on Finance.

Mr. SHEPPARD presented a resolution adopted by the board of directors of the Chamber of Commerce of Laredo, Tex., favoring the passage of the emergency tariff bill, which was referred to the Committee on Finance.

Mr. CURTIS presented resolutions adopted by the Chamber of Commerce of Arkansas City, Kans., and the Chamber of Commerce of Newkirk, Okla., in favor of the enactment of legislation appropriating sufficient funds for necessary buildings to accommodate more children in the Indian school on the Chilocco Reservation, Okla., which were referred to the Committee on Indian Affairs.

Mr. CAPPER presented a petition of the Grasshopper Local, No. 930, Farmers' Educational and Cooperative Union of America, of Galva, Kans., praying for the enactment of legislation to prohibit gambling in food and grain products, which was referred to the Committee on Agriculture and Forestry.

He also presented a resolution adopted by the Parsons Chamber of Commerce, of Parsons, Kans., favoring continuation of Federal aid in the building of permanent highways in the several States, and opposing the construction of a national system of highways, which was referred to the Committee on Post Offices and Post Roads.

Mr. HENDERSON. Mr. President, I present a telegram from the secretary of the Nevada Livestock Association informing me of the meeting of the convention of stock growers and ranchers held in Nevada, unanimously adopting a resolution strongly urging action on the Fordney bill. I also present a letter from the secretary of that association setting forth the serious conditions confronting the live-stock men of Nevada, and also a copy of a resolution adopted by the Range Stockgrowers Association at Salt Lake City, Utah. I move that the telegram, resolutions, and letter be referred to the Committee on Finance.

The motion was agreed to.

REPORTS OF COMMITTEES.

Mr. NELSON, from the Committee on the Judiciary, to which was referred the bill (S. 4516) providing for the appointment of an additional district judge for the southern judicial district of the State of West Virginia, reported it without amendment and submitted a report (No. 678) thereon.

Mr. CURTIS, from the Committee on Indian Affairs, to which was referred the bill (H. R. 6221) conferring jurisdiction on the Court of Claims to hear, determine, and render judgment in the Osage civilization-fund claim of the Osage Nation of Indians against the United States, reported it without amendment, and submitted a report (No. 679) thereon.

Mr. FLETCHER, from the Committee on Military Affairs, to which was referred the bill (S. 4284) to correct the military record of Alfred Clark, submitted an adverse report thereon, and moved that the bill be postponed indefinitely, which was agreed to.

LAKE ST. CROIX BRIDGE.

Mr. CALDER. I report back favorably from the Committee on Commerce with an amendment the bill (S. 4737) granting the consent of Congress to the Prescott Bridge Co. to construct a bridge across Lake St. Croix at or near the city of Prescott in the State of Wisconsin, and I submit a report (No. 681) thereon. I ask for the present consideration of the bill.

There being no objection, the bill was considered as in Committee of the Whole.

The amendment was, on page 1, line 3, after the word "That," to strike out the words "the consent of Congress" and insert the word "authority," so as to make the bill read:

Be it enacted, etc., That authority is hereby granted to the Prescott Bridge Co., a corporation organized under the laws of the State of Wisconsin, and its successors and assigns, to construct, maintain, and operate a bridge and approaches thereto across Lake St. Croix at a point suitable to the interests of navigation, at or near the city of Prescott, in the county of Pierce and State of Wisconsin, in accordance with the provisions of the act entitled "An act to regulate the construction of bridges over navigable waters," approved March 23, 1906.

SEC. 2. That the right to alter, amend, or repeal this act is hereby expressly reserved.

The amendment was agreed to.

The bill was reported to the Senate as amended, and the amendment was concurred in.

The bill was ordered to be engrossed for a third reading, read the third time, and passed.

The title was amended so as to read: "A bill authorizing the Prescott Bridge Co. to construct a bridge across Lake St. Croix at or near the city of Prescott, in the State of Wisconsin."

MOBILE BAY BRIDGE.

Mr. CALDER. I report back favorably from the Committee on Commerce with amendments the bill (S. 4603) extending the time for the commencement and completion of the bridge or bridges authorized by an act entitled "An act to authorize the Gulf Ports Terminal Railway Co., a corporation existing under the laws of the State of Florida, to construct a bridge over and across the headwaters of Mobile Bay and such navigable channels as are between the east side of the bay and Blakely Island, in Baldwin and Mobile Counties, Alabama," approved October 5, 1917, and I submit a report (No. 680) thereon. I ask for the present consideration of the bill.

There being no objection the bill was considered as in Committee of the Whole.

The amendment were, on page 1, line 3, after the words "That the," to strike out the words "time for the commencement and completion of the bridge or bridges authorized by the act entitled 'An act to authorize'" and insert "Act approved October 5, 1917, authorizing"; and in line 7, after the word "construct," to strike out the remainder of the bill and insert the following:

Operate and maintain a bridge or bridges and trestles over and across the navigable channels of the mouth of Mobile River from Bay Port, in township 4 south, range 2 east, on the east shore of the waters of Mobile Bay, in Baldwin County, Ala., on a direct line, to a point on Blakely Island, in Mobile County, on the east shore of Mobile River, opposite the municipal docks of the city of Mobile, Ala., at a point or points suitable to the interests of navigation, be, and the same

is hereby revived and reenacted: *Provided*, That this act shall be null and void unless the actual construction of the bridge or bridges and trestles herein authorized be commenced within one year and completed within three years from the date of approval hereof.

SEC. 2. That the right to alter, amend, or repeal this act is hereby expressly reserved.

So as to make the bill read:

Be it enacted, etc., That the act approved October 5, 1917, authorizing the Gulf Ports Terminal Railway Co., a corporation existing under the laws of the State of Florida, to construct, operate, and maintain a bridge or bridges and trestles over and across the navigable channels, etc.

The amendments were agreed to.

The bill was reported to the Senate as amended, and the amendments were concurred in.

The bill was ordered to be engrossed for a third reading, read the third time, and passed.

The title was amended so as to read: "A bill to revive and reenact the act entitled 'An act to authorize the Gulf Ports Terminal Railway Co., a corporation existing under the laws of the State of Florida, to construct a bridge over and across the headwaters of Mobile Bay and such navigable channels as are between the east side of the bay and Blakely Island, in Baldwin and Mobile Counties, Ala.,' approved October 5, 1917."

BILLS AND JOINT RESOLUTIONS.

Bills and joint resolutions were introduced, read the first time, and, by unanimous consent, the second time, and referred as follows:

By Mr. CURTIS:

A bill (S. 4811) for the relief of Mrs. Theodore Sharp (with accompanying papers); to the Committee on Claims.

By Mr. TRAMMELL:

A bill (S. 4812) to require a reduction in rates charged by common carriers and to amend section 15a, paragraph 3, of the interstate commerce act; to the Committee on Interstate Commerce.

By Mr. SHERMAN:

A bill (S. 4813) granting a pension to Lucy L. Boucher; and

A bill (S. 4814) granting an increase of pension to Margaret Bockstruck; to the Committee on Pensions.

By Mr. STANLEY:

A bill (S. 4815) granting a pension to George T. Cooney (with accompanying papers); to the Committee on Pensions.

By Mr. CURTIS:

A bill (S. 4816) to regulate the employment of minors and to provide for compulsory school attendance of children within the District of Columbia, and for other purposes; to the Committee on the District of Columbia.

By Mr. LA FOLLETTE:

A joint resolution (S. J. Res. 243) restraining all further steps looking to allotment of lands or any further disposition of tribal property within the Lac du Flambeau Reservation, in the State of Wisconsin, until further revision of the tribal roll; to the Committee on Indian Affairs.

AMENDMENTS TO EMERGENCY TARIFF BILL.

Mr. HARRISON. I submit an amendment and ask that it be referred to the Committee on Finance, to include the bonus bill, which passed the House as an amendment to House bill 15275, the emergency tariff bill; also another amendment to the same bill creating agricultural joint-stock banks; and another amendment appropriating $50,000,000 for reclamation work in the West.

I move that the proposed amendments be referred to the Committee on Finance.

The motion was agreed to.

AMENDMENTS TO SUNDRY CIVIL APPROPRIATION BILL.

Mr. FLETCHER submitted an amendment proposing to appropriate $110,000 for the completion of the marine biological station at Key West, Fla., including the construction of buildings, purchase and installation of equipment, and improvement and protection of grounds, intended to be proposed by him to the sundry civil appropriation bill, which was referred to the Committee on Appropriations and ordered to be printed.

Mr. SIMMONS submitted an amendment proposing to appropriate $6,924,350 for additional expenses incurred in the operation of boats, barges, tugs, and other transportation facilities necessary to develop the inland, canal, and coastwise waterways of the United States, etc., intended to be proposed by him to the sundry civil appropriation bill, which was referred to the Committee on Appropriations and ordered to be printed.

AMENDMENTS TO ATMOSPHERIC NITROGEN BILL.

Mr. LENROOT submitted nine amendments intended to be proposed by him to the bill (S. 3390) to provide further for the national defense; to establish a self-sustaining Federal agency for the manufacture, production, and development of the products of atmospheric nitrogen for military, experimental, and other purposes; to provide research laboratories and experimental plants for the development of fixed-nitrogen production, and for other purposes, which were ordered to lie on the table and be printed.

Mr. HARRIS submitted an amendment as a substitute for the amendment proposed by the Senator from South Carolina [Mr. SMITH], intended to be proposed by him to the bill (S. 3390) to provide further for the national defense; to establish a self-sustaining Federal agency for the manufacture, production, and development of the products of atmospheric nitrogen for military, experimental, and other purposes; to provide research laboratories and experimental plants for the development of fixed-nitrogen production, and for other purposes, which was ordered to lie on the table and be printed.

Mr. SMITH of South Carolina submitted an amendment intended to be proposed by him to the bill (S. 3390) to provide further for the national defense; to establish a self-sustaining Federal agency for the manufacure, production, and development of the products of atmospheric nitrogen for military, experimental, and other purposes; to provide research laboratories and experimental plants for the development of fixed-nitrogen production, and for other purposes, which was ordered to lie on the table and be printed.

PRESIDENTIAL APPROVALS.

A message from the President of the United States, by Mr. Sharkey, one of his secretaries, announced that the president had approved and signed bills of the following titles:

On January 8, 1921:

S. J. Res. 227. Joint resolution extending the time within which the special joint committee appointed to investigate the advisability of establishing certain naval, aviation, and submarine bases in the United States is required to make its report to Congress; and

S. 390. An act for the relief of Peter McKay.

On January 9, 1921:

S. 2371. An act for the relief of Kathryn Walker.

COUNT OF ELECTORAL VOTES.

Mr. DILLINGHAM submitted the following concurrent resolution (S. Con. Res. 38) which was read, considered by unanimous consent, and agreed to:

Resolved by the Senate (the House of Representatives concurring), That the two Houses of Congress shall assemble in the Hall of the House of Representatives on Wednesday, the 9th day of February, 1921, at 1 o'clock in the afternoon, pursuant to the requirements of the Constitution and laws relating to the election of President and Vice President of the United States, and the President of the Senate shall be their presiding officer; that two tellers shall be previously appointed by the Vice President on the part of the Senate and two by the Speaker on the part of the House of Representatives, to whom shall be handed, as they are opened by the President of the Senate, all the certificates and papers purporting to be certificates of the electoral votes, which certificates and papers shall be opened, presented, and acted upon in the alphabetical order of the States, beginning with the letter A; and said tellers, having then read the same in the presence and hearing of the two Houses, shall make a list of the votes as they shall appear from the said certificates; and the votes having been ascertained and counted in manner and according to the rules by law provided, the result of same shall be delivered to the President of the Senate, who shall thereupon announce the state of the vote, which announcement shall be deemed a sufficient declaration of the persons, if any, elected President and Vice President of the United States, and, together with a list of the votes, be entered on the Journals of the two Houses.

INAUGURAL EXPENSES.

Mr. BORAH. I submit a concurrent resolution and ask for its immediate consideration.

The concurrent resolution (S. Con. Res. 37) was read, as follows:

Whereas, according to a survey of the industrial situation lately made, there are at present out of employment in the United States 2,325,000 workers, many of whose families are now in great need; and

Whereas we are advised by the presence of a resolution now before a committee of this body that there are 3,500,000 children in Europe on the verge of starvation and must die for the want of clothes and food unless saved by the charity of the people of the United States; and

Whereas we are now carrying a fixed debt of $24,000,000,000 and meeting current expenditures to the amount of about $4,000,000,000 per annum, with a deficit of nearly $2,000,000,000 confronting us; and

Whereas the business of the country has advised us that it will be very difficult for business to meet the coming installment of taxes; and

Whereas the party now in charge of the legislative department of the Government and soon to be in charge of all the departments pledged the people of this country in the last campaign that not one dollar should be appropriated from the Treasury of the United States except when absolutely necessary to meet the unavoidable expenses of the Government; and

Whereas in the face of these burdens and sufferings, and in defiance of these pledges, and in the midst of great distress everywhere about us, it is proposed to provide for the most costly, the most expensive and ostentatious presidental inauguration upon the 4th of March, 1921, ever occurring in the history of this or any other country, thus drawing upon the Federal and State treasuries for hundreds of thousands of dollars, which the people in the end must pay; and

Whereas it is proposed further to throw open certain public buildings and interrupt public business to the detriment and cost of the Government and the people of this country; and
Whereas we have already provided, so far as this body is concerned, for an expenditure of $50,000; and
Whereas it is now proposed to appropriate other and further large sums of money: Now, therefore, be it

Resolved by the Senate (the House of Representatives concurring), 1. That no other or further sums of money than that already provided for shall be appropriated from the Treasury of the United States to meet any of the expenses of the inauguration of March 4, 1921.

2. That no public buildings be vacated, or that public business be in any wise interrupted to enable the holding of an inaugural ball.

The VICE PRESIDENT. Is there objection to the present consideration of the concurrent resolution?

Mr. SMOOT. I ask the Senator from Idaho if he will not let it go over until to-morrow?

Mr. BORAH. I ask, then, that it may lie on the table until to-morrow.

Mr. NORRIS. I wish to offer an amendment to the concurrent resolution, and the amendment will, of course, go over with the resolution. I should like to have the Secretary read the amendment.

The VICE PRESIDENT. It will be read.

The READING CLERK. Add to the concurrent resolution the following:

Resolved further, That the Secretaries of the Navy and Army are hereby notified that no appropriations will be made by Congress for the transportation or maintenance of bodies of troops or cadets of the Army or midshipmen of the Navy for participation in said inaugural ceremonies.

The VICE PRESIDENT. The concurrent resolution will go over.

EX-GERMAN PASSENGER VESSELS.

Mr. CALDER. Mr. President, about eight months ago the Shipping Board entered into a contract with a newly organized shipping concern, which is known as the United States Mail Steamship Co., for the purchase by that company from the Shipping Board of certain ex-German passenger vessels which had been used by our Government for transport purposes during the war. Those ships were sold to the United States Mail Steamship Co. at approximately 8 per cent cash, subsequent payments to be carried over a period of years, the money therefor to be obtained from the profits of the operation of the vessels. Those ex-German ships are still tied up at the docks in New York because of the necessity of rebuilding and reconditioning. I have in my hand two newspaper articles which indicate that it is the purpose of the Mail Steamship Co. to have those ships reconditioned in German shipyards. I offer a resolution of inquiry addressed to the Shipping Board to ascertain if that is the fact. I ask that the resolution may be read, and then I shall ask for unanimous consent for its present consideration.

The VICE PRESIDENT. The resolution will be read.

The reading clerk read the resolution (S. Res. 421), as follows:

Resolved, That the United States Shipping Board is hereby directed to furnish to the Senate as soon as possible the following information:

1. Do the terms of the allocation agreement between the United States Shipping Board and the United States Mail Steamship Co., covering, with purchase provisions, certain ships formerly owned in whole or in part by corporations, citizens or subjects of nations with which the United States is at war, permit of the reconditioning of such ships in other than American shipyards?

2. Is it the policy of the United States Shipping Board to permit the reconditioning in foreign shipyards of any ships allocated with purchase provisions?

Mr. CALDER. I ask unanimous consent for the present consideration of the resolution.

The resolution was considered by unanimous consent and agreed to.

AGRICULTURAL AND INDUSTRIAL CONDITIONS.

Mr. SMITH of South Carolina. I am in receipt of a letter from a constituent of mine in reference to the present condition of affairs in the country. I ask to have the communication printed in the RECORD without reading. Of course, if there is objection made to that, I shall take the time of the Senate to read the communication, which, however, is very short. I ask the privilege of having it printed in the RECORD.

Mr. SMOOT. I can not let the communication go into the RECORD without objection. I have no objection, however, to the Senator from South Carolina reading the communication, if he desires to do so.

Mr. SMITH of South Carolina. Then I shall read the letter, because the writer is very much in earnest. The letter is as follows:

THE FARMERS LOAN & TRUST CO.,
Bishopville, S. C., December 15, 1920.

Senator E. D. SMITH,
Washington, D. C.

DEAR SENATOR: We are in an infernal fix down here. We are getting what's coming to us before time. Saint and sinner are squirming. Man never did need but one thing at a time. Once it was time, or rather length of days; once it was preservation of the body after death; once it was burial in one's own country; once it was orders of the church; once it was physical strength; once it was to worship God as one selected; once it was to be free and to own one's country; once, in the South at least, it was to own a slave. Now it is to have money in one's pocket.

When the main and supreme desire of the human heart is withheld, then that individual is already in hell. They say down here that when the Government needed us it took us, while now we need the Government and it is nowhere to be found, and the question naturally arises, "What is the use of such a one-sided affair?"

When the debt of thirty billions was contracted our cotton was selling for $600 per bale. This fall the same cotton has sold for $30 per bale. If we had to pay the thirty billions now it would require an amount of cotton that would have sold for six hundred billions one year ago. That is called by the bankers "adjustment." And so adjustment means a reduction of the ability of the debtor to pay. Hence slavery follows. Nothing has yet been said of scaling debts, but always scaling the ability of the debtor to pay. No man ever enters a contract to pay unless he has faith in his Government to sustain him and see him through.

Our faith has been misplaced. We can do nothing for ourselves. The Constitution forbids. Can we presume to diagnose our own case? We want the discount on silver exchange abolished. If we could trade direct with silver-using countries, cotton would steadily sell for 25 cents per pound, and the people of the North would have to work night and day to supply our needs and our wants. As long as we remain as we are, the North must be content to dwell in the bread line.

Ask any exporter about the immense export trade there was with China and India while silver was at $1.40 an ounce. It is so much easier to reinstate silver than to undertake the plan to standardize money in Europe.

Let me say that the degradation of silver was influenced only as a policy by a selfish clique, and there was no principle involved in its demonetization. The Constitution expected us, by using both silver and gold, to be free to trade east or west, north or south, as far as people dwelt. And when we rejected silver the area of trade was circumscribed to that extent. Hence suffocation commenced, and the World War followed; otherwise Europe and America combined never could have supplied the needs of the world. If we stick to gold alone, many nations will be starved into impotence, and the few survivors will again have to fight for their commercial lives.

W. A. JAMES.

DISTRICT HOTEL CHARGES DURING INAUGURAL CEREMONIES.

Mr. SHERMAN. I submit the resolution which I send to the desk, and ask that it be read and referred to the Committee on the District of Columbia.

The resolution (S. Res. 420) was read as follows:

Resolved, That the Committee on the District of Columbia of the Senate be, and is hereby, directed to investigate and report charges demanded or to be made by the hotels of the city of Washington during the inaugural ceremonies to be held in March, 1921.

Mr. SHERMAN. Mr. President, if the Senate will indulge me for a moment, I ask unanimous consent to submit a few remarks on the resolution submitted by me.

The concurrent resolution read a while ago and presented by the Senator from Idaho [Mr. BORAH], which deals with appropriations contemplated for inaugural purposes, ought to go along with the resolution I have just submitted. The Government, by the appropriations it provides, by the use of its public buildings, and by other methods, including the granting of permits for the building of grandstands along Pennsylvania Avenue and other places of public interest, draws a very large number of people from various quarters of the United States to the city of Washington during the inaugural ceremonies. The Government thereby becomes a dummy or a decoy or a stool pigeon for the purpose of attracting a large number of people here in order that they may be plundered by various occupations in the city of Washington, notably by the hotels.

During the last national convention held in the city of Chicago the Congress Hotel charged $25 for the entire convention. The space afforded for that charge was ample, the ventilation, light, elevator service, and other accommodations were as good as at any place in the United States. For less space, for poorer accommodations, for no fire escapes, for no waiter, messenger, or other service, except the hand of the servitor is out behind his back more than it is in front for the performance of the service, for much less valuable service and accommodation in every way the hotels of Washington are now demanding $50, or double what was charged in Chicago during the last Republican national convention. I offer this by way of comparison to show that the money contemplated to be appropriated for inaugural purposes ought not one dollar of it to be taken out of the Public Treasury until at least there is some reformation in the matter of charges.

Extortion on the occasion of the inauguration has ceased to be a matter of individual practice and has become District and city wide. Everybody who comes here expects to be plundered to some extent, but he does hope to have enough loose change left over to get back home without walking. It is very doubtful, however, under present conditions whether that will be possible. Before the 1st day of January one could not make a reservation in any hotel in the city of Washington. Efforts were made along that line, but not only could no reservations be made but no information could be secured as to what the charges would be.

There is more lawbreaking in the District of Columbia under the nose of a beneficent Government than there is in any other quarter of the United States. This morning the press reports carried the pleasing information for those who love to justify manslaughter that there are more murders in the District of Columbia in 12 months than there are in the entire country of Scotland in the Old World. The antitrust laws of this country have long been set at defiance right in the District of Columbia. No laws are enforced here. During the war profiteering was more rampant in the city of Washington than in any place in North America. It has grown to be a jest and a by-word that the Government can not regulate its own Capital.

Mr. President, I venture the assertion that the charges for those who come to view this inaugural will be more extortionate on and prior to March 4 and a few days afterwards than at any time in the history of the country. Notwithstanding that prices are falling on all the necessaries of life that grow out of Mother Earth, that pay rolls are being diminished, and that wages are being reduced, the one shining exception to the general rule of the reduction of charges will be found in the hotel charges of Washington, which will not merely remain at the old figures in prior inaugurals but will mount to unheard-of new levels.

It is time that an investigation was had, and, if there is no law to cover it, let it go, but let the public stay away from Washington. The President can be sworn in; the pillars of state will not crumble in the event there is no inaugural ball. I do not know what the President elect thinks about it, but in all probability the whole uproar, the fuss and formality and frivolity and official feathers that are shed on the streets of Washington are as distasteful to him as they are to the Senator now occupying the floor. It has grown to be not only a national scandal but a national jest; not only a matter of extravagance in a time when we are endeavoring to save every penny, but a scandal to the occupations involved and to the public plundered by those occupations.

Prices are from 25 to 40 per cent higher in the District of Columbia than they are in any Western State. They have been that way for a long time, even preceding the war. My suggestion is that we make not one dollar of appropriation for the inaugural. If these gentlemen wish an inaugural paid for, let those who charge double the rates in any first-class hotel town in the country, in the cities of New York, Chicago, Philadelphia, St. Louis, go down in their pockets like a Fourth of July celebration in a local town, and those who get the benefits pay the bills.

I hope that neither the joint resolution nor the consequent appropriations that may be pending here will be passed, and that this investigation will be had, and that the public will be informed that the extortion that is sought to be practiced here on and before March 4 will be met by a diminished attendance on the part of those who would otherwise see an inaugural ceremony.

The VICE PRESIDENT. The resolution will be referred to the Committee on the District of Columbia.

ATMOSPHERIC NITROGEN.

Mr. SMITH of South Carolina. I also have a communication from a Mr. Edwin R. Grove, of the city of Washington, inclosing certain anonymous communications, pointing out the deceptive methods used by those who are seeking to defeat the passage of the Muscle Shoals proposition. These anonymous communications appear to be issued by the Press Service Co., 25 West Forty-third Street, New York City, N. Y. They are unsigned, but have been referred to by certain of my colleagues. The writer of this letter incloses some samples of the anonymous communications which are very contradictory in terms, and says:

WASHINGTON, *January 8.*

DEAR SENATOR SMITH: Realizing that you are a true friend of the farmer and that you are doing your best to help the farmer in these critical times, I am inclosing copies of press-agent propaganda that is being mailed daily to the newspapers, and I suppose also to Members of Congress, by persons who seek to defeat the Muscle Shoals nitrate bill. These press-agent sheets show how brazen is the opposition to this bill, and I do not think it a very difficult matter to guess the origin. It would seem to me that this is a matter for congressional investigation, for the people are entitled to know the source of such subtle propaganda against the interests of the farmers of the United States. Trusting that the inclosed sheets will prove of use to you, I remain, with all good wishes,

Yours, very sincerely, EDWIN R. GROVE.

[Nitrate Bulletin No. 3.]

PRESS SERVICE CO.,
25 West Forty-third Street, New York City, N. Y.

WILSON DAM AND CHEAP NITRATES—THE WATER POWER THAT IS ESSENTIAL TO ECONOMY IN MUSCLE SHOALS GOVERNMENT OPERATION SCHEME CAN NOT POSSIBLY BE AVAILABLE FOR AT LEAST THREE YEARS.

The testimony of War Department official shows:

1. That the Muscle Shoals nitrate plant can not produce cheap sulphate of ammonia without cheap water power.

2. That even if Congress maintains an uninterrupted flow of appropriations into this scheme three years at least must elapse before the absolutely essential cheap water power is available.

That cheap water power is essential for the success of the Government operation scheme (S. 3390; H. R. 10329) was the conclusion of Mr. Arthur Glasgow, formerly nitrate director of the War Department, and has the concurrence of his successor, Mr. George J. Roberts, the present nitrate director, who says:

"In Mr. Glasgow's clear, concise presentation of the operation of the plants and the expected return it is clearly shown that the margin of profit when operating by steam is so small that it can not be recommended to operate these plants exclusively by steam. They must be operated in conjunction with the cheap water power from the hydroelectric plant now being constructed at Muscle Shoals. One is dependent upon the other." (Page 85, hearing before the Senate Committee on Agriculture and Forestry, Mar. 22, 1920.)

But it will be January 1, 1924, at the very earliest, before the necessary water power will be available. This is the opinion of Gen. Harry Taylor, in charge of the construction of Wilson Dam, who appeared on Saturday, December 4, 1920, before the House Committee on Appropriations, with Secretary Baker and other officials of the War Department, to urge the appropriation of the next installment of $10,000,000 for carrying on the Muscle Shoals water-power work.

"The CHAIRMAN (Mr. GOOD). How long would it take to complete this entire project if the money was expended in an economical way?

"Gen. TAYLOR. In about three years."

The economical operation of the Muscle Shoals nitrate plant is thus shown by the War Department experts to be impracticable for three years at least.

Why, then, so much haste about starting the operation of the fixed nitrogen corporation?

Assuming that the promises and theories of the backers of this measure are based on sound economic doctrine, there is clearly no pressing need to justify Congress in rushing precipitately into a doubtful experiment with a Government-owned corporation, highly financed with public funds, controlling more than $100,000,000 of public property, endowed with unprecedented powers for the condemnation of private rights, and fraught with grave competitive menace to private industry.

[Nitrate Bulletin No. 4.]

PRESS SERVICE CO.,
25 West Forty-third Street, New York City, N. Y.

"FACTS AND NOT FANCY" ABOUT MUSCLE SHOALS—BEING A RESPONSE TO REPRESENTATIVE MADDEN'S DEMAND FOR INFORMATION AS TO HOW MUCH THE FARMER WILL BE BENEFITED BY THIS GOVERNMENT OPERATION SCHEME. (S. 3390; H. R. 10329.)

"This proposal to do something for the farmer is a subterfuge. * * * The time has come when we must know the facts before we impose further burdens upon the taxpayers of the country. Economy must be the watchword. Facts should be the basis of action here, and not fancy. * * *" (Statement in House debate on Jan. 4, 1921, by Representative MARTIN B. MADDEN (Ill.), p. 950, RECORD.)

The facts are that the testimony of the backers of this Muscle Shoals Government operation scheme make it quite clear that the farmer will receive no substantial benefit through the proposed creation (S. 3390; H. R. 10329) of a Government-owned fixed nitrogen corporation and the turning over to its control of $12,500,000 of Government funds and more than $100,000,000 worth of Government property.

Three points from the testimony of War Department experts are pertinent:

1. The War Department's plan for operating this plant as a competitive business enterprise does not contemplate the manufacture of a complete fertilizer but only certain ingredients of fertilizer. The main product will be sulphate of ammonia.

"Our dependence now in coming to you to operate this plant is sulphate of ammonia, and we are basing our life upon that." (Testimony of Mr. George J. Roberts, nitrate director of the War Department, Senate Committee on Agriculture and Forestry, p. 59.)

2. The War Department's scheme does not contemplate the sale of this material directly to the farmers but to the fertilizer manufacturers.

"After studying the question very carefully, we came to the conclusion that the Government ought not at present, at least, to undertake to deal directly with the ultimate consumer; that that would involve the establishment of agencies all over the United States, and we have come to the conclusion that at present we ought not undertake to do that, but that we ought to make the product and make it available under circumstances that would enable the distributors who are at present relying upon Chilean nitrate to get our nitrate and distribute it for us." (Testimony of Secretary Baker before Senate Committee on Agriculture and Forestry, p. 9, report of hearing.)

3. Furthermore, the scheme contemplates selling the sulphate of ammonia only at the market price "as determined by the law of supply and demand."

"In other words, we should say to the farmer and to the fertilizer industry: 'We can not sell you ammonium sulphate at less than the market rate, governed by the law of supply and demand * * *.'" (Letter to the Secretary of War from Mr. Arthur Glasgow, former nitrate director, who framed the Muscle Shoals Government operation scheme, p. 91 of hearings before Senate Committee on Agriculture and Forestry.)

Whatever might have been the intentions of the War Department, it could not make sulphate of ammonia as a direct product cheap enough to compete with the by-product sulphate of ammonia produced by the coke ovens. A private company (American Cyanamid Co.) tried to do this, using the same process to be used at Muscle Shoals, and had to give it up. Where private operation failed in such a matter is it likely Government operation would succeed?

But now we see that the War Department does not even intend to sell at less than the market price!

And it does not intend to sell to the farmer—the ultimate consumer—but to middle men!

These are some of the facts that should dispose of the fancy regarding a benefit to the farmers.

REDUCTION OF THE ARMY.

The VICE PRESIDENT (at 12 o'clock and 35 minutes p. m.). The morning business is closed. The calendar under Rule VIII is in order.

Mr. NEW. Mr. President——

The VICE PRESIDENT. Unless there is unanimous consent, nothing else is in order.

Mr. CURTIS. Mr. President——

Mr. NEW. I ask unanimous consent, then, that the Senate may proceed to the consideration of Senate joint resolution 236, directing the Secretary of War to discontinue enlistments in the Army of the United States until the number of men in the Army shall be reduced to 175,000 men.

Mr. SMOOT. Mr. President, if that unanimous consent is given, can we take up the calendar after the disposal of the joint resolution?

The VICE PRESIDENT. Yes; in the opinion of the Chair. The Chair is of the opinion that Calendar Monday can be set aside only by unanimous consent. There is no use making provision for it if it does not amount to anything.

Mr. SMOOT. The Chair is right.

Mr. NORRIS. Mr. President, a parliamentary inquiry. Is it the understanding of the Chair that if Calendar Monday is set aside by unanimous consent for the purpose of taking up this particular joint resolution, and that is disposed of, we will then automatically go back to the calendar?

The VICE PRESIDENT. Yes; unless some other Senator can get unanimous consent to take up something else.

Mr. NORRIS. The point is, Mr. President, that I have no objection to setting aside the calendar in order to take up that joint resolution; I do not suppose it will take long; but I should object if it were to set aside the calendar for the day.

The VICE PRESIDENT. Is there any objection to the request of the Senator from Indiana?

There being no objection, the Senate, as in Committee of the Whole, proceeded to consider the joint resolution (S. J. Res. 236) directing the Secretary of War to cease enlisting men in the Regular Army of the United States until the number of enlisted men shall not exceed 175,000, which had been reported from the Committee on Military Affairs with amendments.

Mr. KING. Let the joint resolution be read.

The VICE PRESIDENT. The Secretary will read the joint resolution.

The joint resolution was read, as follows:

Whereas an act approved June 4, 1920, known as H. R. 12775, being an act to amend an act making further and more effectual provisions for the national defense, and for other purposes, approved June 3, 1916, provided that "except in time of war or similar emergency when the public safety demands it the number of enlisted men of the Regular Army shall not exceed 280,000 men, including the Philippine Scouts"; and

Whereas an act approved June 5, 1920, known as H. R. 13587, and entitled "An act making appropriations for the support of the Army for the fiscal year ending June 30, 1921, and for other purposes," appropriated and provided funds for an enlisted personnel of the Regular Army not to exceed 175,000 men: Now, therefore, be it

Resolved, etc., That the Secretary of War be, and he hereby is, directed and instructed to cease all enlistments in the Regular Army until the number of enlisted men shall not exceed 175,000, or until a further and specific appropriation for the pay of enlisted men shall be made by Congress.

Mr. LENROOT. Mr. President, I desire to offer an amendment to the joint resolution.

The VICE PRESIDENT. There are committee amendments to be considered.

Mr. LENROOT. I was going to make a request in that connection. My amendment reduces the number from 175,000 to 150,000, and since that figure appears in part in the original text and in part in the committee amendment, I wondered if it could not be agreed that I might offer the amendment now to cover both the committee amendment and the original text, striking out 175,000 and inserting 150,000, so that we may then have one vote upon the only question, I think, that is involved.

Mr. WADSWORTH. Mr. President, let me say to the Senator from Wisconsin that I, for one, am entirely willing that that procedure should be followed, except that I think it may be desirable to offer another amendment, which does not appear in the committee text and which should be offered, in all probability, after the question which the Senator brings up is determined; in other words, that the reduction be made in the branches by percentages.

Mr. LENROOT. Then, Mr. President, I ask unanimous consent that the amendment I send to the desk may be considered at this time.

The VICE PRESIDENT. The amendment will be stated.

The READING CLERK. It is proposed to strike out the figures "175,000" wherever they appear in the joint resolution and to insert in lieu thereof the figures "150,000."

The VICE PRESIDENT. The question is on the amendment offered by the Senator from Wisconsin.

Mr. NEW. Mr. President, I think I shall oppose the adoption of that amendment, for the reason that I think it would go further in the way of a reduction of the Army than the exigencies of the situation permit.

In considering this amendment, it would be well to understand that a considerable portion of the Army of the United States is now beyond seas. The figures I am about to read are not absolutely accurate, but they are approximately so—so nearly so that they may be accepted as representing conditions as they exist.

There are now in Germany 15,300 men, in Hawaii 7,000 men, in Panama 5,900 men, in the Philippines 10,000 men, in Porto Rico 1,800 men, and in China 1,400 men. That makes about 42,000 of our Army out of the country.

Mr. BORAH. Mr. President, may I ask the Senator whether he gave the figures of the number in Germany as 15,500?

Mr. NEW. I said about 15,300.

Mr. LENROOT. Mr. President, will the Senator yield at that point?

Mr. NEW. Certainly.

Mr. LENROOT. Does the Senator think that the 15,000 men will long remain in Germany, or that very shortly after the special session convenes there will be any authority for them to remain there?

Mr. NEW. I certainly hope they may be withdrawn from Germany at the very earliest moment possible, and I think there is a very strong prospect that they will be.

Mr. LENROOT. Does not the Senator think that the condition will be such, shortly after the 4th of March, that they will have to be withdrawn?

Mr. NEW. Yes; I hope so.

Mr. POMERENE. Will the Senator kindly state what the reasons were which persuaded the committee to fix the figure at 175,000?

Mr. NEW. The majority of the committee, after considering the situation, felt that 175,000 was the figure at which the Army should be placed at present. The desire, of course, is to cut down expenses and at the same time leave the Government in possession of a military force sufficient to meet all reasonable demands which might be placed upon it.

Mr. POMERENE. May I ask what number the minority of the committee favored?

Mr. NEW. One hundred and fifty thousand. The facts are these, Mr. President: The act of June 4, 1920, provides that the military force shall not exceed 280,000 enlisted men. Congress, however, assumed that 175,000 would be sufficient, and it assumed further that that would be as many men as probably could be enlisted during the period for which that appropriation was made. The Secretary of War has affected to so construe the law as to make it mandatory upon him to enlist the maximum number. He has proceeded, by every known means, to enlist just as many men as possible, so that December 31 the Army had 218,398 men. They were then enlisting at the rate of 1,000 men a day. It is my understanding that on last Friday they enlisted 1,500 men. I think it is perfectly safe to say that the rate of enlistment now is at least 1,000 men a day. I apprehend that a statement of the size of the Army last night would show it to be somewhere in the neighborhood of 237,000 or 238,000 men.

Mr. WADSWORTH. Including officers?

Mr. NEW. Yes; of course, that includes officers. It is the purpose of the joint resolution to stop enlistments at once. If it is passed, the way it will operate will be to bring the Army down to 175,000 about the middle of September next. That is to say, men will be discharged as their terms of enlistment expire, and it will require until about the middle of September to bring the Army down to the point where its strength shall stand at the figure fixed by the joint resolution, 175,000 men.

Mr. KING. Will the Senator permit an inquiry?

Mr. NEW. Certainly.

Mr. KING. Would the effect of the joint resolution, if passed, be a reduction in the number of officers corresponding with the diminution in the number of enlisted men?

Mr. NEW. No.

Mr. KING. If not, ought it not to be so amended that there shall be a pro tanto reduction; that is, that officers shall be withdrawn from the service as men are withdrawn from the service?

Mr. NEW. No; I do not think so, Mr. President. The joint resolution would leave the skeleton of the Army as it is, capable of immediate expansion by the enlistment of men, and in case of an emergency I think it could be brought up to any reasonable requirement almost immediately. It leaves the nucleus, the skeleton, there. It would not leave us in the situation in which we were found on the 6th of April, 1917. The measure has that particularly in mind.

The point I now seek to make is that so many of these men are beyond seas that I think it inexpedient to bring the force down to 150,000 men at this time.

Another thing, Mr. President, I would like to make clear in this connection is, that in each of the areas about 5,000 men are

required to care for public property, and this would leave about 6,000 men available for emergency service in each of the nine areas.

Mr. LENROOT. Mr. President——

The VICE PRESIDENT. Does the Senator from Indiana yield to the Senator from Wisconsin?

Mr. NEW. Certainly.

Mr. LENROOT. With reference to men beyond the seas, is not the Senator satisfied that before the middle of September those 15,000 men will be returned to the United States?

Mr. NEW. I hope so.

Mr. LENROOT. Then a reduction from 175,000 to 150,000 would not affect that question?

Mr. NEW. If the 15,000 men were all brought back from Germany, for instance, it would still leave something like 27,000 men beyond seas. I do not know that it is entirely safe for us to proceed upon the theory that it may not be necessary to augment the force now abroad, without any regard to the force in Germany. I think that particular force will certainly be brought back within that time, but we may be called upon to enlarge the overseas force in some other places.

Mr. McLEAN. Mr. President, I would like to ask the Senator if he knows what the saving would be in the expense over last year occasioned by a reduction to 175,000 men?

Mr. NEW. It would amount to a good many millions of dollars. I think it would save from thirty-five to forty million dollars.

Mr. JONES of New Mexico. Mr. President——

The VICE PRESIDENT. Does the Senator from Indiana yield to the Senator from New Mexico?

Mr. NEW. Certainly.

Mr. JONES of New Mexico. I would like to understand whether or not, if the joint resolution is passed as it is framed, there will be any great immediate reduction in the enlisted strength of the Army.

Mr. NEW. It would begin immediately, and in answer to his question I will tell the Senator one thing that would be done. The War Department is at this minute spending money in what I think is a most extravagant manner in obtaining further enlistments. Full-page advertisements in high-priced periodicals and all sorts of expense is undergone in the matter of enlisting men whom I do not think we need at all. That would stop at once, and immediately would begin a reduction of the force. That would be gradual, as I sought to explain. The reduction would just go on from day to day, each day leaving a somewhat smaller number than the day which preceded it, until somewhere about the middle of September the 175,000 mark would be reached.

Mr. JONES of New Mexico. If I understood the Senator correctly a moment ago, he estimates that the enlisted strength will not be reduced to 175,000 until next September?

Mr. NEW. That is right.

Mr. JONES of New Mexico. Is it not possible to bring about some greater immediate reduction in the force?

Mr. NEW. I doubt, Mr. President, if that can be done without crippling the military force. The joint resolution has been drawn with a view to permitting the reduction, and forcing the reduction, for that matter, with just as little inconvenience and loss from the military standpoint as is possible in reaching the end desired.

Mr. JONES of New Mexico. I observe that the committee has proposed an amendment on page 2, excepting those "who at the time of the passage of this act have served more than one year in the Regular Army or the Army of the United States during the recent emergency."

Mr. NEW. Yes.

Mr. JONES of New Mexico. I should like to inquire of the Senator what effect that amendment will have upon the recruiting of the Army. How many persons will probably come into the service under that amendment?

Mr. NEW. I think none will come in, but some will be retained, some will be permitted to reenlist. Some men go into the Army to make a career. They are really the valuable men of the Army. The men who have served the first enlistment and who have gone in for that purpose are men who have already become noncommissioned officers, and it is for the purpose of permitting the service to retain those very valuable men that that amendment was inserted. The reference to the Army of the United States was made in order that the veteran of the World War, who served under the conscription act, shall be entitled to the same opportunity that is given to the man who serves in the Regular Army of the United States.

Mr. JONES of New Mexico. Does not the Senator believe that if that be the purpose of the amendment, it should be limited to those who are in the Army now?

Mr. NEW. It is so limited.

Mr. JONES of New Mexico. As I take it, the language does not bear out that interpretation. The exception extends to those who at the time of the passage of the act have served for more than a year in the Regular Army or the Army of the United States during the recent emergency, whether they are now in the service or not. Does not the Senator believe that that should be limited to those who are now in the service?

Mr. NEW. It was the intention to limit it to those who are now in the service.

Mr. JONES of New Mexico. Does the Senator believe that the language will warrant that interpretation?

Mr. NEW. I have thought so.

Mr. JONES of New Mexico. I certainly feel that it should be made more specific. I desire to state, Mr. President, that I am anxious not only to prevent the future augmentation of the number of enlisted men in the Army, but I believe there should be something done immediately to reduce the expenses of the Army. We all realize that there are thousands of men who served in the recent emergency who are demanding medical treatment. We are pressed for hospital accommodations for thousands of such men. I know that the committee which is considering the question of providing hospitals feels that it is not able to provide all the money which should be provided for the purpose of building hospitals for the disabled men who have served in the Army. I believe that there should be some immediate reduction in the expense of the Army, at least sufficient to make us feel free to provide all the hospital accommodations which the men ought to have.

I believe that the exception should be limited to those who are now in the service of the Army, and if there can be some way provided whereby we can make a present reduction without waiting for this gradual reduction it should be done, so that we may use this money for other purposes. I hope the chairman of the committee will see fit to agree to amend that amendment so as to bring about what he evidently has in mind, but which I do not believe the language will accomplish. If it is possible to propose some amendment which will bring about an immediate reduction in the expense, it ought to be done. There is no reason why we should wait until next September, it seems to me, to reduce this force. Something ought to be done to reduce it now.

Mr. BORAH. Mr. President——

The VICE PRESIDENT. Does the Senator from Indiana yield to the Senator from Idaho?

Mr. NEW. In just a moment. The Senator from New Mexico and myself are certainly in substantial agreement. I am seeking by the joint resolution to accomplish about what he has in mind, and I think this does accomplish it. It may be open to the technical objection which the Senator makes. If so, I am perfectly willing that that point should be made clear.

Mr. LENROOT. I would like to call the attention of the Senator from New Mexico to the fact that the exception covers only reenlistment. Reenlistment is a well-defined term, having reference to those who are now in the Army.

Mr. NEW. Exactly. The reference, as the Senator from Wisconsin points out, is to reenlistment. It applies only to those who are now in the service.

Mr. JONES of New Mexico. I think that ought to be made plain.

Mr. FLETCHER. I think that can easily be remedied by adding, after the word "act," the words "are in the service," so that it will read, "who at the time of the passage of this act are in the service."

Mr. JONES of New Mexico. I suggest that that amendment to the amendment be accepted so as to remove all doubt.

Mr. NEW. I think the objection is technical and fanciful rather than substantial, because if the man is not in the service he can not be reenlisted. The very word reenlist means that he must be in the Army. He can only be reenlisted at the expiration of a present reenlistment. I think that is perfectly clear.

Mr. JONES of New Mexico. That may be the technical construction of it in war language, but I submit to the average reader it would not apply at all. If a man has once been enlisted, he can be reenlisted whether he is serving in the Army at the time of the reenlistment or not. That must be the ordinary construction of the term, and I think the amendment suggested by the Senator from Florida ought to be accepted, so as to remove all doubt on the question.

Mr. NEW. Let me add to what has been previously said on this point that the term "reenlistment" is defined by the statute. The man who desires to reenlist is given certain privileges, but that is accompanied by a certain requirement. He must reenlist within a given time. The term "reenlistment" is accurately defined by statute, so I think there can be no doubt about it.

Mr. JONES of New Mexico. May I not inquire if the explanation which the Senator has just made does not give rise to the criticism which I have offered to the amendment? It is now stated that the statute prescribes that a certain time may elapse after the expiration of one enlistment within which there may be a reenlistment. Does not that carry with it the implication at least that there may be a period of time when the person is not in the service of the Government?

Mr. NEW. That whole matter is a matter of contract between the Government and the soldier. Certain rights are guaranteed him by contract, and in order to get the benefit of them he must comply with the requirements that are fixed by the statute. The term "reenlistment" there is absolutely defined. No one having once served a period of enlistment can come in a year hence, or at some indefinite time in the future, and claim the benefit of a previous enlistment. He must do it within a given number of days, the interval permitted between the expiration of one enlistment and the beginning of another being granted merely in order that the soldier may have the opportunity to visit home and perhaps turn the thing over in his mind.

Mr. JONES of New Mexico. May I inquire of the Senator if under the present law there is a contract arrangement whereby a person who enlists in the Army has a right to reenlist?

Mr. NEW. Yes.

Mr. JONES of New Mexico. Then does not the Senator by the joint resolution take away that contract right?

Mr. NEW. No; not at all. As the Senator from New York [Mr. WADSWORTH] points out, that is one of the reasons for the amendment. Not all of the men want to reenlist upon the expiration of an enlistment. Most of them want to get out, but those who want to stay are the men who have a natural taste for military life and who go into the Army for a career and who become noncommissioned officers in the course of a little time, many of them upon the expiration of the first enlistment. They are what has been so aptly termed "the backbone of the Army." It is merely in order that the Government may not be deprived of the services of those men that the provision for reenlistment is made.

Mr. JONES of New Mexico. Are we then to understand that by the joint resolution we are violating a contract with those who have enlisted, but who have not served a year, and preserving it only as to those who have served more than a year? Would that be the effect of the joint resolution?

Mr. NEW. No; there is no implied contract in the first enlistment.

Mr. JONES of New Mexico. Then I fail to understand the force of the remarks of the Senator a while ago that there was some contract arising by reason of an application for reenlistment.

Mr. NEW. That comes under the second enlistment.

Mr. FLETCHER. Is it not true that there are no enlistments for less than a year?

Mr. NEW. There are none for less than a year.

Mr. FLETCHER. All are for a year or three years.

Mr. BORAH. Will not the Senator accept an amendment to the joint resolution directing the Secretary of War to discharge an enlisted man upon his application so long as the discharge does not reduce the Army below 175,000 men?

Mr. McKELLAR. Section 2 provides for that already.

Mr. BORAH. It authorizes it, but does not direct it.

Mr. NEW. It does not direct it, but it authorizes it.

Mr. BORAH. I am afraid that will not be very beneficial.

Mr. McKELLAR. If the Senator will offer such an amendment bringing this about without destroying the morale and injuring our overseas service, I would be glad to vote for it, but I am inclined to think section 2 is about the best we can do.

Mr. NEW. I think there are very obvious objections to that. I think Senators will see, if they stop to consider for a moment, that the amendment, I think, would prove an incentive for the soldier who does not readily subscribe to discipline to violate or disregard discipline, in the belief that having done so he could escape the consequences of it by simply saying, "I do not like this job and I am going to quit." I think that would be disruptive of all discipline.

Mr. McKELLAR. Mr. President——

Mr. NEW. I yield to the Senator from Tennessee.

Mr. McKELLAR. I agree with the Senator from Idaho that the Army ought to be reduced at the earliest practicable moment; and, of course, I see his reason for the amendment in the committee. I had the same notion about it. The difficulty about it, though, is that we have fighting forces overseas, and if we were compelled to accept resignations it might be embarrassing under certain circumstances. For instance, our forces at Panama might suddenly hand in all their resignations and put us in a very embarrassing situation, and so in Hawaii, Alaska, and other places. For those reasons probably the authority should be retained as provided in section 2 of this resolution, but unquestionably I think the Secretary of War ought to exercise the authority vested in him by this second section to reduce the Army according to the views of Congress at the very earliest possible moment. The Senator can see the obvious difficulties about directing that all requests for discharge shall be granted.

Mr. NEW. I think that the Senator may well take into account the fact that the act is to be administered probably by another Secretary of War, and presumably one who will be in more sympathy with the purposes of the bill than the present incumbent of the office.

Mr. BORAH. If I knew who that Secretary of War is going to be I might be consoled by that suggestion, but he might be of the same view as the present incumbent.

I can see objections, perhaps, to applying the proposition to the overseas service; but I know of instances where men have been very desirous of getting out to go back to the farms, and so forth, where they belong, and it is practically impossible for them to get out. It will be so under the provisions of the joint resolution, unless the Secretary of War sees fit to exercise favorably his discretion in the matter.

Would not the Senator be willing to confine it to men in service in this country? Some of the young men are desirous of getting out and going back where they can render some real service to the community. There ought to be some way by which they can get out rather than by the discretion of some one who does not want them out.

Mr. WADSWORTH. Will the Senator permit me to make an observation to the Senator from Idaho?

Mr. NEW. Certainly.

Mr. BORAH. I shall be glad to have it.

Mr. WADSWORTH. The Senator suggests that the amendment be made applicable only to men who are now serving in the United States. At first blush that would seem rather an attractive compromise, as it were, but we have to remember that the men are enlisted in the service as a result of recruiting parties at considerable expense. As soon as a man is enlisted in the service he is issued clothing and equipment by the Government. He is fed and trained. He is transported, and the transportation charges are one of the principal elements of expense in getting men into the service and finally attached to units where their training is commenced.

Under the Senator's proposed amendment a man could enlist in the Army. He is paid his traveling expenses from the point of enlistment to the first post to which he is attached, a recruiting depot, we will say. He is issued clothing from head to foot. He is fed. He is trained for a time at the recruiting depot and then he goes forward to his regiment. He is transported again in that process. The money spent on him amounts to some hundreds of dollars. That man, after having been in the service a month or six weeks, can say, "Well, I guess I don't like this, and I am going home," and under the Senator's amendment he must be allowed to go.

Mr. BORAH. The very object of the joint resolution is to get that man home.

Mr. WADSWORTH. No; the very object of the joint resolution is to stop recruiting.

Mr. BORAH. Precisely so; but there has been a suggestion here that the Army should be immediately reduced——

Mr. WADSWORTH. It will be.

Mr. BORAH. To 175,000 or 150,000 men. I understood the Senator from Indiana to say that he is in sympathy with that. Now, let the man who makes his application have some say about whether he shall go home or not. We know what happens to a man who is enlisted as against the discretion of a Secretary of War. I do not care whether the Secretary of War is a Democrat or Republican, the discretion is always exercised in the same way.

Mr. WADSWORTH. If the Senator wants to smash all discipline in the Army, he will urge that amendment. A man may be put on kitchen police some morning, peeling potatoes, and he will say, "I do not like this job; I guess I will put in an application for a discharge"; or he may have been ordered to do something else he does not want to do. The word is passed around, for instance, among all the men, "if you are ordered to do anything you do not want to do, ask to go home and they will have to send you."

Mr. BORAH. Precisely. I discover a good deal of insincerity about reducing the Army, about which we have been talking.

Mr. WADSWORTH. No; the Senator has not discovered it yet.

Mr. BORAH. I think I have, because the Army can not be reduced, even under my amendment, below 175,000; and that is

what the Senator says he desires to do. What is all this about if it is not to reduce the Army?

Mr. NEW. It is to reduce the Army and not to smash it.

Mr. BORAH. We could not smash it below 175,000, and the Senator says that is large enough; that that is all we need.

Mr. NEW. I do not think the Senator from Idaho realizes the effect which an amendment such as he offers would have upon the discipline of the Army, for I am sure if he did—at least if he takes the view of the matter that I do—he would not offer the amendment. I am convinced that its adoption would be absolutely disruptive, that discipline could not be maintained under it for 24 hours.

Mr. BORAH. Discipline could be maintained for 175,000 men.

Mr. NEW. No; I do not think so. Every soldier desiring to escape the penalties of a breach of discipline would be asking for his discharge and in some instances getting it.

Mr. WADSWORTH. And may I say that, under the law, the Government would have to pay his traveling expenses home?

Mr. NEW. Yes; exactly.

Mr. BORAH. The Government could well afford to pay his traveling expenses if he would go home and go to work on a farm or some place where he would help the community.

Mr. McKELLAR. Will the Senator from Indiana yield to me?

Mr. NEW. Yes.

Mr. McKELLAR. I will say that in the committee I favored some such amendment as has been suggested by the Senator from Idaho [Mr. BORAH], but upon reflection and upon talking the matter over as we did in the committee it became apparent that we had some forty-odd thousand men abroad and, under the unrestricted right to resign, the whole forty-odd thousand could send in their resignations and receive their discharges at once. That would put our Military Establishment in a situation such as we would not desire to subject it to. For that reason I feel that section 2 as drawn and adopted by the committee embodies the proper method of handling this very difficult situation.

Mr. President, if the Senator from Indiana [Mr. NEW] will excuse me for just a moment, while I am on my feet I desire to say that I am very heartily in favor of the pending joint resolution. I am also very heartily in favor of the amendment which has been offered by the Senator from Wisconsin [Mr. LENROOT] to reduce the number to 150,000 men. It might be said, so far as the present law is concerned, that the Secretary of War is carrying it out, for he was authorized by Congress in the Army reorganization bill which was passed last spring to recruit the Army up to 280,000 men. I thought at the time it was very unwise to fix the number at that large figure, and I think I so stated on the floor of the Senate; I know I did so in the committee. However, the Secretary of War has the authority, for it is granted in the law. That authority was not taken away from him later on when we appropriated for only 175,000 men. The difficulty about the matter arises from the fact that Congress enacted those two apparently conflicting laws. It was supposed that the Army would be recruited to 175,000 men; we thought it would not be difficult to recruit the Army to that number by voluntary enlistment; but it turns out that there have been recruited not only that number but some two hundred and thirty-odd thousand in entire contradiction of the views, as it seems to me, of the committee and of Congress.

How can we bring about a readjustment of that situation? There is but one way and that is along the lines of the pending joint resolution. We must have men reenlist in order that we may have well trained men to teach the new men; we must have experienced men in the Army. For that reason we provided for reenlistments under certain conditions, which is very proper. There is no danger whatsoever in reducing the number provided for to 150,000 men, for the reason that under the terms of the proposed act the number will not be reduced to 150,000 until a year from now or about that time. It will be next December or next January before, under the terms of the bill and amendment, the number will be reduced to 150,000 men. The number will constantly be reduced month by month, but I think it is estimated that it will probably be next September before we can reduce the number to 175,000. Manifestly we ought to reduce the number to 150,000, because it will be a year from to-day before we can secure that reduction, and in the meantime we will have a much larger average number in the Army.

Mr. BORAH. May I ask the Senator a question?

Mr. McKELLAR. The Senator may do so with the consent of the Senator from Indiana [Mr. NEW], who has the floor. I shall be delighted to yield to him.

Mr. NEW. The Senator from Idaho may interrupt as far as he likes.

Mr. BORAH. The Senator from Indiana stated a few moments ago the number of men enlisted at the present time, but I have forgotten the number.

Mr. McKELLAR. The number is about 230,000.

Mr. BORAH. It is now desired to reduce that number to 150,000 or 175,000?

Mr. McKELLAR. To 150,000, I hope.

Mr. BORAH. Under the joint resolution, the Senator does not think there will be any reduction, of course, until the 4th of March next?

Mr. McKELLAR. The number will begin to be reduced immediately.

Mr. NEW. The Senator from Idaho misunderstands the proposition. The reduction begins at once.

Mr. BORAH. To what extent does it begin?

Mr. McKELLAR. At once; but proportionately, month by month.

Mr. LENROOT. The Army will be reduced as enlistments expire.

Mr. BORAH. I should like to have the figures if the Senator can give them.

Mr. NEW. I had the figures, but they happen now to be in the possession of the Senator from New York [Mr. WADSWORTH].

Mr. BORAH. I should like to hear those figures, if the Senator will permit.

Mr. McKELLAR. I shall be delighted to yield.

Mr. BORAH. To what extent will the reduction take place? Do the figures show the number of enlistments which expire between now and the 4th of March?

Mr. WADSWORTH. It will take quite a statement to answer the question of the Senator from Idaho, and I think I had better do it in my own time.

Mr. McKELLAR. I am nearly through.

Mr. WADSWORTH. I do not wish to interrupt the Senator from Indiana further; that is all. I have some figures here about this matter which I shall later present to the Senate.

Mr. McKELLAR. I should like to say to the Senate that so far as I am concerned I feel that the Army ought to be reduced. I think it was unfortunate and unnecessary to have fixed so large a limit as 280,000 men in the Army reorganization bill. I think it was very unfortunate that it should have been recruited up to its present strength. I do not think it was in accord with the last intention of Congress, as expressed in the appropriation bill, and I am very sorry it has been done. The pending joint resolution, amended by inserting 150,000, ought to be passed at once, and we ought to take steps to reduce the Army as fast as we can without destroying its morale and without destroying any subdivision of the Army. We must take proper action in order for it to be effective, for if we act along improper lines the proposed legislation is not going to be effective, and later we shall have to consider another resolution framed along correct lines.

Our war expenditures are enormous. They must be cut down. There is no necessity for a large standing Army at this time. We have millions of well-trained young men in the country now, and should trouble arise they could be put into the Army almost at once. Our tax burdens are heavy, and no larger appropriation should be made unless absolutely necessary. We should not expend more than $200,000,000 on our Army this year, and the best way to insure this is to pass this resolution, with the amendment.

The Senator from New York [Mr. WADSWORTH], chairman of the Committee on Military Affairs, has devoted much time and great attention to this matter. He has worked it out very carefully and with an earnest desire on his part, as I believe, to bring about a result that will be effective to reduce the Army and at the same time not destroy its morale and effectiveness. The Senator from Indiana also has been very active in the matter, and I feel that those Senators are entitled to great credit for what they have done in bringing this resolution before the Senate, and I wish to give them that credit so far as I can. The committee carefully considered this resolution and was unanimously in favor of the resolution, the only difference of opinion being as to the number of men. The joint resolution which has been reported by the committee is in general accord with my views. I am very anxious to have the Army reduced, for, in my opinion, it ought never to have been authorized to a limit of 280,000 or recruited up to the point where it now is.

Mr. President, I hope the Lenroot amendment will be adopted, and that the resolution as amended be passed.

Mr. NEW. Mr. President, I can answer the question of the Senator from Idaho from memory with reasonable accuracy. I shall base what I am about to say on the figures of December 31, 1920. On that date the Army numbered 218,398 men. At

the rate at which enlistments have been received it is considerably larger now; but starting with December 31, when there was a total of 218,398 men, if enlistments had ceased then reduction of enlisted strength would have progressed as follows: On January 31, 1921, the Army would have been reduced to 213,491 men; on February 28, to 209,000 men; on March 31, to 204,000 men, or about 4,000 a month; on April 30, to 201,000; and on May 31, to 194,000. That is about the way the reduction would proceed, and that ratio would continue until about the middle of September, when the 175,000 mark would be reached. That is as nearly a definite answer as I can give to the Senator's question, without having the actual figures before me.

Mr. FLETCHER. Mr. President, may I suggest to the Senator that it is easy for us to sit here and, without understanding all the conditions surrounding the Army and the needs of the service, say we do not want more than 100,000 or 120,000 or 140,000 enlisted men in the Army. I am afraid we would make a very great mistake simply to indulge the general notion that we want to reduce the Army down to the very smallest possible basis and then guess at the figure. The Senator will remember—and this bears on the subject of the amendment offered by the Senator from Wisconsin—that in the hearings before the committee last year the War Department officials generally, as I recall, estimated that something over 500,000 men were needed for the Army. That was in May or April last. The House committee, when the bill which was approved on June 4, 1920, was under consideration, were in favor of placing the number at two hundred and ninety-odd thousand, as I recall, and I think those are about the figures. Those were the respective estimates in June last, the Army reorganization bill having been approved on June 4, 1920.

So the War Department having estimated as being necessary something over 500,000 men, the House being determined that the proper number was two hundred and ninety-odd thousand, and the Senate having determined upon a less number, finally a compromise was effected placing the number at 280,000. That, I repeat, was the number fixed on June 4, 1920, the 280,000, of course, being the maximum, although it was very much less than the number contended for at the time by the Army itself and by the War Department as necessary for the service.

We ought to be very careful here not to make a mistake which might almost destroy the Army by reducing to 150,000 based on a mere guess.

There has been further consideration of the subject by both the House and the Senate. When Congress came to pass the appropriation bill it was determined that possibly the enlistments could not exceed 175,000 during the life of the appropriation, and therefore an appropriation was provided to pay 175,000 enlisted men. That is evidence of the latest consideration by Congress on the subject. Now, the committee under the joint resolution which the Senator from Indiana [Mr. NEW] has offered, and which has been reported, proposes to fix the number at 175,000, which represents the latest guess of the committee, and now it is proposed on the floor to reduce that number to 150,000 merely in an arbitrary manner. I think we ought to be very careful about the step we take in this regard.

Mr. OVERMAN. Mr. President, can the Senator advise as to what was the strength of the Army prior to our entry into the war?

Mr. FLETCHER. It was something over 100,000 men.

Mr. OVERMAN. If only 100,000 men were necessary then, why should we have 175,000 now?

Mr. FLETCHER. We have made progress in a great many directions and we have gone back in a great many directions. The world is a different world to-day from what it was in 1914.

Mr. OVERMAN. That is no reason for increasing the Army.

Mr. FLETCHER. The conditions throughout the world are considerably different, and our needs are different from what they were then.

Mr. OVERMAN. How are our needs different?

Mr. FLETCHER. They are different because of the terrible world upheaval which has happened since then. The Senator can realize some of the changes which have been brought about by looking at his paper in the morning and reading what is happening on the California coast and on the Mexican coast and in other directions. I do not think I need to dwell upon that phase of the situation, for we know that we are in a different position to-day from that which we occupied in 1913 and 1914.

I do not wish to take up the time of the Senator from Indiana now. I merely wanted to throw out that suggestion and to call his attention to the estimates which were made last year as bearing on this question.

Mr. POMERENE. Mr. President, if I may ask the Senator in charge of the bill another question, when this matter was up before the committee with a view to reducing the Army, as I take it, from the authorized number of 280,000 to 175,000, what was the position of the War Department with respect to the change?

Mr. NEW. The War Department was opposed to it. The Secretary of War and the Chief of Staff were opposed to it.

Mr. President, I think I have said about all I care to say on this subject, except that I should like to add this: I have not fixed this figure at 175,000 without having given the subject a good deal of consideration, and I know that that is true of the Senator from New York [Mr. WADSWORTH], who has perhaps given it even more thought than I have. My desire is to get the Army down to as low a point as possible consistent with present-day needs and without impairing the efficiency of the Army. In fixing the figure at 175,000 I have taken into account the fact that there are a great many men abroad, the further fact that some of them are certainly going to be returned home within a few months, and the fact that half of these men, or nearly half of them, are necessarily employed at this minute in the care of public property. This figure of 175,000 really leaves only a little more than 50 per cent of the men as effectives for actual military operations in case of an emergency, and I believe that it would be a military mistake and an economic mistake to put the number below the 175,000 mark. For that reason I can not accept the amendment offered by the Senator from Wisconsin.

Mr. LENROOT. Mr. President, when the Army reorganization bill was passed it was certainly with the clear understanding upon the part of some of us who were members of the Military Affairs Committee that this was an authorization for an Army of 280,000 men, but that the actual size of the Army would depend upon the appropriations that were made from year to year for that purpose. It was not expected that the Army would be increased beyond 175,000 men during this fiscal year. The appropriations were made upon that basis. That, since I have been a Member of Congress, has been the practice, and there is a very good reason for it.

Here is an authorization, as the law now stands, that through the simple act of making an appropriation, without requiring any further legislation, the Army may be increased to 280,000 men; and that was the great advantage in placing in the Army reorganization bill this maximum number. As I said, however, it was supposed that in the enlistment of men the War Department would conform to the appropriations made by Congress. It has not done so.

Mr. NORRIS. Mr. President, the Senator has stated what I thought when we passed the appropriation bill was going to be the fact, although I am not a member of the committee. I think everybody understood the matter just as the Senator has stated it. I am curious to know what excuse the Secretary of War has given for taking a different viewpoint and recruiting the Army without regard to the appropriation that has been made by Congress to pay for it.

Mr. LENROOT. Evidently the Secretary of War regards an authorization by Congress as a direction by Congress. I can not account for it in any other way.

Mr. NORRIS. Has he given any explanation as to what was the effect, in his judgment, of this appropriation?

Mr. LENROOT. None whatever. As I understand, he simply takes the position that it was expected that if the recruiting was sufficient to bring the Army beyond 175,000 men, the excess would be taken care of in a deficiency appropriation. Of course, it is very plain that the Secretary of War, as in so many other cases, the Muscle Shoals Dam being one of many, has no regard for carrying out the will of Congress if Congress technically gives him some greater power. That is exactly what the situation is here.

The majority of the committee are opposed to reducing the Army below 175,000 men. Of course, neither this joint resolution nor the amendment that I have proposed, that is pending, has anything to do with changing the permanent law regarding the size of the Army. We simply limit it to the appropriations that may be made for that purpose, and it ought to be so limited.

Now, do we need more than 175,000 men? And can the Army be reduced to 150,000 men in the next fiscal year so as to effect a very substantial saving to the Treasury if they are not needed?

The answer in both cases must be in the affirmative. It has been shown that by about the 1st of next September, under the joint resolution as proposed by the committee, the Army will be reduced to about 175,000 men. The amendment that I

have proposed will not affect that portion of it, but the reduction would simply go on a little longer until it was reduced to 150,000 men, and that would be accomplished before the 1st of January of next year; so that, assuming that there will be a saving only of six months in which the Army will be reduced to 150,000 men in the next year, my amendment will save to the Treasury $12,500,000 more than will be saved to the Treasury by the joint resolution as reported by the committee.

The only question, it seems to me, is, Do we need in the next fiscal year a greater Army than 150,000 men? It seems to me very clear that if we did not need more than 175,000 this fiscal year, which the Committee on Military Affairs unanimously agreed upon, we certainly shall not need more than 150,000 men during the next fiscal year.

We have had more than 15,000 troops located in Germany. It is admitted by the majority of the committee that within the next few months those 15,000 men will be returned to this country. It is admitted that when the Army reorganization bill was passed our National Guard amounted to practically nothing. The National Guard on the 1st of January, I believe—the chairman will correct me if I am mistaken—amounted to some 70,000 men, and it is rapidly increasing. Therefore, Mr. President, if 175,000 men in the Army were enough for this year, with 150,000 the country will have more protection during the next fiscal year than it had with 175,000 this year.

I do not know how anyone can successfully contradict that statement; and if that be true, especially in view of the condition of the Treasury, I can not see any justification for incurring this additional expense of $12,500,000 a year over that which is proposed by my amendment.

As to whether or not 150,000 men will be sufficient in the next fiscal year, Mr. President, if they are not we shall have to have more than 175,000. If any emergency shall arise, the difference between 150,000 and 175,000 is not going to take care of the emergency; but there never has been a time, probably, within the memory of any Senator upon this floor—certainly not since the Civil War, and I doubt whether there are any Members present this morning who can remember that time—when there was less possibility of there being any necessity for an Army over 150,000 men than there is to-day.

The Senator from Florida [Mr. FLETCHER] suggested that we ought to be very careful and that we ought not to guess at this matter of reducing the Army below 150,000 men. Mr. President, there is not anything technical about it. A further reduction of 25,000 men will simply mean that the skeleton regiments which were provided for in the Army reorganization law will not be quite so full as they would be with 175,000 men; that is all. The difference between 150,000 and 175,000 in that respect can not make any difference in the general plan of the Army.

So, Mr. President, it seems to me this amendment clearly ought to be adopted. The Army is going to cost us quite enough during the next fiscal year, anyway, and if we are going to economize, if we are going to have any regard for the taxpayers of the United States, here is a good place to have some regard for them, because no one can point to any possibility of any necessity during the next fiscal year, in my judgment, of an Army in excess of 150,000 men.

Therefore I hope the amendment I have proposed will be adopted.

Mr. WADSWORTH. Mr. President, I think we might go back a little to trace the steps which have been taken by Congress in regard to the size of the Army. I am especially prompted to impose upon the Senate in that regard by an observation made by the Senator from North Carolina [Mr. OVERMAN].

Back in 1913 the Regular Army consisted, as I recollect, of about 88,000 men, exclusive of certain noncombatant services, such as the Medical Service and the Quartermaster Corps. In 1916 there was enacted the national defense act. At that time the Regular Army numbered in the neighborhood of 100,000 men, and in the national defense act we provided specifically that during the four or five succeeding years—I forget the exact number of years—the Army should be increased by annual increments to a figure which would bring it in the neighborhood of 220,000 men in five years' time. That was passed in 1916, so that as the result of the national defense act of that year, by 1921 the Army would number 220,000 men; and I think the Senator from North Carolina voted for the national defense act. It so happens that that is just about the size of the Army to-day. If Senators will look back over the record they will see that there is nothing very outrageous, from the legislator's standpoint, about the present size of the service, for they will find that the Army to-day is just about the size of the Army they voted to authorize five years ago.

Mr. OVERMAN. I did vote for that bill, because there was a cloud hanging over the country and war was expected.

Mr. WADSWORTH. It is hard to make very accurate estimates of clouds. There may not be such clouds to-day as there were then, but there are some.

Along came the reorganization act of last year. The Secretary of War and the Chief of Staff had a bill prepared in the War Department, they sent it to Congress, and it was introduced in the Senate. It called for a regular standing Army in time of peace of 576,000 officers and men. The Senate Committee on Military Affairs regarded that as an absolutely untenable request. The annual cost would have been $800,000,000 for such a force. So, after most extensive hearings, the Military Affairs Committee of the Senate reported its bill carrying the Army at an enlisted strength of 280,000, with sixteen thousand and odd officers. At the same time the House Committee on Military Affairs, which also held hearings, reported its bill carrying an enlisted strength of 298,000 men, 18,000 larger than the number proposed by the Senate committee.

Mr. NORRIS. Mr. President, can the Senator give the date of the bill which was introduced, prepared by the War Department, in which nearly 600,000 men were provided for?

Mr. WADSWORTH. It is my recollection that it was in the early summer of 1919. I can not give the date of its introduction.

Mr. NORRIS. Can the Senator give it with reference to another incident? Was it before the Senate had acted on the treaty of peace?

Mr. WADSWORTH. Oh, yes.

Mr. NORRIS. To be fair to the War Department, then, I think it ought to be said, or it may be that it is claimed by them, that that was the size of the Army which they thought we would need in case we went into the League of Nations. They might not think they need so many now.

Mr. WADSWORTH. That is very possibly true. The inference was that the League of Nations proposal had something to do with suggesting that figure, although it was never completely confessed that that was the reason. There was a clear intimation, however, that at that time the possible obligations of the United States would require a Regular Army of 576,000.

However, Mr. President, when the Army reorganization act went into conference between the two Houses, the House conferees insisted for some time on an authorized strength of 297,000, the Senate conferees for 280,000, and finally the Senate conferees had their way, the House conferees yielding, and the Army reorganization act went through at 280,000. It is well to remember that the act provides that except in time of grave emergency the Regular Army shall not exceed 280,000, using language which had generally been used in old-time statutes. Of course, we had the idea that that merely fixed a maximum, and that it was within the discretion of the Congress, and of the Secretary of War to some extent, to vary the actual strength of the Army from time to time.

Following the passage of the Army reorganization act there came the Army appropriation bill, and here, I think, we ought to have a clear understanding of what occurred, because I think the Senator from Wisconsin [Mr. LENROOT] is somewhat inaccurate in one of the assumptions that he makes.

When the Army appropriation bill reached conference between the two Houses one of the questions at issue was the amount of money to be appropriated for the pay of the Army, and it was suggested, of course, that the item "Pay of the Army" was one of the most potential items in the bill governing the strength of the Army. At the time the conference was going on there were 202,000 men in the Regular Army. This was last May. The number had been decreasing prior to that time, but its rate of decrease had been slowing up, so that those who examined the figures were convinced—at least some of us were convinced—that instead of the decrease continuing the minimum would shortly be reached and the Army would shortly commence to increase, with the recruiting machinery which was then installed.

The House members insisted that the Army could not get more than 175,000 men, on an average, for the fiscal year. The Senate conferees contended that they would get much more than 175,000 men on the average, and that matter was discussed back and forth, but not one word was said in the conference, according to my recollection, to the effect that the appropriation would limit the size of the Army.

Mr. LENROOT. May I ask the Senator a question?

Mr. WADSWORTH. In just a moment, if I may finish the statement, because I want it to appear consecutively. The House conferees and the Senate conferees could not bring their minds together for a long time as to what the number of men in the Army would actually be, on the average, during the year.

We felt that there would be considerably more than 175,000. They felt there would be no more than 175,000. Finally, the Senate conferees accepted the item proposed by the House, which, theoretically, was regarded as sufficient to pay 175,000 men. As a matter of fact, it was not big enough to pay even that number. It was cut even below that, and I think, if my recollection is correct, that I warned the Senate when the Army appropriation bill was before it that the pay items were not enough even to pay the number of men who were supposed to be available for the Army under the theory maintained by the House of Representatives.

Mr. POMERENE. Mr. President——

The VICE PRESIDENT. Does the Senator from New York yield to the Senator from Ohio?

Mr. WADSWORTH. May I just continue a moment, and then I shall be very glad to yield. There was a distinct understanding that if by any chance the recruiting service of the Army produced more men than 175,000 a deficiency item could take care of it this winter, and I, in conference and in committee, protested against that way of doing business, for I did not think it was fair to the public, I did not think it was fair to the Congress, to proceed with appropriations upon that basis. It turns out, Mr. President, that the original contentions of the Senate conferees were correct, for, instead of having the Army reduced to 175,000, it has increased to 224,000, and we are met with a deficit.

Mr. POINDEXTER. What deficit?

Mr. WADSWORTH. We have 224,000 men in the Army, and there was not enough money appropriated to pay them.

Mr. POINDEXTER. What is the amount of the deficit?

Mr. WADSWORTH. It will be forty or fifty or sixty million dollars.

Mr. SMOOT. It is more than that amount that they are asking. They are asking for about $100,000,000.

Mr. WADSWORTH. Not all for pay.

Mr. SMOOT. I mean the deficit for the Army as a whole.

Mr. WADSWORTH. Yes; there are deficits which they claim exist in other branches of the Army; but I am speaking only of pay.

Mr. POMERENE. The question I was going to ask is, Does the appropriation bill itself indicate that this appropriation was for an Army of 175,000?

Mr. WADSWORTH. It does not.

Mr. POMERENE. So it is blank on that subject?

Mr. WADSWORTH. It is absolutely blank on it. Simply an amount of money is appropriated for pay of the Army, and the understanding was that if the Army went above 175,000 a deficiency item would come before Congress; and I did not like that way of doing business.

Mr. POMERENE. Then, as a matter of fact, the only thing to guide the Secretary of War was the authorization?

Mr. WADSWORTH. That and common sense, which I will come to in a moment.

Mr. POMERENE. There was nothing in the statute, as I take it, which indicated that the Congress or the committees themselves were trying to limit the organization to 175,000 men?

Mr. WADSWORTH. No; nothing in the statute.

Mr. LENROOT. Mr. President, there was a specific appropriation for the pay of the Army, which in itself constituted a limitation.

Mr. FLETCHER. And it was the understanding of the conferees, as the Senator from New York says, that if that was not sufficient a deficiency appropriation would take care of it.

Mr. WADSWORTH. Mr. President, I want to be fair in giving my recollection; but I protested against it at the time, and I warned the Senate in open session that this thing might occur which has occurred. When the Congress reconvened in December——

Mr. LENROOT. Before the Senator leaves that will he not permit a question?

Mr. WADSWORTH. Certainly.

Mr. LENROOT. I have not been a member of the Military Affairs Committee very long and I would like to know if it has not been the understanding of the Senate that the size of the Army is limited to the size of the appropriations made for the Army for the fiscal year? I wish to say to the Senator that during my service in the House that was always the understanding.

Mr. WADSWORTH. Mr. President, there were some other phases of the matter which bore upon that question. I think technically the Secretary of War was within his rights; but I think he has made a great error, and I hope to explain my position upon that if I am permitted to.

Mr. NORRIS. Mr. President, does not the Senator think that when Congress appropriates for an Army of 175,000, that ought to be the guide of the official who is recruiting the Army?

Mr. WADSWORTH. I think it should be the guide. I think the Secretary has made a mistake in judgment. I am not prepared to say he has violated a law.

Mr. SMOOT. Mr. President, the Senator knows there is a statute positively forbidding the head of a department from creating a deficiency, and imposing a penalty for so doing. I have not any doubt that the law has been violated, but I am perfectly willing to say that he has acted just the same as nearly everybody else in a similar position has acted in the past. They pay no attention whatever to an appropriation made by Congress. I do not know that they ever will, Mr. President, until one of them is put in the penitentiary. We ought either to repeal the statute, or compel the representatives of the departments to live within the appropriations.

Mr. OVERMAN. Mr. President, we have had three and four and five deficiency bills. It is common practice here, and it is common practice in the House, to limit appropriations as much as possible, knowing that there will be deficiencies.

Mr. WADSWORTH. Mr. President, reverting once again for just a moment to another incident which occurred, according to my recollection, in connection with the Army legislation of last year, when the legislation was under consideration before the House of Representatives, a Member of that body offered an amendment to the effect that the Secretary of War should not create an Army greater than 185,000 men—that was the general effect of it—and the House of Representatives voted it down by a tremendous majority. That is one of the incidents which occurred. If my recollection is correct, it was a Member of the House from Alabama who offered that amendment, and the House defeated it.

Mr. President, the Congress reconvened in December, and we then discovered that in the middle of the summer the number of enlistments had commenced to increase. Through the middle of the summer and the late autumn the enlistments were rapid, much more so than ever before in the history of the country except in time of war. Shortly after Congress reconvened, when I saw that the Army was going to grow by leaps and bounds to these large figures, I myself suggested to the Secretary of War that he stop recruiting.

The VICE PRESIDENT. The morning hour having expired, the Chair lays before the Senate the unfinished business, which will be stated.

The READING CLERK. A bill (S. 3390) to provide further for the national defense; to establish a self-sustaining Federal agency for the manufacture, production, and development of the products of atmospheric nitrogen for military, experimental, and other purposes; to provide research laboratories and experimental plants for the development of fixed-nitrogen production, and for other purposes.

Mr. NEW. Mr. President, I should like to ask unanimous consent to proceed with the consideration of the joint resolution. The Senate has spent nearly two hours in the consideration of it, and it is evident that the discussion is drawing to a close and that we will get action very shortly. I hope there will be no objection to proceeding with its consideration.

Mr. UNDERWOOD. Mr. President, I do not like to object to the Senator's request, but the unfinished business has been before the Senate a number of days, and there is pending a motion to recommit, which, if adopted, would settle the question. If not adopted, it leaves the bill still before the Senate. I am very anxious to get a vote on the pending motion this afternoon if possible. Under those circumstances, so far as to-day is concerned, I shall be compelled to object to laying aside the unfinished business.

The VICE PRESIDENT. The Senator from Alabama can not take the Senator from New York off the floor, and he may as well continue on the unfinished business.

Mr. WADSWORTH. With the indulgence of the Senate, I shall finish my statement. I assume the discussion will be resumed at another time.

As I said, shortly after Congress reconvened I took it upon myself to urge the Secretary of War to cease recruiting. I did it principally for the reason that the cost of the Army was mounting up into huge figures, and that the condition of the Treasury was such that it should not carry such a burden. Furthermore, I felt at the time that the Army, having then reached about 208,000 or 210,000, was sufficient, perhaps a little more than sufficient, for the needs of the country. The Secretary of War took the ground, which he did openly before the House committee, that the Army reorganization act was a mandate upon him to continue recruiting until it reached 280,000.

He told me personally that, lacking some resolution of the Congress directing him otherwise, he regarded the Army reorganization act as a mandate upon him to raise an Army of 280,000 men. With that construction of the law I can not agree.

Mr. POMERENE. Mr. President——

Mr. WADSWORTH. I yield to the Senator from Ohio.

Mr. POMERENE. As I recall, when the Army reorganization bill was before the Senate the Senator from New York favored an Army of 280,000. Am I right?

Mr. WADSWORTH. Yes; as a maximum, as contrasted with 297,000 urged by the House.

Mr. POMERENE. Now the Senator favors a reduction of the Army to 175,000?

Mr. WADSWORTH. I do.

Mr. POMERENE. I take it, of course, that one reason, and a very good reason, for doing it is from the standpoint of economy. Are there any other reasons in the mind of the Senator which would suggest to him that the Army ought to be reduced, or is he still of the opinion that, except for the matter of economy, the Army should be recruited up to 280,000?

Mr. WADSWORTH. Of course, if we could support armies for nothing, I would not care how large it would be, so long as it did not become a great military caste which would dominate the Government or politics of the country. I do not think an Army of 280,000 is a political danger, but of course the cost is very heavy.

Mr. ROBINSON. Will the Senator yield for a question?

Mr. WADSWORTH. Certainly.

Mr. ROBINSON. Has the Senator before him the provisions of the Army reorganization act affecting this matter? The Senator said, I believe, that he does not concur in the construction which the Secretary of War has placed upon the act, that it requires him to proceed with enlistments until the Army reaches 280,000.

Mr. WADSWORTH. I have the act before me.

Mr. ROBINSON. The language of the act has been called to my attention by the Senator from Florida [Mr. FLETCHER]. The language is as follows:

> Except in time of war or similar emergency when public safety demands it, the number of enlisted men in the Regular Army shall not exceed 280,000, including the Philippine Scouts.

Mr. WADSWORTH. That is it.

Mr. ROBINSON. If there is nothing else in the act which modifies that language, of course that is merely a maximum and the construction of the Secretary of War would be open to criticism.

Mr. WADSWORTH. That is all there is in the act. It merely fixes a maximum of 280,000, except in time of war or similar emergency.

I wish to say just a word about the joint resolution. We have in the service to-day approximately 224,000 enlisted men. The joint resolution proposes to institute an immediate process of reduction to 175,000 enlisted men. At the time the joint resolution was first introduced its adoption would have resulted in forbidding the Secretary of War to permit any reenlistments. That would have had a very bad effect upon the Army, because there are many men in it who have served many years, and when their present terms of enlistment expire they would be compelled to leave the service for good, and thereby lose their right to retirement; and it would also deprive the Army of their experienced services, which are exceedingly valuable. The committee amended the measure so as to permit the reenlistment of men who may have had one enlistment. I think there can be no objection to that amendment.

Then under existing law the Secretary of War, in his discretion, is authorized to issue a discharge to a soldier who can show that since his enlistment something has occurred at home which makes his family dependent upon him and in absolute need of his support. In other words, the discretion of the Secretary is limited to the one class of cases. The committee thought that the discretion of the Secretary should be made larger, so it offered the amendment providing that the Secretary of War is authorized in his discretion to grant applications for the discharge of enlisted men who have served one year or more whose records are satisfactory to their commanding officer, without regard to the provision of existing law respecting discharges. In other words, we made the statute for the time being more liberal in the matter of discharges, to remain in effect until the Army is reduced to 175,000.

The question has been asked, I think by the Senator from Idaho [Mr. BORAH], how quickly the force will be reduced under the provisions of the joint resolution. If the resolution is passed, according to the estimate of the War Department 48,000 men will be discharged from the Army for one reason or another, mostly by reason of expiration of terms of enlistment, between January 1 of this year and July 31 next, that is, in seven months' time. There should be set against that gross loss of 48,000 men the estimated reenlistment, which the department puts at 5,200 men. Putting one number against the other, according to the best estimates which they can make the Army's net loss under the joint resolution between now and the 1st day of August next would be 42,800.

Mr. BORAH. Mr. President——

The PRESIDING OFFICER (Mr. ROBINSON in the chair). Does the Senator from New York yield to the Senator from Idaho?

Mr. WADSWORTH. In just a moment when I shall have finished this statement. Forty-two thousand eight hundred subtracted from 224,000, the approximate number which we have in the service to-day, will bring the enlisted strength of the Army down to 181,200 men on August 1 next, and certainly in the month of September it would strike 175,000.

Mr. McKELLAR. Mr. President——

Mr. WADSWORTH. I intimated that I would yield to the Senator from Idaho.

Mr. McKELLAR. With his permission, I wish to ask a question right in this connection.

Mr. BORAH. Certainly.

Mr. McKELLAR. I wish to ask the Senator from New York how long it would take if the amendment of the Senator from Wisconsin [Mr. LENROOT] were adopted fixing the number at 170,000? Has the Senator the figures on that?

Mr. WADSWORTH. No; I have not. I suppose it would take three or four months longer.

Mr. McKELLAR. I thought perhaps it would take about that length of time.

Mr. WADSWORTH. It would probably be done within three or four months. I now yield to the Senator from Idaho.

Mr. BORAH. The reduction about which the Senator speaks is the reduction which takes place by reason of expiration of terms of enlistment, largely.

Mr. WADSWORTH. Largely, and the preventing of new enlistments. It comes down more rapidly than one thinks. We lose 42,000 men in seven months. I know there are many people, and I am among them, who wish it would come down more rapidly, in order to save money more rapidly; but if we do not permit reenlistments, we wreck the Army in its enlisted personnel. There are sergeants who have served 20 or 25 years and have stayed in the service steadily, who at the expiration of 30 years will get retired pay and be made secure in their declining years, but who would be thrown out on the streets under the original provisions of the joint resolution. The moral contract which the Government makes with them would be violated. The committee could not tolerate a suggestion of that kind.

Not only would it be a great injustice to the men but a very severe blow to the efficiency of the Army, for, as everyone knows, the noncommissioned officers are the men who constitute the reliance of the commissioned officers for the training of the recruits and the maintenance of discipline in the ordinary sense.

Mr. BORAH. Referring to section 2, I take it that if the Secretary of War should, after the 4th of March, be disposed to favor a large Army, section 2 would be practically a nullity.

Mr. WADSWORTH. It is left to his discretion, of course; but his discretion is much widened by section 2.

Mr. BORAH. Still it is his discretion, and if that discretion should be exercised, that is to say, if the Secretary of War should be desirous of keeping up the Army, of course, the widening of it would not help at all.

Mr. WADSWORTH. That is a question of the human equation. I can not answer the Senator's question definitely. The Secretary could refuse to discharge anybody. He could contend that no one in the Army had made a case for discharge. Of course, that would be a most extreme state of affairs.

Mr. BORAH. Of course, it is an extreme state of affairs, but it is a kind of extreme with which I have had some experience. The only thing I desire to call to the attention of the Senator is that while I have not any doubt the committee worked this out, yet it seems to me there ought to be some way by which that discretion could to some extent be controlled.

Mr. WADSWORTH. That is a very difficult question, Mr. President. The committee discussed that very matter for a long time, and we could not reach any other conclusion on it than to the effect that Congress could not direct the discharge of men without destroying the very discipline of the force itself.

I do not intend to discuss this subject any longer to-day. There are some other phases of it. I simply say in conclusion, in order that the discussion of the nitrate bill may proceed, that I hope the amendment of the Senator from Wisconsin [Mr.

LENROOT] will not prevail. I believe that arbitrarily to direct a reduction of the Army to 150,000 men would be going beyond the safety point of the general situation as it now exists.

ATMOSPHERIC NITROGEN.

The Senate, as in Committee of the Whole, resumed the consideration of the bill (S. 3390) to provide further for the national defense; to establish a self-sustaining Federal agency for the manufacture, production, and development of the products of atmospheric nitrogen for military, experimental, and other purposes; to provide research laboratories and experimental plants for the development of fixed-nitrogen production, and for other purposes.

Mr. UNDERWOOD. Mr. President, I hope that I shall not detain the Senate a great while in the discussion of the pending bill. I understand the question now before the Senate is the motion of the Senator from Wisconsin [Mr. LENROOT] to recommit the bill to the Committee on Agriculture and Forestry.

The PRESIDING OFFICER. The Chair understands that the motion is to recommit the bill with all amendments to the committee, including the amendment pending.

Mr. UNDERWOOD. Mr. President, before discussing the pending motion, which it is my purpose to discuss, I wish to send to the desk a telegram which I received this morning from C. E. James, of Chattanooga, Tenn., who was largely instrumental in the building of the great dam near Chattanooga, at Hales Bar, and I ask that the telegram be printed in the RECORD, as there are certain facts in it which Mr. James desires shall be called to the attention of the Senate.

The PRESIDING OFFICER. Without objection, leave to do so will be granted. The Chair hears none, and it is so ordered.

The telegram referred to is as follows:

CHATTANOOGA, TENN., *January 9, 1921.*

Hon. OSCAR W. UNDERWOOD,
United States Senate, Washington, D. C.:

I notice some controversy going on in Washington in regard to the ten million appropriation for Wilson Dam, Muscle Shoals. I consider the Government is under moral obligation to carry out the agreement that the Rivers and Harbors Committee made with me when I undertook to finance and build the Hales Bar Lock and Dam, 32 miles below Chattanooga. The agreement was so plain and of such a nature that I could force an individual to carry it out, but with the Government of course I could only depend on the moral obligation. The facts are these: I think it was in 1904 when Hales Bar Lock and Dam bill was passed by both Houses in Congress; Theodore W. Burton was chairman of Rivers and Harbors Committee of House, Roosevelt was President, and Taft was Secretary of War. I had a meeting with the committee in the presence of JOHN A. MOON, and every member of Rivers and Harbors Committee of House was present as Mr. Burton advised me at the time of the meeting. The bill as granted for the Hales Bar Lock and Dam gave the city of Chattanooga six months in which to accept the obligation. Mr. Burton as chairman told me he wanted an agreement with me individually before they would pass the bill; that he did not believe the city of Chattanooga would assume the obligation. He said there was continual rivalry for improvement on the upper Tennessee district and the lower part of the Tennessee in Alabama, and if I would agree with the Rivers and Harbors Committee that I would finance and procure individual money to build the Hales Bar Lock and Dam that it would relieve the Government of this expenditure in the upper Tennessee, and if I would agree to do that they would immediately pass the bill. I asked Congressman Burton if I should assume that obligation right at that present meeting. I wanted to know what the Government would do with regard to Muscle Shoals; that we wanted that open. Mr. Burton stated that they were going to work on Muscle Shoals project and would have that completed and that the Rivers and Harbors Committee would guarantee and stand behind the Muscle Shoals proposition until it was finished, and as he said every member of the Rivers and Harbor Committee was present and the most of them he hoped would be alive and still in Congress at the time I got the Hales Bar finished; that I could consider that a moral obligation of the Government, backed up with the full consent and approval of every single member of the Rivers and Harbors Committee. I told him at the time that I would go ahead and get private capital to build the lock and dam at Hales Bar, but I called his attention to the fact that I had nothing more than the moral obligation of Congress to continue the work and finish Muscle Shoals Dam, and he told me that I could afford to trust the moral obligation that he assured me then of the Government. There was present at that meeting besides the Rivers and Harbors Committee H. S. Chamberlain, Willard Warner, C. W. Olston, and C. D. Mitchell, representing the Chattanooga Chamber of Commerce, and this statement is well known to every member of the Rivers and Harbors Committee at the time that bill was passed. I have since called Senator Burton's attention to the fact a few years ago that the Government was not carrying out the contract that he made to me, and he wrote me that he was in favor of that dam being built and had been all the time and that he remembered very well the inducements that the Rivers and Harbors Committee held out to me to induce me to assume the large task and obligation of raising the money necessary to build the Hales Bar Lock and Dam which cost about $12,000,000, and that relieved and made navigable the rapids in the Tennessee River from near the Alabama line up to 5 miles above Chattanooga, a distance of about 35 miles. The first bill that was passed and the one that I refer to gave the city of Chattanooga six months to assume the work first; after that it gave C. E. James and J. C. Guild the right to assume the obligation and build the dam. Now, this large expenditure for the dam did not cost the United States Government one cent except the lock gates, and they obtained through my efforts and expenditure of private capital of something like $12,000,000, and the Government has the right to take over this power plant at any time it sees fit to do so. The Rivers and Harbors Committee were so anxious to get this private money invested in that enterprise that they made me give a bond of $100,000 that I would cause this lock and dam to be built. I considered that by using my best efforts and getting the money to build this upper dam that I would really be the cause of having the Tennessee opened from Chattanooga to the Mississippi. This is an obligation well known to all that committee, and you can easily find out their names and, had it not been for the positive assurance of the committee in regard to Muscle Shoals I doubt if I ever would have undertaken such a stupendous job as raising $12,000,000 for putting in a lock and dam at Hales Bar. Congress and the Senate and the United States Government have no right to make a moral obligation with a private citizen to induce him to use extraordinary efforts to develop all rivers and then, when he has completed his agreement, that the Government or any Member of Congress or the Senate should vote against the Government in not fulfilling its moral if not legal obligations. These statements you can verify by Mr. Burton, Mr. MOON, and any member of the Rivers and Harbors Committee of the date the original bill was passed. Please bear in mind that four years later when we had struggled with the undertaking and consumed all the time allowed us at first, the new bill was passed giving us two more years to complete our job and make a present of the lock and dam, overflowed land into real estate to the Government. No doubt a large number of that committee are still in Congress in the Senate and know these facts.

Very truly, yours,

C. E. JAMES.

Mr. UNDERWOOD. Mr. President, I wish to state to the Senate why I do not think a motion to recommit the pending bill should be acted on favorably. Of course, I understand that the proposal of the proponents of the measure to have the bill recommitted is on the basis that the bill has not had proper consideration by the Committee on Agriculture and Forestry. If that were true, if the bill is not in due form, if the question which it involves has not been properly worked out by the committee, it goes without saying that the bill should be recommitted; but I think it is very far from the fact to so contend.

In the first place, I find that this bill was introduced in the Senate, by request, by the Senator from New York [Mr. WADSWORTH] on the 3d day of November, 1919. The bill has, therefore, been before the Senate for more than a year. On the day that the bill was introduced it was referred to the Committee on Agriculture and Forestry. That committee, on the legislative day of the 24th of May, 1920, authorized the Senator from South Carolina [Mr. SMITH] to report the bill back to the Senate with an amendment. The committee not only reported the bill favorably but there were voluminous hearings on the bill filling a volume of a good many hundred pages.

More than that, the bill was not prepared in an offhand way. It was prepared by the officers of the Ordnance Department of the United States Army, who have a completed plant on their hands that must be operated in some way. They prepared the bill from the viewpoint of operation, after it had been considered from all the angles which presented themselves by experts from the standpoint of business success, by experts on the chemical questions involved, and by experts on the Army questions that were involved. After voluminous hearings and carefully considering the manner in which the bill was prepared, the Committee on Agriculture and Forestry reported it in to the Senate.

Mr. President, I have followed the progress of this proposed legislation in reference to securing nitrogen from the air in one or the other Houses of Congress for a good many years. My first introduction to the question was when an effort was being made to secure the use of hydraulic power on the Coosa River, in Alabama, to operate the air-nitrogen plant which is now located in Canada. The bill was passed by both Houses of Congress, but President Taft afterwards vetoed it. Then the plant was established in Canada.

Step by step this question has advanced in Congress, but I do not know of a single step that has been made except against the resistance of interested parties who desire to prevent development of this kind in the United States. I endeavor to judge no man, and I am not here by innuendo or insinuation to reflect on the motives of the opponents of various bills of similar character and of this proposition, except to say that their business and personal interests evidently lead them to oppose legislation of this character. I do not say that it is not natural for men to follow such inclinations and few men are big enough and great enough to rise above the personal equation. So what I have to say in reference to the pending measure I hope will not be regarded as any intended reflection on the opponents of the bill.

I can readily understand that men who are engaged in the manufacture of powder as a private business, the Government of the United States being the greatest consumer of powder, naturally do not desire the Government to enter that business or a business that is so closely allied to it as is the production of nitrogen. I can also readily understand that men who are engaged in the business of making fertilizer to sell to the farmers and who have their capital invested in that business

are not desirous of having the Government embark upon an undertaking that may at least in part preempt the field of business that they now desire to occupy; and I can also understand that men who are in the business of manufacturing coke and from it extracting the by-products, one of which is ammonia, are not desirous of having a plant inaugurated that may make nitrogen and to a small extent at least become a competitor in the market where they sell their product. I know that those gentlemen from the inception of this class of legislation, from the hour seven or eight years ago when the first proposal was made to put a dam across the Coosa River and manufacture nitrogen products from the air, have opposed it. I have in my files a brief that was presented to me then by men who controlled the patent rights on the by-products of coke ovens. It was a well-prepared brief, an able brief, upon their side of the problem; they had a perfectly legitimate right to present it, and I am not criticizing them for doing so. I merely call the attention of the Senate to the fact that that class of opposition from that hour down to this has stood across the path of this legislation, and will continue in its path until it is either finally defeated or ultimately consummated into effective legislative enactment.

I say that by way of illustrating much of the criticism which is directed against this bill. It is criticism that is reflected in the Senate, because the same criticism that comes to my office from interested parties on the other side is ultimately reflected on the floor of the Senate, and much of it is that character of criticism that is prepared dogmatically to defeat the proposal, and not criticism that is carefully considered and thought out from a legitimate standpoint.

Of course, I recognize the fact that there is an issue before the Senate as to whether or not we shall engage in this business at all, and that is a perfectly legitimate question of discussion—as to whether the Government of the United States shall engage in the manufacture of nitrogen. I know it is proclaimed that there is a great development in by-product coke and that from that field the Government of the United States can secure in the future the opportunity to defend the country against attack in time of war. Therefore it is said we should not go into the business ourselves. I know it is contended by many that the Government should not engage in business at all and that these lines of endeavor should be left open to private business alone. So far as I am concerned, I agree to the general principle; but, like all other principles, there are exceptions to the rule, and the Government has made those exceptions in the past; and one of the great exceptions to this rule has been under the war power of the Government.

It is nothing new for the Government to invade the province of private business to protect its war arm. We have built battleships in Government yards. We have the only great gun plant for the manufacture of heavy ordnance for the Navy Department located here in Washington. We are in the business of making small arms. We are in the business of making powder. Although the Du Pont Co. makes the great portion of the powder that is consumed by the Government in peace and in war, yet long years ago the Government adopted the policy of having powder plants of its own in order that it might ascertain more accurately the cost of production. And so I might go on ad infinitum, demonstrating the fact that this is no venture; that the Government of the United States has time and time again invaded the province of private business in manufacturing and developing enterprises in order that it might strengthen the war power; and it has not confined itself to the war power, but it has invaded the field of private business in other directions.

So far as the war power is concerned, however, I do not think there can be any question that where it is necessary to protect the present life of the Nation or the future life of the Nation the Government should insure the people of the United States the protection that a government owes to them by seeing that we have the facilities of protection should we ever become engaged in war again; and the very basis of it all in modern civilization is nitrogen.

You may build your battleships, you may enlist your men, you may provide for your supplies, you may bring them to the battle field, but when you fail to have an adequate supply of nitrogen you are incapable of the manufacture of powder, and in modern warfare without powder your guns are worthless, your troops stand only for sacrifice, and defeat and disaster must be the only result of your folly. That is illustrated in other nations. Since it became ascertained that nitrogen could be extracted from the air there is not a great civilized nation on this globe that has not developed great nitrate plants; and the German Government would have met with final disaster during the first six months of the war if it had not foreshadowed the coming of events and provided nitrate plants at home from which it could abstract the nitrogen to be used on the battle field.

Of course, in answer to that proposition the opponents of the bill, those who have followed the trail of it with the purpose of bringing about disaster to it, have always contended that the by-products of coke were an ample protection for the Government; but there can be no more complete and absolute answer to that claim than the history of Germany itself. The first great development of by-product coke came from Germany. For years before the outbreak of this war practically every coke oven in Germany was a by-product coke oven and manufacturing its supply of nitrogen, and yet notwithstanding that we found the greatest development of air nitrogen plants in the world in Germany, showing that they knew, even if the American Congress can not ascertain the fact, that you can not stand on the production of your coke ovens to save the life of your Nation when the hour of peril comes. That is manifest. Coke in the main is used only for the manufacture of iron. There is a limit to the consumption of iron, and necessarily a limit to the production of coke; and if the coke ovens in America were all converted into by-product ovens the supply would not be adequate for war purposes, much less for the growing purposes of peace.

If the Government does not engage in this proposition of taking nitrogen out of the air, there is no indication that private industry will do so; and if you strike down and abandon this bill, we will find ourselves again where we were in 1918, when we were dependent for our supply of nitrogen on the Chilean nitrate beds, with thousands of miles of sea lying between us and our supply, our troops on the firing line, and an inadequate supply of powder to sustain them. That is the condition in which we found ourselves in the summer of 1918, when the President ordered that this plant be built, and built within a year, under the stress of the war.

It is said here that this method of making nitrogen has become obsolete; that newer methods have been found; and when you ask those who say this, they say something about the Haber system of Germany.

Mr. President, the real facts of the case are that the great nitrogen plants of the world are either the arc-process plants found in Norway or the cyanamid-process plants of the other nations; but the only nation in the world that is manufacturing nitrogen through the Haber process to any appreciable extent is Germany, and why? Because the arc process and the cyanamid process require power—hydroelectric power—if you want to accomplish the result cheaply; and Germany has no water power. The only way she could use these processes was by the expensive use of coal. Therefore she was driven to the synthetic process of manufacturing nitrogen rather than the direct process of using hydraulic power in the arc process or the cyanamid process; and notwithstanding her loss of power and her need for power, even then during the war she built great nitrogen plants and used her precious coal to fire them in order that she might get the nitrogen necessary to carry on the war.

There is not one fact that I have ever heard in any of these investigations which goes to show that this great power plant No. 2 at Muscle Shoals, the cyanamid-process plant, is not a thoroughly up-to-date plant, and manufacturing nitrogen in the best known and cheapest way of manufacture. I admit that the development of the manufacture of nitrogen from air in commercial quantities, and on a commercial basis, is a comparatively new art. It is a developing art, and in the course of time I have no doubt there will be great improvements made. But that very fact, in my judgment, only leads up more surely to the conclusion that we should keep this plant in operation.

We do not want to use it to make powder, because that would be a waste of money in times of peace. We do not need this great plant making powder in times of peace, and we can not manufacture powder and store it for times of war, because the powder, after a number of years, will deteriorate and not be effective. If we want to keep this plant in step with the advance of the science, we must operate it, and keep it in operation, or it will become obsolescent, and the only way to do that is to produce nitrogen for uses in the commercial arts, instead of for war purposes, and the greatest consumption of nitrogen for that purpose is as fertilizer. It seems to me it is a very proper field in which the Government should function and use this plant in time of peace.

More than that, under section 124 of the national defense act the executive branch of the Government has been given the direct mandate and order that when their product is not needed in time of war these plants shall be operated to manufacture nitrogen for fertilizer in time of peace for the great development of the country.

I am not going to take up the time of the Senate to-day in demonstrating how badly the people of America need fertilizer,

in pointing out how much greater is the production of the farms of Germany and England and France, where fertilizer is used in large quantities, than in America, where it is sparsely used. That has already been done by those who can say it better than myself. But we can not get away from one proposition that is most vital to the life of the Nation and of the American people—that if we want to obtain a larger production of food products at a cheaper expenditure of money there is but one way in which it can be accomplished, and that is to enable the farmer to raise greater crops with the same amount of labor on the same amount of land, and that can be accomplished only in one way, by the abundant use of a cheap fertilizer.

It has been said by the wisest statesmen that the overthrow of the great nations of the world can only come from two sources, one a conquering army and the other the depletion of the fertility of the soil. Of the two I am inclined to believe that the depletion of the fertility of the soil is a more certain death sentence to the life of a nation than to be overwhelmed by a conquering army, because with the conquering army the life and the spirit of the nation may yet live, but with the depletion of the soil and the lack of food the only thing that can be expected is the downward trend of the national vigor and the national life, until the national existence is snuffed out.

Yet, when there appears the sole opportunity of this Nation to put itself in line with modern inventions and modern movements, to produce the one article which means the survival of an army in time of war and the development of the fertility of the soil in time of peace, we find that the Capitol of the United States is surrounded by an army of lobbyists, who are here fighting for selfish interests in opposition to national good and national life. There is no question about that. As I said in the beginning, I am not standing here to say this as a personal reflection on the persons who throng these galleries and call at the corridors of the Senate. They have a right to present their side of the case. But the Senate of the United States has no right, with the life of the Nation at stake, to yield to the selfish arguments of men who are fighting for dollars and not for principles.

Mr. President, it is proposed to destroy this bill by sending it back to the Committee on Agriculture and Forestry on the motion of the Senator from Wisconsin [Mr. LENROOT]; and I say destroy this bill advisedly, because there is not a Senator on this floor who does not know that if the bill is referred back to the committee at this late day of the session, with the great supply bills of the Nation about to press for time in this Chamber, there will never be another opportunity at this session of Congress to consider the bill for its passage.

Why should we refer it back? It has been before the Senate now for days, with ample debate, ample opportunity to offer amendments, and but few amendments have been proposed.

In his argument the other day the Senator from New York [Mr. WADSWORTH] contended against the bill in its present form, because he said its details had not been thought out and the Senate had not amply guarded the provisions of the bill.

Mr. President, what does the bill propose to do? It proposes to create a Government corporation; not a private corporation, but a Government corporation, every share of the stock to be in the hands of the Secretary of War, to be cast by him in electing a board of directors, and the board of directors have the same power to function that the board of directors of any other corporation has. To function on what? The operation of a nitrogen plant, which is already built and in existence, to manufacture nitrogen for powder in time of war and fertilizer in time of peace. Now, I ask any lawyer in the Senate, if he was going to organize a private corporation to do this business would he put any further limitations on them than that proposed? Would he limit its endeavor, if it were a private corporation, to the operation of the plant for the main purposes of its creation? No; he would not. The only man to whose mind such a limitation is apt to occur is the man whose mind dwells along the line that this corporation must not trespass on the rights of certain private business, and that the private business must be protected against Government operation. I am not one of those who believe in the Government engaging in commercial operations, as a rule, but when it comes down to that class of operation that is necessary, from a military standpoint, to protect the Nation, then I think the Government should operate, and when it does operate it ought to be given full scope to operate successfully, and not with those limitations on it that would prove disaster and defeat to the enterprise. There is no reason that I can see for any limitation on that score. If we are looking at it from the standpoint of the success of Government operation, the limitation that is on it is the capacity of the plant, and that capacity can not be enlarged without further enactment of legislation by Congress.

I notice that in the debate of days here the opponents of this measure, who are now contending that it shall be sent back to be throttled in a committee, have offered amendments to the bill. It is reasonable to suppose that such amendments as they thought were necessary for the proper operation of this plant would have been offered after the many days' debate we have had. What do they indicate? The Senator from New York [Mr. WADSWORTH] proposes to strike out, on the third line of the bill, the words "Secretary of War," and insert in lieu thereof the word "President," wherein it relates to the power of appointment of the board of directors. That is not a material amendment. The Secretary of War is appointed by the President, and the presumption is that he will follow the principles the President believes in, or retire from office. So far as I am concerned, it is a matter of indifference to me whether the bill stands authorizing the Secretary of War to appoint the board of directors, or fixing the power in the President. I see no reason why the bill should be referred back to the committee for that matter.

Then, in a number of other instances where the bill gives certain powers to the Secretary of War, the Senator from New York proposes amendments giving those powers to the Secretary of the Treasury. That does not go to the life of the bill. I do not know that it would seriously injure anything if his amendments were adopted, except that it seems to me manifest that when you have a great plant whose primary purpose is making nitrogen for powder it should be controlled by the Secretary of War, as a part of the war arm of the Government, rather than the Secretary of the Treasury, who is engaged in finance.

The Senator from New York also offers another amendment, on page 8, by which he seeks to strike out the capitalization of the corporation as provided in the bill, and to increase that capitalization so that it will reflect the cost of this plant. That is not a question that it is necessary for a committee to pass on. The issue is very plain about that amendment. As the bill was reported, it was not intended to make this corporation pay the war cost of the building of this plant, the losses which were due to its hasty construction and building, and fix that as a charge upon the American people when they desire to buy fertilizer. Therefore the capitalization was comparatively small and the charge on the plant for capitalization small. Evidently it was not the intention of the committee to carry along these war costs and put them on the consuming masses of the American people in the future, but to make the burden light.

The proposed amendment does not go to the full extent of the war costs, but seeks, in the shape of bonds bearing 5 per cent interest, to force this corporation to pay back its actual value and a part of the war cost to the Government. That is easily understood. There is no necessity to send the bill back to the committee to determine the amendment. So far as I am concerned, I wish to see the corporation successfully operated, so the burden of its operation will not rest upon the American people, but after that I should be glad to see those who produce the food of America obtain fertilizer as cheaply as possible, in order that the cost of food to the American people might be reduced. But if any Senator thinks otherwise, here is the amendment. It is not necessary to stop the arm of the Government and send it back to committee to determine which we desire to take. It is merely the question of a vote on the simple proposition whether we want, on the one side, the consuming masses of America to receive the benefits of the bill, or, on the other side, whether we desire to erect a wall to protect private industry.

Another amendment offered by the Senator from New York [Mr. WADSWORTH], on page 5, proposes to limit the manufacture at the plant to ammonium nitrate, ammonium sulphate, any cyanamid, which, to a large extent, are the raw materials of fertilizer. Of course, I know that cyanamid can be used directly as a fertilizer. The other two products are the raw materials from which fertilizer is manufactured. The bill is broad enough in its scope to allow the board of directors to manufacture anything along the fertilizer line with nitrogen alone, if they are successful in operation and have the money to carry it on.

So far as I am concerned, if I were going into private business to establish it, I would not limit my private business to the manufacture of raw materials for some one else to use. I would give an opportunity for that private business to go into the field of production that would enable it to sell its products as finished material. Unless we are so tenderfooted that we dare not step one foot within the domain of competition with private business, there is no reason whatever why the scope and power of the corporation should be limited to the production of raw material instead of the finished product.

But that is not a question that it is necessary for the committee to decide. We make nothing by sending the bill back to the committee to decide that question. In its last analysis it must be decided here on the floor of the Senate. It is not intricate; it is not difficult. Any man can understand it. It is here. It is so simple that one may read it as he runs.

Mr. WALSH of Massachusetts. Mr. President——

Mr. UNDERWOOD. I yield to the Senator from Massachusetts.

Mr. WALSH of Massachusetts. I should like to ask the Senator from Alabama, though I think the Senator is not a member of the Committee on Agriculture and Forestry, if it is a fact that the Secretary of War and the Secretary of Agriculture and the unanimous membership of the Committee on Agriculture and Forestry favor the bill?

Mr. UNDERWOOD. I know that the Secretary of War favors it because his letters are here. I think the Secretary of Agriculture favors it.

Mr. WALSH of Massachusetts. And there is a unanimous report from the committee favoring it?

Mr. UNDERWOOD. So far as I know that is true, but the Senator from South Carolina [Mr. SMITH] can advise the Senator more certainly on that point, as I am not a member of the committee.

Mr. WALSH of Massachusetts. Is it a fact also that the only opposition to the measure on record before the committee was more or less of a selfish character, namely, opposition from people engaged in the fertilizer business who object to Government competition?

Mr. GRONNA. If the Senator from Alabama will yield——

Mr. UNDERWOOD. Certainly.

Mr. GRONNA. I wish to say as a member of the committee who heard the testimony—I might say all the testimony—that the Secretary of War, Mr. Baker, appeared before the committee with his staff. He was very much in favor of the bill, and his staff of experts indorsed it. The Secretary of Agriculture did not appear before the committee, but Dr. Whitney, who is in charge of the Soil Survey of the Department of Agriculture, appeared before the committee and advocated and recommended this particular legislation.

It is also true, as the Senator from Massachusetts has stated, that the only opposition to the bill before the committee came from men interested in the manufacture of nitrogen and the manufacture of fertilizer. So far as I know, those were the only people who had any objection to the legislation.

Mr. WALSH of Massachusetts. So all the public officials whose duty it is to have the public interest at heart approve of the bill?

Mr. GRONNA. Yes.

Mr. WALSH of Massachusetts. Was the report of the Committee on Agriculture and Forestry unanimous or practically so? Was there any opposition in the committee?

Mr. GRONNA. I was not present in committee when the bill was ordered to be reported. I am in favor of the bill and——

Mr. SMITH of South Carolina. It was a unanimous report, several members reserving to themselves the right to move to amend the bill in certain particulars on the floor of the Senate.

Mr. KENYON. Mr. President, I think the RECORD ought to be made correct on that point.

The PRESIDING OFFICER. Does the Senator from Alabama yield to the Senator from Iowa?

Mr. UNDERWOOD. I yield.

Mr. KENYON. I am not expressing my view about the bill when I say this. With the exception of the Senator from South Carolina [Mr. SMITH] and one other Senator on the committee, I have never been able to learn of any Senators who were present when the bill was ordered reported out. I was not present. Having been engaged in other committee work during most of the hearings, I was not able to attend many of the meetings. How many members were present when the bill was ordered to be reported?

Mr. SMITH of South Carolina. I think the chairman of the committee will bear me out when I say that, after having been discussed and the hearings that are now on the desks of the Senators having been had, there were questions asked and discussion had of the bill by practically all of the members of the committee. At the time the bill was ordered reported out I do not recall, but my impression now is that there was a comparatively full membership present, and I was authorized to report the bill favorably, with the understanding, as I have just indicated, that certain members reserved the right to offer amendments on the floor of the Senate.

I did not hear, and I think the Senator from Iowa will bear me out, one word of adverse criticism in the committee from any member of the committee as to the principles involved in the bill or as to any particular feature of the bill.

Mr. KENYON. The only question on which I was seeking light was the suggestion of a unanimous report from the committee. In a technical way that is true, but I have very serious doubts if a majority of the Committee on Agriculture and Forestry were present when the bill was reported out.

Mr. SMITH of South Carolina. I am not advised as to that, but I think the impression was very general, and I think the Senator will bear me out, that there was no opposition whatever to the principles involved in the bill. I heard no specific objection to any section of the bill. It was gone over pretty generally. However, there was reserved the right by certain Senators to offer amendments on the floor of the Senate, if they saw fit. It being so universally understood that the principles of the bill and perhaps the bill itself were agreed to, it was reported out. I do not recall how many were present at the time, but certainly a quorum.

Mr. KENYON. I never feel like complaining when I am not able to be present at a committee meeting. Just at that time I was engaged in the work of the committee of which I happen to be chairman, but I have inquired of four or five Senators, members of the Committee on Agriculture and Forestry, none of whom were present, and they did not seem to understand that the bill was to be reported out. I certainly did not understand it. I thought there would be further consideration of it in the committee.

Mr. UNDERWOOD. I am not a member of the Committee on Agriculture and Forestry, and, of course, I do not know what occurred.

Mr. STANLEY. Mr. President——

Mr. UNDERWOOD. I yield.

Mr. STANLEY. Along that line, I will state that there are over 500 pages of the hearings, showing that the bill was indorsed by the experts and by the commissioners who examined the question in Europe and in America and by the Secretary of War and by the Ordnance Department. The National Board of Farm Organizations appeared, through Mr. Bower, and strongly urged it. The National Grange appeared, through Mr. Atkeson, and urged it. The hearings were continued for some time, and the only opposition that I can find in the hearings anywhere, the only witness I find who appeared against it, was Mr. Washburn, who had been for two years urging the Government to do this thing, who claimed that sulphate of ammonia could be made for $17 a ton and that this was the best place and cheapest place to use the best process. Afterwards, when the Government proposed to run the plant in opposition to certain plants of his, he appeared in violent opposition to it, and his testimony comprises possibly 50 or 60 pages of the hearings.

Mr. WALSH of Massachusetts. So that, so far as the committee heard evidence, they were placed in the position of deciding upon the position of those who represent the public—the public officials—and the judgment of those who had selfish interests against competition?

Mr. STANLEY. And those who had the selfish interest were forced to appear and absolutely contradict everything they had ever said before.

Mr. UNDERWOOD. I am not a member of the Committee on Agriculture and Forestry, and, of course, do not know what occurred at the meetings; I was not there. Suffice it to say the bill could not have been reported to the Senate legitimately, properly, and legally without a majority of the committee were present, and if less than a majority of the committee saw fit to report, or attempted to report, the bill a single point of order would have sent it back to the committee. With the violent opposition that exists here to-day against the bill and the trail of the opposition that has followed it from the beginning, I have no doubt if such a thing occurred a point of order would have been made as soon as the report came to the Senate.

Mr. GRONNA. Mr. President——

Mr. UNDERWOOD. I yield.

Mr. GRONNA. I do not wish to shirk any responsibility. I wish to state that I authorized the Senator from South Carolina [Mr. SMITH] to count me present at the committee meeting, and that I was in favor of reporting the bill out and making a favorable report. It is true, as the Senator has stated, that some of us thought there ought to be some slight amendments. I make that statement, because the inquiry was made as to how it was reported out, but the Senator from South Carolina did have authority to count me present, to which proceeding, of course, generally there is no objection by a committee.

Mr. SMITH of South Carolina. There was certainly a majority of the committee present when the bill was voted out, and it was the opinion of myself, and I think of every other member of the committee, that there was practically a unanimous sentiment in favor of the principles of the bill, reserving to the individual members the right to offer certain amendments as they saw fit when it came to the floor of the Senate.

Mr. RANSDELL. Mr. President, will the Senator from Alabama yield to me for a moment?

Mr. UNDERWOOD. I yield to the Senator from Louisiana.

Mr. RANSDELL. I should like to add that I am a member of the Committee on Agriculture and Forestry; I was present during a great many of the hearings on the bill; and I desire to corroborate the statement of the Senator from South Carolina as to the impression which was made upon him. I thought every member of the committee was in favor of the bill, or at least of the general idea of the bill. If there was any objection on the part of members of the committee I do not remember it having been stated in our discussions. I can not now remember whether or not I was present when the bill was reported from the committee, but I certainly was in favor of it.

Mr. UNDERWOOD. Mr. President——

Mr. GRONNA. Will the Senator from Alabama yield to me for just a moment?

Mr. UNDERWOOD. I yield.

Mr. GRONNA. I think it only fair to those who are interested in the manufacture of fertilizer—and I refer to them in no spirit of criticism, for they are engaged in a legitimate industry and are manufacturing a product which is indispensable—to say that there was complaint made by some of the fertilizer manufacturers after the hearings were closed. I know, however, that some of their representatives were present at many of the hearings, and, although they were not heard, they had the privilege of filing reports or having letters printed. I make this statement because the Senator from Kentucky [Mr. STANLEY] stated that the only opposition he could find in the hearings was from Mr. Washburn. There is opposition to the bill by Mr. Huntington, the president of the National Fertilizer Association.

Mr. UNDERWOOD. That is what I said, that the opposition came from the fertilizer and by-product men and others who were selfishly interested in the manufacture of fertilizers or nitrate.

Mr. GRONNA. Yes.

Mr. UNDERWOOD. Mr. President, to return to the base from which I was arguing, the question as to whether or not the bill should be recommitted, I desire to say that the next amendment which I find proposed is one by the committee. In substance it proposes to authorize the Secretary of War to sell a certain amount of Chilean nitrates which are on hand and to use the money arising from such sale as a working capital for the proposed corporation. That amendment is not yet embodied in the bill. It is an amendment proposed by the committee. I think it is a wise amendment, but that is neither here nor there. There is no reason to send the bill back to the committee because of that amendment. The Senate is intelligent, or is supposed to be so, and is perfectly capable of understanding the proposed amendment and expressing judgment on it, either favorably or unfavorably, without another reference of the bill to the committee.

I have stated all of the amendments of which I am aware which have been suggested or proposed to the bill save one. I do not know that such an amendment as that to which I am about to refer has as yet been proposed, but some of those who probably are in opposition to the bill and interested in the sale of electrical power or its development have sent this proposal to my office for my consideration:

> Page 6, line 2, after the word "aforesaid," insert the following: "*Provided*, That surplus electrical energy or the right to develop such energy from surplus waters not required by the corporation for the manufacture of nitrogen products shall be disposed of as provided by the act of Congress approved March 10, 1920, known as the Federal power act."

They stated they thought it was fair, if the Government was going to have surplus power to sell, that it should be sold under the same limitations and restrictions under which private industry was compelled to sell, and that, therefore, the sale of such surplus power should be regulated by the Federal power act. In other words, they did not want unlimited competition to come from the Muscle Shoals plant on the part of the Government, but they and other industries wanted protection from the Government development there. I do not think they are in any danger. I should not like to see the proposed corporation enter into any long time contracts for the sale of power, certainly not for a longer period than the 50 years contemplated in the power act, because we may need the surplus power at some time for governmental purposes; but I do not see why we should restrict the opportunity of the corporation to make some money for the Government out of the sale of surplus power that is not needed to manufacture nitrogen for powder or for fertilizer.

Mr. WADSWORTH. Will the Senator yield to me?

The PRESIDING OFFICER. Does the Senator from Alabama yield to the Senator from New York?

Mr. UNDERWOOD. I yield.

Mr. WADSWORTH. The Senator has indicated that surplus power from the dam is to be sold. Do I understand him to mean by that the secondary power?

Mr. UNDERWOOD. I was not referring either to primary or secondary power. The suggested amendment assumes that there is going to be surplus power. I was assuming that the amendment was directed at surplus power.

Mr. WADSWORTH. The plans of the gentlemen who drafted the legislation and appeared before the committee—and it is upon those plans that this whole project is based—are to the effect that only secondary power from the dam is to be used for the manufacture of nitrates, and that the primary power is not to be used at the nitrate plant at all.

Mr. SMITH of South Carolina. If the Senator from Alabama will allow me, I desire to ask was that brought out at any time before the committee?

Mr. WADSWORTH. It was; that is a part of the scheme; and the testimony so discloses.

Mr. UNDERWOOD. If the Senator will allow me, that is neither here nor there. Under the pending bill we are seeking to organize a Government corporation and to give it the power of other organizations. When your new administration comes in—because it will not be our administration—if this bill becomes a law and the new President of the United States selects a Secretary of War who shall appoint the board or appoints it himself, I am going to assume that he is going to appoint intelligent, patriotic, honest business men to run this venture who will obey the laws of Congress and operate the plant to the extent of the power that is necessary to make nitrogen for fertilizer, and that part of the power which is not necessary for that purpose they will sell, whether it is secondary or primary. There is no limitation in this bill on their action in that regard, and there should be none.

Mr. WADSWORTH. Mr. President——

The PRESIDING OFFICER. Does the Senator from Alabama yield to the Senator from New York?

Mr. UNDERWOOD. I yield.

Mr. WADSWORTH. The purpose of my interruption was to point out to the Senator that the business of the proposed corporation has been outlined, in so far as the use of power is concerned, by the so-called Government experts who appeared before the committee.

Mr. UNDERWOOD. The Senator knows that they can not limit the operation of this bill.

Mr. WADSWORTH. And all of the estimates as to the cost of turning out the product are based on a certain line of action. Now, if the Senator proposes upon the floor of the Senate or intimates upon the floor of the Senate that an entirely different line of action is to be taken and that the nitrate plant is not to be run upon secondary power, but upon primary power, then we must revise the estimates completely.

Mr. UNDERWOOD. I have not intimated either; I have said nothing about either. If the Senator from New York were organizing a business corporation, however, I do not think that he would think it necessary to disband his corporation, organized for a necessary and practical purpose, because the original proponents of its organization concluded to change their manner and mode of procedure. It is not necessary for us now to determine whether or not the proposed corporation is going to be a financial or business success; the experts say it will be, but the proposition before the Senate is—and we can determine the question in no other way than by actual experience—to try to see if it can be made a success. The Government will retain control of the corporation and will hold the stock; it can discharge the board of directors when it sees fit; it can control the situation; and the only way we can determine whether or not the plant can be successfully operated is to give the directors the opportunity and the scope to attend to their business as we would do if it were our own private affair, and then let them demonstrate whether or not the plant can be successfully operated. But if it be said by some that they will not take the chance, if that be their position, why recommit the bill to the committee? Why not defeat the bill and let the great nitrate plant lie idle and become obsolescent? In that event in the years to come, perhaps a decade from now, when the bugle blows and summons the boys of America to respond to the Nation's call we will find ourselves again without power to defend our country. That is what will happen if Senators are willing to destroy this plant because it may interfere with private business.

I am not taking the affirmative or negative on the amendment which is proposed by those interested in the sale of water power. So far as I am personally concerned, I am not disposed to limit the power of the board of directors in their operation of the plant. I want to give them a fair chance to succeed

The amendment is not especially material; add it to the bill and the plant might go on and operate, although perhaps it would not make so much money or be so successful; leave it out of the bill and it could work no injury except to a special interest.

However, it is not necessary that the Committee on Agriculture should decide that question. The Senate has sufficient intelligence when that amendment comes up for consideration to determine whether it will accept the amendment of the hydroelectric interests of the country or will reject it.

Those are the only amendments that have been called to my attention since this bill has been before the Senate. I will assume that if the gentlemen who are in opposition to it or think that the bill is initially wrong had other amendments to propose they would have brought them before this body and called our attention to them.

Mr. LENROOT. Mr. President, will the Senator yield?

Mr. UNDERWOOD. I yield.

Mr. LENROOT. The Senator is aware that amendments are not in order as long as an amendment is pending, and all that one could do would be to give notice of proposed amendments and have them lie on the table. I will say to the Senator that I have a large number of amendments which I shall offer if this motion to recommit shall not prevail.

Mr. UNDERWOOD. Mr. President, there are a number of amendments pending on the desk. Everybody knows that under the rules of the Senate you do not have to wait until an amendment is disposed of. You can introduce your amendment and send it to the desk and have it printed for the information of the Senate at any time. I do not suppose the Senator from Wisconsin has great confidence in his own amendment, or if he had, I assume that he would correct the bill by way of amendment rather than pursue his motion to send it back to the committee, where it will receive its deathblow—that is, if he were in favor of the legislation. Of course, if the Senator is opposed to the legislation, he will pursue such methods as will accomplish the result of killing the proposal.

Mr. President, those are the main amendments and the main reasons advanced for sending this bill back to the committee; but, while I think about it, the Senator from Wisconsin, whose motion is now before the Senate to recommit the bill and encompass its defeat, has based his argument largely on the idea that some sinister interest is going to be benefited by the passage of this bill. He referred to it many times, but his closing peroration against the bill was that a corporation in Alabama called the Alabama Power Co. was promoting this endeavor in order that it might control the surplus power. He says that it is an English corporation, and I think he is correct about it. We could not get American capital to build a dam on a river down in Alabama, and finally some English capital, before the war, came over and built it and furnished the people of Alabama with the lighting for their towns and the electricity to run their street cars in some of the towns in northern Alabama.

The Senator seems to think that they have an interest here. If they had, and this bill were being passed to help a private interest, I should say the Senator was right. I am no more in favor of legislating favorably to private interests than I am in favor of letting private interests stalk at the doors of this Capitol for the purpose of defeating legislation that means the life of the Nation. But in order that the Senate may not misunderstand and may not be misled by declarations of this kind, I wish to read a telegram that I received this morning, and I will say, in passing, that it was not solicited by me. I had made my final answer to the Senator day before yesterday in reference to this company not having any interest in this matter. I knew nothing about it myself, except the facts that are of record. I knew they were endeavoring now to obtain a Government permit to build a great dam on the Coosa River at an expenditure of millions of dollars, and it was not sane to suppose that men who were expecting to use their money in a development of that kind were expecting the use of this water power.

Here is a telegram I received this morning, as I say, unsolicited by me or anybody else in my behalf. It seems that the press dispatches carried the eloquent speech of the Senator from Wisconsin to Alabama, and here is the reply to it. I will say that this telegram is signed by Mr. Thomas W. Martin, who is the president of the Alabama Power Co.:

BIRMINGHAM, ALA., *January 9.*

Senator OSCAR UNDERWOOD,
Washington, D. C.:

In June last, while our Mr. Perry W. Turner was in Washington, he delivered to Mr. GARRETT, of Tennessee, and Messrs. ALMON and HEFLIN a statement of Alabama Power Co. in regard to the misleading, unfair, and untrue allusions made in the Graham report on Muscle Shoals in so far as the report refers to or mentions Alabama Power Co. I would be glad if you could secure a copy of this report from either of above gentlemen, and I trust an opportunity will present itself to have it incorporated in the RECORD in the discussion now going on concerning Muscle Shoals. Since our company is again referred to, it is but fair that our statement appear in the RECORD, as we had not the slightest reason to think our company would be touched on by Graham committee. We had no opportunity to appear before this committee and we were surprised when we read the Graham report, which does the Alabama Power Co. a grave injustice. You will remember our company donated to Federal Government without any restrictions the Muscle Shoals site, which cost Alabama Power Co. approximately half million dollars. We regret that we are now criticized by Senator LENROOT and others in connection with Muscle Shoals matters, concerning which Alabama Power Co. has no interest except the general interest of all other citizens of the country in this important development. Alabama Power Co. did not get one cent from Government for Muscle Shoals property. Press reports state that Senator LENROOT refers to Messrs. Worthington and Washburn as representatives of this company in Washington. As you probably know, they do not represent our company, and we have no connection whatever with them of any kind.

THOMAS W. MARTIN.

Mr. President, I have not read the report to which he refers, and I do not know what is in it; but I sent over and asked Mr. GARRETT, if he had it, please to let me have a copy of it. I have it in my hand, and although I do not know what is in it, I think it is fair to this company and fair to this discussion that it should appear in the RECORD, and I ask that it be printed in the RECORD as part of my remarks.

The PRESIDING OFFICER. Without objection, leave will be granted. The Chair hears no objection.

The matter referred to is as follows:

REPORT OF SUBCOMMITTEE 5.

ORDNANCE EXPENDITURES, UNITED STATES NITRATE PLANT NO. 2.

In the latter part of 1917 the urgent need of nitrates for explosives compelled the United States Government to seek some artificial means of meeting the demand, since it was probable that the supply of Chilean nitrates would prove inadequate or be cut off, and the erection of nitrogen-fixation plants was recommended by the fixed nitrogen commission appointed by President Wilson to investigate this subject. Attention of the Government was directed to Muscle Shoals, Ala., located on the Tennessee River near Florence and Sheffield, Ala. Although the selection of this site was governed by many reasons, one of primary importance was that the necessary supply of electric energy could be obtained upon short notice from the generation and transmission system of Alabama Power Co., a central-station company then operating at no great distance from the site at Muscle Shoals.

The possibility of utilizing the facilities of this company was brought to the attention of Maj. Gen. Crozier, then Chief of Ordnance, United States Army, by Mr. Frank S. Washburn, president of the American Cyanamid Co., which company was interested in having the cyanamid process approved for installation at the proposed nitrogen-fixation plants to be erected by the United States Government.

As a result of the recommendations of Mr. Washburn, correspondence passed between the Ordnance Department and Mr. James Mitchell, president of Alabama Power Co., relative to obtaining the necessary electrical energy for use at the proposed United States Nitrate Plant No. 2, to be situated at Muscle Shoals on the Tennessee River. In a letter from Mr. James Mitchell to Col. J. W. Joyes, of the Ordnance Department, United States Army, was contained a tentative proposal for the use of the system of Alabama Power Co. This letter was dated November 6, 1917.

Although—owing to the indefinite information possessed by Mr. Mitchell—the proposal was necessarily formulated along general lines, it was so clear and comprehensive that it met with the instant approval of the Ordnance Department and of Col. J. W. Joyes, of the Nitrate Division, Ordnance Department, and an investigation of the facts contained in the letter resulted in an invitation to Mr. Mitchell to come to Washington to confer with officials of the Nitrate Division on the subject of supplying electrical energy to Muscle Shoals.

Several conferences were held in Washington during the month of November and the conditions outlined as follows:

Practically the entire electrical output of Alabama Power Co. was being utilized by various essential industries, and the constantly increasing demand for power was such that the existing installations were practically taxed to their limit during certain seasons of the year.

The final result of the conferences between Mr. Mitchell and officials of the Ordnance Department was that a 30,000-kilowatt steam-generating plant would be purchased by the Government and installed at the Warrior steam plant on foundations already placed by Alabama Power Co. for its own use. The original design of the Warrior plant had been for three units, fortunately, and all pioneer engineering work was done on that basis. Moreover, certain heavy work, such as condenser intake and discharge tunnels, had been completed for the entire plant, thus advancing the construction work at least six months and also reducing the actual cash requirements to install additional units. The Government, of course, was to reap the benefit of the then obtaining conditions. As speed was a primary requisite in this case, the drawing of the formal contract was left until a later date, and it was agreed that work would be started upon receipt of work orders giving authority to proceed.

In addition to the generating equipment, it was necessary to construct a transmission line from the Warrior steam plant to Muscle Shoals, under the same conditions as the generating unit at Warrior, the Alabama Power Co. having a field force organized that could carry on all phases of the work contemplated.

The Ordnance Department, nitrate division, also made the request on January 25, 1918, that space be reserved for an additional generating unit at the Warrior plant should it be required.

The United States felt that by tying into the system of Alabama Power Co. it could obtain energy for construction purposes and would also obtain security against shutdown, if its own plant at Sheffield should break down, as it would have been possible to discontinue service to some of the customers of Alabama Power Co. who might be engaged in industries less important than the needs of the Government.

SUBCOMMITTEE REPORT.

On May 17, 1920, subcommittee No. 5 on ordnance presented to the Select Committee on Expenditures in the War Department a report concerning the expenditures by the Government at United States nitrate plants Nos. 1, 2, 3, and 4. In dealing with the expenditures at United States nitrate plant No. 2, Muscle Shoals, Ala., the work done by the

Alabama Power Co., as contractor agent for the United States, was brought into the investigation, and in submitting their report and findings the subcommittee makes certain charges against the Alabama Power Co. that it is now proposed to answer. It should be borne in mind that the subcommittee in making these charges against the Alabama Power Co. did so without an inspection of the work done by Alabama Power Co. for the United States. None of the officials or employees of the Alabama Power Co. were called to testify before the subcommittee, although the subcommittee sat at Sheffield, a distance of 90 miles from the Birmingham office of Alabama Power Co.

In paragraph 40, on page 7, of the report of the subcommittee the charge is made that as a result of this vast expenditure of public moneys on the property of Alabama Power Co. the power company has been able to build up its property and establish it as a power of monopoly in northwestern Alabama. This charge is false and has no foundation in fact, or in the evidence submitted to the subcommittee, as will be shown hereinafter.

A majority of subcommittee No. 5 makes the following charges against the Alabama Power Co.:

CHARGE 1.—SYSTEM OF ALABAMA POWER CO.

The subcommittee charges:

"The Alabama Power Co., when the war began, had a small system, and were comparatively poorly equipped. To-day they have one of the most modern power stations in the world at the Warrior River, with coal mines electrified and a railroad connecting them with the Southern Railroad Co., many transmission lines, and with a practical monopoly of electric power in the northern and western part of the State of Alabama, and this at Government expense."

In 1917, prior to the entrance of the United States into the World War, the power system of the Alabama Power Co. consisted of the following:

The generating plants of the system consist of water-power plants at Lock 12 on the Coosa River and at Jackson Shoals on Choccolocco Creek and the Gadsden and Warrior reserve steam plants.

LOCK 12.

Lock 12, the main plant of the system, is located about 50 miles southeast of Birmingham on the Coosa River, by authority of an act of Congress approved March 4, 1907.

The dam at Lock 12 is of the gravity type, approximately 1,638 feet long and 65 feet high. This height is further increased to a normal operating head of 72 feet by spillway gates which also serve as a means of stream control. There are 26 of these gates, each 30 feet wide by 14 feet high, in the 930-foot spillway section of the dam. In July, 1916, floods up to 200,000 cubic feet of water per second, the severest flood ever recorded on the Coosa, passed over the spillway without any difficulty.

The power house in which are located the immense water turbines forms the western portion of the dam. This power house is 323 feet long, 128 feet wide, and 160 feet high. There is a total of 187,000 cubic yards of concrete in the power house and dam. Power is normally generated at the rate of more than 1,000,000 kilowatt-hours per day.

The ultimate contemplated capacity of the station is 110,000 horsepower, of which 89,500 horsepower is installed. The present installation consists of four 17,500 horsepower and one 19,500 horsepower Westinghouse vertical single runner turbines. These are directly connected to 13,500 kilovolt amperes, 6,600 volt, 3 phase, 60 cycle generators.

JACKSON SHOALS.

The second hydroelectric plant on the power company's system is located at Jackson Shoals on Choccolocco Creek, a few miles south of Lincoln, in Talladega County. This plant has a diversion dam approximately 500 feet long and a wooden flume 2,000 feet in length, which connects the power house with the dam. The power house is a reinforced concrete structure, in which are located the two vertical double-runner turbines directly connected to 1,000-kilovolt ampere generators. These generators are rated at 2,300 volts, 3 phase, 60 cycles.

NECESSITY FOR STEAM RESERVE.

With a diversified load such as this company has—that is, public utilities, mines, blast furnaces, cement and brick plants, cotton mills, etc.—the demand for continuity of service is such that a hydroelectric development would not be feasible without adequate steam reserve to insure customers continued and uninterrupted service during periods of low water flow. Such reserves are also called on from time to time to supply power during interruptions caused by lightning, cyclones, or other interruptions due to operating exigencies. With the view of meeting these varied contingencies the power company has constructed two reserve steam plants, one at the northeast terminus of its system, near Gadsden, and the other on the Warrior River in Walker County. These plants are operated during but a brief period each year, but the value to the users of light and power in assuring them of continued service for successful operation makes it necessary to keep such reserve plants in a constant state of readiness to operate.

GADSDEN.

The Gadsden reserve steam plant is located near Gadsden in Etowah County on the Coosa River and 100 miles northeast of Lock 12. The capacity of this station is 15,000 horsepower, there being two 7,500 horsepower horizontal steam-driven turbines, 60 cycle, 3 phase, 2,300-volt General Electric generators installed. Condensing water is drawn from the Coosa River.

WARRIOR.

The Warrior River steam plant is located at Gorgas in Walker County on the historic Black Warrior River 40 miles northwest of Birmingham. The town is named for Maj. Gen. W. C. Gorgas, Surgeon General of the United States Army, a native Alabamian. This plant is located in the heart of the Warrior coal fields, the coal for the boilers being mined within a few hundred feet of the power station. An ample supply of water is furnished by the Warrior River for condensing and boiler-feed purposes.

The Warrior plant is equipped with one 30,000 horsepower horizontal steam turbo-generator. Coal bunkers, capable of storing 600 tons of coal, two days' supply, are located above the boilers, and coal is delivered from them through automatic weighers and chutes to the stokers.

LOCAL STEAM PLANTS.

In addition to the stations located on the main transmission lines of the Alabama Power Co., there are steam stations at Huntsville, Decatur, and Guntersville, in the northern part of the State, and at Marion in the west-central part. These stations serve the immediate communities only.

SUBSTATIONS.

In addition to the four generating plants there are seven primary substations located at Warrior, Gadsden, Jackson Shoals, Magella, Anniston, Bessemer, and Sylacauga.

All substations are of the outdoor type. The electrical equipment is designed to be moisture proof and fitted with breathers and air driers to avoid the collection of moisture or condensation. All transformers are single phase, oil insulated, and water cooled, and the oil switches are 3-unit solenoid operated remote control type. The control wires are carried in underground conduits to the switch houses, where the switchboard, instruments, storage batteries, and telephone instruments are located.

TRANSMISSION LINES.

The main transmission lines of the system form an immense triangle in the central part of the State of Alabama. The circuits which radiate from the corners of this triangle make a total length of about 900 miles. The area served is 10,000 square miles in extent, being practically the entire central and northern part of the State. This territory includes practically the whole of the great industrial coal and mineral districts of Alabama.

The type of the transmission lines varies according to the voltage carried. All 110,000-volt lines of the power company are supported on galvanized-steel double-circuit towers by suspension-type insulators. The 22,000-volt and 44,000-volt distributing lines are carried partly on steel towers with the 110,000-volt lines and partly on creosoted wood poles. Both suspension and pin-type insulators are used.

The area served includes some very sparsely settled and rough country, which is subject to violent lightning storms during the summer months and winds of almost cyclonic fury during the spring. Nevertheless, a system has been built up which has very few interruptions to service. This result has been achieved by giving special attention to the strength of towers and poles, insulators, and cable, duplication of lines, lightning protective apparatus, and automatic relays.

The power generated at Lock 12 and other stations of the power company is supplied to the various industries in Alabama by means of high-tension transmission lines. In 1917 there were approximately 1,000 miles of transmission line owned by the Alabama Power Co. and utilized by the consumers; part of this line was constructed on steel towers and part on wooden creosoted poles. The territory served extended from Opelika in southeast Alabama to Decatur and Huntsville in northeast Alabama, and from Anniston and Gadsden in east Alabama to Tuscaloosa and Jasper in west Alabama, and served in all approximately 40 municipalities.

In 1917 the power supplied by the Alabama Power Co. came almost exclusively from Lock 12 hydroelectric plant, very little use being made of the Warrior reserve steam plant and the Gadsden reserve steam plant, except in case of low water in the Coosa River.

Although the bulk of the energy generated by the Alabama Power Co. consisted of water power, with a diversified load such as is being carried, the demand for continuity of service is such that a hydroelectric development would not be feasible without adequate steam reserve power to insure customers continued and uninterrupted service during periods of low-water flow. To meet any exigency that might thus happen, the Alabama Power Co. has built the two stand-by plants, one at Warrior and one at Gadsden, as shown above; but these plants are operated for but a brief period each year, and only as necessity demands. However, the fires under the boilers of these stand-by plants are always banked, and within 90 minutes each of these plants can be brought on the line delivering their capacity for the maintenance of power for continuity of service.

Some idea of the work performed in the industrial field in Alabama by the hydroelectric system of the Alabama Power Co. may be gathered from the following summary of the plants that are supplied:

Type of industry.	Number served.	Per cent of total use of power.
Coal mines	21	4.04
Ore mines	7	5.75
Steel mills	4	16.15
Ferro-alloy electric forces	1	19.52
Cotton mills	10	7.63
Brick plants	1	.21
Cement mills	2	7.25
Foundries and machine shops	2	.51
Cotton gins and fertilizer plants	4	.52
Pumping plants	3	1.13
Quarries	2	.63
Lime plants	1	.03
Graphite mills	22	1.76
Public utilities and street railways	6	34.55
United States Government (Camp McClellan)	1	.32
Total	87	100.00

The above is merely an indication of the scope of the Alabama Power Co. and the diversity of its consumers as it existed prior to the making of the contract with the United States Government.

The Alabama Power Co. feels a just pride in its accomplishment in the industrial field during the period of the war. The use of hydroelectric power not only conserved man power but it conserved the equally essential and much-sought-after product of coal; it furnished the power that drove the giant steel mills in the Birmingham district that were making war munitions for use at the front, and this, too, before one penny of Government money had been expended in erecting its plant at Gorgas. Its lines reached into the graphite fields of eastern Alabama, where 58 per cent of the graphite in the United States was being produced. Had it not been for this hydroelectric power that important war industry could not have been. These lines, too, went into the graphite fields before the United States Government expended one cent on its Warrior extension unit.

How, in fairness, the subcommittee could have made the charges that when the war began the Alabama Power Co.'s system was a small one and was comparatively poorly equipped is beyond explanation. We prefer to believe that the subcommittee made these charges in ignorance; otherwise their conclusions would be unworthy of them. Any authority in the United States on power and power systems could have informed the subcommittee that the system of the Alabama Power Co. was new, and in the point of installation, improvement, and equipment was one of the most modern and efficient generating systems in the United States.

CHARGE 2.—DRIFTON EXTENSION RAILWAY.

The subcommittee charges:

"The Warrior River station is located at a place called Gorgas, about 100 miles from Muscle Shoals, and a place excessively hard to reach. During construction most of the supplies came by the Warrior River by steamboat from Benoit, 18 miles away. The nearest railroad station is Parish, Ala., about 9 miles from Gorgas. During the construction period the expense and hardships of transporting material to Gorgas were immense.

"The construction work began at Gorgas on March 13, 1918. The Alabama Power Co. owned at the time a small steamboat named *Blanche* and some coal barges. The Government bought these from the Alabama Power Co. at an expense of approximately $10,000 at about the time they began construction work and used them in transporting supplies, selling the *Blanche* and the barges afterwards for about $6,500. The Alabama Power Co. did not need them when the Government bought them.

"Nine miles away from the plant was a station of the Southern Railroad at Parish, Ala.; from Parish for 6 miles in the direction of the plant the Southern Railroad Co. was operating a railroad to serve certain coal mines along that line. From the end of this 6-mile spur for 1½ miles a road had been built theretofore by the Southern, but was abandoned and out of repair, and for the last 1½ miles there was no railroad at all. Although the Government was transporting supplies from Benoit by river, 18 miles, and hauling them by truck from Birmingham, 40 miles away, over the worst of roads, this 1½ miles of railroad was not built until after the signing of the armistice, and after all the heavy work of construction and transportation had been finished. Then it was taken up and pushed to completion by the Ordnance Department. The Alabama Power Co., when it was evident the war was to end, perceived that it would be advisable for the company to build this extension that it might get coal easier and more cheaply, and the road was then built (p. 3521). No explanation is given for this proceeding, and, so far as can be observed, there could be none. Obviously this road should have been the first thing built."

In order that there may be a clearer understanding of the purposes in the building of the 8,000 feet of railroad track connecting the Government unit with the Drifton branch of the Ensley-Southern Railway, a blue print showing the location of the Drifton branch and the extension built by the United States and Alabama Power Co. is hereto attached. The Drifton branch of the Ensley-Southern Railway extends southwesterly from Parish, Ala., for a distance of 6 miles toward Gorgas, Ala., its nearest point to Gorgas being 8,000 feet. This line of railway taps one of the richest coal field in Alabama and has located on it several large producing coal mines.

The Alabama Power Co. plant was finished and put in operation in September, 1916. The coal supply necessary for the operation of the power company unit was obtained from the Winona Coal Co., located within 300 feet of the power company unit. The acreage of this company and its daily output was sufficient for the operation of the power company unit for many years to come, and prior to the building of the Government unit on the premises of the Alabama Power Co. there existed no necessity for getting coal from the outside. However, when the Government unit was located at this point it became apparent to both the Government officials and the officials of the Alabama Power Co. that additional sources of coal supply should be secured. The close proximity of the coal mines served by the Drifton branch of the Ensley-Southern Railway naturally suggested to both parties that the connecting line between the Drifton branch and the plant should be constructed. The idea was not conceived in the iniquitous mind of the Alabama Power Co. "when it was evident the war was to end." The majority of the subcommittee did not deem it advisable to go to the indisputable records for information in regard to the negotiations for the building of this railway or the necessity for it, but instead preferred to base its charge against the Alabama Power Co. upon rumor and hearsay and uncertainty. A reference to the files in the office of the Ordnance Department would have disclosed the negotiations of the Government with the power company with reference to the building of this railway and would have shown that the negotiations for the building of this railway began in December, 1917, with a letter from Col. J. W. Joyes addressed to the Alabama Power Co. Thereafter the files are full of letters and plans and specifications relating to the building of this railway.

Again, had the subcommittee been desirous of obtaining accurate and fair presentation of this matter, they could have gone to the contract which they had before them and there have found a stipulation requiring the building of this railway. (Art. IVa, Drifton extension railway, contract T-69, p. 2717, serial 6, pt. 50.)

Again, had their eagerness for fairness been commensurate with their desire to discredit, they might have referred to schedule E, attached to and a part of contract T-69, and set out at page 2734 in serial 6, part 50, and there have found that the Government did not build this road at their cost entirely.

The United States supplied rails and rail joint material and contributed $30,000 toward the cost of the work. The Alabama Power Co. did the work at an additional cost to the Alabama Power Co. of $115,933.67. It is to be noted also in this connection that Schedule E in paragraph 7 provides that the expense of the United States in constructing this railway shall be deemed a part of the actual cost of the Warrior extension for the purpose of sale to the Alabama Power Co. under article 22 of its contract with the Alabama Power Co.

CHARGE 3.—THE POWER COMPANY'S WARRIOR RESERVE STATION.

The subcommittee charges:

"At the Warrior River station the Alabama Power Co. had had a brick building, about 100 by 100 feet, with indifferent machinery. The Alabama Power Co., under its aforesaid contract, built an addition thereto, 100 by 100 feet, and of the most modern construction, installed the most modern machinery, boilers, and appliances, and a 30,000-kilowatt turbogenerator of the most modern and complete construction. This turbogenerator is placed on permanent foundations in the building heretofore described, and the whole is located on land owned by the Alabama Power Co., and with no right in the Government to acquire the same."

On or about June 1, 1916, the Alabama Power Co. began the construction of its Warrier steam reserve power plant at Gorgas, Ala., located at the junction of Bakers Creek with Mulberry Branch of the Warrior River. This plant was located at this point because—

(1) It was near the Birmingham load center.
(2) It was located in the heart of the great coal region of Alabama.
(3) Water for condensing and for boiler feed was plentiful and free from scale-forming quantities.
(4) Minimum danger from floods.

This plant was completed and in operation in September, 1917. It was equipped with the most modern machinery in the world, the equipment consisting of—

Six 1,206-horsepower Stirling boilers.
Five Westinghouse underfeed stokers.
One Combustion Engineering Co. type E stoker.
One 25,000-kilowatt, 6,600-volt, 3-phase, 60-cycle, 1,800 revolutions per minute, 80 per cent power factor, Westinghouse Electric & Manufacturing Co. turbogenerator.
One Westinghouse Leblanc jet condenser.
One bank of three 8,333 KVA Westinghouse transformers.

The plant has been in continuous operation since that time and has fulfilled every expectation from the point of efficiency.

In the Southern Engineer for November, 1917, appears an article, illustrated by photographs, on the Warrior reserve steam plant of the Alabama Power Co., which shows the machinery of the plant to be the most modern and up to date in existence. In addition it shows photographs of the type of employees' dwellings to be of substantial and permanent construction. The following excerpt taken from this article has this to say in regard to the Warrior reserve steam plant and the system of the Alabama Power Co.:

"The Warrior reserve steam plant of the Alabama Power Co. is located on the Mulberry Fork of the Black Warrior River at the junction of the fork with Bakers Creek. The site was chosen because of its relation to the load on the system of the company and the abundance of water for condensing purposes.

"Further advantages of this location were the foundation conditions and the proximity of coal, there being mines operated within 500 feet of the coal-crushing machinery of the plant.

"In the new plant the first unit, which is nearing completion, forms part of the extensive system operated by the company throughout the State of Alabama, supplying cities, traction companies, and industries."

Again, in the Manufacturers' Record, in the issue of June 28, 1917, additional information and photographs are contained respecting the Warrior reserve steam plant. This article says:

"The first unit of the new steam-power plant erected by the Alabama Power Co. as an auxiliary to the hydroelectric plant of the company will be in operation in a few weeks.

"The plant is situated at the point of confluence of Bakers Creek with the Mulberry Fork of the Warrior River, which is approximately 25 miles from the city of Birmingham. This point was selected by the company on account of the fact that it is in the heart of the Warrior coal fields, and there is abundant cooling water for condensing purposes.

"Open-ground storage will be used for coal, and coal-handling apparatus will consist of a traveling bridge over the storage pile and a belt conveyor to the overhead bunker. The storage pile is so laid out there will be possible ground storage of 90,000 tons. Coal is supplied from a mine situated a quarter of a mile from the steam plant.

"A feature of the development is the character of the operatives' houses, which are of hollow tile and plaster construction.

"There is an increasing demand on the Alabama Power Co. for electric current for lighting and power purposes. A fifth unit is being added to the hydroelectric plant on the Coosa River, which will make a total of 92,500 horsepower generated at this point. In addition to serving municipalities and existing industries, such as coal-mining operations, cotton mills, etc., it is the policy of the company to encourage the location of new industries. Conspicuous in this line are the plants of the Anniston Ordnance Co., the Anniston Properties Co., and others, in addition to which are a number of other projects under negotiation, an announcement of the locations of which are expected in the near future."

In addition to this, Capt. Stiles, in his testimony before the subcommittee (record, p. 3507), testifies that the Warrior reserve steam plant of the Alabama Power Co. was good; that it was new; that it compared favorably with the kind of material that the Government had in their unit; that the electrical apparatus was good; and that the plant was good.

In view of the above, quoted from the record and undisputed, how can the majority of the subcommittee arrive at the conclusion that the Warrior River substation of the Alabama Power Co. was equipped with indifferent machinery?

CHARGE 4.—GENERAL CONTRACT T-69.

The subcommittee charges:

"The proposition of the Alabama Power Co. was not accepted by Col. Joyes, but on December 1, 1917, a written contract was made with that company by which the United States authorized the Alabama Power Co. to build at its Warrior River station certain considerable extensions of the plant, to acquire the right of way and build transmission lines to the nitrate plant at Muscle Shoals, and to do such other work as was necessary in electrifying certain mines to other facilities, and to generally act as the agent of the United States in all of these matters, for which the United States agreed to pay all costs of every kind and nature made by its agent, use of the agent's line, and a fee not to exceed $225,000 to the agent for doing this work, and for the power the company was to receive 6½ mills per kilowatt hour, with a minimum monthly charge of $30,000, the United States to retain 2 mills per kilowatt hour until the cost of the Warrior station and the Warrior substation should be paid. It will be observed that this contract is much less favorable to the Government than the proposition made to Col. Joyes by the Alabama Power Co. on November 5, 1917. No reason is given for this by Col. Joyes except that he thought the Government had no authority to loan money."

The availability of power in close proximity to the site of the proposed nitrate plant at Muscle Shoals had previously been noted by Government officials, and early in October, 1918, Mr. Elliott, of the War Industries Board, had requested certain information from the Alabama Power Co. with a view to ascertaining the position of the company should power be needed by the Government.

On November 6, 1917, Mr. James Mitchell, president of the Alabama Power Co., in a letter to Col. J. W. Joyes, Chief of the Nitrate Division, Ordnance Department, made a certain tentative proposal relative to furnishing necessary electrical energy for use at the proposed United States nitrate plant No. 2, being situated at Muscle Shoals, Tennessee River.

As the information possessed by Mr. Mitchell was very vague and indefinite, this proposal was necessarily formulated along general lines, and would, of necessity, be considerably modified and changed when definite plans of the Government were known. It was explained by Mr. Mitchell that financing of such a huge undertaking could not be formed by the Alabama Power Co., but the company, for patriotic reasons, was prepared to cooperate in every possible way to assist the Government in successful prosecution of the war.

It was also stated that, in order to furnish this power, an extension would have to be built to the Warrior River steam plant, but that any undertaking of this character would necessarily have to be financed by the Government, as the company was not prepared to finance a development of this magnitude owing to the stringency of the money market created by war conditions.

While the proposal of Mr. Mitchell on November 6, 1917, was very general, it was made at the suggestion of the Ordnance Department with the view of opening the negotiation and assuring the Government of the willingness to cooperate. While in general this proposal did specify an estimated figure of the cost to do certain things, provided this sum be advanced by the United States, the decision not to make this advance, but to do this work by contract and increase the projected capacity to be installed, obviated any possibility of comparing the amount set up in the letters of November 6, 1917, with the ultimate expenditures of the United States under this contract.

Mr. Mitchell was invited to attend a conference in Washington, where further details would be discussed, and on November 21 the conference was held in Washington between Col. J. W. Joyes and Maj. J. E. Runcle (retired), representing the United States, while the Alabama Power Co. was represented by Messrs. James Mitchell, Thomas W. Martin, W. N. Walmsley, and O. G. Thurlow. In this meeting several plans were discussed as to the best method of securing power for use of the Government at Muscle Shoals. The officials of the Alabama Power Co. explained in detail that the Alabama Power Co. was in no sense in the contracting business, nor did it hope to make any large gain, but was actuated by the desire to cooperate with the Government and assist in every way in speeding up construction at Muscle Shoals. It was also explained that officials of the power company could not at that time agree upon any plan, but that the entire subject would have to be placed before the board of directors of the company and before the trustee under the company's mortgage, and some plan worked out which would fulfill all the legal requirements of the company's mortgage.

During the conference it was stated by the Army officers that the Government had the power of condemnation, and if a public necessity existing within the meaning of the present statutes, the President of the United States could direct the Army engineers to take possession of the Warrior Steam Plant or any other property of the power company, and use it in any way they saw fit to further formulate plans. It was stated, however, that the Government had no desire to invoke any such power as this, but if a proceeding of this kind was necessary, the Government would not hesitate to take this action.

Another conference was held in Washington on November 27, attended by Col. Joyes, for the Government, and Messrs. Walmsley and Martin, representing the company, in which a tentative authority for the formation of formal contract was discussed.

From time to time in the next two weeks conferences were held by representatives of the Government and the power company, and in order to expedite work it was decided not to wait upon the signing of the formal contract, but to proceed with construction with all speed on receipt of necessary authorization from proper Government officials in the form of work orders.

These work orders covering building of an addition to the steam plant at the Warrior transmission line, construction and furnishing of power were issued on December 7 and signed by Col. Joyes. Upon receipt of these work orders the Alabama Power Co., in good faith, proceeded to organize their construction forces and make the necessary preparations for the work to be done.

In the meanwhile various draft forms for the formal contract were drawn up by the Alabama Power Co. and submitted to the Government for approval, but certain clauses in these contracts were unsatisfactory, and the amendments as shown by the Government were not completely satisfactory to the Alabama Power Co. The result, partly due to busy days of war time and inability to get the proper parties together to make the necessary changes, this contract hung fire and was not formally signed until November 9, 1918.

Had this work been undertaken by the Alabama Power Co. as originally contemplated, it would not have been necessary to apply the eight-hour law to the work, nor would it have been necessary to undertake the patrolling and guarding, which was purely military and not a contractual necessity. The power company would have absorbed the direct and other charges, but as a contractor it was deemed fair and reasonable that a fee should be paid for its services, which, under the circumstances, as compared with the fee paid other contractors throughout the country, was very nominal.

CHARGE 5.—WARRIOR-MUSCLE SHOALS TRANSMISSION LINE.

The subcommittee charges:

"They also bought or acquired right of way for power transmission line for approximately 90 miles, from the Warrior River to nitrate plant No. 2, the title to which is in the Alabama Power Co., and which the United States has no right to acquire by virtue of its written contract (2787). On this right of way was built a transmission line, the only connection between United States nitrate plant No. 2 and the installation made at the Warrior River plant. This line is of flimsy construction, on wooden poles, and would not pay for the expense of taking it down and removing it (3368)."

Prior to the outbreak of the war and prior to the time of the making of the contract between the Alabama Power Co. and the United States for construction of the plant at Gorgas and the transmission line from Gorgas to Muscle Shoals, the power company had already acquired approximately one-third of the right of way from Gorgas to Muscle Shoals. This fact, together with the great natural advantages of the power site at Gorgas, were the inducing factors causing the United States to place the power plant at Gorgas and run its transmission line from there to Muscle Shoals.

The transmission line between Gorgas and Muscle Shoals was begun in January, 1918, and was finished and in operation by the 1st of July, 1918. The line is 90 miles long, and a great part of it over a very rough and mountainous country. The line was finished within the time specified by the contract, and thereby enabled the Government to procure power for lighting and construction at Muscle Shoals months in advance of the completion of the power plants at Muscle Shoals and Gorgas. This was made so by the connection of the Warrior-Sheffield transmission line with the Warrior reserve steam plant of the Alabama Power Co. at Gorgas.

Capt. J. C. Stiles, who was perfectly familiar with the line and its construction, tells the subcommittee that the line was built in accordance with the best practices of power-line construction. It was built of creosoted poles, which have an ordinary life of 30 years or more. The wires were standard copper wires used in the conduction of heavy voltage, and the other equipment and appliances were in keeping with the high standards of power-line construction (3517). Capt. Stiles correctly states that the reason wooden poles were used was that the steel towers were not only very high in price but, due to the war demands for steel products, were impossible to obtain.

The Warrior-Muscle Shoals transmission line has been in operation continuously for more than a year, and during the period of the worst weather ever known in Alabama. It has at all times functioned efficiently and without break. The line is an exact duplicate of many hundreds of miles of line built by the power company prior to the construction of this line. These older lines have been in operation for approximately six years and have always given the highest degree of efficiency. As a matter of fact, as stated by Capt. Stiles, the modern tendency is to come back to the wooden-pole transmission lines. If it be flimsy construction to build a line on wooden poles and of the best copper wire and appliances, then the management of every power company in the United States is subject to a severe criticism and indictment by the men who have invested their capital in the power companies. But this criticism of the line is not merited. The only man (Capt. Stiles) who testified before the subcommittee who knew anything of the line frankly told them that the line was built in accordance with present approved standards of line construction.

As a matter of fact, the cost of changing the wooden poles that became decayed and nonusable would be less than the interest on the additional cost had steel towers been secured.

CHARGE 6.—HOUSES FOR OPERATIVES—AMUSEMENT, ETC.

The subcommittee charges:

"Not content with the rejuvenation of its power plant, the Alabama Power Co. built for the Government at its plant an industrial village. Twelve permanent houses were built and 20 semipermanent operative houses and a number of houses for colored people. A hospital was erected of 30 beds, and also an ice factory, a pool room, an entertainment place, and a moving-picture show. The permanent houses were of the best construction and cost $5,000 apiece. All of these buildings were built on lands owned by the Alabama Power Co., and the Government has not even the right to acquire title to this land. From five to seven hundred men were employed during the work, and none of them lived in these houses. The houses were not completed until after the armistice, and instead of stopping construction on them with the armistice, the Government, with its agents, rapidly proceeded and completed them, so that they are at this time occupied by employees and officers of the Alabama Power Co. stationed at the plant (3615). The five to seven hundred workmen employed lived in tents during construction. Nobody ever contended or represented that these houses were being built for any other purpose except for the Alabama Power Co."

Exception is taken to the statement "not content with the rejuvenation of its power plant," as facts indicated in this report show clearly that the plant, far from being old or antiquated, was just completed and one of the most modern in the United States, and any statement to the contrary is without basis in fact. In regard to the building of an industrial village at the site of the Warrior steam plant, it is obvious even to laymen that in order to house a large body of men it is necessary to construct dwellings for them to live in. At the first influx of men to be housed at this plant tents with wood floors and sides were hastily thrown up, and these men were temporarily taken care of in this manner.

In an undertaking of this character it necessarily follows that there must be superintendents, physicians, and clerical forces who must be housed, and for this purpose were built the 20 semipermanent houses. These houses were occupied only by the executive administrative forces, and, while costing approximately $700 each, were in fact nothing more than the roughest sort of construction.

In all construction work where a large body of men are employed it is absolutely necessary that facilities be afforded for the treatment of the sick and wounded men, and a hospital to care for these men was constructed. The construction of this hospital was approved by Maj. Coombs, officer in charge of the Warrior steam plant. The hospital was a wood structure, semipermanent, and constructed in as economical a manner as possible, with the prevailing fundamental idea of providing a place for the sick at the least possible expense.

A pool room and moving-picture house were likewise constructed in the cheapest manner possible. In order to keep men on a job of this character, which is far from town, it was absolutely necessary to provide some manner of amusement for the leisure time, and such amusement places have been provided on big construction jobs in this country and in all Army cantonments.

In the South it is absolutely necessary that ice be provided, as it is impossible to keep food without it, and a large loss of foodstuffs would have necessarily followed had not this addition to the ice plant already in existence been constructed.

The class of men required to operate a generating plant is necessarily of a high-class character and the majority of them are married men with families. It was to provide habitation for men of this character that the 12 permanent houses were constructed. Great difficulty was experienced in securing operators at all for this station, as the demand for men of this type rendered it almost impossible to get them unless they were provided with good dwellings, where their wives and families would be fairly comfortable and satisfied. It was the aim of the Alabama Power Co. to provide these dwellings. The construction of these houses was advocated on numerous occasions by the officials of the power company from the commencement of construction until the houses were actually under way, and while some of these houses were completed after the armistice was signed they had been under construction for some time, all material was on the ground, and it was economy from all standpoints to complete these houses, where they would be of some value, instead of being left in a state of partial completion and subject to rapid deterioration.

These houses were most emphatically not built for the service of the Alabama Power Co., but for occupancy by the operating forces to be employed on the unit installed for Government use at the Warrior steam plant. The Alabama Power Co. reaps no benefit from their construction; any statement that this work was done for any other purpose than to facilitate construction and operation of the Government plant is contrary to the facts.

The power company was endeavoring to the utmost of its ability to facilitate the construction and operation of this plant by the Government, and notwithstanding all statements to the contrary, it is still the belief of the officials of the Alabama Power Co. that the building of these houses was absolutely necessary and reacted to the benefit of the Government, for while these houses are on the land of the Alabama Power Co., it is stated in the contract that all these properties, together with addition to the plant, etc., would be sold to the Alabama Power Co. at a fair value by the Government. They form a part of the plant proper, and the use of them by the power company was figured in on the rental to be paid the Government for the use of the plant.

CHARGE 7.—SALVAGE VALUE—UNITED STATES UNIT, GORGAS.

The subcommittee charges:

"It is probable that aside from the turbogenerator at the Warrior River station, which might be removed at an immense expense, there is not a cent of the expenditure made by the Government for the Alabama Power Co. that could be salvaged."

It is unfortunate that the subcommittee, while so close to the Government unit at Gorgas, Ala., did not take occasion to visit it and investigate conditions at that point. It is likewise unfortunate that, in making the charge that there was no salvage to the plants erected at Gorgas by the Government, they did not examine with care the contract under which the plant was erected. Had they been so careful, they could have found in article 22 of said contract that the Alabama Power Co. was obligated to purchase this plant from the United States upon the written demand of the United States at a price fixed by arbitration, as provided in said contract. That clause in the contract is sufficient to refute the statement of the majority of the subcommittee that the plant has no salvage value.

CHARGE 8.—PRODUCTION OF GOVERNMENT UNIT COMPARED WITH PRODUCTION OF THE SYSTEM OF ALABAMA POWER CO.

The subcommittee charges:

"40. The committee finds that the expenditure of over $5,000,000 for the development of the property of the Alabama Power Co. was unjustifiable and unnecessary, and that the same results might have been accomplished by a loan of less than half this amount. That the result of this vast expenditure of public moneys has been to build up the property of a private corporation and establish it as a power monopoly in northwestern Alabama."

The charge of the subcommittee in reference to the above subject is false and has no foundation in fact.

The statement hereinbelow shows the output of the Government unit since it was brought into operation. In a parallel column is shown the output of the system of the Alabama Power Co., exclusive of the Government unit over the same period of time.

Period.	Total generation of entire system of Alabama Power Co.	Generation by United States Government unit.	Remarks concerning Government unit.
1918.	*k. w. h.*	*k. w. h.*	
November		0	
December	42,861,580	112,800	Initial operation without load; trial operation; energy supplied United States Nitrate Plant No. 2.
1919.			
January	40,215,000	5,809,600	Unit dismantled. Rotor returned to General Electric Co.
February	25,813,500	0	
March	26,796,900	0	
April	25,150,300	0	
May	24,181,000	0	
June	23,322,637	0	
July	25,061,410	0	Rotor returned to plant and reassembled.
August	28,100,580	0	
September	30,034,918	0	Commercial operation; energy purchased by Alabama Power Co.
October	32,072,399	2,998,700	
November	31,732,300	15,630,709	
December	35,511,840	3,384,900	
	347,992,784	22,014,300	
1920.			
January	38,693,550	738,900	Commercial operation. Unit down for inspection. Capacity of unit reduced.
February	37,574,180	0	
March	41,021,900	5,400	
April	41,373,804	286,200	
	158,163,434	1,030,500	
Grand total	549,017,798	23,157,600	

Energy generated by Government unit expressed in per cent of total; 4.2 per cent, of which 6,512,046 kilowatt-hours was supplied to Government and 16,645,554 kilowatt-hours, or 3 per cent, of the total generation, was purchased by Alabama Power Co.

It will be noted that the grand total produced by the statement of the Alabama Power Co. over this period was 549,017,798 kilowatt hours, as compared with 23,167,600 kilowatt hours produced by the Government unit.

The Alabama Power Co. therefore furnished twenty-four twenty-fifths of the combined output of its system and that of the Government unit.

The output of the Government unit for the entire time only represents the output of the Alabama Power Co.'s system for 20 days.

Expressed in percentage, the Alabama Power Co. produced 95.8 per cent of the combined output of the power company's system and the Government unit supplied the meager sum of 4.2 per cent.

Of the 4.2 per cent produced by the Government unit, the Government in its Muscle Shoals operation consumed 1.2 per cent and the Alabama Power Co. purchased from the Government the remaining 3 per cent, as is provided in the contract between the United States and the Alabama Power Co., at the rate of $0.0015 per kilowatt hour. (Art XVII.)

One needs but to glance at the above table of figures to be convinced that the charge made that the power company's system was built up at the expense of the Government is utterly false. All these facts were available to the committee had they desired them.

The contrary of the charge made that the Alabama Power Co.'s system was built up at the expense of the Government is true.

The Alabama Power Co. was required by the contract T69 in Article I to build a tie line between its hydroelectric system and the Government unit at a cost of approximately $312,000. Prior to this time the Alabama Power Co. had transmission lines connecting its hydroelectric system with the power company's Warrior reserve steam plant which met all requirements of the Alabama Power Co. This obligation in contract imposed a burden upon the Alabama Power Co. for this additional outlay of money, from which it has received no return, due to the suspension of construction and operation at Muscle Shoals.

The Alabama Power Co. at its own expense and at the instance of the United States Government expended the sum of $131,000 for additional equipment at the Winona mine to supply the United States Government with coal. This now represents a nonpaying investment.

The Alabama Power Co. at an outlay of $65,000 completed the purchase of the right of way from Gorgas to Muscle Shoals, and on this right of way the Government line was built. It was expected when the contract was made that the margin of profit made by the sale of power to the Government from this line would yield a reasonable return on this investment. The cancellation of the Government's contract for power has made this a nonproducing investment.

In addition to that:

"Since the construction of the nitrate plants at Sheffield was begun the President has also authorized the development of the Muscle Shoals water power by the Government. The Alabama Power Co. owned the dam site and much of the riparian property for this development, in connection with which it had expended some $500,000; but desiring, as it did, to further the plans of the Government in the development of its war program, it was decided to donate that property to the Government for that purpose, for which the thanks of the Federal Government have been expressed to the power company in a letter from the Secretary of War."

Mr. LENROOT. Mr. President, will the Senator yield?

Mr. UNDERWOOD. I yield.

Mr. LENROOT. The Senator proposes to print in the RECORD both the majority and minority reports upon the Alabama Power Co., does he?

Mr. UNDERWOOD. No; what I am printing in the RECORD is neither the majority nor the minority report. If the Senator caught what this telegram said, Mr. Martin in his telegram said that he had had no opportunity to appear before the Graham committee, and that he did not know of the criticism, and that he had made a statement and gave it to Mr. GARRETT, stating his viewpoint of the Graham report, and it is that which I ask to have inserted in the RECORD. If I said "report," I used the term inadvisedly.

Mr. LENROOT. I misunderstood the Senator; but I should like to ask the Senator if he would have any objection in that connection to having printed at the same time both the majority and minority reports upon the Alabama Power Co.?

Mr. UNDERWOOD. I think that would be entirely fair and very proper, because if the Senator prints them both in connection with the statement of the Alabama Power Co. itself we will have a more intelligent view of the subject; and I am satisfied from what I have heard that Mr. GRAHAM's committee were misled, in their statements in reference to the Alabama Power Co. being connected with this matter, by persons who were not sufficiently informed.

The PRESIDING OFFICER. Does either Senator ask that the majority and minority reports be printed in the RECORD?

Mr. UNDERWOOD. I supposed that the Senator from Wisconsin asked it. I have no objection to his asking it.

Mr. LENROOT. I ask that the parts I will indicate later of the minority report and the majority report be printed in the RECORD.

The PRESIDING OFFICER. Without objection, leave will be granted. The Chair hears no objection.

The matter referred to is as follows:

[Extract from pp. 50 to 54 of majority report.]

THE ALABAMA POWER CO.

About the time it was decided to build nitrate plant No. 2 at Muscle Shoals Mr. Frank S. Washburn, who was at that time a stockholder in the Alabama Power Co., got in conference with James Mitchell, who was president of that company, and from their office at 120 Broadway, New York City, the Alabama Power Co. communicated with Col. J. W. Joyes, of the Ordnance Department, proposing to build extensive additions to their plant on the Warrior River in Alabama, and furnish electric power to the Government at Muscle Shoals. In their letter of November 6, 1917, to Col. Joyes, the company proposed to supply 30,000 kilowatts after such station had been built, if the Government would loan them $2,250,000, this power to be furnished at 7 mills per kilowatt hour, 3 mills of this to be set aside until the Government was reimbursed for the sums advanced. (2708.) There is no doubt that this proposition originated with Frank S. Washburn, and that he saw the possibility of building up the Alabama Power Co. at the same time the Muscle Shoals plant was being built.

The proposition of the Alabama Power Co. was not accepted by Col. Joyes, but on December 1, 1917, a written contract was made with that company by which the United States authorized the Alabama Power Co. to build at its Warrior River station certain considerable extensions of the building, to acquire the right of way and build transmission lines to the nitrate plant at Muscle Shoals, and to do such other work as was necessary in electrifying certain mines and other facilities, and to generally act as the agent of the United States in all of these matters, for which the United States agreed to pay all cost of every kind and nature made by its agent, the Alabama Power Co., and in addition to pay $60,000 for the use of the agent's lands and a fee of not to exceed $225,000 to the agent for doing this work, and for the power the company was to receive 6½ mills per kilowatt hour, with a minimum monthly charge of $30,000, the United States to retain 2 mills per kilowatt hour until the cost of the Warrior station and Warrior substation should be paid. It will be observed that this contract is much less favorable to the Government than the proposition made to Col. Joyes by the Alabama Power Co. on November 5, 1917. No reason is given for this by Col. Joyes except that he thought the Government had no authority to loan money. (2707.)

Acting under the authority contained in this contract, the Alabama Power Co. built an extensive addition to their plant on the Warrior River. They also bought or acquired right of way for power transmission line for approximately 90 miles from the Warrior River to

nitrate plant No. 2, the title to which is in the Alabama Power Co., and which the United States has no right to acquire by virtue of its written contract. (2787.) On this right of way was built a transmission line, the only connection between United States nitrate plant No. 2 and the installation made at the Warrior River plant. This line is of flimsy construction, on wooden poles, and would not pay for the expense of taking it down and removing it. (3368.)

At the Warrior River station the Alabama Power Co. had had a brick building about 100 by 100 feet, with indifferent machinery. The Alabama Power Co., under its aforesaid contract, built an addition thereto 100 by 100 feet and of the most modern construction, installed the most modern machinery, boilers, and appliances, and a 30,000-kilowatt turbogenerator of the most modern and complete construction. This turbogenerator is placed on permanent foundations in the building heretofore described, and the whole is located on land owned by the Alabama Power Co., and with no right in the Government to acquire the same.

The Warrior River station is located at a place called Gorgas, about 100 miles from Muscle Shoals, and a place excessively hard to reach. During construction most of the supplies came by the Warrior River by steamboat from Benoit, 18 miles away. The nearest railroad station is Parish, Ala., about 9 miles from Gorgas. During the construction period the expense and hardships of transporting material to Gorgas were immense.

The construction work began at Gorgas on March 13, 1918. The Alabama Power Co. owned at the time a small steamboat named *Blanche* and some coal barges. The Government bought these from the Alabama Power Co. at an expense of approximately $10,000 at about the time they began construction work and used them in transporting supplies, selling the *Blanche* and the barges afterwards for about $6,500. The Alabama Power Co. did not need them when the Government bought them.

Nine miles away from the plant was a station of the Southern Railroad at Parish, Ala. From Parish for 6 miles in the direction of the plant, the Southern Railroad Co. was operating a railroad to serve certain coal mines along that line. From the end of this 6-mile spur for 1½ miles a road had been built theretofore by the Southern, but was abandoned and out of repair, and for the last 1½ miles there was no railroad at all. Although the Government was transporting supplies from Benoit by river, 18 miles, and hauling them by truck from Birmingham, 40 miles away, over the worst of roads, this 1½ miles of railroad was not built until after the signing of the armistice, and after all the heavy work of construction and transportation had been finished. Then it was taken up and pushed to completion by the Ordnance Department. The Alabama Power Co., when it was evident the war was to end, perceived that it would be advisable for the company to build this extension that it might get coal easier and more cheaply, and the road was then built. (3521.) No explanation is given for this proceeding, and so far as can be observed, there could be none. Obviously this road should have been the first thing built.

When the armistice was signed on November 11, 1918, the Government had finished this addition to the Alabama Power Co. building and most of the machinery and equipment were at the plant but not installed. Irrespective of the armistice, the work was pushed rapidly and the entire installation was made and work stopped on April 15, 1919, before any stop order was made by the Ordnance Department. After this and up to the present time a force has been retained by the Government at that place, and very large sums have been expended for operation and to get this plant in complete working order. (3511.)

The 30,000-kilowatt turbogenerator furnished by the Government at an expense approximately of $2,000,000 was not tested until December 29, 1919. Since that time presumably it has been operated to assist the Alabama Power Co. in serving its patrons, and it is admitted by the Ordnance Department that in November and December, 1919, power was used from it continuously for commercial purposes.

Not content with the rejuvenation of its power plant, the Alabama Power Co. built for the Government at its plant an industrial village. Twelve permanent houses were built, and 20 semipermanent operative houses, and a number of houses for colored people. A hospital was erected of 20 beds, and also an ice factory; a pool room and entertainment place, and a moving-picture show. The permanent houses were of the best construction, and cost $5,000 apiece. All of these buildings were built on lands owned by the Alabama Power Co., and the Government has not even the right to acquire title to this land. From five to seven hundred men were employed during the work, and none of them lived in these houses. The houses were not completed until after the armistice, and instead of stopping construction on them with the armistice, the Government, with its agents, rapidly proceeded and completed them so that they are at this time occupied by employees and officers of the Alabama Power Co. stationed at the plant. (3515.) The five to seven hundred workmen employed lived in tents during construction. Nobody ever contended or represented that these houses were being built for any other purpose except for the Alabama Power Co.

The Alabama Power Co., when the war began, had a small system and were comparatively poorly equipped. To-day they have one of the most modern power stations in the world at the Warrior River, with coal mines electrified and a railroad connecting them with the Southern Railroad Co., many transmission lines, and with a practical monopoly of electric power in the northern and western part of the State of Alabama, and this at Government expense.

By a temporary line the Alabama Power Co. furnished the Government power at the Muscle Shoals plant after July, 1918, from its other stations, but no power was received from the Warrior River plant where the Government had its installation until shortly before the armistice (in October, 1918). (3149.) All the electric power which the Government has used in its construction work at the Muscle Shoals plant has been furnished by the Alabama Power Co.

Since the armistice a settlement has been arranged between the Alabama Power Co. and the Ordnance Department. As one of the conditions of this settlement, the Alabama Power Co. figured up what things the Government had not done to comply with its contract and were paid by the War Department $17,500 to supply these deficiencies. (3511.)

In inventorying the property at the plant that was purchased for construction and operation in this settlement, property costing $59,000 was rejected by the Alabama Power Co. and turned back to the Government for that amount, and for which the Alabama Power Co. received credit. This material, according to the ordnance representatives, is worth probably $6,000. (3367.) While the Alabama Power Co. were permitted to turn back such material as was worn out or unsalable in this way, they were likewise permitted to take anything at its cost price that was desired by the company for its own commercial uses.

No apparent account has been kept of the supplies that have gone to the Alabama Power Co., and so gross was the inefficiency of some of the property officers and disbursing officers stationed at the Warrior River plant and representing the Ordnance Department that Maj. Frederick Stanger, of the Quartermaster Corps, in reporting to the Inspector General of the Army on March 18, 1919, recommended that Capt. O. S. Webb, of the Ordnance Department, property officer, and First Lieut. Carl W. Culman, of the Ordnance Department, disbursing officer, should be discharged. As was usual in such cases, this recommendation was not concurred in as to Capt. Webb, but he still remained as property officer of the plant. (3523.)

In the proposal of November 6, 1917, of the Alabama Power Co., it was stated:

"We estimate that the necessary addition to your Warrior River steam plant and the transmission line and substation necessary for delivering power at Muscle Shoals will cost approximately $2,250,000."

There was no additional request for allotments by the company, but on August 19, 1918, Col. Joyes wrote the Alabama Power Co. calling their attention to the fact that up to that time the Government had been committed by the company to an expenditure of over $4,000,000. (3530.) Irrespective of this condition of affairs, the Alabama Power Co. was permitted to proceed by Col. Joyes, and before it completed had expended approximately $5,167,277.14. (2781.) It is probable that aside from the turbogenerator at the Warrior River station, which might be removed at an immense expense, there is not a cent of the expenditure made by the Government for the Alabama Power Co. that can be salvaged.

In addition to the provisions for power made with the Alabama Power Co., the Ordnance Department planned a steam plant of its own to develop 60,000 kilowatts of electrical energy, to be built in connection with United States nitrate plant No. 2. This was started some time during the year 1918, but at the time of the armistice, and after a great deal of money had been expended, it was only well started. Practically all of the construction of the steam plant at Muscle Shoals was done after the signing of the armistice. The steam plant was tested in October, 1919, but has never been used for the production of power at the plant. (3133.) It has not been used since its test, because the operation of it is so expensive that it is more economical for the Government to buy its power from the Alabama Power Co., a method which is now being followed while the steam plant is standing idle.

[Extract from p. 92 of minority report.]

40. The contract with the Alabama Power Co. whereby there was constructed additions to its plant and a transmission line over lands to which it owned the right of way so as to supply 30,000 kilowatts of power to nitrate plant No. 2 is not, upon the evidence before this committee in its entirety, a satisfactory one. It has features that upon the record as it stands justify criticism. So far as our record goes the Alabama Power Co. does not stand in a favorable light therein. It is largely owned by English capital, and the common stock of it, which controls it, is owned by Alabama Traction Light & Power Co. (Ltd.), which is a corporation of the Dominion of Canada. We do not mean to imply from the record as we have it that this company has been guilty of criminal conduct, but the conclusion can not be escaped in the light of testimony we have that at some stages of the proceeding the company appeared to have imposed upon the Government's necessities and unduly forced increases in certain of its facilities. The contract with this company and various things done in its execution were not satisfactory to the contracting officer in all their phases. It was simply a case where he did the best he could. It was entered into under the spur of extreme necessity for power to operate the plant.

The pressure was insistent, growing out of public necessity for getting the plant into operation, to begin producing explosive material for the expected 1919 military campaign. The steam-power plant could not be gotten ready in time to coincide with the manufacturing part of the enterprise, nor could the dam at Muscle Shoals. We think the authorities were justified in turning to the Alabama Power Co. and making the best terms possible, which we believe they did, and we do not concur in any respect in the majority's criticism of Col. Joyce, the contracting officer. At the time the first proposition of this company was submitted to Col. Joyce, suggesting a Government loan to it of $2,250,000, there was no authority of law to make loans to private industry. We do not believe that the statement is correct, that the same results "could have been attained by a Government loan of half the amount."

Just how the same structures could have been built with half the money which was spent directly by the Government, if that half had been loaned instead, passes our comprehension. However this may be, the fact remains that at the time this contract was negotiated there existed no authority of law to make a loan to private industry, even for Government purposes. It was long subsequent to this and after the construction work under the contract had progressed far toward completion that Congress enacted the legislation which enabled the Government to make such loans.

The Government expenditures upon it have added greatly to the facilities of the plant, but it is not correct to say that these expenditures of themselves "established it as a power monopoly in northwestern Alabama." Its powers are, we assume, derived from the laws of the State of Alabama. We have no testimony in the record as to what powers were given it by that State nor do the minority know from any other source.

Under the terms of the contract there was to be deducted from the amount of $30,000, payable each month by the Government for power, a rental for the use of the property constructed by the Government which would have amounted to about $18,000, and after the amount of the Government payments should have exceeded $30,000 per month, there was to be a deduction of 2 mills per kilowatt from the 6 mills per kilowatt agreed to be paid by the Government for all used in excess of 30,000 kilowatts, which was to go as a payment on the purchase of the Government facilities and, when the Government expenditures had been thus repaid with interest, the title to the property was to be vested in the company. Until such time, title remains in the Government.

The settlement with the company on matters growing out of the contract is one to be dealt with by the proper authorities after Congress shall have determined the future of the nitrate plant.

[Extract from pp. 120 to 122 of minority report.]

THE ALABAMA POWER CO.

As we have heretofore stated, the Alabama Power Co. does not stand in a favorable light with the minority upon the record before the committee. Further discussion might be unnecessary were it not for the fact that notwithstanding there is an agreement between the majority and the minority as to the attitude of the company itself, the majority

makes the discussion of it the occasion for criticism of Col. Joyes, whom we do not regard as being subject to criticism.

It will be remembered that the Alabama Power Co. is owned by the Alabama Traction, Light & Power Co. (Ltd.), which is a corporation of the Dominion of Canada, and that it is very largely the property of the citizens of Great Britain. For the proper view of the transactions involved it must be borne in mind that under the conditions prevailing at the time it was perfectly apparent that power for the operation of plant No. 2, in the beginning, would have to be obtained from some source other than the plant itself, and the Alabama Power Co. was the nearest and, so far as the record shows, the only available institution from which to draw it. Just here it is proper to say that several years ago Mr. Washburn withdrew from all activity in connection with this company except that he is a stock owner therein.

At the beginning of negotiations the company submitted a proposition, which involved the matter of a loan of $2,250,000, for the installation of equipment necessary to furnish this amount. Col. Joyes held, and held correctly, that he had no authority of law to make such a loan. This was long before the act of Congress authorizing loans to private industry, and so negotiations had to proceed upon a different basis. That the company could not itself furnish all the money necessary, or any considerable portion of it, is doubtless true, and it being a Government proposition with the length of time that the service would be required uncertain, made it not improper for the Government to supply the funds under fair conditions. We do not feel that these conditions have been wholly met as to fairness, but we do believe that Col. Joyes made every effort within his power to protect the Government's interest in connection with the transaction. We think it is clearly inferable from the record that this company was extremely difficult to deal with, that its demands were large, and that the Government was compelled, in order to obtain the service, to comply with them.

As for the work done subsequent to the signing of the armistice, it must be remembered that it was done in accordance with the strict letter of contracts which had been entered into before that time. The company was in position to insist upon the performance of all the work there done, and it was undoubtedly the view of those having direct charge of the matter that it was better and more economical to carry out the contract to the extent that it was carried out than to repudiate or cancel it and negotiate a settlement. There are inaccuracies in the majority report. For instance, in the third paragraph on page 52 the impression would be gained from the language there that the turbo-generator had no test until December 29, 1919. It should be stated that this was a second test or a retest. It had been tested quite awhile before, and the General Electric Co., which furnished it to the Government, withdrew it from the plant, shipped it back to its factory, did the necessary work upon it, and returned it, all at its own expense. We do not think it is quite accurate to say that when the war began the company had a small system and were comparatively poorly equipped. It was a system of considerable magnitude and had good equipment but did not have the necessary amount of facilities to furnish the Government requirements.

The settlement made with the Alabama Power Co., referred to in the majority report, is not a complete one, at least there will necessarily have to be an adjustment of the rights of the two parties when the future of nitrate plant No. 2 shall have been determined. The Government has absolute title to all buildings, transmission lines and other property placed upon the lands of the company. This was provided by the terms of the contract. These are valuable properties for the company and, through the rights which the Government has, as to use of power, there is, we trust, a sufficient leverage to bring about a settlement based upon equitable principles.

The statement in the last paragraph of the majority's discussion of this subject, that practically all of the construction of the steam plant at Muscle Shoals was done after the signing of the armistice, is not correct. The major portion of the building was completed and commitments were outstanding for the greater part of the machinery. This is a powerful plant, one of the largest in the United States, and the test of it was satisfactory in all respects.

Mr. UNDERWOOD. Mr. President, there is one great problem that stands behind this bill, and that is the question of the completion of the dam at Muscle Shoals; but I am not going to discuss that question in connection with the pending bill. Of course, if the dam is completed, and we have electrical power furnished by water instead of steam, the operation of this plant will be more efficient and can be conducted more cheaply.

But even if it is not finished, this plant is provided with steam power to the extent of 120,000 horsepower, sufficient to run this plant, sufficient for its operation, and entirely independent of the building of the dam, although if we want to get real cheap nitrogen and manufacture cheap fertilizer I think the building of the dam ultimately will be necessary; but that is not involved now. It may be involved in a few weeks in the Senate when the sundry civil bill is reported for consideration, and it will be time enough when that bill comes before the Senate to consider that question on its merits. But I do say unless we are going back to the old days, when this Government pottered, with moss growing on every endeavor, when it was impossible to pass progressive legislation in the interest of the American people, when the hands of the clock were set backward and governmental progress ceased and special interests sat enthroned in Washington—unless this Government is going back to those days, then there is no reason why an effort should not be made to determine whether this development can be practically carried on in the interests of the Nation's life and the progressive development of America; and any effort to stop this bill is an effort looking backward, not looking forward.

I think it is idle to go to the country on the idea that this bill has not been considered, when it has been before the Congress of the United States for 14 or 15 months, when it was before the Committee on Agriculture and Forestry for 6 or 7 months, when they had voluminous hearings, which it seems that some members of the committee were unable to attend, but which at least a majority of the committee attended, who considered and studied the bill. The bill was not prepared in an offhand manner. It was prepared by the very best experts of the War Department.

Mr. WADSWORTH. Mr. President, will the Senator mention those experts?

Mr. UNDERWOOD. They are named.

Mr. WADSWORTH. Does the Senator believe that Mr. Glasgow is an expert?

Mr. UNDERWOOD. Yes; I think he was, on this bill.

Mr. WADSWORTH. Expert in what?

Mr. UNDERWOOD. He was an expert in the information he gathered.

Mr. WADSWORTH. Had he ever been in the nitrate business?

Mr. UNDERWOOD. No.

Mr. WADSWORTH. Which one of them has?

Mr. UNDERWOOD. I think Mr. Burns has been in the nitrate business, in the operation of this plant.

Mr. WADSWORTH. No; Mr. Burns has not been in the nitrate business.

Mr. UNDERWOOD. I am glad the Senator asked me the question. It has been indicated here that we should not vote for this bill because Mr. Glasgow resides at present in England.

Mr. WADSWORTH. I have not made any such argument.

Mr. UNDERWOOD. No; but that has been stated here on the floor. Mr. Glasgow belongs to a very old family down in Virginia, and he lived there a great many years. He is a man of ability and education, and when it became necessary to determine what should be done with this plant, the President selected him and appointed him to investigate and report. There is nobody who has a higher regard for the ability and integrity of the Senator from New York than I have, and I know Mr. Glasgow, and I am willing to say that I regard them on the same basis. I say that if the President of the United States had appointed the Senator from New York, although he has never been in the nitrate business, with this high commission, with authority to call the experts, and go to Europe to investigate the matter, and determine it from a business standpoint, he would make a report that his brother Senators would have a right to take with confidence; and I say that Mr. Glasgow is a man of the same character.

Mr. Glasgow was appointed to investigate what should be done with this plant when the war was over. He called in experts, he examined the details, he went to Europe and investigated the nitrate plants of Europe, and the way they were handled, and then came back and made this report. I recall that in the testimony there is mentioned the name of a Mr. Scott, an English engineer, who is an expert in the manufacture of nitrogen, and who indorsed this bill.

Every governmental agent who had an opportunity to investigate this matter has recommended that during the time we do not need to operate this plant to make powder we operate it to make nitrogen to sell primarily for fertilizer, in order that the plant will not become obsolescent. I know there is an onward growth. I do not contend that the last word is said in the manufacture of nitrogen, and I know that if we operate this plant it must build on and on and on to keep pace with the time, the development of the world; and that is what it will do if you appoint a board of men to properly operate it. But if you do not, you will oil and paint your machinery, you will have no party of expert men to operate it, and you can not call men to operate a delicate, scientific piece of machinery overnight. If you have no organized force at the time of the outbreak of war to handle this plant, if you propose to lock it up and paint it and grease it, when the summons comes again you will not be prepared, even if you have the plant. But if you operate it and sell its product for a useful purpose, when the summons comes to war again, if it ever comes, you will have a trained class of experts in charge of this plant, and it will only be necessary to shift the plant from fertilizer to powder, and in 24 hours you will be operating as a matter of national defense.

More than that, as time slips by and new improvements become developed, as they will probably become developed, the plant can be kept up to date by this Government corporation you are organizing. I assume these directors will be men of intelligence and men of patriotic desire, and that if new developments come they will put them in the plant, they will keep it up to date, and we will have a live, growing concern.

There is nothing unusual about this plant. I am not referring to the cost of it. It cost more to build it in war than it would cost now, but that is not an issue here. The academic students of history may debate that question if they want to. We have a great nitrogen plant. Its value to-day is many millions. The question is, Shall we operate it in the interests of the Government and the American people? The simplest way to

operate it is to organize a corporation and appoint a board of directors, instead of having it dragged about with the red tape of a bureaucracy in the city of Washington.

Mr. WADSWORTH. Is the Senator familiar with Mr. Glasgow's suggestion about the appointment of the board of directors?

Mr. UNDERWOOD. I read his report, but I have not read it for many months, and I do not recall now.

Mr. WADSWORTH. Will the Senator permit me to read one paragraph from a letter addressed by Mr. Glasgow to the Secretary of War?

Mr. UNDERWOOD. Certainly.

Mr. WADSWORTH. In discussing the corporation, Mr. Glasgow said:

> The Secretary of War would be chairman of the board; Mr. Roberts and Col. Burns might be president and vice president, respectively, as well as directors; the Chief of Ordnance might be another director; I should be willing to serve, if you wish, as director (in Europe).

And not one of those men has ever manufactured nitrates.

Mr. UNDERWOOD. My good friend from New York is not a lawyer, and therefore I think we must excuse him for indulging in that class of argument, because if he had been in the habit of reasoning along legal lines I am sure he would not have made such a suggestion. Mr. Glasgow, before this proposal comes in, before the bill is introduced, before Congress considers it, writes a friendly letter to somebody, suggesting who might be included in the personnel of the corporation if it is ever organized.

Mr. WADSWORTH. He writes to the Secretary of War, who is to appoint the directors.

Mr. UNDERWOOD. Certainly; but it was not organized; it was not accomplished. He was writing to his friend, the Secretary of War, suggesting where they might find the personnel for the organization of this corporation, and the Senator from New York, in his opposition to this bill, wants it driven back to the committee and throttled because, forsooth, a gentleman who is not in the country to-day writes a letter to the distinguished Secretary of War, who is going to retire from office on the 4th of March, and will have nothing to do with these directors. It is really a very pertinent reason why the bill should be passed, as the present administration is about to pass out of office and the administration of the Senator's party is coming in and will be charged with the responsibility of organizing this corporation and appointing the board of directors. So the fact that Mr. Glasgow has suggested that perhaps Mr. Burns or the Secretary himself might be efficient officers and directors it seems to me is not a really legitimate excuse why the Senate should send this bill back to the committee.

Mr. HARRISON. If the Senator will pardon me, the papers have lately stated that the President elect is considering the appointment of the Senator from New York [Mr. WADSWORTH] as Secretary of War.

Mr. UNDERWOOD. I indorse the suggestion, although I am not willing to stand for the legal arguments of the Senator from New York; but when it comes down to his high personal character and business attainments I am willing to back him to the limit. But I want to call the attention of the Senator from New York to the fact that no matter what may appear extraneous of the record or in the record, the issue before the Senate is not what somebody says, it is what is in this bill, and that is expressed in five lines—

> That the Secretary of War is hereby authorized and empowered to designate any five persons to act as an organization committee for the purpose of organizing a corporation under the authority of and for the purposes enumerated in this act.

Then it goes on and gives the powers. The Senator desires to make that read "the President" instead of "the Secretary of War." I have no objection to the amendment if he wants to make it the President. I do not care whether it is the Secretary of War or the President. That is immaterial to me.

Mr. WADSWORTH. Will the Senator suffer an interruption there?

Mr. UNDERWOOD. Yes.

Mr. WADSWORTH. I unfortunately was out of the Chamber when the Senator was discussing some of the amendments which have thus far been introduced. Did the Senator discuss the capitalization amendment which I offered?

Mr. UNDERWOOD. Yes; I discussed it. I am frank to say to the Senator that I said that, as to that amendment, the Senate itself can pass upon it. As far as I am concerned, I do not care to overcapitalize this plant. Of course, I would like to see the fertilizer, the product of the plant, go to the consumers of fertilizer at as low a price as possible. The Senator's amendment seeks to put certain burdens on the plant that I see no value in, except that they will make it more difficult for this corporation to compete with private endeavor, and I am not in favor of that limitation. But it is a question the Senate can determine. There is no difficulty about determining it.

Mr. WADSWORTH. I was going on to ask the Senator whether he commented on my amended amendment to that provision or on the first one?

Mr. UNDERWOOD. I do not think I have seen the Senator's amendment to his amendment.

Mr. WADSWORTH. May I call the Senator's attention to this language, which I added to the first amendment, providing as follows:

> If at the end of any fiscal year the corporation shall not have earned sums sufficient to meet the interest on said bonds as evidenced by audit of the accounts of said corporation by the Secretary of the Treasury, the corporation shall forthwith cease operations and shall not resume until authorized to do so by the Congress.

Mr. UNDERWOOD. If a majority of the Senate want to put that in the bill, well and good. It is better to have that in than not have the bill pass. It is better to have that in and to have this plant operated even with the limitation than without it. But, as far as I am concerned, I would not put the limitation on the operation of the great continental lines of America, something to stop their running and carrying the passengers and freight of this country to the ultimate destination by an arbitrary law, if they are operating for the Government. Nor would I put an arbitrary proposition in this bill to stop the operation of this plant under a particular condition. It is in the power of the Government.

The Senator's party is going to be in power for four years, at least in the Executive branch of it, and I am going to assume that that party is going to give an intelligent administration of public affairs. Whether it be the President or the Secretary of War, they are going to have the absolute power and control of the board of directors, can turn them out of office when they see fit, and through them turn the officers of this corporation out. To put an amendment on the bill that by law they can not change will absolutely stop the functioning of this plant if certain things do not happen. Any time they do happen I think it would be a foolish thing to do, if the Senator will allow me to say so. I think that the Senator's administration will put in men who will be intelligent men.

I know there is hardly a private corporation in America that has not had times when it failed to show a profit, when it failed to be successful, at least on the face of the paper, and yet afterwards it went back and made up its losses, and turned them into a great success. So it is with this plant. There may be hours and days and months when it may work without a profit, and yet if that time comes the Senator, by the limitations of his amendment, would stop it by law instead of leaving it in the discretion of the board of directors appointed by his party. The Senator has not as much confidence in the intelligence of the appointing powers to be as I have. I believe they will endeavor to give an intelligent operation of the corporation.

Now, Mr. President, I have consumed more time of the Senate than I intended. I thank Senators for the attention they have given me, and I hope that we may have a vote on the motion of the Senator from Wisconsin on the question to recommit. If we are going to recommit the bill let us find it out. Each Senator can take his own responsibility in the matter, and let us go to something else. If we are not going to recommit it and a majority of the Senate desires its consideration, then let us proceed to the consideration of amendments and clear this out of the way for the consideration of other pressing business that must be determined upon before the 4th of March.

Mr. HARRIS. Mr. President, during the late war we were dependent upon Chile for nitrate with which to prosecute the war. It is a well-known fact that Germany threatened Chile and told her not to let our Government have nitrate. If Germany's navy could have reached the coast of Chile she could have kept Chile from letting us have nitrate, she could have delayed our preparations for war, and it would probably have meant the death of many splendid young American boys.

I hope we shall never have another war. I do not think we shall have war with Japan, but I believe the chances are that we are more likely to have war with Japan than with any other country. I spent several weeks in Japan this summer and I do not believe the people of Japan want war with us. We are their best customer and they are among our best customers. I know the people of the United States wish to continue our friendly relations with Japan which have lasted many years. But suppose Japan declared war on the United States, what would she do the first thing in the event we did not have this nitrate plant? The very hour she declared war with the United States she would have her gunboats at Chile to stop nitrate coming into this country, and this delay in preparation might

mean the death of thousands of American boys. Every leading nation except the United States is prepared to get nitrate.

A number of our friends on the other side of the Chamber have often said in criticism of the lack of preparation on the part of the United States that the way to prevent war was to prepare for it. Here is the preparation we on this side of the Chamber are offering the country, and what do we find from a majority of those on the other side? Instead of cooperation they are opposing this measure. The fertilizer and powder trusts and other selfish interests are here lobbying against this measure because it makes our Government independent of them and will furnish fertilizers to farmers at such reduced prices that they could raise foodstuffs cheaper and reduce the cost of living.

I would like to answer the objections of the Senator from New York [Mr. WADSWORTH], for whom I have the highest regard, as to the expense of manufacturing fertilizers. He said that the great expense would be prohibitive, or words to that effect.

The manufacturers of fertilizers sell in carload lots. One billing clerk alone could attend to all the shipping of the nitrate plant output. The farmers and all the people of our country would be benefited. In most of the States there is great increase in the use of fertilizers by the farmers; in some States the increase is over 200 per cent, and it is increasing all over the country. In my State—Georgia—the farmers spend nearly fifty millions annually, and the construction of this plant would mean a saving of several million dollars a year to them.

On January 4 I sent to the Secretary's desk a proposed amendment to the bill. The chairman of the Committee on Agriculture informed me that it met with his approval. Four days later the Senator from South Carolina [Mr. SMITH] offered an amendment which was similar. I ask unanimous consent to offer mine as a substitute for the amendment of the Senator from South Carolina in connection with the proposed recommittal of the bill, and I ask that it be read.

The VICE PRESIDENT. Is there objection? The Chair hears none, and the Secretary will read.

The ASSISTANT SECRETARY. As a substitute for the amendment offered by the Senator from South Carolina [Mr. SMITH] the Senator from Georgia [Mr. HARRIS] proposes to insert, on page 5, line 19, after the word "others," the following:

preference being given to farmers, and all such products sold to producers of fertilizers shall be with the agreement that they shall resell to farmers at reasonable prices.

Mr. WALSH of Massachusetts. Mr. President, during the able speech of the Senator from Alabama [Mr. UNDERWOOD] some questions were raised as to the attitude of the Secretary of Agriculture toward the bill. Since that time some one has called my attention to the report of the Secretary of Agriculture, made public December 11, 1920. What he has to say upon the subject I think is interesting and ought to go in the RECORD. It is very short and I will read it:

"NITROGEN AND POTASH.

"The European war emphasized the fact that no effort should be spared to establish national independence in the production of fertilizer materials. This is especially true in the case of nitrogen, which is not only a valuable fertilizer ingredient but an essential element in the manufacture of munitions. Of all the nations involved in the war, Germany alone had a sufficient nitrate supply within her borders, but England, France, and Italy are now rapidly perfecting plans to make themselves equally secure in this respect. Increased interest has been manifested in this country also in the study of methods for fixing atmospheric nitrogen, and the Department of Agriculture, through the Bureau of Soils, has actively cooperated with the War Department in this important field. The production of ammonium sulphate from by-product coke ovens and gas plants has greatly increased, but not sufficiently to meet the demand for fixed nitrogen.

"The nitrogen fixation plant at Muscle Shoals, Ala., completed shortly before the armistice, offers a hope for an independent source of nitrogen for fertilizer use in time of peace. This plant is prepared to make calcium cyanide, or, by some additions, to manufacture ammonium sulphate. With modifications, also, it may be equipped for the preparation of highly concentrated fertilizer materials which will be free from filler, and therefore result in a considerable saving to the consumer in freight charges. The plant is still idle, awaiting the necessary authority from the Congress for its operation. It is hoped that the matter will receive consideration at the next session of the Congress and that the requisite authorization will be granted without further delay, in order that the Nation may escape, once for all, from dependence upon foreign nitrate fields, and that an adequate supply of nitrogen may be developed both as a protection in times of national stress and to meet the growing demand for this valuable product for fertilizer purposes."

Mr. KING. Will the Senator permit a suggestion in connection with what he has read?

Mr. WALSH of Massachusetts. Certainly.

Mr. KING. The plant, I understand, has been completed for the purpose of manufacturing nitrogen for explosive purposes. Nothing further is required. It has cost substantially $80,000,000. My understanding is that the plant is of a very high character and that in addition to the plant for the manufacture of nitrogen for explosives, or in connection with it, there is a very valuable and up-to-date steam plant, which has been completed; so there is nothing whatever to prevent the manufacture of nitrogen now for explosive purposes. Whatever the Government needs, if it needs any, may be manufactured now by the plant, which has been completed at such enormous expense.

I venture further to trespass upon the Senator's time by suggesting that the plan now is to proceed to construct enormous dams, one or more, in the Tennessee River at Muscle Shoals, the cost of which will be in the aggregate at least $50,000,000, and, in addition to that, to expend further sums upon the plant to manufacture sulphate of ammonia and perhaps other products. I do not know just what they will be. So the entire expense in the aggregate would possibly be in the neighborhood of $150,000,000, nearly one-half the cost of the great Isthmian Canal.

If the Senator is interested in the manufacture of nitrogen for explosive purposes, the Government at tremendous expense has built the plant for that purpose. Now the question is, Shall we go ahead and spend fifty or more million dollars to manufacture sulphate of ammonia, which may be used for fertilizer purposes? Shall we invade the province of private activity? Shall we project the Government into the manufacturing business when everybody knows that if the Government engages in the business the cost will be enormous? We have had so many evidences of the incapacity of the Government to conduct private business that I confess I shrink from projecting the Government into further business activities.

Mr. WALSH of Massachusetts. I am very glad to have the Senator's views. He will understand, of course, that I was not making an argument on the subject. The question arose as to the attitude of the Secretary of Agriculture on the question; my attention was called to his report; and I thought it was a contribution which ought to be made to the discussion.

Mr. LENROOT. Mr. President, I shall occupy only a few moments in reply to the Senator from Alabama [Mr. UNDERWOOD]. As I stated Saturday, the principal reason upon my part for the motion to recommit is that we have the sundry civil bill here from the House, and the House has refused to make appropriation for further construction of the Muscle Shoals Dam. The testimony is overwhelming that the plant can not be profitably operated except with water power, so it resolves itself into a plain business proposition, shall we go ahead with $12,500,000 of Government money in a proposition that can not possibly be successfully operated unless the Muscle Shoals Dam is completed? That is the question.

There are some figures in Mr. Glasgow's letter showing that the plant might operate even with steam power at a profit; but in that letter Mr. Glasgow says:

It must be borne in mind that the estimates of cost for the first two periods, ending when water power becomes available (say, December, 1922), are based upon the continuous operation of eight carbide furnaces, or 80 per cent of the ultimate capacity of the plant. It is obvious that a new industry of these huge dimensions will not thus spring into being; the creation of this unique manufacturing organization, and the marketing of this great output must be matters of careful and gradual growth. In fact, this growth will doubtless continue until the water power becomes available before reaching the full 80 per cent capacity of the present steam-power plant. For this reason the figures for steam-power costs in the first and second periods are academic rather than practical; they are useful as illustrating the great advantages attaching to cheap water power rather than as a measure of profit and loss during the initiation of the business.

That is Mr. Glasgow's opinion.

Mr. President, would any business man—and we are trustees for the people of the United States—think of going ahead with this project on a steam-power basis? There can be but one answer, and that is no. If this bill is recommitted to the committee, if the Senate shall conclude to go on with the Muscle Shoals Dam project and the other House recedes from its position, then I will cooperate with the Senator from Alabama and the chairman of the committee in perfecting the bill, because, in that event, I think it ought to pass.

The Senator from Alabama has referred to special interests represented in the lobbies here in regard to this bill. He stated that he did not wish to cast any reflection upon any Senator who was opposing the bill, and I am sure he did not; nor do I wish to cast any reflection upon the Senator from Alabama in what I am about to say.

Mr. UNDERWOOD. I was interrupted and did not hear the Senator's statement.

Mr. LENROOT. I stated that the Senator said he did not wish to cast any reflection upon Senators who are opposing the bill, because of the fact of special interests opposing it.

Mr. UNDERWOOD. Certainly not; and I do not cast any reflections on the special interests, except that I stated they were here.

Mr. LENROOT. And I do not wish to cast any reflections upon the Senator from Alabama; but in the 10 or 12 years in which the Muscle Shoals project has been before Congress in one form or another, this is the first time that any special interests happen to be upon the same side that I appear upon to-day. In the past they all have been upon the same side as the Senator from Alabama in urging legislation for the improvement of Muscle Shoals. That is no reflection upon him; he has been sincere; and I am sure that he would not wish any reflection to be cast upon any Members on the other side.

So far as the special interests are concerned, I have not met the representatives of a single one of them; I do not know a single one of them; and my position upon the bill to-day is the same as it has been in the past. I may also say the position of the Senator from Alabama upon the bill is the same as it has been in the past. I think his one desire—and I do not criticize him for it—has been to secure the development of the Muscle Shoals water power. If private interests were ready to undertake that development, if the fertilizer trust was ready to undertake it, the Senator from Alabama was willing they should do so. Now, the Senator criticizes the same people for opposing the proposition. Their motive has been readily explained, I think, in the telegram which the Senator from Alabama introduced this afternoon, in which the Alabama Power Co. states that Mr. Washburn and Mr. Worthington are no longer connected with the Alabama Power Co.

Now, as to the statement of the Senator from Alabama that there is nothing in the bill that requires any further consideration at the hands of the committee. He went over the amendments proposed by the Senator from New York. I have not offered the amendments which I shall offer to perfect the bill if my motion to recommit is lost, but I did the other day call attention to the fact that there is not a line in the bill protecting the farmer in securing fertilizer from the operation of Muscle Shoals plant. There is not a syllable in the bill that requires the operation of the plant by the corporation proposed to be created. Under the terms of the bill they may make a contract with any of the fertilizer companies to operate the plant that has cost the Government so much money for a hundred years if they choose, with no power on the part of the corporation or the Government to regulate the price which the farmer must pay for the fertilizer that may be produced.

There is a provision in the bill that the President may delegate to the corporation the powers delegated to him by section 124 of the national defense act. Why was that put in the bill? He could have done so if that section were out of the bill. He is empowered to designate any agency that he sees fit. The Senator from Alabama must admit that there is only one purpose that the War Department had in putting that provision into the bill, and that was to get rid of the restrictions placed in section 124 of the national defense act for the benefit of the farmers of America. There can not be any other purpose behind it. That restriction was that the plant when completed should not be operated in cooperation with private capital, but should be operated by the Government itself. That is the restriction of which the War Department desires to get rid of. Why should this be done if this is a bill in the interest of the farmer? At the proper time one of the amendments which I shall propose will be to strike that provision out of the bill.

Mr. UNDERWOOD. Let me ask the Senator a question. The powers of the corporation are embraced within the four corners of the bill. Does the Senator from Wisconsin, as a lawyer, say that when we give the board of directors the power to operate the corporation as a Government corporation they can enter into partnership with any private corporation in its operation?

Mr. LENROOT. They can. The power is expressly given in two instances in the bill. One of them is found in subdivision (f), which provides:

(f) To enter into such agreements and reciprocal relations with others as may be deemed necessary or desirable to facilitate the production and sale of nitrogen products on the most scientific and economical basis.

Under that language the directors of the corporation could say, "The American Cyanamid Co. can run this plant more economically and better than we can, and we will let a contract to the cyanamid company to run it." Later on in subdivision (m) we find this language:

(m) To lease or purchase such buildings or properties as may be deemed necessary or advisable for the administration of the affairs of the corporation or for carrying out the purposes of this act; and with the approval of the Secretary of War to lease to other persons, firms, or corporations any of its properties not used or needed by the corporation, or to enter into agreements with others for the operation of such properties.

Mr. UNDERWOOD. I will say to the Senator, if he will allow me, that I do not think there is a necessity for our sending the bill back to committee for any such reasons, because I am sure that I agree with what the Senator says about the desire to have the plant operated for fertilizer when it is not needed for war purposes. If there are any amendments which are necessary to protect that purpose, I am sure that the Senator would not only command my vote but probably he would command the vote of all of those who favor this proposed legislation. So I can not see any reason, if it is a mere question of that kind, to be on the safe side, for recommitting the bill. We can adopt such an amendment as that within a very few minutes.

Mr. LENROOT. The Senator from Alabama knows as well as I do how difficult it is to get individual amendments adopted on the floor of the Senate, with a few Senators listening to the discussion, as there have been very few throughout this entire debate. Senators come in on a roll call and vote with the committee. The Senator from Alabama knows that quite as well as I do.

Mr. UNDERWOOD. I do not think there would be very great difficulty in adopting the particular amendment to which the Senator has reference, if that is all there is involved; but if the Senator failed to secure his amendment, failed to protect what he thinks is the prime interest of the bill, as to which I agree with him, then there would be a reason for sending the bill back to the committee. I think, however, there is no reason for sending the bill to the committee in advance, fearing that it will not be properly protected along those lines.

Mr. LENROOT. In this bill, from beginning to end, apparently, there has been a deliberate intention on the part of somebody to get away from the restrictions of section 124 of the national defense act, which were placed in that act on the initiative of the Senator from South Carolina for the protection of the farmers of the United States. At every page of this bill there will be found provisions for that purpose, among them being a specific repeal of the restrictions provided in the national defense act secured through the efforts of the Senator from South Carolina.

Now, what happened, Mr. President? I have read the hearings from beginning to end, and there was not at any point in the hearings any discussion or consideration of the details of the bill. There was a discussion of the principles of it; it was assumed that the corporation would operate this plant; but nobody apparently took the trouble to find out whether the corporation proposed to be created by the bill would be compelled to operate it or whether it might lease the plant or make contracts with others to operate it. That it did not receive consideration at the hands of the committee I think is apparent upon the face of it, for I can not conceive of my friend the chairman of the Committee on Agriculture and Forestry [Mr. GRONNA], if he had carefully considered the provisions of the bill, giving his consent to having it reported with the provision in it that the sale of fertilizer, if manufactured by the corporation, should be to "producers and users," putting "producers" first, which means fertilizer companies. I am sure the one purpose of the chairman of the committee is to secure benefit for the farmers of the United States, and I can not conceive of his being willing to have a bill reported that put producers or the fertilizer companies before the farmer in the securing of the product of the plant.

Mr. GRONNA. Mr. President——

The VICE PRESIDENT. Does the Senator from Wisconsin yield to the Senator from North Dakota?

Mr. LENROOT. I yield.

Mr. GRONNA. I think it is only fair for me to say to the Senator that I have on two occasions at least indicated to him on this floor that several members of the committee—three of them at least—reserved the right to offer certain amendments, I was one of those who reserved that right.

Mr. LENROOT. May I ask the Senator a question?

Mr. GRONNA. In just a moment, if the Senator will permit me to proceed a little further. I have said that all of the members of the committee were not present the day the bill was reported out of the committee. I did not want to shirk any responsibility, for I was in favor of the general principles of the bill. That is true. I am in favor of limiting the time which may be extended to any leaseholder by the corporation, and as soon as I can get the floor I shall express myself in regard to

that. I am also in favor of striking out the last paragraph of subsection (m), and, if the Senator will permit me, I will read it. It is as follows:

In the operation, maintenance, and development of the plants purchased or acquired under this act the corporation shall be free from the limitations or restrictions imposed by the act of June 3, 1916, and shall be subject only to the limitations and restrictions of this act.

It is my purpose to move to strike that out. I believe there are some amendments which the Senator from Wisconsin has to offer——

Mr. LENROOT. I am not criticizing the chairman of the committee; I am simply using that to illustrate what it seems to me must appear to be the fact, that this bill was not considered in the committee and amendments proposed by the committee to perfect the bill.

Mr. GRONNA. It may be true that before the bill was reported out the members of the committee, who had indicated a desire to offer amendments, may not have had that opportunity; I do not deny that; but it was understood, as the Senator from South Carolina who reported the bill has said—and it was so understood, I think, by every member of the committee—that it would be permissible and they would have the right to offer amendments on the floor.

Mr. LENROOT. I am sure that the Senator will not approve of the practice of a committee deliberately reporting out a bill full of imperfections with merely the reservation of the right to offer amendments on the floor, without attempting to secure the adoption of the amendments in the committee.

Mr. GRONNA. I may answer the Senator in this way: We have, I am glad to say, some of the best lawyers in the Senate on the Agricultural Committee. The chairman of the committee is not a lawyer, as every Senator knows, but we have some very good lawyers on the committee. Unfortunately, however, those members were not able to be present at all times. The War Department was very anxious to have the bill reported out; many of the agricultural associations were asking that it should be reported out; and we had confidence in the membership of this body that when the bill reached the Senate every Member of the Senate, or the lawyers of the Senate, at least, would assist in offering amendments to perfect the bill.

Mr. LENROOT. Mr. President, inasmuch as the chairman has made that statement, I want to take a few moments in going over amendments that I think clearly should be made to the bill if the public is to be protected.

Mr. SMITH of South Carolina. Mr. President, I ask the Senator to allow me to make just one remark apropos of what he has said about the imperfections of the bill, and reporting it out, and that the testimony did not disclose any dwelling upon the particular features of the bill.

I am going to state, as one member of the committee, that those who appeared in behalf of the bill from the War Department came seemingly possessed of a determination to defeat the very purpose that the Senator from Wisconsin and the Senator from South Carolina desire shall not be obtained by these outside interests. A close reading of the hearings before the committee will disclose that there was the most acrimonious argument and debate between the cyanamid people and the War Department. All the testimony given by the War Department was leading up to and developing the idea of munitions and this ingredient for the farmer—so much so that they, on their own motion, had certain members of the Agricultural Department who were charged with these particular matters come before us and give expert testimony. Now, one would not simply have inferred but would have been saturated with the idea that these people were endeavoring to carry out the object and purpose of section 124. I can see, as the Senator sees, that if you remove it from the condition in which the committee was considering it, those who were the proponents of the initial draft were strenuously arguing against the private parties who were opposed to the bill. They were taking the side that we are taking, and going to the extent of this voluminous testimony to show what could be done and what was not possible to be done. The entire matter should be considered in the light of their testimony as friends to our view.

But I stand here to-day and say that my intention is to strike from this bill, if we are to amend it and pass it, any possible power to be delegated to this Government corporation that would give them the right to lease or call into copartnership with them any of these interests that we have been discussing here in the passage of this bill in the committee and in the passage of the old act of 1916, because there is but one object before us, and that is to make the Government independent of outside interests in the manufacture of its powder, in the manufacture of its ingredients for explosives, and, incidentally, to aid us in determining what is a legitimate price for the stuff that goes into the soil for the help of the farmer.

Mr. LENROOT. Mr. President, I feel very sure that the Senator from South Carolina has correctly stated the situation. When the committee found such special interests as the American Cyanamid Co., that had always been trying to get this legislation and that controlled the Alabama Power Co., fighting this legislation, very naturally the committee took it for granted that the bill must be a good bill to a very large extent. I rather think that if the committee had known that the American Cyanamid Co. no longer controlled the Alabama Power Co. they might have scanned the bill more closely than they did.

Mr. GRONNA. Mr. President——

The VICE PRESIDENT. Does the Senator from Wisconsin yield to the Senator from North Dakota?

Mr. LENROOT. I do.

Mr. GRONNA. I want to say to the Senator that Mr. Washburn was asked before the committee whether he had any interest in the Alabama Power Co., and he stated positively that he had not; so it was known to the committee that Mr. Washburn no longer had any interest in the Alabama Power Co.

Mr. LENROOT. And did the committee consider any interest that the Alabama Power Co. did have, or might have, in this legislation?

Mr. GRONNA. I can only answer for myself. As one of the members of the committee, I, of course, was very anxious, and I am now, to make the condition such that this shall be absolutely a Government plant, and that it shall not be possible for any private corporation to cooperate with the Government, but that it shall be exclusively a governmental plant; but I will say to the Senator that I am not in favor of restricting the powers of the agencies of the Government. If it is under the War Department, I believe we should give them broad powers.

Mr. LENROOT. Let me understand. Then, is the Senator from North Dakota willing to grant to the War Department the power to lease this power and give the benefit of this Government expenditure to the Alabama Power Co.?

Mr. GRONNA. No; I am not; and I want to say to the Senator that I have been trying all the afternoon to get the floor in order to suggest certain amendments, and if the Senator will pardon me for this interruption I shall try to be as brief as possible.

On page 7 of the bill, line 22, after the word "corporation," I want to add the following language:

For a term not exceeding 20 years.

That is in accordance with the first section of the bill, where it extends to this corporation a franchise to continue for 20 years.

Mr. LENROOT. Let me ask the Senator there whether he is willing that this property should be leased, we will say, to the Alabama Power Co. for a term of 20 years?

Mr. GRONNA. No.

Mr. LENROOT. Or that the water power shall be leased to the Alabama Power Co. for a term of 20 years?

Mr. GRONNA. If the Senator will let me finish, I can express my thoughts in just a very few words.

The sentence would then read in this way:

To lease or purchase such buildings or properties as may be deemed necessary or advisable for the administration of the affairs of the corporation or for carrying out the purposes of this act; and with the approval of the Secretary of War to lease to other persons, firms, or corporations any of its properties not used or needed by the corporation for a term not exceeding 20 years, or to enter into agreements with others for the operation of such properties—

And then I want to repeat—

not used or needed by the corporation.

And then strike out the remainder of the paragraph.

Mr. LENROOT. Who determines that? The corporation does, does it not?

Mr. GRONNA. I want to strike out the remainder of the paragraph.

Mr. LENROOT. But the corporation determines whether it is used or needed, does it not?

Mr. GRONNA. The corporation is the Government corporation.

Mr. LENROOT. Yes; but if the corporation says: "We do not use this property; we do not need it; we will lease it to the Alabama Power Co. for 20 years," does the Senator say he is willing to have such a provision in the law?

Mr. GRONNA. Mr. President, I have before me the act creating the agency for building the Alaska Railroad. I observe that very broad powers are given to that corporation—very broad powers—and necessarily so.

Mr. LENROOT. That is true; but does the Senator think, then—I want to see what the Senator's position is—that this corporation should be given power to lease all of this property, even for 20 years?

Mr. GRONNA. The Senator has not listened very attentively to what I have been saying.

Mr. LENROOT. Yes, I have.

Mr. GRONNA. I repeat, in the amendment which I intend to offer the corporation will have power to lease any of its property "not used or needed by the corporation" for a term not exceeding 20 years.

Mr. LENROOT. Suppose the directors say: "We do not either use or need this property, and so we are going to lease it."

Mr. GRONNA. I can hardly imagine that any honest man appointed as a Government agent would undertake to turn over to outside parties property belonging to the Government of the United States; and these men being charged with the responsibility of being a governmental agency, I can hardly imagine that they would so grossly violate the law.

Mr. LENROOT. It would not be any violation of the law at all.

Mr. GRONNA. I believe it would.

Mr. LENROOT. Oh, no. Let me give the Senator an illustration. Suppose this capital is used up in losses before you get this water power. No capital is left to run the plant. Congress does not give this corporation any more capital. The plant must lie idle. It is, therefore, not used by the corporation; and, under the language that the Senator proposes, they could lease it for 20 years.

Mr. GRONNA. Oh, no, Mr. President. That is another question altogether. This paragraph simply has reference to what this corporation could lease. It would be properties for which it had no use and which it could spare. For instance, if they are giving water power, if there was more power than was needed by the corporation, naturally they would lease some of that water power.

Mr. LENROOT. Is the Senator in favor of that?

Mr. GRONNA. I am in favor of leasing the water power if we have a surplus of water power.

Mr. LENROOT. By this corporation?

Mr. GRONNA. By the Government of the United States.

Mr. LENROOT. No; by this corporation?

Mr. GRONNA. By the Government.

Mr. LENROOT. No; by this corporation? This is not the Government.

Mr. GRONNA. I am not in favor of the company leasing it, but the Government.

Mr. LENROOT. That is what the bill provides.

Mr. GRONNA. Not after the amendments which we are to offer.

Mr. LENROOT. Yes; with the Senator's amendment the bill would provide for leasing it for a period not exceeding 20 years.

Mr. GRONNA. But the Senator must recognize that this corporation is a corporation set up exclusively by the Government, and whatever profits are made go to the Government.

Mr. LENROOT. Oh, yes; I understand that.

Mr. GRONNA. And if there are any losses, the losses are sustained by the Government.

Mr. LENROOT. And the Senator knows quite as well as I do, in view of the history of the past, that when an officer of the Ordnance Department is elected director of a corporation he does not change his nature. If he was a good man before, he is a good man afterwards. If he conserved the interests of the Government before, he would do so afterwards. If he wasted the money of the Government before, he would be very likely to waste it afterwards. But this only illustrates, Mr. President, the necessity of having this bill recommitted. The Senator's amendment, which he says he will propose in order to protect the public, would not protect the public at all. By one of the first amendments this corporation is given unlimited power to make contracts. It can make a contract with relation to this very nitrate plant for operation covering a hundred years. I am sure the chairman of the committee is not in favor of that. I am sure no member of the committee is in favor of that. One of the amendments I shall offer, if we reach that point, will provide that no such contract shall extend beyond the period of the life of the corporation.

Another amendment that is very necessary, if the farmer is to be protected, is that if this product is to be sold to fertilizer companies there shall be some control over the price that is to be charged to the consumer. The committee has not protected the farmer in any respect in that regard.

Another amendment that I shall offer is that not more than two of the directors of this corporation shall be officers in the War Department. The necessity of that must be apparent.

Mr. WADSWORTH. Mr. President, that will conflict with one of mine, which in effect says that none of them shall be officers in the War Department.

Mr. LENROOT. If the Senator's is adopted, then of course mine will not be considered. We all agree, I think, that a majority of them shall not be officers in that department.

Mr. President, at this point I am going to ask that there be printed and lie on the table amendments which I have proposed to this bill.

The VICE PRESIDENT. The amendments will be printed and lie on the table.

Mr. LENROOT. Now, Mr. President, in conclusion, there is not a Senator on this floor, if it was a matter of his own business, who would ever go ahead with this proposition if the Muscle Shoals Dam is not to be completed. As I said, if it is to be completed, we ought to go on with it and utilize this plant in this way. But there are $43,000,000 involved, $43,000,000 of new money involved, and if Congress is not going to appropriate the money, it would be the very height of folly to pour $12,500,000 into a corporation which would act like a sieve under operation by steam power.

Mr. POMERENE. When the Senator speaks of the $43,000,000, is he referring to the amount necessary for the purpose of completing the dam?

Mr. LENROOT. Completing the dam alone, and that $43,000,000 and the $12,500,000 provided for in this bill make $55,000,000 involved in this matter.

Of course, it is very apparent that what is desired is to pass this bill, and then say, "Muscle Shoals must be completed, because we have passed the nitrate bill." On the other hand, they say that we must have this nitrate plant, because we are going to complete the Muscle Shoals Dam. That has been the argument all along up to this time.

But, Mr. President, I must be permitted to repeat that this bill in its present form offers no protection to the farmer whatever. There is no provision in it which offers security to the farmer that he will receive fertilizer at a reasonable price. The eminent chairman of the committee the other day just before we adjourned stated that he was more interested in securing this plant for explosives for the Government than he was in the fertilizer part of it, although that was important. Of course, the chairman of the committee must know that this is a complete plant now for the manufacture of explosives for the Government. I would be the last Senator to advocate either the selling of this plant or the tearing of it down. It is a plant where explosives can be manufactured at once, and it ought to be kept in condition for the purpose. Of course, we now have nitrate sufficient on hand, so far as peace times are concerned, to last this Government for the next 30 years. But this plant should be kept in such condition that it can manufacture nitrates for explosive purposes if there shall ever be another emergency. It is true that the officials of the War Department state that to keep this plant in condition will cost $400,000 a year. That may be so. Whether that is too high or not I do not know. I am frank to say that we have found estimates of the War Department being rather too low than too high. But we are paying 6 per cent for money, and 6 per cent on $10,000,000, asked by the amendment of the Senator from Alabama to go on with Muscle Shoals, is $600,000 a year, so the interest is $200,000 more than the cost of keeping this plant in condition.

But however that may be, that is not before the Senate now. I simply present the plain, business proposition, that if the Senate would have any concern for the taxpayers of America it will not pass this bill now before it determines whether this dam at Muscle Shoals is to be completed so that the water power may be furnished this plant, so that it can be run without a great loss to the Government.

Mr. GRONNA. Mr. President, may I ask the Senator just one question?

Mr. LENROOT. Certainly.

Mr. GRONNA. Does the Senator understand that this provision in the bill is for the purpose of completing the dam?

Mr. LENROOT. Certainly not. But is the Senator willing to expend that $12,500,000 on this corporation unless water power is to run the plant?

Mr. GRONNA. Yes, Mr. President. This is for working capital, to keep the plant going.

Mr. LENROOT. But does the Senator think this plant can be properly operated by steam?

Mr. GRONNA. If it is not, it will not be a dangerous competitor to private business.

Mr. LENROOT. I am not concerned in that.

Mr. GRONNA. Because then the products will cost so much that private enterprise can undersell the Federal Government.

Mr. LENROOT. Certainly; but what has that to do with it?

Mr. WADSWORTH. Then why go into it until water power is available?

Mr. GRONNA. Because we have the plant completed.

Mr. LENROOT. No; it will cost $3,000,000 more to complete it for this fertilizer.

Mr. GRONNA. The plant is completed for the purpose of making cyanamid. Mr. Washburn so stated, and that is the report of the committee.

Mr. LENROOT. But it is sulphate of ammonia which they expect to sell.

Mr. GRONNA. Yes; to make the change so as to manufacture sulphate of ammonia I presume it would cost what the Senator says.

Mr. LENROOT. Three million dollars.

Mr. GRONNA. But the balance would be for working capital.

Mr. LENROOT. Yes.

Mr. GRONNA. If the Senator will refer to a statement made by what I consider very high authority, which will be found on pages 998 and 999 of the hearings upon the sundry civil appropriation bill for the fiscal year ending June 30, 1922, Part I, he will find a statement of Hugh L. Cooper, addressed to Gen. Taylor, Office of Chief of Engineers, War Department, Washington, D. C., under date of November 27, 1920. That goes into the question of whether or not we can operate by steam. Of course, knowing as little about water power as I do, I hesitate to discuss the question except from this standpoint. As a business man I know that if we take additional capital to complete the water power, interest must be figured on that additional capital. It is a question of whether it would be cheaper to operate this plant No. 2 by steam, taking the amount of money which has been expended, or add whatever is necessary. I can not say, because we have not had two men before us yet who have really agreed as to exactly what it would cost to complete the dam, because that depends largely upon conditions. It will not cost as much this year as it would have cost last year. It may not cost as much next year as it would this year.

But I think the Senator will agree with me that that is a sound argument, that if we take an additional $50,000,000, say, to complete the dam, if this corporation is to make 5 per cent upon the capital stock of the corporation we would have to figure that 5 per cent on the additional $50,000,000. So the question is, Would it be cheaper to operate this plant with steam as it is or to add the additional capital? That is the question which must be considered.

Mr. LENROOT. The Senator is aware that an effort was made to get private capital to operate this plant with steam, and the Senator is aware an offer was made to make a lease without any rental until the dividends had exceeded 9 per cent, and they could find no private capital to take this plant for nothing.

Mr. GRONNA. I stated the other day that Mr. Washburn—and I consider him an authority—testified for several days before our committee, and so did some of his staff, and they all appeared to me to be able and high-class men, and he stated that the plant could not be sold at any price just now. He agreed with the statement of Maj. Gaillard and Secretary Baker that it would cost nearly a half million dollars a year to keep the plant in repair, even if it were lying idle.

Mr. LENROOT. Four hundred thousand dollars.

Mr. GRONNA. From four hundred thousand to five hundred thousand dollars.

Mr. LENROOT. But the Senator remembers that it was stated that they could not get private capital to take this plant for nothing and make fertilizer. That is in the record, is it not?

Mr. GRONNA. I presume it is. I do not recollect just now.

Mr. LENROOT. Is not that pretty good evidence that the only way this plant can be operated successfully is by water power?

Mr. GRONNA. No. After reading this statement, to which I call attention, which I believe is very important——

Mr. LENROOT. What is the date of that letter?

Mr. GRONNA. November 27, 1920.

Mr. LENROOT. The Senator will not say there is anything about steam in that?

Mr. GRONNA. Oh, yes.

Mr. LENROOT. Not as a comparison; not on the running of this nitrate plant?

Mr. GRONNA. It is figured out by the kilowatt, of course, what it would cost per kilowatt per hour.

Mr. LENROOT. Is the Senator familiar with the fact that when they attempt to show a profit before his committee on this nitrate plant they figure on getting this power for three-quarters of a mill per kilowatt hour, when in that letter of Col. Cooper to Gen. Taylor he figures 4 mills per kilowatt hour, or nearly five times as much as was figured before the Senator's committee?

Mr. GRONNA. The gentleman making this report is speaking of primary power. He speaks of 4 mills on the primary power and 1½ on the secondary power.

Mr. LENROOT. It is the primary power that they expect to use here.

Mr. HEFLIN. Mr. President, I am very much opposed to the motion of the Senator from Wisconsin [Mr. LENROOT]. As has been said by my colleague, the senior Senator from Alabama [Mr. UNDERWOOD], there is no good reason for referring this bill back to the committee. It has been in the hands of that committee for six or seven months, and it seems to me that the Senate should now proceed to vote upon this measure, which has already been reported favorably by that same committee for the consideration of the Senate.

The Senator from Wisconsin has dragged the Alabama Power Co. into this discussion. The Senator seems to have a terrible grouch growing out of some grudge or grievance against the Alabama Power Co. The Alabama Power Co. is a great and useful industry in my State, and is entitled to fair treatment, and it is entitled to have the truth told about it regarding its interests and activities.

This power company, Mr. President, has built a power dam across the Coosa River in my State, and by so doing has saved the Government several millions of dollars by making that river navigable for several miles. The Government will sooner or later complete that navigation project and make the Coosa River navigable all the way from Rome, Ga., to Wetumpka, a town near Montgomery. This company should not be condemned unless it has done something which deserves condemnation, and I do not know of a single act of this Alabama industry that warrants the caustic criticism to which I have referred.

In this connection I wish to read a portion of a telegram which I have received from a splendid citizen of my State, the vice president of the Alabama Power Co.

The matter referred to is as follows:

[Telegram.]

BIRMINGHAM, ALA., *January 9.*

Senator J. THOMAS HEFLIN,
Washington, D. C.

Since we had no opportunity to appear before the Graham committee and had not the slightest reason to think our company would be touched on by this committee, we were surprised when we read the Graham report, which does Alabama Power Co. great injustice. If Graham committee had been interested in getting the facts in any matter with which Alabama Power Co. was connected or had been connected, this could easily have been accomplished by inviting us before the committee, which was not done. It comes with bad grace that after donating without restriction to the Federal Government the Muscle Shoals property, which cost the Alabama Power Co. approximately a half million dollars, we should now be criticized by Senator LENROOT and others in connection with Muscle Shoals affairs concerning which Alabama Power Co. has no interests other than the general interest of all other citizens of the country in this important development. Alabama Power Co. did not get one cent from the Federal Government for the Muscle Shoals property. If Senator LENROOT refers to Mr. Worthington as representative of this company in Washington, beg to say he does not represent us, nor have we any connection of any kind with him or Mr. Washburn.

R. A. MITCHELL,
Vice President and Treasurer Alabama Power Co.

I felt, Mr. President, in view of what has been said here about the Alabama Power Co., that this telegram should go into the RECORD. I want to say here that since I have been in Congress I have never known of any other measure that has had so many misleading representations made about it as have been made against the pending measure. Misrepresentations have been made as to the money required to complete the Wilson Dam at Muscle Shoals. The highest estimate of the cost necessary to complete the Wilson Dam is $45,000,000. We have already appropriated or made available $17,000,000, $12,000,000 have been expended and $5,000,000 more are available, leaving about $28,000,000 more to complete the whole project.

It seems to me, as I have said here before, that it would be a shortsighted policy for Senators to undertake to abandon this work at Muscle Shoals and lose all of the eighty-odd million dollars that has been invested in this mighty project in order to prevent, perhaps, an additional appropriation at some future time of maybe $10,000,000 more. Would Senators permit the whole eighty-odd million dollars to be thrown to the four winds rather than appropriate a little more money, if need be, to complete the project?

Let Senators ponder well that when they vote to take this bill away from the Senate and return it at this late date to the Committee on Agriculture and Forestry, they are voting contrary to the interests of the great agricultural industry of the United States.

Here is a measure indorsed by the Secretary of War, by various officers of the War Department. It is approved by the Secretary of Agriculture and indorsed by the great organizations of farmers throughout the country, and no legitimate reason has been given for the butchery of the bill as is proposed by the

motion of the Senator from Wisconsin [Mr. LENROOT]. Why not have a vote by the Senate on the various provisions of the bill? Why try to dodge the issue by referring the bill back to the committee? I will vote for some of the amendments suggested. I am in hearty agreement with my Republican friend, Senator GRONNA, who is supporting the bill, in the matter of making it certain that our farmers shall obtain fertilizers to be produced at this plant, and I will vote for an amendment to safeguard this point. The operation of this plant will enable us to accurately determine the cost incurred in manufacturing fertilizers and whether or not farmers are being charged an exorbitant price.

Who is it that is here fighting the measure? The Senator from North Dakota has told us—the president of the Fertilizer Association of America. Is he disturbed lest the Government shall ascertain the truth as to what it costs to produce fertilizer? Some strange things have happened in connection with the efforts to secure this legislation. There are some field guns hidden off somewhere amongst the cliffs where we can not see them, and, of course, we are unable to tell positively who it is that is operating them. They are sending Senators anonymous letters, unsigned, assailing and bitterly opposing the measure now before the Senate. Why do they not come out from under cover and let the country know just who they are?

A few days ago I called attention to the fact that some mysterious individual, supposed to be stopping at the Willard Hotel, by the name of Hampden Norman, had assailed the project at Muscle Shoals, and I challenged the opposition to produce him. I denied then that such a man existed. I charge now that no such man is in existence, and that the statement was a fake. That is a nice way to undertake to influence legislation in the great Senate of the United States. I am not charging Senators on the other side with having anything to do with it, but I am charging that some one outside, very vitally interested in the defeat of this measure, is doing it. Who is Hampden Norman? They have failed to produce him. I charge that he is a fictitious person and that some fertilizer trust or powder king is seeking, through Hampden Norman in the columns of a Washington paper, to injuriously affect the pending legislation.

Let Senators remember that when they vote against the bill they are voting to deny the United States Government the opportunity to free itself from dependence for nitrate upon a foreign country. There is no escape from this conclusion.

The Senator from Wisconsin [Mr. LENROOT] asked the Senator from North Dakota [Mr. GRONNA] if they complete the construction and do not want to operate it, whether he would favor leasing it to some one. The Senator said they might lease it rather than let it stand idle. The Senator from Wisconsin seems to want it to stand idle, according to his statement. I prefer to lease it rather than have it stand idle and rust out and be of no benefit at all to the Government. I would rather lease it to some one who would take care of it and keep it in running order and pay the Government something for it than to silence it to the great joy of the fertilizer trust.

Mr. LENROOT. Mr. President——

Mr. HEFLIN. I yield to the Senator from Wisconsin.

Mr. LENROOT. Do I understand the Senator from Alabama to say that he is in favor of giving the corporation power to lease the nitrate plant to the fertilizer trust if it sees fit to do so?

Mr. HEFLIN. No; the Senator does not understand me to say that, but I do say that if, when it is completed, the Government should then find that it does not desire to operate it, it should have the right to lease it to some one, and the Government should be the judge as to the party to whom it would lease it. But I would not permit the fertilizer trust or any other fertilizer arrangement in the country to silence this great industry and let the plant rust away and make every dollar put into it a complete loss to the Government of the United States. I am pleading for the completion of the plant and for its utilization in behalf of the Government itself and the farmers of the country.

The President of the United States, the Commander in Chief of the Army and Navy, at the high tide of the war called upon the Government to build this very plant at Muscle Shoals, and to build it speedily. They have nearly completed it. Now, strange to say, some Senators seem willing to throw away all that has been expended and destroy the Government's opportunity to have and own a great nitrate plant. Let us work it out and make the Government independent of fertilizer concerns that make the nitrate in time of war, and of the Chilean fertilizer trust, a foreign concern, that holds this Government dependent upon it in time of war for the mightiest agency in modern warfare—explosive power. By the passage of the measure we can supply the farmers with cheaper fertilizer; we can increase the productivity of the soil; we can conserve the coal supply; we can deliver the farmers from the clutches of the fertilizer trust, and free the Government from dependence upon Chile for nitrates. I trust that Senators will vote against the motion of the Senator from Wisconsin to recommit the bill. I feel that a vote to recommit this bill at this late date when the session is nearing the close is a vote against the interests of agriculture and a vote against the highest and best interest of the whole people of the United States.

RECESS.

Mr. GRONNA. I move that the Senate take a recess until 12 o'clock to-morrow.

The motion was agreed to; and (at 5 o'clock and 10 minutes p. m.) the Senate took a recess until to-morrow, Tuesday, January 11, 1921, at 12 o'clock meridian.

HOUSE OF REPRESENTATIVES.

MONDAY, *January 10, 1921.*

The House met at 12 o'clock noon.

Rev. G. Ellis Williams, pastor of Petworth Methodist Church, Washington, D. C., offered the following prayer:

Almighty God, our Heavenly Father, Thou who art the giver of every good and perfect gift, we thank Thee for this day and for its opportunities of service. Lend us Thy grace, Thy wisdom, and Thy guidance in everything that shall be undertaken. We ask it in Jesus' name. Amen.

The Journal of Saturday, January 8, 1921, was read and approved.

INAUGURAL CEREMONIES.

Mr. CANNON. Mr. Speaker, I call up Senate joint resolution 237, covering the inaugural ceremonies, which has been reported from the Committee on Appropriations this morning, and ask unanimous consent for its consideration in the House as in Committee of the Whole under the five-minute rule.

The SPEAKER. The gentleman from Illinois asks unanimous consent for the present consideration in the House as in Committee of the Whole of a joint resolution, which the Clerk will report.

The Clerk read the title of S. J. Res. 237, to enable the Secretary of the Senate and the Clerk of the House of Representatives to pay the necessary expenses of the inaugural ceremonies of the President of the United States on March 4, 1921.

The SPEAKER. Is there objection to the present consideration of the joint resolution?

Mr. GARD. Mr. Speaker, I make the point of order that there is no quorum present.

The SPEAKER. The gentleman from Ohio makes the point of order that no quorum is present.

Mr. CANNON. Will the gentleman let us see whether it will be necessary to have a rule to consider this, or whether we can secure unanimous consent for its consideration, before he makes the point of order? Then, when we come to the consideration of it he can make the point of order if he desires.

Mr. GARD. My only object in making the point is for the purpose of getting a sufficient number of Members here to be advised of the gentleman's request. I will withhold it.

Mr. BLANTON. Mr. Speaker, I understand that the gentleman from Illinois will give me 10 minutes' time. I am opposed to this resolution.

Mr. CANNON. The gentleman no doubt will get consent for the 10 minutes. As far as I am concerned, I have no objection.

Mr. BLANTON. The gentleman will have charge of the resolution, and I should like that much time in general debate.

Mr. CAMPBELL of Kansas. The gentleman can take five minutes under the five-minute rule and get an extension, without objection.

Mr. CANNON. I will amend the request so as to include the request that the gentleman from Texas shall have 10 minutes.

The SPEAKER. Is there objection?

Mr. RAYBURN. Reserving the right to object, I should like to have the resolution read.

The SPEAKER. The Clerk will report the joint resolution.

The Clerk read as follows:

Resolved, etc., That to enable the Secretary of the Senate and the Clerk of the House of Representatives to pay the necessary expenses of the inaugural ceremonies of the President of the United States, March 4, 1921, in accordance with such program as may be adopted by the joint committee of the Senate and House of Representatives, appointed under a concurrent resolution of the two Houses, including the pay for extra police, there is hereby appropriated, out of any money in the Treasury not otherwise appropriated, $50,000, or so much thereof as may be necessary, the same to be immediately available.

The SPEAKER. Is there objection to the request of the gentleman from Illinois that this be considered in the House as in Committee of the Whole?

Mr. POU. Mr. Speaker, what is the request?

The SPEAKER. That the joint resolution be immediately considered in the House as in Committee of the Whole, and that the gentleman from Texas [Mr. BLANTON] may be allowed to address the House for 10 minutes. Is there objection?

Mr. BLANTON. The gentleman from Illinois agreed to give me that time.

The SPEAKER. The gentleman from Illinois will not have the time to give.

Mr. WALSH. Mr. Speaker, reserving the right to object, I do not think we ought to couple up with that any request as to who shall have any particular amount of time.

Mr. BLANTON. Mr. Speaker, I do not care to have that put in the request. I think the gentleman from Illinois will take care of me, all right.

Mr. CANNON. If it is considered under the five-minute rule.

The SPEAKER. Is there objection to the immediate consideration of the joint resolution in the House as in Committee of the Whole?

There was no objection.

The SPEAKER. The Clerk will report the joint resolution.

The joint resolution was again read.

Mr. GARD. I make the point of order that there is no quorum present.

The SPEAKER. The gentleman from Ohio makes the point of order that there is no quorum present. It is clear that there is no quorum present.

Mr. MONDELL. I move a call of the House.

The motion was agreed to.

The SPEAKER. The Doorkeeper will close the doors, the Sergeant at Arms will notify absent Members, and the Clerk will call the roll.

The Clerk called the roll, when the following Members failed to answer to their names:

Ackerman	Drewry	Kennedy, Iowa.	Radcliffe
Andrews, Md.	Eagan	Kettner	Rainey, Ala.
Babka	Edmonds	Kincheloe	Ramsey
Baer	Ellsworth	Kitchin	Reed, W. Va.
Blackmon	Emerson	Kreider	Riordan
Bland, Ind.	Evans, Nev.	Langley	Rodenberg
Bland, Mo.	Fisher	Lonergan	Rowan
Boies	Focht	McCulloch	Rowe
Booher	Fordney	McDuffie	Sanders, Ind.
Bowers	Frear	McFadden	Sanders, La.
Brooks, Pa.	Gallagher	McGlennon	Sanford
Brumbaugh	Gallivan	McKenzie	Schall
Burke	Ganly	McKeown	Scully
Caldwell	Goldfogle	McKinley	Sells
Candler	Goodykoontz	McKinley	Sisson
Cantrill	Gould	McLane	Small
Carew	Graham, Ill.	McPherson	Smith, Ill.
Carss	Graham, Pa.	Maher	Smith, Mich.
Casey	Greene, Vt.	Major	Smith, N. Y.
Coady	Griest	Mann, S. C.	Steele
Collier	Griffin	Mason	Stiness
Copley	Hamill	Mead	Strong, Pa.
Costello	Hamilton	Milligan	Swope
Crisp	Harreld	Monahan, Wis.	Upshaw
Crowther	Haugen	Moon	Vare
Cullen	Howard	Mooney	Venable
Dale	Hull, Tenn.	Morin	Volk
Davey	Humphreys	Mott	Wheeler
Davis, Minn.	Husted	Mudd	Williams
Dempsey	Hutchinson	Nicholls	Wilson, Ill.
Denison	James, Mich.	Nolan	Wilson, Pa.
Dent	Jefferis	O'Connell	Wise
Dewalt	Johnson, S. Dak.	Olney	Wright
Donovan	Johnston, N. Y.	Overstreet	Young, Tex.
Dooling	Juul	Patterson	
Doremus	Kahn	Perlman	
Doughton	Kelley, Mich.	Porter	

The SPEAKER. Two hundred and eighty-six Members have answered to their names, a quorum.

Mr. MONDELL. Mr. Speaker, I move to dispense with further proceedings under the call.

The motion was agreed to.

The doors were opened.

Mr. CANNON. Mr. Speaker, I desire very briefly to call to the attention of the House a few facts in respect to this joint resolution which is now being considered in the House as in Committee of the Whole under the five-minute rule. For the information of the House, I would say that the total appropriation for the inaugural ceremonies in 1917, which was the last inauguration we had, being the second one of the present President, was $35,000. The total amount expended was $32,255.21. There was a balance covered into the Treasury of $2,744.79. The total cost of the main stand at the east front of the Capitol was $16,402.50, and the amount expended for other stands at the east front for the photographers' stands, barricades, and for covering roadways was $6,370.37. The amount making up the difference between this total of $22,994.87 and the total amount expended of $32,255.21 was paid out by the inaugural committee for printing, decorations, chairs, and incidentals of that kind.

The estimated cost of the inaugural stand for the coming ceremonies is $22,720. The estimated cost of the incidental stands, the barricades, and so forth, and the covering of walks and roadways is $10,000, which makes a total of $32,720. The estimated additional cost of the coming ceremonies over those of 1917, amounting to between 35 and 40 per cent, is due to the increased cost of material and labor.

In the early part of December, at a meeting of the Joint Inaugural Committee, authority was given the Superintendent to proceed to receive bids for the inaugural stands under plans and specifications which he presented and which were adopted by the committee. This, of course, to be subject to an appropriation.

On December 27, 1920, the Superintendent of the Capitol received bids for the main stand. There were 12 bidders, and prices ranged from $49,470 down to $22,720. At a meeting of the committee on December 28, 1920, the superintendent was authorized to accept the proposition of the low bidder, subject to an appropriation. Material is already being placed on the ground.

I may say with respect to the bid, that the bidder is to furnish the lumber, put up the stand at his own expense, remove the lumber at his own expense. That covers the main stand. I think that is all I desire to say.

Mr. BYRNS of Tennessee. Mr. Speaker, will the gentleman yield?

Mr. CANNON. Yes.

Mr. BYRNS of Tennessee. Has it not always been the custom heretofore to make appropriations of this kind to provide for these stands?

Mr. CANNON. It certainly has been since Grant's second inauguration, because I have been, including that, to all of the inaugurations since that time, and I believe it has been so since the foundation of the Government, but I would not be certain about that.

Mr. CLARK of Missouri. Mr. Speaker, will the gentleman yield?

Mr. CANNON. Yes.

Mr. CLARK of Missouri. Is it not true that the inaugurations for a long time were held in the Hall of the House of Representatives?

Mr. CANNON. It may be true. I do not know.

The SPEAKER. The time of the gentleman from Illinois has expired.

Mr. GARD. Mr. Speaker, I ask unanimous consent that the gentleman's time be extended for five minutes.

The SPEAKER. Is there objection?

There was no objection.

Mr. GARD. Just a question. This resolution is intended to authorize the payment of the expenses of the inaugural ceremonies of the President at the Capitol, here in the Capitol Building?

Mr. CANNON. Yes.

Mr. GARD. It is not intended to cover any other. I read in the resolution that it is to be in accordance with such program as may be adopted by the joint committee. This is to include just the ceremonies at the Capitol Building. Does this expense cover any other function?

Mr. CANNON. I think there are some other functions, though I am not clear about that, such as printing, and so forth. I judge it will satisfy the request of Members for tickets, that there will be other expense. A great many Members have come to me asking to know how many tickets they are to have.

Mr. REAVIS. Mr. Speaker, will the gentleman yield?

Mr. CANNON. Yes.

Mr. REAVIS. The inauguration of course is at the Capitol alone.

Mr. CANNON. Precisely.

Mr. REAVIS. This committee was appointed by the House to provide the arrangements for the inauguration?

Mr. CANNON. Yes.

Mr. REAVIS. The expense incurred will consist in building the stands, the printing of souvenir programs that are a duplicate of those printed and circulated four years ago, and the policing of the Capitol.

Mr. CANNON. Yes.

Mr. REAVIS. And that is all the expense incurred by this resolution.

Mr. GARD. It is all incident to the ceremonies at the Capitol?

Mr. REAVIS. Yes.

Mr. BYRNES of South Carolina. Mr. Speaker, I move to strike out the last word. As the gentleman from Nebraska has

developed by his questions, this resolution provides only for the expenditure of money to construct the inaugural stand, to construct the stand opposite upon which the photographers and moving-picture men are generally located, to construct two side stands, such as have always been constructed, to have invitations engraved, such as have been sent out at every previous inauguration, and further to provide additional policemen necessary for proper police protection.

Mr. LINTHICUM. Mr. Speaker, will the gentleman yield?

Mr. BRYNES of South Carolina. In just a moment. As was suggested by the questions of the gentleman from Ohio [Mr. GARD], this does not provide for anything other than the exercises at the Capitol.

It has nothing to do with the exercises held in the city, the construction of stands, or the inaugural parade. It provides for an expenditure for no other purpose than that which was authorized at the inauguration of President Wilson and of every other President. The only reason that the amount has increased is because the price of lumber and the cost of labor have increased. This provides for no unusual expense, and that being so I sincerely trust that this House will, with little delay, dispose of it and thus demonstrate to the country that this body can act with efficiency at a time like this, when legislation of great importance to the Nation is pending.

Mr. BARKLEY. Mr. Speaker, will the gentleman yield?

Mr. BYRNES of South Carolina. Yes.

Mr. BARKLEY. For the information of Members, what has been customary as to the number of tickets on the stand that are issued to the Members of the House and the Senate?

Mr. BYRNES of South Carolina. I regret that I can not give the gentleman that information. The members of the Inaugural Committee I know could give the gentleman that information.

Mr. LINTHICUM. I saw something in the newspapers about an additional resolution which was to later come in for the policing of the city, amounting to about $60,000. Does the gentleman know anything about that?

Mr. BYRNES of South Carolina. No, I do not. I have only the information in respect to that, that the gentleman has, reading it in the newspapers. The resolution under consideration has reference only to the expenditures at the Capitol.

I hope that the resolution will be passed unanimously. The American people believe in showing due respect to the President of the United States. No man who votes for this resolution will ever be criticized because of this expenditure. If opposition must come I hope it will not come from the Democratic side, because by our unity here to-day and by our participation in the inaugural exercises we can demonstrate to the few disaffected people of this country that, regardless of what took place before the election, whenever the President of the United States is inaugurated that he is President of all the American people [applause] and we intend to support him. [Applause.]

Mr. BLANTON. Mr. Speaker, I move to strike out the last word. Mr. Speaker, the President whom we are to inaugurate on the 4th day of March, during the next four years is going to be my President as much as the President of any other individual of this Nation. And as an humble Member of this House and Congress I intend to cooperate with him in every way possible and lend my feeble aid in every way possible to make his administration successful. But he comes here pledged to the people of America. His pledge is that he will conduct an economical administration and will stop the waste and extravagance in governmental affairs. Coming with that pledge, his own pledge to the people, and the pledge of his party to the Nation, we start in with an orgy of expense. It was stated in the Senate, when this resolution was under consideration there, that this little resolution of $50,000 is a mere bagatelle to what is to come here later. It was admitted on the floor of the Senate by those in charge of the resolution and others that there was already pending there another resolution, which will pass as easily as this will pass, appropriating $60,000 more to cover police hire, and so forth. And it was further admitted that it was in contemplation to spend $37,000 to bring the cadets here, to spend thousands of dollars more to bring detachments and regiments of Cavalry here, another expense which will be brought to the door of this Congress to be paid. Herbert Hoover has lately said that with every $10 that can be placed in his hands just now he can save the life of a human being. With this $50,000 we can save the lives of 5,000 human beings. With the $60,000 more to come we can save the lives of 6,000 more human beings, and yet our Congress is still proceeding under custom, and no matter what the emergency might be that arises that would cause a change in custom the same question can be asked by the gentleman from Tennessee and others, "Has it not been the custom to do so and so for years?" back to the time when the memory of man runneth not to the contrary. I am one individual who is willing to get away from custom when the custom is wrong under certain emergencies in this country.

Mr. HUDSPETH. Will the gentleman yield?

Mr. BLANTON. I desire to offer an amendment; my time is nearly up, and then I will yield.

The SPEAKER. The Clerk will report the amendment.

The Clerk read as follows:

Amendment offered by Mr. BLANTON: On page 1, line 11, strike out "$50,000" and insert in lieu thereof "$10,000"; and in line 12, after the word "necessary," add the following: "All expenses chargeable against the Government to be kept within this sum."

Mr. BLANTON. Mr. Speaker, I ask recognition on the amendment. I understand I will be entitled to five minutes on the amendment, Mr. Speaker, under the rules of the House.

The SPEAKER. Of course the gentleman can not offer one amendment after another amendment, and thus keep the floor indefinitely on one recognition.

Mr. WINGO. Mr. Chairman, I shall not object to the gentleman getting unanimous consent, but I will certainly object to a proceeding like that.

The SPEAKER. The Chair had proceeded to state——

Mr. WINGO. That question under the rules of the House has been decided time and again.

Mr. BLANTON. Mr. Speaker, I ask unanimous consent to proceed for five minutes.

The SPEAKER. The gentleman from Texas asks unanimous consent to proceed for five minutes. Is there objection? [After a pause.] The Chair hears none.

Mr. HUDSPETH. Will the gentleman yield?

Mr. BLANTON. I will yield.

Mr. HUDSPETH. I was just going to ask the gentleman, What does the gentleman recommend, that the President be sworn in by a notary public in front of the White House? [Laughter.]

Mr. BLANTON. No; I do not recommend that. I do recommend that at this particular time, in the present emergency, when we are facing a deficit of $3,000,000,000, which my colleague must take from the pockets of his constituents and pay the expense of the Government, it is time we should——

Mr. HUDSPETH. My constituents will not object to it [applause], not one of them. [Applause.]

Mr. BLANTON. I regret that some men think their constituents will not object no matter what money they appropriate out of the Treasury to be spent in reckless extravagance. I want to do honor to the great incoming President of the United States, but it is time certainly just now to go back to the days when the President of the United States was sworn in in the House of Representatives—he could be sworn in here. It would not cost this Government one dollar. There is no more appropriate place than in this Chamber. There will be thousands of people who will not get within the sound of his voice out there, and yet to provide seats for the "elect" to be used for just a few minutes time you are to spend thousands of dollars of the people's money in this ceremony. Oh, I may be called narrow in this respect, but I want to say this, my narrowness is confined to trying to save the money of the poor people in the Public Treasury and lighten the burdens that they have, which after all are not borne by the people on just one side of the Ohio and Mississippi, as represented by the gentleman from Illinois, but they are borne and most heavily by the poor people of our land who in every indirect way pay much of the taxes of this Government.

I know I can not stop this resolution from passing. It is going to pass. I would not have taken up the time of the House but for the fact that I thought it was necessary to enter of record my feeble protest against the continued extravagance of this Congress. I had been in hopes that my colleagues on this side of the aisle, at least, would have taken warning from the action of the people last November. If you think the people of the United States are going to stand this forever, you are mistaken. It was their action that showed they were going to demand of the House and Senate from now on an economical administration of governmental affairs. You are going to keep on and keep on. I am going to protest every time I see you doing it, even though my protest does not stop you. But just as they stopped us, so will they stop you two years from now if you keep it up.

Mr. REAVIS. Mr. Speaker, I ask to be heard in opposition to the amendment.

The SPEAKER. The gentleman from Nebraska [Mr. REAVIS] is recognized.

Mr. REAVIS. I had not intended to take any time on this resolution, and would not have done so if it had not been for the unfortunate exhibition that has just been put on in this House.

UMI

It has been related to you that the provisions made under this resolution are the provisions that have been made for the predecessors of the President elect for many years in the past. I am at liberty to say to you that Senator HARDING seeks no display, that he will be well satisfied no matter how simple the ceremony, but the action of this House will be determined not by the desires of the President elect but by our sense of the decencies of the occasion. [Applause.]

The committee that was appointed by this House and authorized by the resolution to make arrangements for the inaugural ceremony has jurisdiction, of course, only of the inaugural ceremony. The only place that the Nation or the Government touches the exercises is in the inauguration proper. Everything that follows after that in the way of inaugural parade and all other displays is entirely alien and apart from the Congress and from the Nation, and is inspired entirely by the desire of the local community to make more or less of an event of the inaugural ceremony. When the committee came to consider what we should do in preparation for the ceremonies the only guide we had was what the Congress had done on similar occasions for many years past; that is, to provide a stand in front of the Capitol. The stand that has always been provided, and that will be provided if this appropriation is made, will seat approximately 10,000 people. The tickets to that stand will be distributed, not equally between the Senate and the House but equally between the Senators and the Members of the House, so that every Member of the House will get his full quota. I am not sufficiently informed to advise you just how many tickets each will obtain, but practically the entire seating capacity will be distributed in tickets equally to the Members of the House and the Senate.

We had souvenir programs printed, because it has always been usual in the past. We selected as the design for the souvenir program the design that was selected by President Wilson himself four years ago. It is both beautiful and appropriate. I wonder if there is any Member of this House who would have it otherwise? We will also have tickets to print, and we must police the Capitol. In addition, the Congress will hereafter be compelled to appropriate to afford ample police protection for the city. The crowds that come here from throughout the country are entitled to such protection, and this resolution will provide it to the multitude throughout the inaugural ceremonies at the Capitol.

There is also certain barricading that must be done in order to protect different portions of the Capitol. In doing these things we are doing identically what has been done in every inaugural ceremony probably for the last half century, and the committee, composed alike of Democrats and Republicans, thought it only decent and courteous that the Congress and the Nation do for the President elect what has been done for everyone of his predecessors for the past half century.

I regret exceedingly that a protest has been voiced on the floor of this House against doing what appears to us to be the proper thing. There is a good deal of talk about display, but this is not display. The inspiration which underlies this resolution comes from the desire of the average man to have the settings and surroundings in harmony with the event that we celebrate.

A great deal of objection is made in another body to bringing State troops here, and by the Associated Press report it appeared as though Congress was going to be responsible for the expense of bringing those troops. We have nothing to do with that. If these States desire to bring their militia at the expense of the States, to witness the inaugural ceremony, it is of no concern, as Members of Congress, to you or to me.

The SPEAKER. The time of the gentleman has expired.

Mr. BYRNES of South Carolina. Mr. Speaker, I ask unanimous consent that the gentleman's time be extended for five minutes.

The SPEAKER. The gentleman from South Carolina asks unanimous consent that the time of the gentleman from Nebraska be extended for five minutes. Is there objection? [After a pause.] The Chair hears none.

Mr. REAVIS. Of course, it is an expense to the people, as my good friend from Texas [Mr. BLANTON] says, to bring those troops here, but I saw these State troops in the summer of 1918—troops from Ohio and Indiana, from Minnesota, Iowa, and Alabama, and the other National Guard troops that made up the Forty-second Division—in the dust of rock and mortar at ruined Chateau-Thierry. I saw these State troops going to the front, a little frightened, perhaps, but with a look of determination on their faces that did not appear well on faces so young. I saw them brought back from the front, some of them. I wish I could efface from my memory the sight that I saw as they brought them back. And I saw them, a few of them, on shell-torn fields, with "white, upturned faces," rigid, motionless, with the pitiless sun shining in their dead eyes. If the States want to bring these troops here to witness the induction into office of the Chief Magistrate of the Nation to whose eternal glory they contributed so greatly, I have no right to object to the expense; but if I had the right, I would have a supreme contempt for myself if I exercised it. [Applause.]

We are trying to do what has always been done, not at the suggestion of the President elect—for I am frank to say to you that by nature and character he rebels at display—but you and I have a duty to perform. Let us perform it decently and not act like demagogues. [Applause.]

Mr. GARD and Mr. HUDSPETH rose.

The SPEAKER. The gentleman from Ohio [Mr. GARD] is recognized.

Mr. GARD. Mr. Speaker, I move to strike out the last word.

The SPEAKER. The gentleman from Ohio moves to strike out the last word.

Mr. GARD. Mr. Speaker, there are certain ceremonies of government which should be attended with appropriate dignity. I believe that the office of President of the United States is the highest executive office in all the world. Believing that, I think, too, that the ceremony of his inauguration—the ceremony at the Capitol, where the President takes the oath of office to be for the next four years President of all the people of the United States—should be a ceremony in every respect consistent with the required dignity of the great occasion.

I differentiate in my own mind between the ceremony at the Capitol, which I say should be attended with all appropriate convenience, decorum, and dignity, and that which may be characterized as a commercial attachment, in a manner to attempt to commercialize the inauguration of the President of the United States for the private benefit of those who seek to profit from enterprises outside the scope of the inaugural ceremony and inconsistent with the highest standard of that true Americanism which revolts at unseemly ostentation and display.

This resolution provides for the inaugural ceremonies here in the Capitol Building and outside the Capitol Building and the invitations and printing attendant thereupon; and it seems that not alone in the light of what has happened in the past, but what is eminently proper, that this ceremony should be attended with proper dignity, in order that we may pay not alone tribute to the incoming President of the United States, but that we may make known our own sense of order, fitness, and propriety as Representatives in the Congress of the United States.

Therefore I hope that, in so far as this resolution is concerned, it will pass. I hope it will pass without a dissenting voice. I hope that the amendment proposed by the gentleman from Texas [Mr. BLANTON] may not endure, and that it may be defeated. [Applause.]

Mr. HUDSPETH. Mr. Speaker and gentlemen of the House, I do not want it to go out to the people of this country that the sentiment expressed by my colleague from Texas is the sentiment of the people of that great State, from whence I come. [Applause.] He may represent the sentiment—which I doubt—of his district, but he does not of mine. [Applause.]

Texas at one time, gentlemen, was a Republic, and its history and the records show that in the inauguration of its President it made ample appropriation, although it was a weak and struggling Republic at that time. Texas, gentlemen, is a proud State, and while Texas gave Gov. Cox 250,000 majority [applause on the Democratic side], we still have in Texas a warm spot in our heart for that great American, Senator HARDING. [Applause.]

Tell me that the people of Texas, now struggling in a financial depression, the greatest that has confronted them, especially in my part of Texas, since 1893, would quibble about an expenditure of $50,000 to properly inaugurate a great American! I say that it is not the sentiment of the section from which I come, and I doubt very much if it is the sentiment of the district which my colleague represents. [Applause.] I have too high a regard for the people of the seventeenth district of Texas to believe, gentlemen, that they would countenance the statement made by their Representative. [Applause.] I know that they are good Americans, and although, as he stated, we are Democrats down there, yet we are Americans first [applause], and Senator HARDING was received with a warmth and hospitality befitting a man of his station when he recently visited my State, and we want to see him properly inaugurated, with such a ceremony befitting the greatest Nation on this globe. We are not in favor of this peanut proposition, you will understand; we are Americans to the core in Texas, and in saying that I think I speak for every man, woman, and child in my State, and I know I do for the great sixteenth congressional district, which gave Gov. Cox one of the biggest majorities of any district in that State—my district. [Applause.]

Mr. HUDDLESTON rose.

UMI

The SPEAKER. The gentleman from Alabama is recognized.

Mr. SHERWOOD rose.

Mr. HUDDLESTON. I yield to the gentleman from Ohio.

The SPEAKER. The gentleman from Ohio is recognized.

Mr. SHERWOOD. Mr. Speaker, I always like a minority. Emerson says minorities are usually right. I have known the incoming President for 30 years, and I believe that if we had as simple an inauguration as Jefferson had or as Abraham Lincoln had it would be the most popular feature of his administration at the start. [Applause.] I believe that sincerely, and for that reason I am going to vote against this resolution.

I am the only living man in public life that witnessed Abraham Lincoln's second inauguration on the 4th of March, 1865. It was after we had fought the battle of Franklin and Nashville. Our veteran army took the transports on the Tennessee River and came up the Ohio to Cincinnati, then came across the country on the Baltimore & Ohio Railroad, and arrived in Washington on the 3d day of March. I was looking for a war horse, as my last horse was shot at the Battle of Franklin.

Lincoln was inaugurated the next morning on the east front of the Capitol. I had never seen Abraham Lincoln. I was bound to see that inauguration, as Lincoln was the idol of our Army.

I reached the Capitol just as the inauguration had started. There was no general platform. There were no reserved seats for Congressmen or anybody else. We were all standing up. There must have been 20,000 people in front of the Capitol. Lincoln stood there on the east front, on a little platform that did not cost $500, with a little stand and a glass of water. He had a white pocket handkerchief around his neck. I can see him now as I saw him then, a tall, spare man, with deep lines of care furrowing his cheeks; a sad face, a strong face, the face of a man of many sorrows; a face lit up with the inspiration of a great soul as he voiced in prophecy the ultimate destiny of this Nation. There was no display whatever.

I had on my old, once blue, coat that I wore on the Atlanta campaign, besmirched with grime from the red-clay roads of northern Georgia and the sticky mud of western Tennessee, and my old slouch hat with a hole in the crown, caused by sleeping too near the bivouac fire.

I worked myself up through that vast crowd and stood within 10 feet of Abraham Lincoln and heard him deliver the last of his inaugural address—his last official declaration. Our army was to take the ocean transports that night for Fort Anderson and to meet Gen. Sherman's army coming up from Savannah.

I believe such a simple inauguration as was given Lincoln in 1865 would be the most proper and popular inauguration for our coming President. I believe that Lincoln was a typical American, and that the great mass of American people are opposed to a great military and civic display on inaugural day. In other words, I believe in the thoroughly democratic inauguration, with no reserve seats for anybody, the same as was given Lincoln on March 4, 1865.

I am not, however, very much stirred up about it. This $50,000 is nothing to worry about. That does not amount to much, only I believe it would be more proper to have such an inauguration as Jefferson gave us and as Lincoln gave us. I should not have said a word if it had not been that the gentleman from Nebraska [Mr. REAVIS] spoke about the proposed inauguration being an established precedent. Jefferson and Lincoln established a precedent that I believe should be followed in the inauguration of all incoming Presidents. Congress was not called upon to make any appropriation for the inauguration of either Lincoln or Jefferson. [Applause.]

Mr. HUDDLESTON. Mr. Speaker, the gentleman from Texas [Mr. HUDSPETH] inquires whether anyone would have the President go down to the White House and be sworn in before a notary public? I would say to him that there is a very excellent precedent for similar simplicity, in the inauguration of one of the greatest men who was ever President—when Mr. Jefferson came into the assumption of his official duties.

My feeling about this matter is not based upon an overwhelming desire for economy. It is based upon the thought that in our fashion of inaugurating the President of the United States we do not conduct that ceremony in a manner becoming to the dignity of a great nation. That is why I object to what is contemplated. I objected to what was done four years ago. I object to the system that has grown up of butchering a President of the United States to make a Washington holiday. These inaugural ceremonies have become so tainted with a low order of commercialism as to be unworthy of our great country. The whole scheme is to get as many people as possible to come to Washington so as to make good business for the hotels, boarding-house keepers, and people who have something they want to sell. It is not for the purpose of inaugurating our Chief Executive in a becoming and dignified manner, but to draw a great mob, to get everybody who will to come to Washington to stare open-mouthed, from a distance, at the inaugural exercises, then to shiver around the streets for a few hours preliminary to giving up to the cormorants, profiteers, and highwaymen that we have around this city what money they have in their pockets. [Laughter and applause.] That is about what it amounts to. I am not willing to further that scheme.

I venture to say, Mr. Speaker, that no nation in the world that compares with ours in importance would for a moment consider subjecting its Chief Executive to the kind of vulgar ordeal to which we subject our President. No other nation in the world has its Chief Executive inducted into office with such little taste or with such outrageous disregard of the feelings of the officer himself and of those who are entitled to consideration on such occasions.

We have a vast platform erected out here adjoining the Capitol, and a lot of expensive admission tickets are given to Congressmen for distribution among their constituents to the end that they may gain some popularity thereby. A vast platform is erected; a vast mob of curiosity seekers assemble around it. The unfortunate President elect who is being inaugurated stands on the extreme outpost of the platform. The March storm beats upon him, the rain comes down, the snow falls upon his devoted head, the winds chill him, he is subjected to every physical discomfort. Nobody hears what he says. Nobody cares a continental what he does say; we can comprehend it better when it is printed in the papers that afternoon. The whole occasion is simply to give a careless and curious multitude a chance to look at him and to say, "I saw Wilson" or "I saw Harding" or "I saw the President of the United States."

It is time for us to get away from this sordid commercialization and to remember that we are a great Nation, and that it is our province to lead the nations of the world, not merely in material resources or military achievements, but in matters of taste and dignity, in excellence of the kind that doth become a nation in which the people are supreme. For that reason I say, let us go back to some of the old simplicity!

The inaugural ceremonies should take place somewhere indoors. They do not need to occur in the presence of a multitude. Why, not only is the President elect subjected to discomfort, not only do you jeopardize his health, but some assassin might take advantage of the opportunity to attempt his life. He is subjected to unnecessary peril. In times past as I have seen these exercises I have trembled as they went on; I have been afraid that something might happen that would very seriously mar them. I have felt relieved when they were over, and I have gone away, not having been close enough to hear anything or really to see anything, and I was disgusted and dissatisfied. That is the experience of us all, and that is what we will again experience on the 4th day of March next. [Applause.]

The SPEAKER. The question is on the amendment of the gentleman from Texas [Mr. BLANTON].

The question being taken, on a division (demanded by Mr. BLANTON) there were—ayes 1, noes 194.

Mr. BLANTON. I make the point of no quorum present, Mr. Speaker.

The SPEAKER. The gentleman from Texas makes the point of order that no quorum is present. The Chair will count. [After counting.] One hundred and ninety-eight Members present, not a quorum. The Doorkeeper will close the doors; the Sergeant at Arms will notify absent Members. As many as favor the amendment of the gentleman from Texas [Mr. BLANTON] will, as their names are called, vote "yea," those opposed "nay," and the Clerk will call the roll.

The question was taken; and there were—yeas 5, nays 285, answered "present" 1, not voting 149, as follows:

So the amendment was rejected.

The result of the vote was announced as above recorded.

The doors were opened.

The SPEAKER. The question is on the third reading of the joint resolution.

The joint resolution was ordered to be read a third time, and was read the third time.

The SPEAKER. The question is on agreeing to the resolution.

The question was taken; and on a division (demanded by Mr. BLANTON) there were—ayes 152, noes 4.

So the resolution was agreed to.

On motion of Mr. CANNON, a motion to reconsider the vote by which the resolution was passed was laid on the table.

ENROLLED BILL PRESENTED TO THE PRESIDENT FOR HIS APPROVAL.

Mr. RAMSEY, from the Committee on Enrolled Bills, reported that January 8 they had presented to the President of the United States, for his approval, the following bill:

H. R. 12337. An act to provide for the relief of Anthony Sulik, former sergeant, United States Marine Corps.

JOINT COMMITTEE ON THE REORGANIZATION OF THE ADMINISTRATIVE BRANCH OF THE GOVERNMENT.

Mr. REAVIS. Mr. Speaker, I call from the Speaker's table Senate concurrent resolution 36 and ask unanimous consent for its present consideration.

The SPEAKER. The gentleman from Nebraska calls up the concurrent resolution which the Clerk will report.

The Clerk read as follows:

Senate concurrent resolution 36.

Resolved by the Senate (the House of Representatives concurring), That the President of the Senate and the Speaker of the House of Representatives be, and they are hereby, authorized to sign a duplicate copy of the enrolled joint resolution (S. J. Res. 191) to create a Joint Committee on the Reorganization of the Administrative Branch of the Government, and that the Secretary of the Senate be directed to transmit the same to the President of the United States in compliance with his request.

The SPEAKER. Is there objection to the present consideration?

Mr. GARD. Mr. Speaker, reserving the right to object, what is the purpose of the resolution?

Mr. REAVIS. The House and the Senate passed Senate joint resolution 191, which was the resolution to reorganize the administrative departments of the Government. The resolution was either mislaid or was lost at the White House. The President sent a communication to the Senate a day or so ago saying that under section 240 of the Revised Statutes it was necessary for him, inasmuch as he had permitted the resolution to become a law without action on his part, to file it with the Secretary of State, and that having been lost or mislaid, it was impossible for him to obey the requirements of that statute. This resolution now authorizes the President of the Senate and the Speaker of the House to sign a copy and transmit it to the President, so he might meet the requirements of the law.

Mr. GARD. Copy or duplicate?

Mr. REAVIS. A duplicate.

Mr. CHINDBLOM. Will the gentleman yield for a question?

Mr. REAVIS. I will.

Mr. CHINDBLOM. Does the RECORD show delivery to the President in the first instance?

Mr. REAVIS. It shows delivery to the President, and in the President's communication to the Senate he admits it is lost and makes a statement that it became law without action on his part.

Mr. BLANTON. Will the gentleman yield?

Mr. REAVIS. I will.

Mr. BLANTON. Under the law the document which the President must file is the original bill or resolution passed by the House and Senate and sent him?

Mr. REAVIS. Yes.

Mr. BLANTON. Does this resolution, I will ask the gentleman from Nebraska, go far enough in that it fails to authorize the President to file this duplicate copy in lieu of the original, which was lost?

Should not this resolution now before the House go further and authorize him to file this copy in lieu of the original?

Mr. REAVIS. It is the opinion of the White House and of the Senators who are interested in it and of myself that the resolution answers all requirements.

The SPEAKER. Is there objection?

Mr. BEE. Have we anything to do with authorizing the President to act? After the Speaker of the House and the President of the Senate sign the resolution——

Mr. REAVIS. It goes to the White House for such action as his judgment suggests.

The SPEAKER. Is there objection? [After a pause.] The Chair hears none.

The question was taken, and the concurrent resolution was agreed to.

PHILIPPINE ISLANDS (H. DOC. NO. 963).

The SPEAKER laid before the House the following message from the President of the United States.

The Clerk read as follows:

To the Senate and House of Representatives:

As required by section 19 of the act of Congress approved August 29, 1916, entitled "An act to declare the purpose of the people of the United States as to the future political status of the people of the Philippine Islands, and to provide a more autonomous government for those islands," I transmit herewith a set of act No. 2722, passed by the Fourth Philippine Legis-

lature during its first session, together with laws and resolutions enacted during its second session, from October 16, 1917, to February 8, 1918, inclusive; its third session, from October 16, 1918, to February 8, 1919, inclusive; its special session of 1919, from March 1, 1919, to March 8, 1919, inclusive; and by the Fifth Philippine Legislature, first special session of 1919, from July 21, 1919, to July 26, 1919, inclusive; its first session, from October 16, 1919, to February 9, 1920, inclusive; and its special session of 1920, from February 25, 1920, to March 6, 1920, inclusive.

These acts and resolutions have not previously been transmitted to Congress, and it is therefore recommended that they be printed as public documents as heretofore.

WOODROW WILSON.

THE WHITE HOUSE,
10 January, 1921.

The SPEAKER. The message is referred to the Committee on Insular Affairs.

Mr. MANN of Illinois. Mr. Speaker, a parliamentary inquiry.

The SPEAKER. The gentleman will state it.

Mr. MANN of Illinois. The message, of course, is ordered to be printed, though the Speaker did not so state. I believe it is not necessary to order it printed at this time with the accompanying documents.

The SPEAKER. The Chair did not like to take that responsibility without investigating.

Mr. MANN of Illinois. I did not know what would happen.

The SPEAKER. The Chair thinks it should not be printed without order of the House.

Mr. MANN of Illinois. Frequently in certain cases the Speaker announces the message will be printed and referred without printing the accompanying document.

The SPEAKER. The Chair has followed the custom that unless the Chair stated they were to be printed they would not be.

LEGISLATIVE, EXECUTIVE, AND JUDICIAL APPROPRIATION BILL.

Mr. WOOD of Indiana. Mr. Speaker, I move that the House resolve itself into the Committee of the Whole House on the state of the Union for the consideration of the bill H. R. 15543.

Mr. BANKHEAD. Mr. Speaker, a parliamentary inquiry.

The SPEAKER. The gentleman will state it.

Mr. BANKHEAD. Has any disposition been made of the rule in reference to the District of Columbia business of to-day?

The SPEAKER. If this motion is agreed to it will dispense with District business.

The motion was agreed to.

Accordingly the House resolved itself into the Committee of the Whole House on the state of the Union for the consideration of the bill H. R. 15543, the legislative, executive, and judicial appropriation bill, with Mr. LONGWORTH in the chair.

The CHAIRMAN. The House is in Committee of the Whole House on the state of the Union for the consideration of the bill H. R. 15543, which the Clerk will report.

The Clerk read as follows:

A bill (H. R. 15543) making appropriations for the legislative, executive, and judicial expenses of the Government for the fiscal year ending June 30, 1922.

Mr. WOOD of Indiana. Mr. Chairman, I ask unanimous consent that the first reading of the bill be dispensed with.

The motion was agreed to.

Mr. WOOD of Indiana. Mr. Chairman, I shall state to the Chair and the committee that Mr. SISSON, who is the ranking member on the minority side, has an engagement which has taken him out of town, and I understand he has left the conduct of the bill in his colleague's hands, Mr. BYRNS of Tennessee, a member of the committee. No time has been agreed upon in reference to general debate. I have some remarks I wish to make on some of the more salient features, and I take it, in the absence of an agreement, the time will run along until such time as we think proper to agree upon closing debate. I will state, in all fairness, that it is Mr. SISSON'S desire to make a speech upon this bill. I understand he will be back to-night or to-morrow morning, and I take it for granted the general debate will consume to-day, so as to permit him to speak to-morrow.

Mr. BEE. Would it be possible to get an agreement as to general debate, so Members will know exactly the time consumed in general debate, if possible?

Mr. WOOD of Indiana. My idea is, to-morrow morning we will secure an agreement in reference to the close of general debate.

Mr. BEE. And that the day be devoted to general debate?

Mr. WOOD of Indiana. Yes.

Mr. DOWELL. General debate will consume all of to-day?

Mr. WOOD of Indiana. I think so.

The CHAIRMAN. The gentleman from Indiana is recognized for one hour.

Mr. WOOD of Indiana. Mr. Chairman, I wish to call the attention of the committee to some of the striking features of this bill. I dare say that it contains more of disappointment than any measure which has been reported to this House for a quarter of a century. At the presentation of this bill at the last session I announced that each Cabinet member, either directly or through a representative, appeared before the committee and asked that no increase of salary for his respective department be considered by the committee, and none were asked. At this session, before the committee considering this bill, each Cabinet head or some one representing him appeared and asked for an increase in the salary for every individual member of his bureau, from top to bottom, with scarcely a single exception.

After due consideration it became the policy, and the announced policy, of the subcommittee having this bill in charge that increases of salary would not be granted. To increase them would mean a reclassification of the entire salaried list of the Civil Service of the United States.

Mr. GARD. Will the gentleman yield?

Mr. WOOD of Indiana. I yield.

Mr. GARD. Was there any consideration or determination given to the report of the Committee on Reclassification of Salaries in the present appropriation bill appropriating salaries?

Mr. WOOD of Indiana. So far as our committee was concerned, there was no official consideration given it. I will state, however, that I think it is the sense of the committee having this bill in charge that a reclassification is needed and should be had at the earliest possible moment. There are inconsistencies and incongruities everywhere. There is no justification for the present salary list. There are many inequalities that of necessity will require a general reclassification in order that justice may not only be had to the Government of the United States and its Treasury but to those who are interested as employees in the Civil Service of the United States. The time is too short to point out at any considerable length these inconsistencies. We find in one department clerks obtained a certain salary, while in another department clerks doing exactly similar work obtain a different salary, the difference ranging all the way from a few hundred dollars to a thousand dollars, where they are doing practically the same class of service. But, as I have stated, in order for this committee to have adjusted these inequalities and to do justice to those who have been unjustly treated would have meant a reclassification all along the line, from top to bottom.

So believing that Congress would take early action looking to a scientific reclassification, we came to the conclusion that it would be useless for us to undertake it, and that by making a further patchwork of it we would simply be adding confusion to confusion already existing throughout all these departments. I wish, however, to say in passing, voicing my own sentiments, and, I think, in a large measure, the sentiments of my associates, that the reclassification bill submitted as the result of the Reclassification Commission is absolutely impossible. It has in contemplation the formation of what is known as the dictionary system of fixing salaries and reclassifying them.

Mr. SNELL. Will the gentleman yield?

Mr. WOOD of Indiana. I will.

Mr. SNELL. I did not understand what the gentleman said was absolutely impossible.

Mr. WOOD of Indiana. The bill that was reported as the result of the work of the Commission on Reclassification. There are more than 70 different classifications. It would require an almost constant and continuous session of the Congress of the United States to give it practical enforcement. I believe it is possible that a simple reclassification can be had where every individual Member of Congress at a glance could understand what these reclassifications mean, so that everybody who is interested and affected by it as an employee of the Government of the United States could understand it and that the definitions would be so few and simple that it would result in clarifying rather than confusing the employment service of the United States.

Now then, by reason of these inequalities and by reason of these further activities of the Government that sprang up during the existence of the war and have been continued down to this time, many of them now being asked to be made permanent, a further inequality in the fixing of salaries has taken place out of the lump-sum appropriations given to these various departments where discretion was lodged in fixing the salaries in the heads of these bureaus.

Salaries largely in excess of those existing for the same class of service in the old-established bureaus and divisions of the Government were granted, which resulted, if you please, not only in jealousies but in demoralization generally. And that is one of the things that is confronting the Appropriations Committee now—namely, these invidious comparisons that are being made by those in public service who are receiving far less for compensation for their services than those who have been appointed under these new activities, and which increase of salaries were made out of lump-sum appropriations. In order that these inequalities may be adjusted, in order that persons doing like service may receive like pay, and in order that there may be a general good feeling among the various bureaus and those employed in the various bureaus, it is very essential that this reclassification be had at the earliest moment, for under the present chaotic system and condition there is inefficiency everywhere, and it is constantly growing, because of the dissatisfaction existing in these various departments by reason of the inequalities in salaries.

The number of civil-service employees on December 1, 1920, was 86,000 in the District of Columbia. There were unclassified employees in the District in addition, in round numbers, of 4,000, making a total of 90,000. The peak reached during the war was 117,000 on the classified list and 8,000 on the unclassified list, making a total of 125,000. There has been a decrease from that peak to the number of 35,000. The decrease under this bill amounts to a total of 12,183, but there is an increase of 1,198, making a net decrease of 10,985 on the civil-service list and of about 1,000 upon the unclassified list.

Mr. BARKLEY. Can the gentleman say whether that 10,000 or 11,000 are in addition to the 35,000 that have already been let out or some of the positions duplicated?

Mr. WOOD of Indiana. I do not understand the question.

Mr. BARKLEY. Are these 10,000 or 11,000 which this bill drops in addition to the 35,000 that have already been released?

Mr. WOOD of Indiana. Yes; it will be in addition to that number. In order to make the proposition perfectly clear, the appropriations carried in this bill provide for the employment of 10,985 fewer upon the civil-service list than the current bill carries.

Mr. BARKLEY. I did not know whether it was in addition to those already let out or whether there had been many clerks let out for which there had been no reappointments and this bill contemplated leaving their places vacant which, in that case, might be a duplication of count.

Mr. WOOD of Indiana. No; if the recommendations in this bill are carried out, and no further appropriation is made from any of the other branches of the general committee, there will be 10,985 fewer people upon the list at the close of the fiscal year commencing on July 1 than there are now on that list. That would be in addition, if you please, to the 35,000 I have already mentioned.

Mr. BARKLEY. Are there as many clerks here now in the District of Columbia as are authorized by existing law?

Mr. WOOD of Indiana. Well, I think possibly there are. This is true, however: The departments have had and are having some difficulty in filling some of the lower-priced positions, and vacancies are constantly arising. The condition of the civil-service list is never the same for two days in succession in this District, as I am informed. They are going out and coming in constantly. The change in some of these departments amounts to as much as 40 per cent in a single year, and in some of them even a little more than that. That gives you some idea of the constantly vacillating and changing conditions of the civil-service roll.

Mr. BARKLEY. What was the number employed in the District of Columbia prior to the war?

Mr. WOOD of Indiana. Thirty-seven thousand.

Mr. BARKLEY. Then it is now more than twice what it was at that time?

Mr. WOOD of Indiana. Yes.

Mr. BARKLEY. What is the possibility, in the gentleman's opinion, of getting back to a prewar basis in the next three or four years?

Mr. WOOD of Indiana. I do not think it is possible for us to get back to the prewar basis. It has been the history of this Government since its beginning that as an aftermath of war itself the civil service of this Government has always been increased, and they have never gone back to the original normal that existed prior to the war. But I have this to state, that if you will take and consider in percentages the amount of reduction that has been made since the close of the great World War toward the normality that existed prior to the war you will find it has been greater than that accomplished after the Civil War and infinitely greater than that accomplished after the close of the Spanish-American War.

Here is the difficulty about doing the things that the gentleman from Kentucky has suggested: New activities spring up by reason of the war itself and for emergency war purposes. Many of them sprang up during this war. With hardly a single exception the gentlemen at the head of these different activities have appeared before the committee and tried to convince the committee that their activities are absolutely essential to be continued in peace times. We abolished some of them by the legislative bill at the last session, and we continue to abolish some of them here, and it will be the effort of this committee to abolish them still further until we have reduced them to the least possible minimum. And I will say this, that your committee had the assistance of not one single bureau in making a reduction of the employees in any division.

Mr. BARKLEY. I can appreciate how the war increased the personnel of the Army and of the War Department and of the Navy Department and the Treasury Department, and possibly the State Department, but what activities as the result of the war have made necessary increases in the Agricultural, Interior, Labor, and Commerce Departments?

Mr. WOOD of Indiana. These increases have not occurred in such a large degree in the Department of Agriculture or in the Interior Department in a general way, except as the natural growth goes, affected in some little degree by the activities of the war.

Mr. BARKLEY. Has the increase been abnormal in those departments over and above what the natural increase would have been if the war had not occurred?

Mr. WOOD of Indiana. No; I would not say that it has. Some of them have not increased at all, and of others I can say that their increases have not been greater than is natural.

Mr. BRIGGS. Mr. Chairman, will the gentleman yield?

Mr. WOOD of Indiana. Yes.

Mr. BRIGGS. In what departments have the greatest reductions in number of employees been made?

Mr. WOOD of Indiana. Well, I will say the greatest reduction has been made in the War Department, where we think it should have been made.

Mr. BRIGGS. To what extent has it been made? How many employees have been reduced in the War Department and how many in the Navy Department?

Mr. WOOD of Indiana. Well, I do not know that I have the data with me, but I think I can give the information desired. I will state in answer to the gentleman's question that the reductions are about as follows: In the Civil Service Commission, 42; in the State Department, 120; in the Bureau of War Risk Insurance, 2,862; in other Treasury Department offices, 1,345; in the War Department, 2,500; in the State, War, and Navy Building and temporary office buildings, 355; in the Navy Department, 350; in the Interior Department, 75; in the Bureau of the Census, 4,203; in the Bureau of Immigration, 12; in the subtreasuries, field employees, 319; making a total of 12,183.

Mr. PELL. Mr. Chairman, will the gentleman yield?

Mr. WOOD of Indiana. I yield.

Mr. PELL. The gentleman said there was about 40 per cent of changes each year in the civil service. Does that mean that there is a clerical turnover of 40 per cent?

Mr. WOOD of Indiana. In some departments there has been that much, and in one or two of the departments it has been even more than that.

Mr. PELL. Is not that extraordinarily high?

Mr. WOOD of Indiana. Yes. And one of the great reasons for that may be traced to the Government itself in demoralizing the labor of this country. It went on the outside and commenced competing with every class of business for the purpose of getting their employees away from them; and, as a consequence, they made it possible for their own clerks to enter into this competition, and they were constantly leaving the service to get better pay; and they were not only leaving one branch of the service but going into other branches of the service, which were competing with each other.

Mr. PELL. But is not that 40 per cent a great deal higher than in the ordinary employment of clerks in business?

Mr. WOOD of Indiana. There is no doubt about that; and it is a great deal higher than it will be in the United States Government hereafter because of the fact that the army of the unemployed are now furnishing a quota that is coming back to the Government. Many of those that left their places in the Government service to take those exceptional high salaries are now coming back to the doors of the Government and asking for reemployment. When we come back to normal in reference to the labor of this country we will get back to nearly the natural normal in the Government turnover and the change then will not nearly equal 40 per cent.

Mr. SNELL. Mr. Chairman, will the gentleman yield?

Mr. WOOD of Indiana. Certainly.

Mr. SNELL. In listening to the statements that the gentleman has made and the questions that have been propounded to him in connection with them, I have been very much interested to know whether we are going to accomplish something in this bill whereby we will get a real lessening of the number, one that is appreciable.

Mr. WOOD of Indiana. Well, I think that if the gentleman and every other gentleman in this House who is interested in the reduction in the cost of governmental expenses will stand by this committee in its effort to reduce these employees, he will find that a very material reduction has been made in this bill. But here is what happened last year, and it will happen again in the consideration of this bill: Before our committee everyone appearing in behalf of these bureaus readily accorded with the policy of the committee in trying to reduce and retrench governmental expenditures. They all admitted that it should be done, admitted that there were too many employees here, but each contended that the reduction should be made in the other man's yard, and that his own establishment should not be affected. And on this floor, in response to solicitations from these men who have been cut from this bill, gentlemen will be found offering all kinds of amendments seeking to put back every one of these omitted employees. So it is up to this House to determine whether we are going to have a substantial reduction in this army of employees.

Mr. SNELL. I want to say to the gentleman that I am going to cooperate with him to the fullest extent.

Mr. WOOD of Indiana. I am glad of it.

Mr. SNELL. I notice that there are several provisions in the bill for temporary employees. Why is it not possible at this time to cut them out absolutely?

Mr. WOOD of Indiana. This is the reason that actuated the committee: We did wipe out some of them, but it is impossible as yet to determine how much of temporary employment is essential in order to close up the aftermath of the war. The gentleman will remember that when we made the appropriation for the buildings down in Potomac Park, it was then the estimate of gentlemen in a position to know that it would require 10 years after the close of the war to get back to normal, and that during all that time this extra space would be needed for the purpose of closing up these war activities. So in like proportion it is impossible for us to say now, and it is even impossible for the heads of these bureaus themselves to say from one year's end to another how many of these temporary employees they may need, and this is the reason why in our opinion we should not increase the statutory positions. Many of these departments asked the committee that every one of their temporary employees be placed upon the statutory list. If you establish a statutory position, it is a fixture, and it is pretty hard to dispense with it, and they can always find some reason for keeping it; while, on the other hand, if it is only temporary and not statutory, it will be dispensed with when the necessity has ceased to exist.

Mr. SNELL. A year ago, when we were considering this same bill, we thought that we were cutting the appropriation so that there would be a very decided decrease in the number of employees in the District of Columbia.

Mr. WOOD of Indiana. There was.

Mr. SNELL. Not anything like the number that the Congress and the country at large expected.

Mr. WOOD of Indiana. If the gentleman paid attention to the figures I gave a while ago——

Mr. SNELL. I tried to.

Mr. WOOD of Indiana. The bill that we presented from our committee last year dissociated about 40,000 employees from the pay roll.

Mr. SNELL. There have not been that many reductions.

Mr. WOOD of Indiana. But by reason of the perseverance of those gentlemen who were desirous and successful in their efforts before other committees they placed a number of them back, so that the total reduction amounted to about 35,000.

Mr. SNELL. I am entirely in sympathy with the gentleman when he says he wants to dissociate 40,000 employees from the pay roll. Now, what I want to get at is, how to accomplish that.

Mr. WOOD of Indiana. The only way to accomplish it is by cutting as we did, by reducing appropriations. We had to use our best judgment, without any help from these gentlemen as to their necessities, most of them contending that they needed all they had and were asking for more. We took over $23,000,000 from submitted requests.

Mr. SNELL. Would any harm come to the Government or to the efficiency of the work being done in Washington if you automatically and drastically cut out all these temporary employees?

Mr. WOOD of Indiana. Yes; especially in the Internal Revenue Department there is a necessity for a very largely increased force, and I will explain that.

Mr. SNELL. I should expect that there would be in that department; but in the other departments, the War and Navy Departments and others that had a great number of war-time employees, it seems as if it was time to put the ax right in and cut them all off.

Mr. WOOD of Indiana. I will state to the gentleman that as far as the War Department is concerned we are making a very near approach to what will perhaps become their normal. We thought it wise in some of the other departments still to continue the appropriation for the temporary employees, because of the desire of the committee that they should not be fortified with the argument that positions have been made statutory, and I think we would undoubtedly cripple them if they were all taken away from them.

Mr. SNELL. How many less employees are there in the District of Columbia to-day than there were when the armistice was signed?

Mr. WOOD of Indiana. Thirty-five thousand less in round numbers.

Mr. SNELL. Is that the last official report?

Mr. WOOD of Indiana. Yes.

Mr. SNELL. I understood there were nearly 90,000 now and only 110,000 or 111,000 at the time of the armistice.

Mr. WOOD of Indiana. There were 117,000 at the time the armistice was signed, and on the 1st day of December there were 86,000 on the classified list and 4,000 on the unclassified list, making in round numbers 90,000.

Mr. SNELL. Then there are 90,000 at the present time?

Mr. WOOD of Indiana. Practically.

Mr. SNELL. How many do you expect will be actually dissociated when you get through with the present appropriation bill?

Mr. WOOD of Indiana. If it is permitted to go through as reported, 10,985.

Mr. SNELL. Is that the greatest number the Committee on Appropriations think it is possible to dissociate at the present time?

Mr. WOOD of Indiana. That is the greatest number that we felt we were justified in reducing, in view of the information we had, or the want of information.

This demonstrates the absolute necessity of having a budget system where it will be somebody's business to know what the situation is. The way it is now, we hear only one side of the case, the other side being absolutely voiceless. Nobody who appeared before the committee was in opposition to the granting of these increases. There is no way of finding out—we have no one whose business it is to find out—and it is only by prying and by inference from admissions made, or by facts which the committee thinks have been kept from it, that we are able to make these decreases.

Mr. SNELL. Would not any budget commission have to get the information from the same source?

Mr. WOOD of Indiana. If it is a properly organized budget commission with the proper kind of a comptroller, not the kind of a comptroller who must respond to the Executive who appoints him, but one who will respond to the Congress who wants the information, we can get the information then readily.

Mr. SNELL. The gentleman is sure that we will have at least 10,000 less next year.

Mr. WOOD of Indiana. If the House will stand by this bill, and they do not do anything to it at the other end of the Capitol, yes.

Mr. BRIGGS. Mr. Chairman, will the gentleman yield?

Mr. WOOD of Indiana. Yes.

Mr. BRIGGS. The gentleman gave me a moment ago some statistics showing the decreases of employees under the proposed bill. Has the gentleman a list of the increases, in the bureaus of departments in which they have been granted, of employees, or have there been any such decreases under this bill?

Mr. WOOD of Indiana. Yes; and I will give them to the gentleman before I get through.

Mr. BARKLEY. Mr. Chairman, will the gentleman yield?

Mr. WOOD of Indiana. Yes.

Mr. BARKLEY. Is the gentleman going to discuss the question of the elimination of the temporary buildings constructed in Washington during the war? I do not want to interrupt him now if he is going to discuss that question.

Mr. WOOD of Indiana. I prefer to do it now for fear I shall forget about it.

Mr. BARKLEY. Of course, we all understand that during the war we had to construct here in Washington a lot of temporary buildings, a thing which was not done, however, to any

large extent in any other great capital of the world. In the construction of these temporary buildings we have practically ruined every park in the city. One can not see the Lincoln Memorial now unless he gets behind it. Various other public parks in the District of Columbia have been mutilated necessarily during the war by the construction of these temporary buildings. What is the plan of the various departments and of the committee and of the Government with reference to the ultimate elimination of all of these temporary buildings that are now standing in the public parks of the city?

Mr. WOOD of Indiana. I understand it will be the plan of the committee having these buildings in charge, the committee that has jurisdiction over them, to dispense with them and remove them as rapidly as possible consistent with the demands of the Government. Here is what we are trying to have done in the meantime. We are expending millions and millions of dollars every year in paying rent.

Mr. BRIGGS. How much is carried in this bill for rents outside of Government buildings?

Mr. WOOD of Indiana. I can not state that, but I shall do so during the consideration of the bill under the 5-minute rule. It is the policy of the committee to force these gentlemen as much as possible into these temporary buildings that were erected in order to save rent during the period of time that they are permitted to remain. This bill provides for tearing down of two of the group of five of these buildings, down near the foot of Eighteenth Street. In this connection I wish to call the attention of the Committee on Reorganization to the fact that there is an army of men employed in looking after these buildings, not only the temporary buildings but the old buildings, the ones that will still be here when the temporary buildings are all gone.

Every one of these buildings has a superintendent, and he has a force of laboring men varying from a few in number to hundreds. He has all kinds of bosses and subbosses in the plumbing department, in the painting department, in the carpentering department. What should be done is to do the businesslike thing, and that is to have an organization for the purpose of taking care of these Government buildings, with an executive head whose business it is to take care of the business. That would result in the saving of millions of dollars that are now being wasted because of the haphazard manner in which the buildings are attended to.

Mr. BARKLEY. Does the gentleman know what is ultimately contemplated to be done with the buildings known as the Munitions Building and another alongside of it used by the Navy and the Army? When we provided during the war for the construction of these buildings, it is my understanding, and I think it was the understanding of Congress, that they were all to be of a temporary character, later to be torn down. In the construction of the buildings to which I have referred down in the Mall, between here and the Lincoln Memorial, those particular ones were not of a temporary character, but were built of concrete and steel, as if the departments having charge of them intended them as permanent buildings.

Mr. WOOD of Indiana. The gentleman has reference to the buildings, one of which is for the Army and the other the Navy?

Mr. BARKLEY. Yes.

Mr. WOOD of Indiana. If my recollection serves me right, remembering the debate at that time, it was to the effect that it would require 10 years after this war was over to close up the odds and ends, and that during that space of time these buildings would be needed by these various activities, it being the intention of Congress to reduce the force from these temporary buildings by segregating a number of employees of other activities in these two buildings.

The trouble in doing this is that every one of the departments of the Navy in the Navy Building and every one of the bureaus of the Army Building are jealous of keeping possession of the space which they now have, each of them contending that it may depend upon the action of Congress with reference to the size of the Army or the Navy as to whether the space they have would be sufficient. It has been with the greatest difficulty that we have been able to get any space there for the purpose of taking in any activities other than those of either the War or the Navy.

Mr. BARKLEY. I want to register my objection in that connection. If Congress had anticipated that any part of the temporary structures we thought necessary during the war would be made permanent, I do not think that Congress would ever have consented to the erection of permanent buildings in Potomac Park. If the department has taken advantage of the temporary construction and has marred the beauty of that park by the construction of permanent buildings, then I do not believe that it has done anything in conformance with the purpose of Congress.

Mr. WOOD of Indiana. I agree with the gentleman, not only with respect to the buildings, but I think that if Congress had known what was going to be done with a lot of other money that we appropriated we would have been slow to appropriate it.

Mr. BYRNS of Tennessee. Mr. Chairman, the gentleman will recall that in the construction of the temporary buildings those down in Seaton Park and on the Smithsonian Grounds are not of an expensive character, but there are two very expensive buildings erected in Potomac Park, as the gentleman from Kentucky [Mr. BARKLEY] said.

As I recall, the statement was made to Congress that these buildings cost something like $4,000,000. These buildings could be maintained, if necessary, for 20 or 25 years. Now, I want to ask the gentleman this question. If there was a provision to do away with these particular buildings in Potomac Park at this time during the next fiscal year, would it not cost the Government hundreds of thousands of dollars to rent quarters to take care of the clerks?

Mr. WOOD of Indiana. It would be an absolute impossibility to find space without renting additional buildings. Here is what will have to be done: We will either have to continue these temporary buildings until the Government acquires more buildings to house its activities or go out and rent more buildings on the outside, as we have been doing.

Mr. BYRNS of Tennessee. The gentleman recalls that before we entered the war with the force that is maintained in peace times we were spending something like $700,000 or $800,000 in rents?

Mr. WOOD of Indiana. Yes; and we are spending more than that in addition to the temporary buildings.

Mr. BYRNS of Tennessee. My own idea, if the gentleman will permit me in his time, is that we ought not to dispense with these buildings, which are now considered up-to-date and proper office buildings, until Congress gets in a position and the Treasury gets in a position so that the Government can put up its own buildings and not submit to 10, 15, or 20 per cent interest charged by landlords.

Mr. BARKLEY. I agree with the gentleman on that, but I think it is extremely unfortunate these temporary buildings are located where they are instead of some place where they will not interfere with the parks.

Mr. WOOD of Indiana. I now yield to the gentleman from Kansas [Mr. WHITE].

Mr. WHITE of Kansas. I would like to ask the gentleman a question on the subject we have been discussing, brought out in the discussion with reference to the program for the creation of the joint committee of the House and Senate on the reorganization of the executive departments. The gentleman will remember it was then stated that a saving might be accomplished of three to five million dollars per annum. I know the gentleman's experience is very extensive, and I would like to know what his judgment is in reference to this. If that program should be carried out, would it not assist greatly in the elimination of the duplication, which every Member of Congress, I believe, has stated, at least many of them, is the source of the greatest abuse in reference to extravagant expenditures of the Government?

Mr. WOOD of Indiana. I do not think there is any question about it.

Mr. GOODYKOONTZ. Will the gentleman yield?

Mr. WOOD of Indiana. I will.

Mr. GOODYKOONTZ. Mr. Chairman, some time ago the capitol of the State of West Virginia was entirely destroyed by fire, and in that fire went out of existence all furniture, fixtures, and equipment. I observe in the various buildings equipped here in Washington there were thousands of typewriters and roller-top desks, filing cases, furniture, and so forth. Can the gentleman tell us whether or not these departments are going to let loose of it; and if so, at any time soon?

Mr. WOOD of Indiana. They will not let loose of them except when compelled to do so. We provided in the last legislative bill that it shall be unlawful for the Government to purchase any typewriter until the surplus on hand can be utilized by the Government, and we gave direct authority to the Secretary of the Treasury of the United States to make requisition on the War Department for the purpose of supplying the typewriters, and it is to be done in that way. In each individual instance where appeals have been made for trucks and automobiles to do the business of the Government we have made a direct order upon the War Department for the purpose of transferring those, and it seems that is the only way we can get the War Department to declare any portion of those typewriters or automobiles a surplus, notwithstanding the fact there are thousands and thousands of them rotting away and men employed at high salaries for the purpose of watching them rot away.

Mr. EVANS of Nebraska. Will the gentleman yield?

Mr. WOOD of Indiana. I will.

Mr. EVANS of Nebraska. During the consideration of the bill last session there was a statement in substance that seven or eight thousand clerks were employed in filing away and taking charge of the papers sent in from the various States relating to the draft. Can the gentleman tell me whether or not those employees are still carried over in this appropriation bill?

Mr. WOOD of Indiana. They are not carried under this appropriation. We have reached the stage where that work will be completed during the present fiscal year, and no further appropriations will be made for that purpose.

Mr. EVANS of Nebraska. That will eliminate something like 7,000 or 8,000 clerks?

Mr. WOOD of Indiana. No; it will not eliminate that many. The gentleman is misinformed as to the number employed for that purpose.

Mr. EVANS of Nebraska. That is the number stated on the floor of the House here.

Mr. WOOD of Indiana. There are less than 2,000 in that specific work, and they will be eliminated.

Mr. EVANS of Nebraska. Then there are 2,000, which makes a reduction of the regular employees in other lines but 8,000?

Mr. WOOD of Indiana. Yes; that is correct. Now, if I may proceed a little further. As I stated awhile ago, with the new activities which sprung up by reason of the war, many of them continuing more or less permanent for a certain length of time and many of them continuing absolutely permanent for all time, they increased the civil-service roll. In 1916 this bill carried $36,910,799.75. This bill carries $112,705,748.75, or an excess in this bill over the bill of 1916 of $75,794,949.

Mr. BLANTON. Will the genteman yield right there?

Mr. WOOD of Indiana. I will.

Mr. BLANTON. This is the third supply bill. The last one, which we passed Saturday, the Post Office appropriation bill, was an increase of $69,000,000 and a little more. How much did the first supply bill increase, does the gentleman know?

Mr. WOOD of Indiana. I do not know.

Mr. BLANTON. Well, it was quite a number of million.

Mr. WOOD of Indiana. If the gentleman will watch this bill, he will find no such ground for objection.

Mr. BLANTON. This $75,000,000 increase, as the gentleman stated——

Mr. WOOD of Indiana. You mean as compared with 1916.

Mr. BLANTON. How about it as compared with the last appropriation?

Mr. WOOD of Indiana. It is $20,000,000 less.

Mr. BLANTON. Twenty million dollars?

Mr. WOOD of Indiana. Yes.

Mr. BLANTON. As compared with preceding the war, it is $75,000,000?

Mr. WOOD of Indiana. As compared with 1916, it is an increase of $75,000,000, and I desire to call the attention of the committee as to what this increase is composed of.

Now, the handling of war loans recommended by this bill is $7,250,000, and the Treasury Department asks us to appropriate $10,000,000 for this purpose. The gentleman will remember that when we passed these various Liberty loan acts authorizing the sale of bonds and the acts authorizing the sale of Treasury certificates we provided in some of these bills that one-fifth of 1 per cent should be set apart for the purpose of defraying the expense of making these loans and one-tenth of 1 per cent in reference to the sale of Treasury notes. Now, after all these Liberty loans thus far made and all the Treasury notes thus far sold, and the work had been accomplished, there was $27,000,000 or a little more still remaining in the hands of the Treasury unexpended. In the last bill we repealed the law with reference to the use of these moneys and ordered them covered back into the Treasury of the United States.

Now, it becomes apparent that we of necessity must continue to issue these short-time notes until such time as the moneys derived from taxation will equal our governmental expenditures. And unless we reduce the cost of governmental expenditures, that time seems to be far distant, and as long as this necessity continues there will be necessity for the expenditure of money in making these sales.

The Federal reserve banks of the United States, acting as fiscal agents for the Government, are largely the beneficiaries of this expenditure and are getting a great portion of it for doing their work. We reduced the appropriation asked for from $10,000,000 to $7,245,000. Now, that is one of the items that makes up this increase and which did not exist before the war.

Mr. MANN of Illinois. Does that $7,000,000, or any considerable portion of it, pay the expenses of issuing and selling the temporary certificates of the Government?

Mr. WOOD of Indiana. Yes; a considerable portion of it does. They sell these bonds or sell these short-time certificates, and it is going on constantly from month to month through the Federal reserve banks of this country, and every Federal reserve bank has got a great number of employees that do nothing else except act as fiscal agents of the Government in disposing of these securities.

Mr. MANN of Illinois. Seven million dollars, or half of it, is a very considerable sum of money to pay employees. These temporary certificates, while sold to the Federal reserve banks, are meant as allotments to the banks. The banks are told to buy them, and they buy them. There is no solicitation.

Mr. WOOD of Indiana. And the hearings disclose a large part of this sum goes for that purpose. We believe we were justified in limiting it to the amount we have.

The War Risk Insurance is another item carried in this bill, amounting to $7,145,400; that did not exist before the war.

The Internal Revenue Bureau, for the purpose of collecting taxes, is an activity we did not have before the war, and amounts to $40,246,000. The enforcement of the prohibition act, recommended by this bill, is $6,500,000. Other fiscal activities in the Treasury Department created during the war amount to $4,000,000; or a total of $65,141,400, which, if taken from the excess carried in this bill, compared with the bill of 1916, leaves an increase of approximately $10,000,000 for the activities that were carried in the bill before the war and carried in it now. So we think we have made a pretty good effort toward getting back to where we were before the war.

The total appropriations of 1921 for the purposes carried in this bill were $118,457,210.11. There is recommended by this bill $112,705,748.75, or a decrease of $5,751,461.36. The amount recommended by this bill is $23,746,886.22 less than the estimates submitted by the various departments to your committee.

There is another item that I wish to call attention to, and about which there may be some contrariety of opinion in the discussion of this measure. We have made a change in the bonus allowed to the clerical forces in the District of Columbia. There is a law that provides that the Navy Department shall pay to those engaged in the navy yards of the country salaries equal to those received for like services in the several communities where they may be employed. There is another law that requires the same sort of thing to be done with reference to fixing the salaries of those engaged in the arsenals. Each of these classes, both the navy-yard employees and the arsenal employees, have heretofore been receiving the bonus of $240 in addition to their salaries.

We discovered by reason of these adjudications that have been made from time to time fixing their salaries that these men working in the navy yards and arsenals have been beneficiaries of these continuous increases in salaries and wages paid throughout the country and that in addition they are receiving a bonus of $240, which is absolutely unfair to the Treasury of the United States, absolutely unfair to every other employee engaged in the service of the Government of the United States. So in justice to these other employees, in justice to the Treasury of the United States, we have eliminated all those engaged in the navy yards and in the arsenals from a participation in the bonus carried in this bill, which will result in a saving to the Government of the United States of $15,000,000 which, if added to the difference between the amount recommended in this bill and the amount of the appropriation for the current fiscal year, makes the saving recommended by this proposed legislation, $20,751,461.

Now, I stated a while ago we made increases aggregating somewhere in the neighborhood of 1,200 people. One thousand one hundred and twenty-five of these are necessitated in the Internal Revenue Bureau.

And for the purpose of paying the additional employees which this bill carries, an added appropriation of practically ten millions as compared with the appropriation for the like service in the bill for the current year. I wish to explain to the committee the necessity for this increase in the personnel and this increased appropriation. It became apparent to the Internal Revenue Bureau that unless there was an additional force employed for the purpose of auditing the accounts and ferreting out the moneys belonging to the United States that have been omitted during the last two or three years it was going to result in a very great loss to the Government, and under the recommendation of Mr. Roper, followed by Mr. Williams, an undertaking was begun in the Internal Revenue Bureau for the purpose of recovering these omitted sums that would be barred by the statute of limitations in three years.

For the purpose of carrying out that work this organization has already been operating, and a deficiency of $9,000,000 is submitted to pay for the force now employed. As a result, in

the opinion of those in the Internal Revenue Bureau, there will be turned into the Treasury of the United States $1,500,000,000 that would not otherwise have been received. As a matter of fact, they are turning in more than $35,000,000 a month, so that the prophecy of the Commissioner of Internal Revenue is in a fair way to be carried out by fulfillment.

Mr. McLAUGHLIN of Michigan. Mr. Chairman, will the gentleman yield?

Mr. WOOD of Indiana. Certainly.

Mr. McLAUGHLIN of Michigan. I think the gentleman from Indiana is talking about the recovery of taxes that have not been paid and that should have been paid and which have been withheld?

Mr. WOOD of Indiana. Yes.

Mr. McLAUGHLIN of Michigan. Is there a plan in vogue in the Treasury Department by which employees are paid a percentage of the collections they make in this line?

Mr. WOOD of Indiana. No; if there is it has not come to the knowledge of this committee. It would be absolutely unlawful.

Mr. McLAUGHLIN of Michigan. Is there not some force employed by the Treasury Department where percentages are paid for the discovery of these discrepancies, and the money finally comes into the Treasury of the United States and upon it a percentage is paid to somebody?

Mr. WOOD of Indiana. If there is any such scheme it has not been brought to my attention or to the attention of any member of the committee, to my knowledge.

Mr. McLAUGHLIN of Michigan. I am told that such a plan as that was in vogue.

Mr. WOOD of Indiana. Some years ago we were told that some of the employees of the Internal Revenue Bureau, who had become proficient in the auditing of these accounts, were also interested with some outside gentlemen in bringing notice of the fact to those who were entitled to repayment for money erroneously paid in collection, and that those people were making all kinds of contracts for a share or a portion of the money that was to be paid back. I understand that action was taken that resulted in the stopping of that practice and stricter surveillance over that branch of the service. But I do not think that there could be a legal obligation for the payment of any percentage of money recovered for the Treasury Department. Such a scheme would be unlawful.

Mr. McLAUGHLIN of Michigan. It seems difficult for the Treasury to recover taxes in some cases, but it is infinitely more trouble for those who have overpaid to get their money back than for the Government to get it in the first place. It is almost impossible to have these matters considered with expedition. They are delayed and delayed, and they pass from one hand to another in cases that seem entirely clear. They just refuse to give consideration to them, and keep the money in the Treasury.

Mr. WOOD of Indiana. There is no doubt about that, and that is one of the reasons that induced the committee to increase this appropriation as much as it did, so that these millions of dollars which are due to the people of the United States, who have paid more than they should have paid, may be refunded in some reasonable length of time. The excuse now being offered by the Treasury Department is that they have not sufficient force to properly audit these cases. The truth is that before one auditor passes upon them or completes the job he gets out or is transferred somewhere else and another auditor comes in, and you can not get the same opinion from any two of these people who are thus employed.

Mr. McLAUGHLIN of Michigan. I understand that this percentage method has been followed and that as an excuse for the delay in repaying this money to the taxpayers I was told that somebody got a percentage, and of course he did not want to have any of the money slip through his fingers.

Mr. MANN of Illinois. Mr. Chairman, will the gentleman yield?

Mr. WOOD of Indiana. Yes.

Mr. MANN of Illinois. The gentleman spoke of how difficult it was to get back the money that was paid in erroneously. Of course, I have no doubt that is often the case. But that was not my own personal experience. The Treasury Department audited my income returns for a number of years and, as I thought, wasted a lot of valuable time in doing it, which they might have more profitably expended in examining somebody else's returns. I still think that, but at the end of it all they sent me a notice that there was a dollar or so due me, which I could get by making the proper certificate. As I thought it would cost me more and the Government more to get the money back than it was worth, either to me or to the Government, I threw the slip away. But they certainly were very energetic in finding out that the Government owed me a dollar, and would have been equally prompt, as they said they would be, in paying it if I made the application. It struck me at the time that they were very prompt, but also very prodigal.

Mr. FAIRFIELD. Mr. Chairman, will the gentleman yield?

Mr. WOOD of Indiana. I yield to the gentleman.

Mr. FAIRFIELD. Through a constituent of mine I had some little experience in a matter of that kind. I think the firm had paid something like $3,275 excess. It was passed upon by the auditor and allowed, and then it took six months to get it out of the Treasury.

Mr. WOOD of Indiana. They were pretty lucky to get it in that time.

The CHAIRMAN. The time of the gentleman from Indiana [Mr. WOOD] has expired.

Mr. BYRNS of Tennessee. Mr. Chairman, I ask unanimous consent that the gentleman may proceed for one hour.

The CHAIRMAN. Is there objection to the gentleman's request?

There was no objection.

Mr. BURDICK. Mr. Chairman, will the gentleman yield?

Mr. WOOD of Indiana. Yes.

Mr. BURDICK. Did I understand the gentleman to say that these employees at arsenals and navy yards whose wages were fixed by wage boards were entitled to $240 bonus in addition to what they would receive by having their wages fixed according to the standard of wages prevailing in like trades in their neighborhood?

Mr. WOOD of Indiana. Yes; they are receiving it under the present law.

Mr. BURDICK. Will the gentleman tell me where that information comes from?

Mr. WOOD of Indiana. They are receiving it under the law, under the bill for the current year.

Mr. BURDICK. But I am informed that these wage boards in fixing the wage have taken into consideration that $240.

Mr. WOOD of Indiana. The trouble is they do not seem to have done it. I have it from the Secretary of the Navy himself, as the result of a letter addressed to each one of his bureaus and to those who were charged with this adjustment, that in consequence of their adjustment they are paying these men an amount equal to and more than the bonus in excess of what they are receiving for the same service rendered by like employees employed in other establishments.

Mr. BURDICK. That is what I wanted to find out, because my information comes from the representatives of those employees, who state the contrary. I wanted to ascertain which was right.

Mr. WOOD of Indiana. The hearings disclose the exact situation, as well as the admission of the Secretary of the Navy, so far as those employed in the Navy Department are concerned.

Those in charge of the Volstead Prohibition Act requested an appropriation of $7,500,000. The current law carries for this purpose $5,500,000. Your committee, after careful deliberation, concluded that they could get along with $6,500,000, which is an increase of $1,000,000 more than the current bill carries, and a decrease of $1,000,000 as compared with the request made by the Internal Revenue Bureau for this purpose. And I wish to call the attention of this committee to the situation presented by the hearings in this case. In my opinion, and I think in the opinion of every man who is cognizant of the facts, we made a very great mistake when we lodged the responsibility for the enforcement of this act in the Department of Internal Revenue. It should have been in the Department of Justice, for it is a law-enforcement proposition. All that the Internal Revenue Bureau has to do with it is a mere bagatelle, almost negligible—the collection of the taxes that may be assessed and would be assessed or should be assessed upon liquor illicitly sold. It should be the duty of the Department of Justice to report this to the Treasury Department. Now, here is the result of this inconsistent proposition: The enforcement of the Volstead Act is a farce in every locality in this country. You can pick up any newspaper and be convinced of this by what is happening here, there, and yonder, that the Volstead Act is not being properly enforced.

Mr. BLANTON. Right there will the gentleman yield?

Mr. WOOD of Indiana. I yield to the gentleman.

Mr. BLANTON. Right in the face of that I want to call the attention of the gentleman from Indiana to the fact that the Attorney General came before the Committee on Appropriations and assured them that it would be impossible for him to enforce this law unless they gave him at least $1,000,000 more than they have recommended to be given to him, and they have refused absolutely to give him the money that he required.

Mr. WOOD of Indiana. Here is the trouble about this thing: It is another demonstration of the fact that what is everybody's business proves to be nobody's business. There is a conflict of

authority everywhere. You can go into every goodly sized community and you will find law-enforcement officers there from the Department of Justice. You will likewise find law-enforcement officers there from the Internal Revenue Bureau, constantly quarreling and bickering with each other as to who has the superior authority in that community, constantly quarreling and bickering with each other as to whose duty it is to do this thing or that thing or the other thing. There is no cooperation between them, and this has been admitted before the committee, not only by those who are connected with the enforcement of this law in the Internal Revenue Bureau but likewise admitted by those connected with the Department of Justice; and it has gone so far that in many sections of this country those who are connected with the Department of Justice have interfered with the enforcement of this law by those who are charged with its enforcement in the Internal Revenue Bureau. Now, that condition will continue to exist as long as there is this divided authority, and as long as it exists we may expect the enforcement of this law to continue to be the farce that it is now.

Everybody is interested in law enforcement. Everybody should be interested in the enforcement of the Volstead Act, and everybody should be interested not only in its being enforced as it should be but in reducing to the minimum the expenditure in enforcing it. It is not being enforced at all as it should be, and that is admitted by everybody connected with its enforcement, admitted by every friend of the Volstead Act who has given any study to this proposition at all; and that it will so continue is perfectly apparent and patent as long as this authority is thus divided. All the responsibility for the enforcement of the act should be placed in the Department of Justice, so that we will not have the future spectacle of those connected with the Department of Justice interfering with the officers in the Internal Revenue Bureau. And, being charged with the full responsibility for its enforcement, they can no longer find an excuse for not enforcing it.

Mr. STEVENSON. Will the gentleman yield?

Mr. WOOD of Indiana. I yield to the gentleman from South Carolina.

Mr. STEVENSON. As a matter of fact, was it not placed in the Internal Revenue Bureau because that was the department that had always had charge of the collection of the taxes from the manufacturers of liquor?

Mr. WOOD of Indiana. I do not know what actuated the committee that framed the law.

Mr. STEVENSON. In support of the gentleman's position I will state that recently the circuit court of appeals for the fourth circuit, at Richmond, held that the Volstead Act has repealed all acts for collecting revenue from manufacturers of liquor. In other words, a man was indicted for making liquor without having obtained a license, without having paid the tax on it, and on the hearing in the court below it was held that there was no longer any authority to collect the taxes; that they had all been swept away by the Volstead Act; and that decision has been sustained by the circuit court of appeals. Therefore there is no longer any excuse for the Internal-Revenue Department having charge of the administration of this law. It strikes me that is the logical conclusion from that decision, which turns loose some 500 people who were indicted under the law for manufacturing liquor without having obtained a license from the United States in South Carolina alone.

Mr. VOLSTEAD. Mr. Chairman, will the gentleman yield?

Mr. WOOD of Indiana. Yes.

Mr. VOLSTEAD. The fact is that over $100,000,000 have been collected during this last year on liquor despite all claims to the contrary. That money has been collected and it is in the Treasury now. Besides that, $20,000,000 have been levied as taxes for violation of the law. That is undisputed. This proposition of turning the matter over to the Attorney General would be contrary to the experience that we have had in this country for the last 50 years. Every law of this kind has been turned over either to the Revenue Department, the Agriculture Department, or some other department of that kind for the purpose of detecting the offenses against the law and then we have asked the Attorney General to prosecute. We have followed that policy, a policy that has been in force in this Government all these years. It is true that the enforcement of the Volstead Act has been more or less a failure, but it has been a failure in the 10 States where we have no State law to enforce prohibition. It is a failure there in a very large measure, but we hope at least that during this winter those States will do something toward passing laws for the purpose of enforcing it. It is just as much their duty as it is the duty of the Federal Government, and if you put the enforcement of the law in the hands of the Attorney General, what would you have in some of those States? You would have absolutely no enforcement at all.

Mr. STEVENSON. Mr. Chairman, will the gentleman yield?

Mr. WOOD of Indiana. Yes.

Mr. STEVENSON. In reference to what has been stated in respect to the tax that has been collected, that was on liquor manufactured prior to the passage of the Volstead Act.

Mr. VOLSTEAD. It is liquor that is passing out of the warehouses now into the trade.

Mr. STEVENSON. Mr. Chairman, the point I make is that with the passage of the Volstead Act the penalties for manufacturing liquor without paying the license tax, the internal-revenue tax, was swept away, because we swept away the right to make liquor. That is the decision of the court of appeals. It is only on liquor that was in existence then that these taxes have been collected, or possibly they have bluffed out some since that time, but the circuit court of appeals has so decided, and that decision is on its way to the Supreme Court. According to that decision a man can no longer be indicted for manufacturing liquor without obtaining a license, because since the passage of the Volstead Act there is no power to either grant a license or collect a tax on liquor manufactured without a license or to indict men for not complying with the internal-revenue law.

Mr. VOLSTEAD. Mr. Chairman, will the gentleman yield?

Mr. WALSH. Mr. Chairman, does the gentleman yield?

The CHAIRMAN (Mr. FOCHT). To whom does the gentleman yield?

Mr. WOOD of Indiana. I yield to the gentleman from Massachusetts.

Mr. WALSH. I would like to ask the gentleman from South Carolina if that court is not in serious danger of being impeached for bringing in such a decision?

Mr. STEVENSON. The gentleman is on the committee that would bring in articles of impeachment. He may have more knowledge about that than I have. I have heard no rumor to that effect.

Mr. WALSH. But the gentleman is not on the side of the question that the gentleman from South Carolina has so ably heretofore defended and advocated.

Mr. VOLSTEAD. Mr. Chairman, will the gentleman yield?

Mr. WOOD of Indiana. Yes.

Mr. VOLSTEAD. Let me call attention to this fact, that 4,000,000 gallons are now being sold through the regular channels each month for medical purposes. That is subject to the payment of a tax of $2.20, I think it is, a gallon. No one contends for a moment that that is not subject to a tax, and every drop of liquor that leaves the warehouse must pay that tax and must be handled, or ought to be handled, by the Internal Revenue Department. The Internal Revenue Department is expected to follow that liquor through the drug store to the ultimate purchaser. The case the gentleman from South Carolina speaks of is one that has been pending, it is true; there are decisions on both sides as to whether you can impose a tax upon an illegal transaction. A number of courts have held that you can, and I can not see why a man should escape the payment of $6.40 a gallon, the beverage tax, simply because he gets it illegally, and I do not believe the Supreme Court will ever sustain any such proposition as that. The fact that a man gets liquor out unlawfully and thereby escapes taxation is ridiculous. Section 35 of the prohibition act expressly provides that he shall pay that tax. The contention is that that portion of the act is unconstitutional. Some courts may hold it unconstitutional, but I do not believe the Supreme Court will ever do it.

Mr. WALSH. Mr. Chairman, will the gentleman yield?

Mr. WOOD of Indiana. Yes.

Mr. WALSH. Did I understand the gentleman from Minnesota [Mr. VOLSTEAD] to contend that it is the duty of the States to enact identic laws with the Volstead Act?

Mr. VOLSTEAD. I did not say identical, but it is their duty to enforce prohibition, just as it is the duty of the Federal Government to enforce it.

Mr. WALSH. The gentleman stated that there were some 10 States that did not have any statutes and that it was their duty to enforce the United States statutes.

Mr. VOLSTEAD. Certainly.

Mr. WALSH. How does the gentleman construe it to be the duty of the States to enact laws?

Mr. VOLSTEAD. Every person in any section of this country who takes an oath as a member of a legislature swears to support not only the constitution of the State but the Constitution of the United States.

Mr. WALSH. He is not doing that, if his State does not enact a law?

Mr. VOLSTEAD. If the State does not enact a law and try to carry it out in good faith, it is not doing its duty.

Mr. WALSH. That only shows the length to which we are going.

Mr. VOLSTEAD. Yes; and Massachusetts has not any law, but Massachusetts, I hope, will pass a law some of these days and get in line.

Mr. WALSH. It will not make itself ridiculous by passing any such law as this.

Mr. STEVENSON. Mr. Chairman, will the gentleman yield?

Mr. WOOD of Indiana. Yes.

Mr. STEVENSON. The gentleman does not mean to say that the circuit court of appeals is wet? The gentleman from Minnesota speaks of a "wet" court. The presiding judge is Judge Pritchard, the great leader of prohibition in the South, the greatest Republican there is in my section of the world, and all the members of the court are dry as dust. I do not want the gentleman from Minnesota to impugn that court by saying that it is a wet court.

Mr. VOLSTEAD. I did not say anything of the kind.

Mr. PELL. Mr. Chairman, will the gentleman yield?

Mr. WOOD of Indiana. Yes.

Mr. PELL. Did the gentleman from Minnesota [Mr. VOLSTEAD] mean that a judge of the United States court, who has sworn to enforce the laws, has deliberately violated the Constitution?

Mr. VOLSTEAD. I am not making any charge of that kind.

Mr. PELL. And that members of the Legislature of Massachusetts are deliberately violating their oaths or are incompetent to enforce their oath?

Mr. VOLSTEAD. I am not making any charge of that kind; but I do know that in some cases where communities are wet the courts seem to follow the election returns.

Mr. WOOD of Indiana. Mr. Chairman, I would like to get in here and say a few words myself. [Laughter.]

Mr. OLIVER. Mr. Chairman, will the gentleman yield?

Mr. WOOD of Indiana. Yes.

Mr. OLIVER. In connection with an appropriation of over $5,000,000 the gentleman made what is to me a very startling statement, to the effect that the Volstead law nowhere in the country is being properly enforced. And yet, without making any suggestion looking to an amendment of existing law, so as to secure better enforcement, we are carrying an additional appropriation of $5,000,000.

Mr. WOOD of Indiana. Yes.

Mr. OLIVER. Now, let me ask the gentleman this: Would it not be well for the Appropriations Committee, to whom so many of these revelations are made known, by subcommittee to make recommendations to the legislative committees with reference to new laws?

Mr. WOOD of Indiana. I will state to the gentleman, in answer to his query, that I think it is very pertinent. I called the attention of the Judiciary Committee to this situation. If it had not been for the desire of the Committee on Appropriations not to ask for legislation by riders upon appropriation bills, we would have proposed a rider on this bill transferring this business to the Department of Justice, where it belongs, and I serve notice now, as far as I am concerned, if I am still on this committee, that unless the Committee on the Judiciary acts and reports a bill to this Congress transferring this to the Department of Justice there will be a rider proposed upon the next appropriation bill, and we will see if we can not get a rule making it in order to provide for transferring it where it belongs.

Now, gentlemen, the kind of colloquy we have had here to-day demonstrates the absolute necessity of this thing being done. That we are wasting at least one-third of this appropriation is in evidence before our committee; I believe we are wasting more than that, and getting no adequate results.

Mr. VOLSTEAD. Will the gentleman yield for a question?

Mr. WOOD of Indiana. I do.

Mr. VOLSTEAD. Is that contained in the hearings?

Mr. WOOD of Indiana. Some of it is contained in the hearings and some is more or less confidential.

Mr. VOLSTEAD. I do not find a single word.

Mr. WOOD of Indiana. I will take pleasure in giving the gentleman all that we have, not only in the hearings but that which is confidential. We do not want to keep anything from him, and desire to advise him in the fullest degree.

Mr. GARD. Did the gentleman say that he had presented such a statement to the Committee on the Judiciary requesting a change in the existing law?

Mr. WOOD of Indiana. I so stated.

Mr. GARD. The committee never heard of it, so far as I know.

Mr. WOOD of Indiana. Here is the proposition: If we are to carry out to its logical conclusion the anomalous position we find ourselves in with reference to the enforcement of this act, we should take away from the Department of Justice the enforcement of all laws, civil and criminal, and lodge their enforcement in the various other branches of the Government. Absolutely ridiculous in a well-regulated Government. If the Department of Justice is not what it ought to be, let us make it what it ought to be. If the Department of Justice is to carry out the functions for which it was created, namely, that of the enforcement of the law, it should be charged with the enforcement of this law as it is charged with the enforcement of all other laws of the United States.

It is infinitely better to place the enforcement of this law in the hands of men who are trained to the enforcement of law and not those of novices. We find the bureau honeycombed with men carried under this appropriation for this Volstead Enforcement Act who are absolutely worse than useless, who are interfering with its enforcement, and colluding with men to see that it is not enforced. That is the situation and the public ought to know it.

Mr. MANN of Illinois. Will the gentleman yield?

Mr. WOOD of Indiana. I will yield to the gentleman from Illinois.

Mr. MANN of Illinois. I may say at first blush I am in sympathy with the idea of transferring the enforcement of the law, but liquor is now stored in warehouses under the control of the Internal Revenue Bureau. I believe it is taken out by permit which has to be granted by the Bureau of Internal Revenue, and there are various operations which have to be approved by the bureau both in taking liquor out of the warehouses and in providing for wholesale dealers' licenses and in transferring liquor from wholesaler to the retailer. I assume that is the case. I try not to be so well posted on this subject, and I am not. Now, all of this work could not be transferred to the Department of Justice.

Mr. WOOD of Indiana. That is correct. There is just one section, section 35, to which the gentleman from Minnesota refers, that feature of necessity remains with the Internal Revenue Department. But that is the only part of this law to-day from start to finish that the Department of Internal Revenue should have to do with as one of the functions of its business.

Mr. VOLSTEAD. Will the gentleman yield for a question?

Mr. WOOD of Indiana. I will.

Mr. VOLSTEAD. On this same branch of the subject. My question is: There is $1,600,000 deficit now. We appropriated $5,500,000 for the enforcement of prohibition and the narcotic act. That makes $7,100,000, does it not?

Mr. WOOD of Indiana. Yes.

Mr. VOLSTEAD. Now, for the same work this year you are appropriating $6,500,000, or $600,000 less than we had last year, and, besides that, is not this true, that during the first part of the year 1920 the organization was not complete, there was a large number of its present personnel now charged with the enforcement who had not been appointed? Here you cut your appropriations of practically a million dollars and complain because you are not getting enforcement.

Mr. WOOD of Indiana. The more we appropriate the greater will be the per cent of nonenforcement. Now, if the gentlemen who would have this law enforced as it should be would consent that it should be placed in the Department of Justice, whose business it is to enforce the laws of the United States, will bring a bill in here transferring this activity to the Department of Justice, the appropriation as written here will be amply sufficient. We have it from the Department of Justice that they can enforce this act with a saving at least of one-third of what it is now costing the Government.

Mr. IGOE. Will the gentleman yield?

Mr. WOOD of Indiana. I will.

Mr. IGOE. When this bill was up originally that matter was discussed, and it was a debatable question whether the Department of Justice should not be given a greater measure in the enforcement, and, as suggested by the gentleman from Illinois, all through this act there are permit privileges, and I am inclined to think if the committee should follow the suggestion of the gentleman from Indiana you will find pretty near the expense you have now, with the internal-revenue duplication of that expense in the Department of Justice, because these permits have been piled up, and a great deal of expense on the part of the Internal Revenue Bureau is in the investigation of the use of these permits.

Mr. WOOD of Indiana. The great bulk of this money is expended, if you please, in paying the field forces that are out over the country.

UMI

Mr. IGOE. What do they do?

Mr. WOOD of Indiana. They do very little. That is the trouble. They do but little that leads to an efficient enforcement of this law. There is constant confusion and conflict that uses up more of the money than is expended legitimately and that brings about practical results. I am a friend of this measure, and I want to see it properly enforced, and my prime purpose in suggesting that it be transferred to the Department of Justice is that it may be enforced and that we can have some place where we can lodge the responsibility for its enforcement. You can not lodge it now with the Internal-Revenue Department for, they say, "We are doing everything we can, and the Department of Justice is interfering with us." You can not lodge it with the Department of Justice, because they are saying, "Our responsibility is divided and we are hampered by those connected with the Internal-Revenue Department." This is another case, if you please, of a house divided against itself. You know what always happens in such an event.

I think it might be interesting to call the attention of this House to some comparative figures as to what we are now paying for government and what we have paid in times past. It will afford, at least, some food for thought and reflection upon what it is our duty to do, looking to a retrenchment of governmental expense. There is one thing that the people are cognizant of, and that is that we are paying an enormous amount for government. They are quite alive to the fact that retrenchment should be had, and they are going to hold to a strict accountability this Congress that retrenchment be made in some considerable degree.

This can only be done through a reduction of appropriation bills, and if we do not do it here there is no place in the world that the people who send us here as their representatives to do this work can look to bring to them that which has been promised and that which they so greatly need, and that which the whole country so greatly needs.

Mr. BLANTON. Will the gentleman yield right there?

Mr. WOOD of Indiana. Yes.

Mr. BLANTON. It can only be done by "nay" on our part when these questions of spending moneys come up. We have got to begin to vote "nay" instead of "yea" on these matters.

Mr. WOOD of Indiana. In 1820 the total revenue from all sources was $24,250,000, and the Secretary of the Treasury at that time predicted that that would be the normal amount of revenue and expenditure for half a century. In 1870, 50 years later, our total disbursements had increased to $293,657,005. In 1920, 50 years more, the operating expense of this Government was $6,133,716,757, an increase, if you please, of 2,000 per cent in 50 years. The population of this country in 1870 was 38,558,371. The per capita cost of government at that time, for running all the machinery of the Government, was $7.61. Our present population is, in round numbers, 106,000,000. The per capita cost of running this Government now is $58.04. The increase of population in 50 years was 200 per cent, while the increase in the cost of running this Government is a little more than 600 per cent. We are told by the Treasury of the United States that for the next three, four, or possibly five years it will be absolutely necessary to raise by taxation $4,000,000,000 every year. We have to-day a national debt of $25,000,000,000, in round numbers. We are paying interest upon that national debt of more than a billion and a half a year, far more than it took to run this Government before we got into this war.

Our present scheme of taxation is not equal to the strain that is being made upon it, and in consequence we are issuing, and are being compelled to issue, short-time notes to defray the current expenses of this Government. And until we provide some scheme whereby the amount of our taxes is going to be equal to the expense of this Government, it is going to compel a continuation of issuing these short-time notes at extravagant rates of interest, not only demoralizing the business of this country but depreciating and dishonoring the public debt of this Government, depreciating, if you please, the bonds of the United States Government. So it is incumbent, by reason of these startling facts, upon everyone charged with the responsibility of government and in making appropriations to see to it that every possible means short of absolute injury to this great Government machinery of ours is resorted to for the purpose of reducing the expense of government.

Here is another remarkable thing: Of the $293,657,000 that was expended in 1870, 80 per cent was for war debts that we had created or paying for bills that we were making in preparing for war. That was true in this Government from the close of the War of 1812, and it is no better to-day. We are spending to-day out of every dollar that is wrung from the people of this country in taxation more than 80 cents in either paying for the war debt that we have created and the interest thereon or paying in preparation for war.

It is a sad commentary upon the civilization of this century that such a thing as this is possible. I can not believe that it is necessary that this spectacle should forever continue, and I believe firmly that this great Nation of ours, boasting of its advanced civilization, can afford to take the initial step in the march toward disarmament.

We need not wait for England, France, or Japan, but let our acts show to the world that we are honest in our purpose, and let us by our deeds prove that we mean to carry out that purpose. If we should do this, in my opinion the sentiment of the world would become so aroused that these other nations would be compelled to follow in our footsteps.

Here is a remarkable proposition: The naval estimates of the United States Government for this year amount to $679,551,731, more than twice the amount, if you please, of all the expenses of this Government of ours 50 years ago. Great Britain has already appropriated for the current year $410,597,796 for her navy. France has appropriated $174,829,243. Italy has appropriated $58,389,226. Japan has appropriated $187,207,243. And yet from these countries in Europe there comes a cry across the sea to the generosity of the United States, which has never given a deaf ear, asking that we raise money to buy bread to feed their starving thousands, when they are spending their millions in preparing to kill each other.

The total expense of the World War amounts to more than $300,000,000,000. The world lost in killed more than 10,000,000 men. Yet we are going on, notwithstanding the ravages of this war, preparing for other greater wars in the future.

Mr. BARKLEY. Mr. Chairman, will the gentleman yield?

Mr. WOOD of Indiana. Yes.

Mr. BARKLEY. Does the gentleman include in the $300,000,000,000 loss and damages to property as well as expenditures by the Governments?

Mr. WOOD of Indiana. Just what was expended by the Governments. No one can compute what was lost by the countries incidentally; what was lost in man power or the possibilities in the future of that man power.

I hope, and every Member of this House sincerely hopes, that the commission appointed a few days ago for the purpose of reorganizing the machinery of this Government will do it as quickly as possible. Through that means I have no doubt millions of dollars will be saved annually that will help to reduce this expense of government.

Mr. MANN of Illinois. Mr. Chairman, will the gentleman yield?

Mr. WOOD of Indiana. Yes.

Mr. MANN of Illinois. The statement was made a moment ago by the gentleman from Kansas [Mr. WHITE], that in the consideration of that resolution in the House the statement was made that there was a possibility of saving from $300,000,000 to $500,000,000 a year by reorganization. Is it not a fact that the Government outside of the operation of the War Department—I do not mean the personnel in the War Department itself—and in the operation and maintenance of the Navy Department outside of Washington, and outside of the Post Office Department, and outside of the pensions paid, and the war-risk insurance, and things of that sort, and the payment of interest, the total cost of the Government now does not amount to more than $500,000,000 a year? Consequently, to talk about saving from $300,000,000 to $500,000,000 a year as the result of the reorganization of the Government departments, unless we cut off the gross extravagance in the Army and the Navy, is an idle dream.

Mr. WOOD of Indiana. This is what I hope the reorganization of this Government will accomplish. That it will not only lead, if you please, if the proper reorganization of this Government is had, directly to cutting out that duplication which is apparent in all these departments, but it will instill in the heads of these bureaus a different line of thought and action, that will save, if you please, millions of dollars in the appropriations for governmental activities which they represent.

We are spending, if you please, about $11,000,000 for buying supplies in the city of Washington, with no supply agency, where everything is bought haphazard and without rhyme or reason.

If we had a purchasing supply agency whose business it was to purchase for all these Government establishments, an agency such as is had by any of these great business concerns in our great commercial centers, having branches throughout the United States, we would save millions of dollars in that item alone; and, as I said a moment ago, if we had a proper organi-

zation here for attending to the care of these various buildings, we could dispense with hundreds and hundreds of employees, thus saving many thousands of dollars.

Mr. GARD. Mr. Chairman, will the gentleman yield?

Mr. WOOD of Indiana. Certainly.

Mr. GARD. I was wondering what plan the gentleman had in mind to carry into effect these reforms that he speaks of.

Mr. WOOD of Indiana. For the purpose of carrying into effect one of these reforms that I was speaking of, in regard to the purchase of supplies, I have already introduced a bill, and I understand it is within the scope of this general reorganization act.

Mr. GARD. What I wanted particularly to know was what the gentleman had in mind with reference to curtailing the expenses of the Army and Navy.

Mr. WOOD of Indiana. Well, here is a thing that might be had with reference to the Army and Navy. If we had some organization which had to do with the purchasing of supplies for the Army and Navy, for instance, without continuing the haphazard and utterly unorganized and inefficient manner in which it is done now, much could be saved. We have been receiving some evidence here in the last few days of what has been going on in the Army with respect to the purchase of coal alone, and what is true with respect to the purchase of coal is likewise true with reference to the purchase of the great bulk of other commodities which constitute the supplies for the activities of these great bureaus into which these millions of dollars of the Government's money go.

The amount in this bill to pay for clerical hire alone is a mere bagatelle compared with the activities which these clerks control and which are duplicated, if you please, many, many times. We have 15 or 16 boards of health, and we have some 6 or 8 boards of education, with more applying for the right to have a hand in our educational affairs.

Mr. GARD. I understood the gentleman was comparing our expenditures with those of Great Britain, France, and Italy.

Mr. WOOD of Indiana. I was speaking of the amount of money appropriated by those Governments for death-dealing purposes. I was not making any comparison with respect to the other expenses of government.

Mr. STEVENSON. Mr. Chairman, will the gentleman yield?

Mr. WOOD of Indiana. Yes.

Mr. STEVENSON. Speaking of the purchase of supplies, has there not been a compact and close organization for the purchase of supplies in the Navy, and does it not have a great advantage by reason of that? Rear Admiral McGowan is at the head of that.

Mr. WOOD of Indiana. Yes. I understand the Navy has been paying only $4 a ton for coal all around the world, whereas these other gentlemen in the War Department have been paying as high as $10 or $12.

Mr. STEVENSON. That was the result of having one compact organization to do the buying.

Mr. WOOD of Indiana. Absolutely, and is a splendid illustration of that.

There are a whole lot of incongruities and inconsistencies that have been carried along here for years and years that seem to be almost fetishes and that it would be sacrilege even to think about eliminating. It may be a little surprising, yet it is true that we are paying $20,000 a year to buy sealing wax to keep up an ancient custom in the Treasury Department. We are paying $7,000 a year for red tape to be mixed up in that sealing wax. There is plenty of other red tape for which we do not know how much we are paying and which we can not calculate. We are paying $6,000 a year for shears in one department alone. I suggest that they had better buy fewer shears and buy more chains and padlocks and lock them down.

Mr. STEVENSON. Amongst the fetishes that the gentleman mentions is this appropriation, that I see you have eliminated, for packing cases.

Mr. WOOD of Indiana. That is one we dispensed with. They have 1,185 clocks in the Treasury Department. I asked the gentleman why they did not take out those clocks and give the clerks a chance to work a little while instead of looking at the clock. He said it would be the greatest mistake in the world to take them out; that the clerks would be out of their rooms half the time trying to find a clock to see what time it was.

Mr. BLANTON. I think the House should commend the Clerk of this House for his economy, because, in spite of the fact that this House last year—over my objection, however—appropriated $6,000 for cedar chests to distribute among the Members, our Clerk had the good sense not to spend the money, and it is still in the Treasury.

Mr. WOOD of Indiana. And there is no appropriation carried for that item in this bill.

I have called the attention of this committee very briefly and without any considerable detail to some of the more important features of this bill. It is the most disagreeable bill with which any body of Congressmen ever has to deal, and perhaps will always remain so, because there is more of the personal equation in this bill than in any other. It is easier for the natural man, and more in keeping with his desires, to give than to take away. Somebody, however, has had to stand between the Treasury of the United States and the demand of those in authority and the employees of this Government. We have done the best that we could in the light that we had to guide us, and we beseech every individual Member of this Congress, who is charged with just as much responsibility as are the members of the committee, to see to it that no changes are made looking to increases, unless they are very thoroughly convinced that a great injustice has been done in the action of your committee. [Applause.]

I thank you.

Mr. BYRNS of Tennessee. Mr. Chairman, I am not a member of the subcommittee which is charged with the duty of conducting the hearings and preparing this bill for the full committee. I do not therefore expect to have anything to say with reference to the bill, certainly not at this time. I do wish, however, to congratulate the gentleman from Indiana [Mr. WOOD] and his subcommittee upon the bill that has been presented. For several years I served as a member of the subcommittee on the legislative, executive, and judicial appropriation bill, and for a part of the time, under the Democratic control of the House, as chairman of the subcommittee, and I know something of the very great difficulties which confront that committee in the preparation of a bill of this kind.

Of course, we all realize that the gentleman from Indiana [Mr. WOOD] and the subcommittee have been confronted with a more difficult task than has ever before confronted a subcommittee in the preparation of this bill, because we reached the peak in the employment of clerks and other employees of the Government during the war, and we have now reached the period when it is necessary to retrench and reduce, and that burden has rested upon the gentleman from Indiana [Mr. WOOD] and his subcommittee. I repeat, I wish to congratulate him and the subcommittee upon the splendid service that they have rendered. I know something of the great amount of work they have put upon this bill. We all know that the gentleman from Indiana [Mr. WOOD] and the members of his subcommittee also have been actuated only by a desire to give to the agencies of the Government the necessary employees to conduct the affairs in their charge properly, and at the same time to economize and to save the Treasury just as much money as possible. The gentleman has rendered a real and splendid service to the Congress and the country.

There are certain items in this bill with which I may not altogether agree. It may be that there are some injustices. It would be very strange, indeed, if there were not among the thousands of items in this bill; but, I repeat, I am sure that the distinguished gentleman from Indiana [Mr. WOOD], chairman of the subcommittee, and his committee have been actuated only by a desire to economize and to save the people's money just as much as it was possible for them to do so, and they are to be congratulated upon the result of their labors.

As the gentleman stated, the difficulty that confronted him and his committee, and that confronts all appropriation committees, is the fact that they can obtain the necessary information to enable them to act on estimates only from those who appear in support of the estimates submitted, and that, of course, presents a situation that is not always for the interest of the Treasury and of the people. In saying that I do not reflect upon those who appear before the committees, nor do I mean in any way to say that they would represent matters to the committee that were not fully justified; for as I have often said, no head of a bureau or division is worth his salt unless he thinks that the work he is doing is as important as any other work being performed by any other employees of the Government, and in submitting his estimates and in appearing before the committee in their support he comes with that idea, and with the firm belief that if any cuts are made they should be made in the estimates submitted from some other department or bureau. That is the trouble the gentleman from Indiana has met with in the consideration and preparation of this bill, I am sure, and that simply emphasizes what he had to say as to the necessity of a budget system.

I hope before we adjourn upon March 4 this Congress will put through some sort of a budget law, so that it can be put into operation in the consideration of the appropriations for the fiscal year 1923. We ought to have some responsible officer of the Government, under the control, direction, and supervision of Congress, whose duty it would be to look over

these estimates after they come from the executive departments, to make personal investigation in the departments as to the advisability or necessity for appropriating money asked for, and be able to advise not only the committees of Congress but Congress itself and the individual Members of Congress as to whether or not the estimates are justified. We ought also to provide the President of the United States with some official and a sufficient force to enable him to go over these estimates before they are submitted to Congress and to revise them. I repeat, I hope that before this Congress adjourns we will have enacted a budget law somewhat along the lines proposed by the select budget committee of this House.

I feel satisfied that the enactment of such a law would result in the saving of millions of dollars and at the same time greatly increase the efficiency of the Government.

Mr. Chairman, I yield 10 minutes to the gentleman from Texas [Mr. BLANTON.]

Mr. BLANTON. Mr. Chairman, I desire not to speak upon the bill, but to answer in a mild way some of the caustic observations made this morning by the gentleman from Nebraska [Mr. REAVIS] and by my colleague from Texas [Mr. HUDSPETH]. Once in a while during the business of the House, when the enormity and ridiculousness of some great appropriation proposed are evident, when money is being taken out of the Treasury in such way as to shock the sense of fairness of some Member, if he rises in opposition to the appropriation and speaks for economy and against extravagance, almost immediately you can hear from other Members, who are attempting to whip him and others into line, the appellation of "tight wad," "hidebound," and even "demagogue." I have not seen a single Member of this House in the last four years make any attempt whatever to save the money of the people of the United States, when he was not called a demagogue by somebody else who was trying to get the money out of the Treasury, and by calling him a demagogue the proponents whip the other Members into line and make them vote their way and the money is taken out and the people have to pay the bill by taxation. So it was this morning. The opposition was hardly raised before you could hear the word "demagogue" from the gentleman from Nebraska [Mr. REAVIS], and yet he is on a committee organized and created recently by this House to attempt to stop the waste in this Government. My good friend from the El Paso district of Texas is an old west Texas cowboy, and nobody could dislike him. He has eaten around the chuck wagons in the cow camps and every fellow likes him. Yet because some considerable number of people out in El Paso and around the Rio Grande voted the Republican ticket he must have felt the spirit move him to get up and tell me that he did not think I was representing the sentiment of my people, that he knew that I was not representing the sentiment of his people, and he did not think that I was representing the sentiment of my district.

My people are just like his people. As a matter of fact, his people were my people before they were his. Why, the Texas Legislature, in order to fix a district for him, took 49 counties away from me and gave them to him. [Laughter.] They used to be my people, and I know them and I can tell him that he has not been their Representative long enough to find out their sentiment, if he thinks it does not back up the position that I take here for economy.

Mr. BARKLEY. How many counties did the gentleman have left after they took away the 49?

Mr. BLANTON. Oh, they left me 10, and then gave me some new ones. Now, as to whether or not I represent the sentiment of my own district, I challenge any Member of this House to show a greater per cent of majority received in his district, both in the primaries and in the general election, than my good people gave me in my district, taking into consideration the nation-wide class fight that was made against me.

Does not that indicate that the people of my district do approve of the stand that I take here from time to time in behalf of economy and against wasteful extravagance? Hardly a day passes now since my friends on the Republican side of the House have come into power that you do not hear some distinguished chairman of one of the committees get up here and preach economy and preach against waste and extravagance, which they all admit exist in governmental affairs. Every time he makes that kind of a statement he gets applause all over the Republican side of the House and from me on the Democratic side. [Laughter.] However, just as soon as his lip economy is over, just as soon as his speech under general debate is over, and we begin to read the bill under the five-minute rule, where you can apply the scissors and cut it, whenever I propose an amendment that would seek to save money, then the very men who preached economy and got applause on the Republican side of the aisle are the ones to vote the money back into the bill and take it out of the Treasury and let the poor people of the country pay for it.

How long are you going to keep up this camouflage? You know that it is camouflage, and everybody knows it is camouflage. I am with you for real economy, and you know the people of the United States want you to cut right down to the bone, to cut down until these departments feel it, and stop this spending of public money. The distinguished gentleman from Illinois [Mr. CANNON], who has been here long enough to know, has told us that until we stop spending public money we can never cut down taxation, because every time we spend you have got to take it out of the pockets of the people to make it good. I am for the proposition of stopping the expenditure of money.

Again reverting to the expense of inaugurals, there will be no great, big sum of public money wasted in the State of Texas to-morrow week, when Pat M. Neff is inaugurated governor of Texas. He has had sense enough and good taste enough in this hour of deflated markets to require only a simple ceremony and has eliminated all vain pomp and display, declining to have an inaugural ball offered him by the people. I commend him for it. His action will meet with the approval of the people of Texas. I only wish that Mr. HARDING was in a position to require that these large sums of public money be not spent on his ceremonies.

The CHAIRMAN. The time of the gentleman from Texas has expired.

Mr. BYRNS of Tennessee. Mr. Chairman, I reserve the remainder of my time.

Mr. WOOD of Indiana. Mr. Chairman, I yield 15 minutes to the gentleman from Minnesota [Mr. VOLSTEAD].

Mr. VOLSTEAD. Mr. Chairman, I want to discuss briefly a feature that has been brought to the attention of the House in connection with the appropriation for enforcing the prohibition act. The question of whether the enforcement should be placed in the Department of Justice or left in that of the Treasury was discussed very carefully by the Judiciary Committee, and it was one of the subjects that gave us perhaps as much concern as any in drafting the bill. The matter was very thoroughly considered. I think the committee did the wise thing, and I believe that if you change it as is proposed here by the gentleman from Indiana [Mr. WOOD] that we shall not be able to get anything like effective enforcement. I call attention to the fact that the prohibition law is not drawn on new lines. It follows a policy that has been pursued by Congress and the country for many, many years. In almost every instance where Congress has created an agency of this kind, it has not turned its enforcement over to the Attorney General, but has left it in some other department. There are reasons why. In almost every instance, when we pass a law of this kind, we delegate to some department the power to make rules and regulations. We did that in this case. Suppose we should turn the matter over to the Attorney General. Would you want the Attorney General to make rules and regulations that are in effect law, and let him enforce those regulations? That does not seem to be fair or reasonable; that will combine the legislative and executive functions in one department.

Mr. VENABLE. Mr. Chairman, will the gentleman yield?

Mr. VOLSTEAD. No; I have only 15 minutes and I do not care to yield.

Take the acts that we have passed for the enforcement of like statutes. We have, for instance, the Post Office Department, that has a large force for the purpose of enforcing the post-office law. That system has been on the statute books for many years. These inspectors act as detectives. They examine the post offices and other branches of the service and see that the law is enforced. Take the pure food law, take the narcotic act, take the drug act. They are not turned, any one of them, to the Department of Justice. They did for the enforcement of those acts what we have done in this instance. They appointed inspectors in the various departments for the purpose of investigating any violation of the law and then charged the Attorney General with the prosecutions. Take the laws creating the Secret Service in the Treasury Department that watches over the currency. You would say that is just a criminal statute. It is true it is only a criminal statute, but still, instead of turning that over—the detection of its violations—to the Attorney General, they leave it in the Treasury Department. They do the same in the banking law. We have a large number of bank inspectors. Whenever a violation of the banking law occurs, it is detected by some officer of the Treasury Department. I might go on and enumerate many more in the same way. Now, why do we do that? Is there no reason for it? Why, the reason is apparent. We created these departments. We created these activities and then we appoint somebody whose special duty it is to enforce it and to see that the law is en-

forced and his attention is diverted by nothing else. Suppose we take and turn it over, as is proposed, to the Attorney General's department, and the gentleman confesses now that the difficulty in enforcing prohibition has been because the Attorney General's department has refused to cooperate. Now, in my State and in other States I have heard the same complaint, that the district attorneys, in whose control the enforcement would rest, refuse to act. For practical purposes the district attorney acts independent of the Attorney General. This would make enforcement impossible in many localities.

Mr. WOOD of Indiana. Will the gentleman yield?

Mr. VOLSTEAD. I will.

Mr. WOOD of Indiana. In the event that a complaint was lodged with the Department of Justice and the Attorney General had a district attorney who refused to act, what would happen?

Mr. VOLSTEAD. What would happen? Just what is happening in a number of instances where they refused to prosecute. They have refused to give an attorney or an assistant attorney to carry out the law. That is true under any system. Suppose you turn over the entire enforcement to the district attorneys; what would you have? Now, at least we can have a force whose duty it is to investigate and determine whether a violation has occurred, and it is not absolutely bound by the action of the district attorney. It can be turned over to the State authorities under the law.

Mr. WOOD of Indiana. If the gentleman will yield further. Does the gentleman suppose after the 4th of March that the Attorney General in office at that time would tolerate for a moment a district attorney who would not enforce the law?

Mr. VOLSTEAD. I am not going to speculate as to what is going to happen. This law may stay on the statute books longer than beyond the period when the next Attorney General may serve, and if we start wrong we will pay the penalty in the future. It does not seem to me that there can be any question about it. You can under this law appoint a man whose duty it is to see to it that the law is enforced. That is what we do under this statute. Under the other system you appoint a man whose duty it is to enforce all laws. Then look at it from the standpoint of administration. What position would you be in? It seems to me it is absolutely ridiculous to contend it would be cheaper. Here is the situation: We provide that liquor should enter the channels of trade for medicinal purposes. We do it under permits. The permit is issued after an investigation by an inspector. He is supposed to follow that permit and see that it is not violated. Now, if anything occurs in his investigation and he finds there is a violation he then turns it over to the Attorney General. That is the proceeding that has been followed in reference to the collection of taxes all these years, and it seems to me it is a logical, sensible way of doing it. Now, if you had only your detective, what connection would he have with these permits? He would have nothing to do with the permits. He would only go out and possibly find out about violations, and you would have a duplicate of the work because you must have the inspector to see that the permits are properly issued and properly executed, and consequently you are going to have two men to do the work that is now being done by one man.

This, it seems to me, is the inevitable result; and that, in my judgment, is the reason why in all these other laws we have followed the procedure followed in this case; turned over detection of violations to the man who is to issue these permits and who sees they are enforced, the duty also of bringing the violation to the attention of the Attorney General or the district attorney. In addition, the inspectors, the same as in revenue cases, are given the power to institute criminal proceedings. It seems to me it is the only logical way.

Mr. GARD. Will the gentleman yield?

Mr. VOLSTEAD. I will.

Mr. GARD. I was interested in the statement of the chairman of the subcommittee that he had submitted a statement to the chairman of the Judiciary Committee requesting this change in the law.

Mr. VOLSTEAD. The gentleman did ask me in reference to a change.

Mr. GARD. That matter was never brought to the attention of the Committee on the Judiciary?

Mr. VOLSTEAD. No; it was in conversation one afternoon when I happened to be over in the office. He came over there and saw me about it.

Mr. GARD. The matter suggested by the chairman of the subcommittee to the chairman of the Judiciary Committee was not brought to the attention of the Committee on the Judiciary?

Mr. VOLSTEAD. No; we have only had one meeting since then.

Mr. GARD. It was never brought to the attention of the committee?

Mr. VOLSTEAD. No.

Now, I believe we ought to have an increase in this appropriation.

Mr. STEPHENS of Ohio. Will the gentleman yield for a question?

Mr. VOLSTEAD. I will.

Mr. STEPHENS of Ohio. As a matter of economy, to save our Government all this expense regarding the liquor, do you not think it would be a good idea to suspend the law for about 30 days and allow all the liquor that is in bond to be sold and disposed of, and in that way follow out the practice of economy?

Mr. VOLSTEAD. I was practically told that that was the object of cutting this appropriation $1,000,000; it is practically cut $1,000,000 below what it cost us last year.

Mr. STEPHENS of Ohio. If we would do that we would not have any money to appropriate.

Mr. VOLSTEAD. I am not accusing the gentleman from Indiana [Mr. WOOD] of doing anything of that kind. He did not, nor did any member of the committee, so far as I know. Just where it came from I will not say at present, but I was told that by a Member of this House.

Mr. BRITTEN. Can the gentleman tell the House how much money was expended throughout the country in the large cities of the United States on New Year's eve for holding special tables for white-shirted detectives——

Mr. VOLSTEAD. If you look with pride at the violation of the law——

Mr. BRITTEN. I am told that tables were reserved on New Year's Eve for these sleuths, who would wait around until midnight and watch men in order to see whether or not they had drink aboard.

Mr. VOLSTEAD. That has not anything to do with what I am discussing.

Mr. BRITTEN. I wanted to know if the gentleman knew how much money was expended for those tables.

Mr. WALSH. Will the gentleman yield?

Mr. VOLSTEAD. No. I do not take any pride in the fact that in some place in this country the law is not observed, and I am not trying to advertise it or discredit this law by any such argument as that. Throughout the country as a whole the law is fairly well observed. We live in this eastern section where we have a number of cities that do not observe the law whenever they can prevent it. They have no statutes of their own, and a good many of them, in many spots, deliberately do their best to discredit the law. There is no question about that. But let me tell you that the sentiment in this country is growing in favor of the law, and some of the gentlemen who are sneering at it now will find themselves way behind the procession some day. This country has adopted prohibition deliberately and written it into the Constitution to stay, you can not wipe it out; behind it will be a sentiment strong enough to make those who sneer at it now ashamed of themselves as the years go by. [Applause.]

Mr. BYRNS of Tennessee. Mr. Chairman, I yield 10 minutes to the gentleman from South Carolina [Mr. STEVENSON].

Mr. STEVENSON. Mr. Chairman, I do not want to inject myself into this controversy between the gentleman from Minnesota [Mr. VOLSTEAD] and the gentleman from Indiana [Mr. WOOD]. The only observation I have to make in regard to that is this: The gentleman has shown the alarming number of side shows that the different departments of this Government have been able to annex up to this time, and the biggest side show has been this side show of the Internal Revenue Department, hung onto the Treasury Department in the enforcement of the Volstead Act. Now, I do not see anything incompatible in the fact of the bureau which is created for the enforcement of the Volstead Act, which is a criminal law and not a revenue law, being attached to and being under the jurisdiction of the Attorney General of the United States, to whom is committed the enforcement of the laws of the United States. And I do not see why a man who is under his direction, the commissioner for the enforcement of that law and who is now under the direction of the Secretary of the Treasury, or the Commissioner of Internal Revenue, should not be just as effective, if he is properly selected and qualified and properly guided, in the Department of Justice as he is in the Bureau of Internal Revenue. So it seems to me that the logical thing to do is to put an Attorney General in the office who is capable of directing the great judicial matters of the Government, and arranging under him the bureaus that are created for the enforcement of the different laws which the Government provides shall be enforced, and to prosecute the criminals who violate the laws of the United States. Put them all under the Attorney General and then they will all be in the place where they belong and in the place where the Constitution intended them to be. It is all a question of selecting the proper men to hold down the job.

If you do that, you will get the laws enforced. If you do not do it, you will not get them enforced. I do not say that because I want to raise an issue about the prohibition law, because I have been a prohibitionist longer than the gentleman from Minnesota [Mr. VOLSTEAD], probably, and my State was a prohibition State a long time before they quit drinking beer in Minnesota. And I believe in the enforcement of this law, and its proper enforcement, by the properly constituted legal authorities of the United States.

I wanted to use a little time to direct the attention of this committee to a matter outside of this. We have heard a good deal in the last few months about the soldier, and we heard a great blare of trumpets and saw a great waving of flags here in passing legislation for the benefit of the soldiers of the late war. There is one class of those men, however, who seem to have been forgotten. I refer to the officer who laid aside his business and went in and became an emergency officer in the United States, who won his position by an examination and by entering the training school, and went to the front, was shot to pieces, and has been treated worse than a stepchild by this Congress, according to my judgment. There is no provision that is more unjust than the provision which prescribes that an emergency officer of the Army of the United States who was disabled in the service, if he was in the Army, can only get such compensation, if he has total disability or is otherwise disabled, as a private can, while in the Navy the emergency officer who was totally disabled in the service is being put on the retired list with the same compensation as a regular officer of the Navy receives when retired as disabled.

We have allowed the cases of emergency officers of the Army who are disabled to be absolutely put to sleep, when we have seen the Navy put its emergency officers on the retired list, just the same as though they were regular naval officers, when they were disabled. Why, take an instance of a first lieutenant—one that I have spoken of heretofore in this House—as well as others, who, we will say, lost his arm when our soldiers broke the Hindenburg line. That first lieutenant, together with another man from the same State, went into the Regular Army. The first lieutenant lost an arm and he is given $80 a month compensation. The other man fell off a truck and developed a stiff knee. This other man was retired because he was in the Regular Army, and he gets $157 a month.

Now, there is no justice in that. The bill which I introduced and which is pending before the Committee on Interstate and Foreign Commerce, upon which hearings have been had six months ago, is still sleeping in that committee without any effort being made on the part of anybody, it appears, to get it out, except one or two members of the committee. I call on this Congress to put itself on record somehow, somewhere, to the effect that it does not believe in that discrimination as against the man who voluntarily left his business and who by virtue of his intellect and intelligence went and qualified himself, and who went overseas and led his men on the plains of France and was shot all to pieces; and when he comes here you say to him, "You are not entitled to the same consideration as the man in the Regular Army who merely sprained his ankle and developed a stiff leg."

Mr. CONNALLY. Mr. Chairman, will the gentleman yield?

Mr. STEVENSON. Yes.

Mr. CONNALLY. When were the hearings completed on that bill?

Mr. STEVENSON. I understand they were completed in the committee in May, and I have not been able to get any information in regard to it.

Mr. RAYBURN. The gentleman is mistaken. The subcommittee reported to the full committee, and the full committee voted not to take any action on it.

Mr. STEVENSON. Well, it is in the hands of the Committee on Interstate and Foreign Commerce. It went first to the Committee on Military Affairs, and then it went to the Committee on Ways and Means, and finally it went to the Committee on Interstate and Foreign Commerce. The hearings were had, and I stand corrected if the gentleman's statement is correct—and I know it is correct or he would not have made it—and they reported to the full Committee on Interstate and Foreign Commerce, and nothing has been done from that day until this.

The CHAIRMAN. The time of the gentleman from South Carolina has expired.

Mr. STEVENSON. I ask unanimous consent, Mr. Chairman, to proceed for five minutes more.

The CHAIRMAN. Is there objection to the gentleman's request?

There was no objection.

Mr. CONNALLY. I would like to ask the gentleman from South Carolina if it is true that the Committee on Interstate and Foreign Commerce took action which was tantamount to the killing of the bill?

Mr. STEVENSON. It would be tantamount to the killing of the bill if it takes no action. I understood, when the courts decided that an officer in the Navy was entitled to the same compensation and retirement and all the privileges of retirement that a regular officer of the Navy was entitled to, to be sure that the Committee on Interstate and Foreign Commerce would then open its heart and say, "What the men in the Navy get the men in the Army ought to have," because the Navy, while it did a wonderful service, did not face on the plains of France and the plains of Flanders the guns of the Germans, as the men in the Army did; and I am only asking that those who were disabled by actual service be given this recognition, and there are only 2,500 of them.

Mr. WALSH. How did this measure get to the Committee on Interstate and Foreign Commerce?

Mr. STEVENSON. It was sent to the Committee on Interstate and Foreign Commerce on the ground that it dealt with compensation. I first introduced the bill to give these men retirement, just as the Regular Army officers get for total disability. The objection was raised that we would thereby invade the retired list, which never had been invaded. I said then, "We will only ask for the same compensation, not taking the privilege of retirement." When I introduced the bill for that it was first sent to the Committee on Military Affairs. Then it was sent to the Committee on Ways and Means, and finally it was sent to the Committee on Interstate and Foreign Commerce, and I think properly so, because it deals absolutely with the question of compensation of disabled men; and that is where it is to-day, and where it will sleep, I am afraid, until the end of this session.

Mr. COOPER. Mr. Chairman, will the gentleman yield?

Mr. STEVENSON. Certainly.

Mr. COOPER. I do not pretend to speak for the entire Committee on Interstate and Foreign Commerce, but I want to say that the committee has patiently considered the measure which the gentleman has been speaking about. I know that only this week that question was brought before the committee.

Mr. STEVENSON. I am glad to hear that the Members have heard of it at least. We had a week's hearing on it. We produced before that committee the provision of the law creating that Army, which provided that the men and officers who went into this Army should have the same treatment as to pay, pensions, emoluments, and so forth, as those of the Regular Army. And yet I have never been able to get any report out of that committee.

Mr. MANN of Illinois. Mr. Chairman, will the gentleman yield?

Mr. STEVENSON. Yes.

Mr. MANN of Illinois. As I understand, the gentleman's bill proposes to give an officer who has lost an arm much higher compensation than the man who enlisted or was drafted in the Army. The officer got a soft snap to begin with, and he should then, should he, be treated far better than the man who endured the hardships?

Mr. STEVENSON. The man who got his arm shot off did not get a soft snap.

Mr. MANN of Illinois. He had a soft snap to begin with.

Mr. STEVENSON. I want to say this, that this Congress provided that the officers should have about four times as much pay as the privates, and therefore it is to be assumed that they had four times as much responsibility and four times as much danger to face; otherwise they would not have been given that discrepancy in pay. If you do not propose to discriminate now, you ought not to have discriminated when you created the Army, and you ought not to have said, "You shall have the same pay as members of the Regular Army."

Mr. MANN of Illinois. The responsibility ceased with the service. The question is whether you are going to pay the man who had the soft snap three times as much as the man who had the hardest duty?

Mr. STEVENSON. But the responsibility is always in proportion to ability, and the destruction of a man's power to serve his country destroys his power to work, and it is presumed that he had a higher ability. This is to remove the discrimination between the Regular and emergency officer, and does not affect the private. They all get the same, whether drafted or emergency men or Regulars.

Mr. MANN of Illinois. Experience has shown that the men did more than most of their officers did.

Mr. KNUTSON. Will the gentleman yield?

Mr. STEVENSON. I yield to the gentleman from Minnesota.

Mr. KNUTSON. What reason is there for making a discrimination between officers who went into the service and sacrificed

their business and Regular Army officers who were taken in hand by the Government when they were 16 or 17 years of age, educated at the expense of the Government—in fact, were trained to become professional soldiers—while the volunteer officer in many instances gave up a lucrative business and threw up everything in order to go into the Army?

Mr. STEVENSON. There is no reason in the world; and, on the other hand, those men who gave up their business and who were destroyed for that business are entitled to more consideration than the man who was educated for that service. And you talk about this matter of discrimination. Let us see whether there is any discrimination or not. By taking up and passing the bill which I introduced you do not discriminate against the private. You do not cut down his compensation a penny. You merely bring up the one man who is discriminated against. You bring up the lieutenants and the captains and the majors who were emergency officers, and whose power to earn a living has been destroyed, and to whom the Government has said, "You are not worth as much as the fellow who has been in here all his life, who was educated at West Point at the expense of the Government." It is not a discrimination. It is the removal of a discrimination, and it takes nothing from the compensation which the private receives.

Mr. COOPER. Will the gentleman yield?

Mr. STEVENSON. I yield to the gentleman from Ohio.

Mr. COOPER. I should like to say that the Interstate and Foreign Commerce Committee has at this time many bills before it pertaining to compensation for ex-service men. I know that the committee are doing the very best they can along that line, and this week we have had hearings on those measures and we are doing all that lies in our power for the ex-service men, especially the wounded soldiers.

Mr. STEVENSON. I am glad to hear that.

Mr. RAYBURN. The gentleman from Ohio [Mr. COOPER], of course, understands that the subcommittee reported back this bill to the full committee before Congress adjourned last June, and that the full committee voted not to take any action upon it.

Mr. STEVENSON. There is no necessity for further hearings, because the representatives of the legion and the representatives of the camps and the representatives of everybody concerned were heard last May, and the hearings were printed. In the face of the showing that was made the committee deliberately voted not to take it up. Therefore I take it for granted that the committee is going to stand pat; but I hope it will see the light, and will appreciate the injustice that is being done because of the discrimination made against the emergency officers of the Army alone in placing them in a different class from the Regular Army officer and from the Regular Navy officer, and from the emergency officers of the Navy, who are being retired—not only compensated but put on the retired list with all the rank and emoluments which that implies.

Mr. IGOE. In connection with the gentleman's bill, can he tell us what has become of the bonus bill?

Mr. STEVENSON. The gentleman asks me about the bonus bill. The bonus bill was in behalf of some 4,000,000 men who had 4,000,000 votes. Many of those men did not even tear their shirts or get their heels scratched in the war; while this bill was in behalf of 2,500 disabled sick and lingering officers who shed their blood for this country, but did not have enough votes to get their bill through this House with bugles and trumpets, as the bonus bill did. [Applause.]

Mr. WOOD of Indiana. I yield five minutes to the gentleman from Massachusetts [Mr. WALSH].

Mr. WALSH. Mr. Chairman, during the energetic and impassioned defense of the national prohibition act voiced here by its eminent author [Mr. VOLSTEAD], in response to a question from the gentleman from Ohio as to whether or not it might be wise to suspend the law and sell some of the liquor that is now in bond, the distinguished chairman of the Judiciary Committee [Mr. VOLSTEAD] stated that some Member of the House had told him that that was the reason this appropriation had been slashed to the extent of $1,000,000; and I am wondering if the distinguished chairman of that committee, who is a very able lawyer, ascertained from the author of that statement just how, under the Constitution, this vast quantity of fire water could be sold, whether we refused to make an appropriation or decreased it or increased it; and I would like to ask the gentleman—although I see he is greatly engrossed in his own remarks—if he knows how this liquor can be sold, or how we could suspend the law so that it could be disposed of, to decrease the expense of enforcing this act?

Mr. VOLSTEAD. I may suggest that I have been told that the law is a dead failure; that it is not enforced anywhere; so I suppose it would not be very difficult to get rid of this stored liquor; but my impression is, and in fact I have been told, that there is room for it in some spots of Massachusetts. [Laughter.]

Mr. WALSH. I should think very likely there is use for it in Massachusetts, as well, possibly, as in Wisconsin and the Dakotas and some of the territory south of the great State a portion of which the gentleman [Mr. VOLSTEAD] so ably represents; but it seems to me that the gentleman who made that statement to the effect that we could pass a law suspending the operation of the national prohibition act and permit this liquor to be sold might well have had brought to his attention by the chairman of the great Committee on the Judiciary—and it is a great committee, notwithstanding my membership in a humble capacity upon it—that the Constitution provides the inhibition against the manufacture, sale, export, or import of liquor, and that reducing this appropriation has nothing to do with the possibility of disposing of this liquor by sale.

As to the matter which the gentleman touched upon of whether or not this should be left with the Internal Revenue Commissioner or with the Attorney General and the various United States attorneys throughout the United States, I think it has been given a pretty thorough trial. It may be that with a different administration we will have a more rigid enforcement of the law, but the law ought to be enforced. It has not been enforced, and the enforcement of it in many sections of the country, in the section of the country from which I come, is farcical. That is not the result of the sentiment of the people, but it is the result of officials into whose hands has been committed the enforcement of the law. I think it ought to be brought to the attention of the present officials, and it ought not to be permitted to go over to the new administration. There ought not to be any slacking up in the enforcement of laws on the part of an administration simply because in a few weeks perhaps it goes out of office. The law ought to be enforced, and the officials ought to have this matter brought to their attention. I think there was some slight division in the Committee on the Judiciary when this question came up originally, and there were some who believed the entire matter might well be turned over to the Department of Justice, and unless there is more reasonable and rigid enforcement of the law it might well be claimed that the present plan has not worked successfully and it might be well to have it changed; but not having received the information from the chairman of the Judiciary Committee as to how this can be accomplished I shall cease my remarks.

Mr. BYRNS of Tennessee. Mr. Chairman, I yield 15 minutes to the gentleman from Mississippi [Mr. VENABLE].

Mr. VENABLE. Mr. Chairman, I hardly think I shall need 15 minutes in which to express my ideas with reference to the placing of the enforcement of the Volstead Act under the jurisdiction of the Department of Justice. It is true, as stated by the gentleman from Minnesota [Mr. VOLSTEAD], that in a number of cases where the enforcement of penalties for the violation of law was simply incidental to an administrative work connected with the Treasury Department, the whole matter has been committed to the Treasury Department, because the enforcement for violation of law was merely incidental to the administration or the exercise of the discretion placed in the department by the statutes. But as I understand it, since the adoption of the constitutional amendment, administrative features have become merely incidental. The collection of any revenue attached to the sale of whisky under the permission given by the exceptions is incidental. The whole subject of the sale of liquor and its prohibition has been transferred to the domain of criminal law, enforced by criminal penalties, and it does seem to me that this being true the natural and logical place for the enforcement of the Volstead Act is through the Department of Justice. It may be said that under certain circumstances permits have to be issued, that in certain cases sales are permitted under the exceptions granted by the constitutional amendment, but that is merely incidental. The broad purpose of the constitutional amendment was to outlaw the sale of intoxicating liquors in the United States, and sales that take place legitimately under exceptions are infinitesimal compared, in the present state of things, with the hundreds of thousands of sales that take place unlawfully from the Atlantic to the Pacific and from Canada to the Gulf of Mexico. In its very nature the enforcement of the constitutional prohibition is an enforcement of criminal law and ought to be in the Department of Justice.

As I understand it, there is a fundamental principle, call it of Government or of human nature, if you please, that divided responsibility never obtains the best results, because when there is a failure the opportunity is afforded by each one of the agencies to whom a part responsibility is committed to charge the failure to some other agency. As it is now, if the prosecution is to be instituted, the agents of the Treasury Department must act through the Department of Justice officials, they must use Federal grand juries and Federal district attorneys, they must use Federal marshals, they must use the law enforcement

machinery of the Government, and yet we have the responsibility divided now between the Treasury Department and the Department of Justice. Personally I have no doubt that it would make for the better enforcement of the Volstead Act to have the entire responsibility of the enforcement of this law from the investigation to the sentence of the man found guilty of violating it in the hands of one department of the Government.

Mr. VOLSTEAD. Mr. Chairman, will the gentleman yield?

Mr. VENABLE. I shall be kinder to the gentleman than he was to me and yield.

Mr. VOLSTEAD. Is it not true that in issuing a permit you will have to have somebody investigate as to the permit, whether it should be granted or not? Is it not also true that after that permit has been granted you will have to have somebody investigate whether it is being observed, and in the detection of any violation would you have him forget about it or would you have him report it to the district attorney?

Mr. VENABLE. My town, sir, has a privilege license required for the practice of law. When I apply to my municipality for a license, they have to investigate the nature of my fitness to practice law, but if I practice law without obtaining a license, that is a matter that is in the hands of the district attorney.

Mr. VOLSTEAD. Is that not in the hands of the district attorney now?

Mr. VENABLE. There is nothing inconsistent in having your primary investigation made, if you wish it made in that way, for the issuance of a permit, but when it comes to a violation of the law, a question of whether the law has been violated, the investigation and the prosecution alike ought to be in the hands of the Department of Justice.

Mr. VOLSTEAD. How are you going to separate it? The men who are investigating these permits will constantly be traveling back and forth. Thousands and thousands of those permits are issued every month, and they have to be renewed all of the time. There are thousands of people entitled to manufacture various materials, and they have to get alcohol, and they have to be watched over. If you are going to have the Department of the Treasury investigating or keeping track of that, would not you want them to do just what they are doing now?

Mr. VENABLE. No. What I am saying is this: Of course, the Department of Justice at any time can get any information from the Department of the Treasury which it has, but as a matter of practical working of the law we know that if a man makes an application to do a lawful thing and there is no objection against his character and no information against him in the hands of the department, whether it be the Department of Justice or the Department of the Treasury, that permit would be issued as a matter of course.

Mr. VOLSTEAD. No; it is not. If you do that, you are going to have this country as wet as you please.

Mr. VENABLE. Is not that the trouble?

Mr. VOLSTEAD. That has been the trouble, but they are changing that policy, and not only the issuing of the permit——

Mr. VENABLE. The gentleman misunderstands me. I say that if I go down there now and apply for a permit for anything that is permitted under the law and no objection can be urged against me I am entitled to get that permit, the same as any other citizen, and it is issued as a matter of course.

Mr. VOLSTEAD. Oh, no; that is not so. There is allowed to the Commissioner of the Internal Revenue a certain amount of discretion. He is charged with a certain duty of investigating——

Mr. VENABLE. Investigating what?

Mr. VOLSTEAD. Investigating the necessity of the application. It may not be an honest application at all. Hundreds of them have been issued for manufacturing purposes, and later the liquor has been diverted from the manufacturing purpose, which was regular, legal, to beverage purposes. Unless you have investigations from time to time you are going to fail to enforce the law.

Mr. VENABLE. Let the department make the investigation.

Mr. VOLSTEAD. It does not know anything about it. Whenever you get the permit to buy a tax is involved, and that permit is followed through its transportation to see whether it reaches its destination. It goes into the hands of the retail druggist, and he has got to be checked up from day to day or month to month, and the whole business has got to be supervised in this fashion just like all these other activities of the same kind.

Mr. VENABLE. The gentleman mistakes the point I am trying to make. He is arguing the merits of the machinery. I am arguing that the machinery or whatever is necessary should be placed in the Department of Justice. There is no difficulty in letting your Treasury Department issue its license, collect its tax. It would be a simple matter to furnish the Department of Justice with every man who has a Federal license, and then let it become the duty of the Department of Justice to see whether the law is violated or not.

Mr. VOLSTEAD. Do you want a prohibition commissioner appointed?

Mr. VENABLE. No; if the Department of Justice can handle it without the commissioner.

Mr. VOLSTEAD. Who are you going to have to issue the permits?

Mr. VENABLE. Let the permits, if you please, if you wish it—I have not worked out the completed scheme—be issued by the Treasury Department if the collection of taxes is based upon it.

Mr. VOLSTEAD. The collection of taxes is based upon every one of them.

Mr. VENABLE. Let your Treasury Department issue the license, and if a sale is made contrary to the law, let that come within the jurisdiction of the Department of Justice.

Mr. VOLSTEAD. Then, if you have a wet district attorney in one locality you will never get any enforcement there.

Mr. VENABLE. Well, if you have a wet inspector you will not, either.

Mr. VOLSTEAD. Yes; because we have inspectors traveling from one State to another.

Mr. VENABLE. Mississippi is theoretically dry, but actually it is as wet as the ocean.

Mr. VOLSTEAD. Still you may have some difficulty——

Mr. VENABLE. Maryland is theoretically dry and actually as wet as the sea. The gentleman can not argue the efficiency of the present administration of the liquor law as an argument in favor of——

Mr. VOLSTEAD. I want to say this: This statement that everything is as wet as the ocean is all rot. It is not true, and everybody knows it. It is true that the saloon practically is a dead thing everywhere in the United States, except in a few places. It is true that a fellow who has got a lot of money and knows where to go can find some liquor, but that is usually mighty poor stuff at that. [Laughter.]

Mr. VENABLE. I do not know; I am not such an expert as the gentleman. [Laughter.] I am not taking issue on the merits, I am not saying present conditions are not better than before, I am not criticizing the Volstead Act or prohibition, but I say it is a fact. The gentleman says "not as wet as the ocean." Of course, that is hyperbole. I say any man who has got the price can go and buy whisky anywhere in the United States.

Mr. VOLSTEAD. No; he can not. I know that.

Mr. VENABLE. I read in a newspaper the other day—I do not know just how true it is—that about $100,000,000 worth of whisky had been taken out of the warehouses during the past year, presumably for medicinal purposes. Well, the doctors must be prescribing whisky, many of them. I am not charging the department——

Mr. VOLSTEAD. Twenty-eight million gallons.

The CHAIRMAN. The time of the gentleman has expired.

Mr. VENABLE. Five minutes more, if the gentleman pleases.

Mr. BYRNS of Tennessee. I yield the gentleman five additional minutes.

Mr. VENABLE. Much of it is on forged permits, and very much of it is perpetrated by criminals for which the department is not responsible. They ought to be responsible. I do not understand to save my life why when it comes to a violation of criminal law—which this Volstead Act is in the main, the other things are incidental—that the department of the Government, which has the criminal law in charge, should not be committed with the responsibility of enforcing it.

Mr. VOLSTEAD. By the way, if the gentleman will pardon me, they are now. The permit system——

Mr. VENABLE. They are charged now with it when the Treasury Department comes up with some information which is put in the hands of the district attorney. To have the Treasury Department enforce what is purely a criminal statute is tantamount to a man getting his cook to drive his car and taking his chauffeur for a cook; they are out of place. Now, the question is the gentleman says that it can not be administered anywhere else. He suggests that if it were transferred it would fail. I do not care anything about the machinery. We must indulge the presumption is that the Department of Justice will obey the law, and I believe it will. We must indulge the presumption the Congress will supply the Department of Justice with the requisite number of men and the departmental machinery necessary to enforce the law.

UMI

The point I am making is that you should not have divided responsibility, and you ought to place the enforcement of this criminal statute in the hands of the Department of Justice, giving them, of course, whatever machinery and whatever men are necessary.

Mr. VOLSTEAD. Now it seems to me, if you will pardon me, that is just exactly what we do. We put the responsibility now upon the Department of Justice, but we furnish them the evidence, because that naturally and inevitably must be developed in this investigation I called your attention to.

Mr. VENABLE. Why could not the Department of Justice be provided with the necessary machinery to develop the evidence and get the evidence to develop its case?

Mr. VOLSTEAD. If they see fit to go outside, they have a right to go on and start prosecutions without asking the Treasury to do anything. Whatever they develop in the course of the administration of the permit system they turn over to them. That is all we do. That is all the machinery there is.

Mr. VENABLE. Why could not you have an investigation of the violation of the permits by the Department of Justice just as well as by the Treasury Department?

Mr. VOLSTEAD. Because by doing it you would duplicate the work. You would have a good many more employees, because these men who are charged with the duty of investigating all these various permits, in issuing them and seeing that they are enforced, are the ones that get the evidence and bring it to the Attorney General. The proposed scheme is one simply for the purpose of getting rid of enforcement. If you will take the situation in many of these States I can name to you, the district attorney will not turn his hand, will not do a thing, and if your scheme was adopted there would not be a bit of enforcement. As it is we have enforcement.

Mr. VENABLE. Will the gentleman yield for one question? Do you not have to go to the district attorney when you want to enforce the law?

Mr. VOLSTEAD. We go to the district attorney, and the law says it is his duty to prosecute.

Mr. VENABLE. Does it not say that it is his duty to prosecute, anyhow?

Mr. VOLSTEAD. Yes.

Mr. VENABLE. If the agents of the Department of Justice came there with evidence, would it not be his duty to prosecute?

Mr. VOLSTEAD. We do as we do with the narcotic act and the pure food act and a dozen other acts, which has proven to be the only effective way, create a special force whose duty it is to see that the law is enforced.

Mr. VENABLE. I am not objecting to a special force, but I say that it should be in the Department of Justice rather than in the Treasury Department. [Applause.]

The CHAIRMAN. The time of the gentleman has expired.

Mr. BYRNS of Tennessee. Mr. Chairman, I yield five minutes to the gentleman from Alabama [Mr. HUDDLESTON].

Mr. HUDDLESTON. Mr. Chairman, I wonder if it is generally known that a soldier who was wounded and permanently disabled while in service in France can not, in aid of his application for compensation, obtain his medical record from the War Department? I wonder whether that is generally known? It seems to me that if it were, the people of the United States would not tolerate such a situation.

It is a fact. I have had the experience a number of times in which not only was the soldier himself unable to get his hospital or medical record while in service, but his Congressman, who had been solicited to get it for him, could not do so. A case of that kind came to my attention this morning. This boy served upon every front in France. He underwent incredible hardships. He returned home, and his disability not being apparent he was discharged as in good health. Soon thereafter he began to manifest symptoms of mental disorder; a little later he became totally insane. He is now out at St. Elizabeths under treatment. I went out there to see this poor boy the other day. He is apparently hopelessly insane, and is incapable of giving any intelligent answer to a question asked him. Now, his father has been appointed his guardian. The father happens to be an eminent Methodist minister in Alabama. He filed a claim with the Bureau of War Risk Insurance for compensation for his helpless son. The reply he received, which was transmitted through me, was that there is some evidence in the file to indicate that the boy's disability is due to "a self-inflicted injury." The bureau's letter is as follows:

(C-456023, Charles G. Sargent, pvt., Co. F, 166th Inf.)

DECEMBER 30, 1920.

Hon. GEORGE HUDDLESTON,
House of Representatives, Washington, D. C.

DEAR MR. HUDDLESTON: I hereby acknowledge receipt of your favor of the 15th instant in behalf of the compensation claim of the above-named soldier, who is now a patient in St. Elizabeths Hospital.

The records on file disclose that the disability from which he is now suffering seems to be caused by a self-inflicted injury; however, the line-of-duty status has not as yet been determined, but an effort is being made to establish whether or not the disability from which he is suffering is a result of service, and if this is determined in the affirmative I shall be pleased to submit an award for compensation in his favor, as it appears that he is at this time totally disabled.

All correspondence relative to this case should bear the file number C-456023.

I am pleased to inclose a copy of this letter for your use.

Very truly, yours,

R. G. CHOLMELEY-JONES, *Director.*

I requested The Adjutant General to give me young Sargent's medical record, my letter being as follows:

DECEMBER 15, 1920.

THE ADJUTANT GENERAL,
War Department, Washington, D. C.

DEAR SIR: Kindly give me the military and medical record of Charles G. Sargent, Company F, One hundred and sixty-sixth Infantry. Said ex-soldier is now mentally deranged. This request is made on behalf of his father, I. B. Sargent, who has his affairs in hand.

Thanking you, I am,

Yours, truly,

GEORGE HUDDLESTON.

The Adjutant General replied by asking for what purpose the medical record was desired, The Adjutant General's letter being as follows:

WAR DEPARTMENT,
THE ADJUTANT GENERAL'S OFFICE,
Washington, December 20, 1920.

Hon. GEORGE HUDDLESTON,
House of Representatives.

DEAR SIR: With further reference to your letter of the 15th instant, in which you requested that you be furnished the military and medical record of Charles G. Sargent, No. 1343526, a former member of Company F, One hundred and sixty-sixth Infantry, which record, you state, is desired for use of I. B. Sargent, father of the former soldier, I beg to advise you that it is the invariable rule of this department not to furnish the military and medical record of former soldiers unless the purpose for which the record desired is known and is one that will justify compliance therewith under the rules of the department.

If a statement be furnished this office setting forth the specific purpose for which Mr. Sargent desires the record of his son, the request will receive further consideration.

Very respectfully,

P. C. HARRIS,
The Adjutant General.

I thereupon wrote The Adjutant General explaining in detail what the boy's father wanted with the medical record, my letter being as follows:

DECEMBER 21, 1920.

THE ADJUTANT GENERAL,
War Department, Washington, D. C.

DEAR SIR: Your file "201—(Sargent, Charles G.) WW" in re military and medical record of Charles G. Sargent, formerly Company F, One hundred and sixty-sixth Infantry, serial number 1343526:

Yours of the 20th instant. The purpose for which said information is requested is to enable the father to more adequately present to the Bureau of War Risk Insurance in support of his son's claim for compensation and insurance the connection between said ex-soldier's service and his present disability. Said ex-soldier is now insane, due to his Army service, and his father is acting as his guardian and next friend. Kindly furnish the information requested.

Thanking you, I am,

Yours, truly,

GEORGE HUDDLESTON.

My efforts were in vain. The Adjutant General declined to furnish the medical record, as is shown by his letter, as follows:

WAR DEPARTMENT,
THE ADJUTANT GENERAL'S OFFICE,
Washington, December 28, 1920.

201 (Sargent, Charles G.) W. W.

Hon. GEORGE HUDDLESTON,
House of Representatives.

DEAR SIR: With further reference to your letter of the 21st instant, in which you request to be furnished with a medical record of Charles G. Sargent, No. 1343526, formerly Company F, One hundred and sixty-sixth Infantry, and in which you state that the purpose for said information is to enable the father to more adequately present to the Bureau of War Risk Insurance in support of his son's claim for compensation and insurance, I have the honor to inform you that the medical record of a former soldier, where it is apparent it is to be used as a claim against the Government, it is the policy of the War Department to furnish such information to the proper office of the Government charged by law for the adjudication of such claims, and your letter has this day been submitted to the Director Bureau of War Risk Insurance with a military and medical history of the soldier.

Very respectfully,

P. C. HARRIS,
The Adjutant General.

The boy is insane; he can not speak for himself. The boy can not tell what happened to him in the Argonne. He can not deny that he was guilty of misconduct; he can not refute the insinuation against his honorable record. And yet The Adjutant General says that he can not give me the record. I replied to him, so that there could be no mistake, that the ex-soldier's father desired the information in order to adequately present his case to the War Risk Insurance Bureau. Back comes the reply that that is the kind of a case in which they will not give the medical record; and, they say, such "is the policy of the War Department."

I happen to have had previous similar experience. The Adjutant General's refusal of the record is based upon section 5498 of the Revised Statutes, which provides that any officer of the United States who otherwise than in the discharge of his official duty aids in the prosecution of any claim against the

United States shall be guilty of a crime. Said section 5498 is as follows:

SEC. 5498. Every officer of the United States, or person holding any place of trust or profit or discharging any official function under, or in connection with, any executive department of the Government of the United States, or under the Senate or House of Representatives of the United States, who acts as an agent or attorney for prosecuting any claim against the United States, or in any manner, or by any means, otherwise than in discharge of his proper official duties, aids or assists in the prosecution or support of any such claim, or receives any gratuity or any share of or interest in any claim from any claimant against the United States, with intent to aid or assist, or in consideration of having aided or assisted, in the prosecution of such claim, shall pay a fine of not more than $5,000 or suffer imprisonment not more than one year, or both.

Neither the War Department nor the Navy Department claim that the officer who furnishes the information is guilty under that statute. But under it they have built up a policy. The Navy is slightly more lenient than the War Department, as will appear from a recent letter which I received in response to a similar request made of the Surgeon General, which note:

WASHINGTON, D. C., *July 7, 1920.*

Hon. GEORGE HUDDLESTON, M. C.,
Birmingham, Ala.

MY DEAR MR. HUDDLESTON: Referring to your letter addressed to the Bureau of Navigation under date of June 29, 1920, in reference to medical history in the case of Archibald Alexander Davidson, ex-enlisted man, United States Navy, I am inclosing herewith an abstract of the medical history on file in his case.

For your information and guidance the following is quoted from a decision of the Secretary of the Navy:

"After careful consideration the department has decided to continue its policy of declining to furnish the medical record to anyone but the man himself, the Commissioner of Pensions, or a committee of Congress desiring the record for official purposes. The department considers a man's record as strictly personal and confidential, and that this record should not be furnished to anyone other than as stated above.

"In the case of a Congressman who requests the medical record of a former enlisted man and states in writing that he knows the person making the request of him is the man himself, the record will be furnished. When a medical record is furnished under these conditions the attention of the Member of Congress should be invited to the provision of section 5498, Revised Statutes, regarding the use of the record in prosecuting a claim against the Government."

Very truly, yours,

W. C. BRAISTED,
Surgeon General, United States Navy.

Nobody, neither soldier himself nor his Member of Congress, nor anybody else, can get a copy of his medical record from the War Department so as to refute or to explain or so as to show that the disability was actually incurred in line of duty.

Mr. GARRETT. Mr. Chairman, will the gentleman yield?

Mr. HUDDLESTON. Certainly.

Mr. GARRETT. That practice is not applied with reference to soldiers of the Civil War, is it?

Mr. HUDDLESTON. I think it is. In other words, I understand that the excuse for the practice is this: After the Civil War it was found that certain rascally employees of the Government would go through the records and find the names of men who were former soldiers and who were entitled to bounties or mileage or pension and other trifling claims, and would make lists of these ex-soldiers and turn them over to rascally lawyers who were in partnership with them, and the lawyers would drum up these claimants and write to them and get to represent the claims for a share of the profit.

The CHAIRMAN. The time of the gentleman from Alabama has expired.

Mr. BYRNS of Tennessee. I yield to the gentleman five minutes more.

The CHAIRMAN. The gentleman from Alabama is recognized for five minutes more.

Mr. HUDDLESTON. They would drum up this business and thereby occasion to the Government some expense and trouble. But certainly this statute was never intended to apply to cases where a man himself, who had served his country, calls for his medical record, so that it might be known what the facts were. Certainly it was never intended to apply to the case of a poor insane fellow, shell shocked, out here in St. Elizabeths who needs his record in order to get his proper compensation.

Mr. GARRETT. He has no other way.

Mr. HUDDLESTON. No; he has no other way. If I were to write to The Adjutant General, as it is sometimes possible for Members to do, assuring The Adjutant General on my word of honor that the information I was seeking was not intended to be used in aid of any claim against the United States, he would give it.

I present the matter to the House now. It is not in order on this bill, but it does seem to me that in view of all the mass of cases where this information ought to be given, we ought to adopt some regulation which would make it sure that the information could be obtained when it was desired in a specific case by a soldier who wants to show the true facts as to his service.

Mr. GARRETT. Does the gentleman understand that they decline that information if asked for by the War Risk Bureau?

Mr. HUDDLESTON. Oh, no. The gentleman did not observe the reading of the statute. The statute provides that by no means otherwise than in the discharge of his official duties. It is made the duty of The Adjutant General to furnish this information to the War Risk Bureau, but it is not his duty to furnish it to the gentleman or to myself, and therefore we must do without it. It is not made the duty of those officers to furnish it to the guardian of this boy, hopelessly insane out in St. Elizabeths, a victim of shell shock; it is not his duty to furnish it to him or to anyone in his behalf.

Mr. CHINDBLOM. Mr. Chairman, will the gentleman yield?

Mr. HUDDLESTON. Certainly.

Mr. CHINDBLOM. The effect of it, as I understand, is that the guardian of this boy or the parent or the Member of Congress is unable to get the information—which the Bureau of War Risk may get—for the purpose of ascertaining for himself whether the decision of the Bureau of War Risk is correct on the facts given to them by The Adjutant General?

Mr. HUDDLESTON. In the exact case given by the gentleman, where a Member of Congress would make this application to satisfy his curiosity, or for his own benefit in some way, and not in aid of a claim presented by the disabled soldier, information would be given, but if he frankly makes the statement and tells the truth, and says, "I want this in order to help the claim of my constituent," he would not get it.

Mr. CHINDBLOM. Of course, neither I nor the gentleman from Alabama would go there simply to satisfy our own curiosity.

Mr. HUDDLESTON. Sometimes a Member is able to make the statement that it is not desired in aid of a claim against the United States.

Mr. GARNER. Mr. Chairman, will the gentleman yield?

Mr. HUDDLESTON. Certainly.

Mr. GARNER. Where did the gentleman get that information? From the War Department?

Mr. HUDDLESTON. Yes.

Mr. GARNER. I have never had an experience like that, although I have made several requests of the department, and have always——

Mr. HUDDLESTON. I hope the gentleman will not throw doubt on the statement that I make. I have the papers here.

Mr. GARNER. I did not intend to cast discredit on what the gentleman has said.

Mr. HUDDLESTON. The gentleman does throw some doubt on it when he says that he has not had that same experience. Why does the gentleman say that?

Mr. GARNER. I just came into the Chamber and heard the gentleman speak, and I simply said that so far as I was concerned I never asked for information from the War Department and failed to get it. The question is whether they are making fish of one and fowl of another.

Mr. HUDDLESTON. No; I do not think the gentleman fully understood my statement; otherwise he would not have made the statement he did.

The CHAIRMAN. The time of the gentleman from Alabama has again expired.

Mr. BLANTON. Mr. Chairman, I make the point of no quorum.

Mr. WOOD of Indiana. Mr. Chairman, I move that the committee do now rise.

The motion was agreed to.

Accordingly the committee rose; and the Speaker having resumed the chair, Mr. LONGWORTH, Chairman of the Committee of the Whole House on the state of the Union, reported that that committee, having had under consideration the bill (H. R. 15543) making appropriations for the legislative, executive, and judicial expenses of the Government for the fiscal year ending June 30, 1922, and for other purposes, had come to no resolution thereon.

LEAVE OF ABSENCE.

Mr. WHEELER, by unanimous consent, was granted leave of absence for one week, on account of important business.

EULOGIES ON THE LATE SENATOR BANKHEAD, OF ALABAMA.

Mr. DENT. Mr. Speaker, I ask unanimous consent for the present consideration of the following order.

The SPEAKER. The gentleman from Alabama asks unanimous consent for the present consideration of a resolution, which the Clerk will report.

The Clerk read as follows:

Ordered, That Sunday, the 30th day of January, 1921, at 12 o'clock noon, be set apart for addresses on the life, character, and public services of Hon. JOHN H. BANKHEAD, late a Representative and Senator from the State of Alabama.

The SPEAKER. Is there objection to the present consideration of the order?

There was no objection.

The SPEAKER. The question is on agreeing to the order.

The order was agreed to.

ADJOURNMENT.

Mr. WOOD of Indiana. Mr. Speaker, I move that the House do now adjourn.

The motion was agreed to; accordingly (at 4 o'clock and 56 minutes p. m.) the House adjourned until to-morrow, Tuesday, January 11, 1921, at 12 o'clock noon.

EXECUTIVE COMMUNICATIONS, ETC.

Under clause 2 of Rule XXIV, executive communications were taken from the Speaker's table and referred as follows:

312. A letter from the Secretary of the Treasury transmitting supplemental estimate of appropriation, required for current expenses and special repairs, Columbia Institution for the Deaf, fiscal year 1921 (H. Doc. No. 964); to the Committee on Appropriations and ordered to be printed.

313. A letter from the Secretary of the Treasury transmitting copy of a communication from the Secretary of War, submitting a deficiency estimate of appropriation required by the War Department to cover "Prevention of deposits, Harbor of New York," for the fiscal year 1920 (H. Doc. No. 965); to the Committee on Appropriation and ordered to be printed.

314. A letter from the Secretary of the Treasury transmitting copy of a communication from the Secretary of the Navy, submitting a supplemental estimate of appropriation required by the Navy Department for "Dry dock and accessories, Norfolk, Va." (H. Doc. No. 966); to the Committee on Appropriations and ordered to be printed.

315. A letter from the Secretary of the Treasury transmitting copy of a communication from the Public Printer, submitting a supplemental estimate of appropriation required by the Public Printer for the fiscal year 1921 (H. Doc. No. 967); to the Committee on Appropriations and ordered to be printed.

316. A letter from the Secretary of the Treasury, transmitting copy of a communication from the Librarian of Congress, submitting a supplemental estimate of appropriation to meet the requirements of the legislative reference service of the Library of Congress during the remainder of the fiscal year 1921 (H. Doc. No. 968); to the Committee on Appropriations and ordered to be printed.

317. A letter from the Secretary of the Treasury, transmitting copy of a communication from the president of the Civil Service Commission submitting a supplemental estimate of appropriation required by the commission for printing and binding, fiscal year 1921 (H. Doc. No. 969); to the Committee on Appropriations and ordered to be printed.

318. A letter from the Secretary of the Treasury, transmitting copy of a communication from the Secretary of State, submitting a supplemental and deficiency estimate of appropriation required by the Department of State for the fiscal year 1920 and prior fiscal years (H. Doc. No. 970); to the Committee on Appropriations and ordered to be printed.

319. A letter from the Secretary of the Treasury, transmitting supplemental estimate of appropriation required by the Treasury Department for the fiscal year 1921 (H. Doc. No. 971); to the Committee on Appropriations and ordered to be printed.

320. A letter from the Postmaster General, transmitting the claim of Corinne T. Summerlin, postmaster at Fort Myers, Fla., for loss sustained by burglary of post office on March 10, 1918; to the Committee on Claims.

321. A letter from the chairman of the Federal Trade Commission, transmitting information which the commission has in its files regarding the activities of the associations of lumber manufacturers of the United States; to the Committee on Interstate and Foreign Commerce.

322. A letter from the Secretary of the Navy, transmitting a draft of a bill authorizing the relief of certain disbursing officers who have furnished civilian clothes to enlisted men of the naval service who have been discharged as undesirable; to the Committee on Naval Affairs.

REPORTS OF COMMITTEES ON PUBLIC BILLS AND RESOLUTIONS.

Under clause 2 of Rule XIII, bills and resolutions were severally reported from committees, delivered to the Clerk, and referred to the several calendars therein named, as follows:

Mr. CANNON, from the Committee on Appropriations, to which was referred the joint resolution (S. J. Res. 237) to enable the Secretary of the Senate and the Clerk of the House of Representatives to pay the necessary expenses of the inaugural ceremonies of the President of the United States on March 4, 1921, reported the same without amendment, accompanied by a report (No. 1178), which said bill and report were referred to the Committee of the Whole House on the state of the Union.

Mr. ESCH, from the Committee on Interstate and Foreign Commerce, to which was referred the bill (H. R. 15418) granting the consent of Congress to Prescott Bridge Co. to construct a bridge across Lake St. Croix at or near Prescott and between the counties of St. Croix, Wis., and Washington, Minn., reported the same with amendments, accompanied by a report (No. 1179), which said bill and report were referred to the House Calendar.

CHANGE OF REFERENCE.

Under clause 2 of Rule XXII, committees were discharged from the consideration of the following bills, which were referred as follows:

A bill (H. R. 14870) granting a pension to Mary Ellen Woodward; Committee on Invalid Pensions discharged, and referred to the Committee on Pensions.

A bill (H. R. 15186) granting a pension to John Baker; Committee on Pensions discharged, and referred to the Committee on Invalid Pensions.

PUBLIC BILLS, RESOLUTIONS, AND MEMORIALS.

Under clause 3 of Rule XXII, bills, resolutions, and memorials were introduced and severally referred as follows:

By Mr. MOORES of Indiana: A bill (H. R. 15634) to amend an act known as the "Trading with the enemy act," approved October 6, 1917, as amended by the act approved June 5, 1920; to the Committee on Interstate and Foreign Commerce.

By Mr. HERNANDEZ: A bill (H. R. 15635) to amend an act entitled "An act for the relief of Indians occupying railroad lands in Arizona, New Mexico, or California," approved March 4, 1913; to the Committee on Indian Affairs.

By Mr. CLASSON: A bill (H. R. 15636) conferring jurisdiction upon the Court of Claims to hear, examine, consider, and adjudicate the claim, including the right of enrollment of any mixed-blood Menominee Indian who participated in the payment of the sum of $40,000 provided for in article 4 of the treaty with the Menominee Indians of October 18, 1848 (9 Stat. L., 952), or any descendant of such Indian, and for other purposes; to the Committee on Indian Affairs.

Also, a bill (H. R. 15637) conferring jurisdiction upon the Court of Claims to hear, examine, consider, and adjudicate claims which the Stockbridge and Munsee Indians may have against the United States, and for other purposes; to the Committee on Indian Affairs.

By Mr. LANGLEY: A bill (H. R. 15638) authorizing the acquisition of a site and the erection thereon of a hospital plant for the investigation and treatment of trachoma at Pikeville, Ky.; to the Committee on Public Buildings and Grounds.

By Mr. BRITTEN: Joint resolution (H. J. Res. 443) authorizing the President to appoint a board for the preparation of a harmonious system of contract forms, and for other purposes; to the Committee on the Judiciary.

PRIVATE BILLS AND RESOLUTIONS.

Under clause 1 of Rule XXII, private bills and resolutions were introduced and severally referred as follows:

By Mr. ASHBROOK: A bill (H. R. 15639) granting a pension to Ida L. Sook; to the Committee on Invalid Pensions.

Also, a bill (H. R. 15640) granting a pension to Malinda Rundell; to the Committee on Invalid Pensions.

By Mr. FIELDS: A bill (H. R. 15641) granting a pension to Mary E. Coaly; to the Committee on Invalid Pensions.

By Mr. GREENE of Vermont: A bill (H. R. 15642) granting an increase of pension to Mary M. Strong; to the Committee on Invalid Pensions.

By Mr. HARDY of Colorado: A bill (H. R. 15643) granting a pension to Margaret S. Pruyn; to the Committee on Invalid Pensions.

By Mr. KEARNS: A bill (H. R. 15644) granting a pension to Mary A. Clark; to the Committee on Invalid Pensions.

By Mr. KIESS: A bill (H. R. 15645) granting an increase of pension to Abbie J. Lewis; to the Committee on Invalid Pensions.

By Mr. LANGLEY: A bill (H. R. 15646) granting an increase of pension to Hester A. Phillips; to the Committee on Invalid Pensions.

UMI

Also, a bill (H. R. 15647) granting an increase of pension to Mary E. Peake; to the Committee on Invalid Pensions.

By Mr. MADDEN: A bill (H. R. 15648) for the relief of Bradley Sykes; to the Committee on Claims.

By Mr. MOORES of Indiana: A bill (H. R. 15649) granting a pension to Samuel W. Farmer; to the Committee on Invalid Pensions.

By Mr. PADGETT: A bill (H. R. 15650) granting a pension to Sarah Ann Cornwell; to the Committee on Pensions.

By Mr. PELL: A bill (H. R. 15651) granting an increase of pension to Helen T. Smith; to the Committee on Pensions.

By Mr. REED of New York: A bill (H. R. 15652) granting a pension to Jennie H. Squire; to the Committee on Invalid Pensions.

By Mr. SELLS: A bill (H. R. 15653) granting a pension to Nannie Merritt; to the Committee on Pensions.

Also, a bill (H. R. 15654) granting an increase of pension to William H. Martin; to the Committee on Pensions.

By Mr. STEPHENS of Ohio: A bill (H. R. 15655) for the relief of Morris Simons; to the Committee on Military Affairs.

By Mr. STRONG of Pennsylvania: A bill (H. R. 15656) granting a pension to Elizabeth A. Barclay; to the Committee on Invalid Pensions.

By Mr. ZIHLMAN: A bill (H. R. 15657) for the relief of Daniel R. Baker; to the Committee on Military Affairs.

PETITIONS, ETC.

Under clause 1 of Rule XXII, petitions and papers were laid on the Clerk's desk and referred as follows:

4894. By Mr. CRAMTON: Protest of Rev. F. A. Roese, on behalf of 850 members of Zion Evangelical Church, of Mount Clemens; John Myer and 12 other citizens of Mount Clemens; and G. H. Voss and 3 other citizens of Bad Axe, all in the State of Michigan, against the presence of negro troops under French command in Germany; to the Committee on Foreign Affairs.

4895. By Mr. ELSTON: Petition of E. H. Liscum Camp urging extension of civil service to presidential appointments; to the Committee on Reform in the Civil Service.

4896. By Mr. FULLER: Petition of National Foreign Trade Council urging the full amount of money asked by Bureau of Foreign and Domestic Commerce be appropriated, viz, $1,487,270; to the Committee on Appropriations.

4897. Also, petition of Chicago City Council favoring the metric system of weights and measures; to the Committee on Coinage, Weights, and Measures.

4898. By Mr. KELLEY of Michigan: Petition of Albert Orr and 34 other residents of Oakland County, Mich., in favor of the French "truth-in-fabric" bill; to the Committee on Interstate and Foreign Commerce.

4899. By Mr. KING: Petition of Columbia Club of Geneseo, Ill., favoring the Sheppard-Towner bill; to the Committee on Interstate and Foreign Commerce.

4900. By Mr. MURPHY: Memorial of Woman's Club of Martins Ferry, Ohio, protesting against the "water-power act" as it now stands, and would like it amended so that it shall not apply to national parks and monuments. They desire to go on record as heartily indorsing the congressional policy of the last 48 years for preserving national parks in a state of absolute nature; to the Committee on Water Power.

4901. By Mr. NEWTON of Missouri: Petition of 44 citizens of St. Louis, Mo., protesting against the passage of House bills 12078 and 12652, introduced by Mr. Fess; to the Committee on Education.

4902. By Mr. O'CONNELL: Petition of National Foreign Trade Council, urging the appropriation of the full amount of money asked by the Bureau of Foreign and Domestic Commerce, viz, $1,487,270; to the Committee on Appropriations.

4903. Also, petition of International Association of Machinists, urging a $240 bonus for navy yard employees; to the Committee on Naval Affairs.

4904. Also, petition of National Lodge of Machinists, urging a bonus of $240 for navy yard employees; to the Committee on Naval Affairs.

4905. Also, conference of mayors and other city officials of the State of New York, urging the passage of a Federal daylight-saving law to be operative between May 1 and September 30; to the Committee on Interstate and Foreign Commerce.

4906. By Mr. STEPHENS of Ohio: Protest of the Janet Chocolate Co., Cincinnati, Ohio, against the adoption by the Ways and Means Committee of the House of the recommendation of the Secretary of the Treasury in the matter of the excise tax on candy; to the Committee on Ways and Means.

SENATE.

TUESDAY, *January 11, 1921.*

(Legislative day of Monday, January 10, 1921.)

The Senate met at 12 o'clock meridian, on the expiration of the recess.

Mr. CURTIS. Mr. President, I suggest the absence of a quorum.

The VICE PRESIDENT. The Secretary will call the roll.

The reading clerk called the roll, and the following Senators answered to their names:

Ball	Hale	McLean	Sherman
Beckham	Harris	McNary	Smith, Ariz.
Borah	Harrison	Moses	Smith, Md.
Brandegee	Heflin	Nelson	Smith, S. C.
Capper	Henderson	New	Smoot
Colt	Johnson, Calif.	Norris	Sutherland
Culberson	Jones, Wash.	Overman	Swanson
Curtis	Kenyon	Page	Townsend
Dillingham	Keyes	Phelan	Trammell
Fernald	King	Phipps	Underwood
Fletcher	Knox	Poindexter	Wadsworth
France	La Follette	Pomerene	Walsh, Mass.
Frelinghuysen	Lenroot	Ransdell	Walsh, Mont.
Gay	McCumber	Robinson	Williams
Gronna	McKellar	Sheppard	Wolcott

Mr. SMITH of Arizona. I wish to announce that my colleague [Mr. ASHURST] is necessarily detained on important business. I ask that this announcement may stand for the day.

Mr. HARRISON. I wish to announce the absence of the Senator from Oregon [Mr. CHAMBERLAIN], the Senator from South Dakota [Mr. JOHNSON], and the Senator from Missouri [Mr. REED] on account of illness.

I was also requested to announce the absence of the Senator from Virginia [Mr. GLASS], the Senator from New Mexico [Mr. JONES], and the Senator from Nevada [Mr. PITTMAN] on official business.

The VICE PRESIDENT. Sixty Senators have answered to the roll call. There is a quorum present.

RESIGNATION OF SENATOR HARDING.

The VICE PRESIDENT. The Chair lays before the Senate a telegram, which will be read.

The Assistant Secretary read the telegram, as follows:

MARION, OHIO, *January 10, 1921.*

Hon. THOMAS R. MARSHALL,
Vice President of the United States and President of the Senate, Washington, D. C.:

I have this day sent my resignation as a Member of the United States Senate to the governor of Ohio.

WARREN G. HARDING.

PRESIDENTIAL APPROVAL.

A message from the President of the United States, by Mr. Sharkey, one of his secretaries, announced that the President had, on January 11, 1921, approved and signed the bill S. 3218, "An act for the relief of Martina Sena, Luis E. Armijo, and Maria Baca de Romero."

GOVERNMENT OF PHILIPPINE ISLANDS.

The VICE PRESIDENT laid before the Senate the following message from the President of the United States, which was read and referred to the Committee on the Philippines:

To the Senate and House of Representatives:

As required by section 19 of the act of Congress approved August 29, 1916, entitled "An act to declare the purpose of the people of the United States as to the future political status of the people of the Philippine Islands, and to provide a more autonomous government for those islands," I transmit herewith a set of act No. 2722, passed by the Fourth Philippine Legislature during its first session, together with laws and resolutions enacted during its second session, from October 16, 1917, to February 8, 1918, inclusive; its third session, from October 16, 1918, to February 8, 1919, inclusive; its special session of 1919, from March 1, 1919, to March 8, 1919, inclusive; and by the Fifth Philippine Legislature, first special session of 1919, from July 21, 1919, to July 26, 1919, inclusive; its first session, from October 16, 1919, to February 9, 1920, inclusive; and its special session of 1920, from February 25, 1920, to March 6, 1920, inclusive.

These acts and resolutions have not previously been transmitted to Congress, and it is therefore recommended that they be printed as public documents as heretofore.

WOODROW WILSON.

THE WHITE HOUSE,
10 January, 1921.

TRANSMISSION OF ELECTORAL VOTES.

The VICE PRESIDENT. The Chair will make an announcement concerning a matter which is none of the Chair's business,

but the messengers from the various electoral colleges are bringing in the votes of the several States to the Vice President. The Chair is informed by the disbursing officer that no arrangement has been made to pay the fees provided by law for those messengers. It may be that they do not care whether or not they receive any compensation, but the Chair has a fellow feeling for those to whom any money is now due. The Chair makes that statement.

PETITIONS AND MEMORIALS.

The VICE PRESIDENT. The Chair will have noted in the RECORD a letter from Mr. F. W. Galbraith, jr., national commander of the American Legion, transmitting a memorial touching upon the situation which surrounds the rehabilitation of disabled ex-service men and suggesting a remedy. It will be referred to the Committee on Military Affairs.

Mr. MOSES presented a resolution adopted by the Dartmouth Scientific Association, of Dartmouth College, Hanover, N. H., in favor of the admission of scientific apparatus to the United States without a duty charge, which was referred to the Committee on Finance.

Mr. CAPPER presented a resolution adopted by the International Farm Congress at its annual convention held in Kansas City, Mo., in favor of adequate appropriations to continue the present investigations by the Department of Agriculture of new menaces in the form of plant and animal diseases, which was referred to the Committee on Agriculture and Forestry.

Mr. SMITH of Maryland presented a petition of the State council of Maryland, Daughters of America, praying for the passage of the so-called Johnson immigration bill, being House bill 14461, which was referred to the Committee on Immigration.

BILLS INTRODUCED.

Bills were introduced, read the first time, and, by unanimous consent, the second time, and referred as follows:

By Mr. ROBINSON:

A bill (S. 4817) for the protection of persons employed on railway baggage cars and railway express cars; to the Committee on Interstate Commerce.

By Mr. WALSH of Massachusetts:

A bill (S. 4818) to amend section 4076 of the Revised Statutes as amended; to the Committee on the Judiciary.

By Mr. HALE:

A bill (S. 4819) granting an increase of pension to Arthur L. Manchester (with accompanying papers); to the Committee on Pensions.

Mr. JONES of Washington. I introduce a bill, sent to me by the chairman of the Board of Commissioners of the District of Columbia, for proper reading and reference.

By Mr. JONES of Washington:

A bill (S. 4820) to further regulate certain public service corporations operating within the District of Columbia, and for other purposes; to the Committee on the District of Columbia.

By Mr. ELKINS:

A bill (S. 4821) granting an increase of pension to James Forsyth Harrison; to the Committee on Pensions.

By Mr. CAPPER:

A bill (S. 4822) to amend an act entitled "An act granting to the State of Kansas the abandoned Fort Hays Military Reservation, in said State, for the purpose of establishing an experiment station of the Kansas State Agricultural College and a western branch of the State Normal School thereon, and for a public park," approved March 28, 1900, as amended; to the Committee on Agriculture and Forestry.

By Mr. CALDER:

A bill (S. 4823) to amend section 1 of the act entitled "An act relating to the Metropolitan police of the District of Columbia," approved February 28, 1901, as amended; to the Committee on the District of Columbia.

By Mr. GAY:

A bill (S. 4824) for the relief of I. C. Johnson, jr.; to the Committee on Naval Affairs.

By Mr. JONES of Washington:

A bill (S. 4825) to extend the time for the construction of a bridge across the Columbia River, between the States of Oregon and Washington, at or within 2 miles westerly from Cascade Locks, in the State of Oregon; to the Committee on Commerce.

By Mr. NEW (for Mr. LODGE):

A bill (S. 4826) to amend section 5 of the act entitled "An act to incorporate the American National Red Cross," approved January 5, 1905; to the Committee on Foreign Relations.

EXPENSES OF PRESIDENTIAL ELECTORS.

Mr. WARREN. I ask permission to bring before the Senate a joint resolution on a rather important matter. The electoral votes for President and Vice President under the law are brought to the Capitol and delivered to the Vice President by a committee of electors from each State, and under the law there is a certain payment of mileage, one way, I believe it is, for their services. I understand that two or three of the electors' committeemen are already here. For that matter, the time has already arrived for those reports to be delivered, although it will extend on over a week or two or more. There being no appropriation for this purpose and there being no appropriation measure before us that would pass early enough to cover the matter properly, I report a joint resolution for this purpose from the Committee on Appropriations, and I ask for its present consideration.

The joint resolution (S. J. Res. 244) providing for the payment of expenses of conveying votes of electors for President and Vice President was read the first time by its title, the second time at length, and considered as in Committee of the Whole, as follows:

Resolved, etc., That for the payment of the messengers of the respective States for conveying to the seat of government the votes of the electors of said States for President and Vice President of the United States, at the rate of 25 cents per every mile of the estimated distance by the most usual roads traveled from the place of meeting of the electors to the seat of government of the United States computed for one distance only, there is appropriated out of any money in the Treasury not otherwise appropriated the sum of $14,000, or so much thereof as may be necessary.

The joint resolution was reported to the Senate without amendment, ordered to be engrossed for a third reading, read the third time, and passed.

AMENDMENT TO EMERGENCY TARIFF BILL.

Mr. JONES of Washington submitted an amendment intended to be proposed by him to House bill 15275, the emergency tariff bill, which was referred to the Committee on Finance and ordered to be printed.

AMENDMENT TO SUNDRY CIVIL APPROPRIATION BILL.

Mr. SHEPPARD submitted an amendment proposing to appropriate $356,700 for purchase of 2,000 acres of land adjoining and to the east of the present military reservation at Fort Bliss, Tex., intended to be proposed by him to the sundry civil appropriation bill, which was referred to the Committee on Appropriations and ordered to be printed.

FIRE IN COMMERCE DEPARTMENT BUILDING.

Mr. SMOOT. Mr. President, the morning press announces that there was a disastrous fire in the basement of the Commerce Department Building, destroying valuable census data covering many, many years past. This is the fifth fire of late in the departments of the Government. A few weeks ago I asked that an investigation be made as to the origin of the four fires which had taken place before the recent one. If reports are true, these fires were started by employees carelessly throwing down a lighted cigarette stub.

I do not know what was the origin of yesterday's fire; it is not stated in the press, and I have not had time to inquire, but it seems to me the time has arrived when there should be an order made in all the departments that while employees are at work smoking shall be prohibited.

I am going to ask for an investigation as to the cause of the fire, because the recent fire occurred in what was supposed to be a fireproof vault; in fact, just about as good a vault as we have for any of our records. I can not conceive of a fire starting in such a place unless it came from carelessness on the part of an employee, and more than likely from a lighted cigarette stub.

I might say that I think while men are in the service and working for the Government they should, at least, be prohibited from smoking during working hours.

Mr. POINDEXTER. Mr. President, in reference to the statement made by the Senator from Utah [Mr. SMOOT], I desire to say that I have not examined into the circumstances of the fire to which he referred, but I notice in the headlines of the Washington Herald this statement:

Census Data of 120 Years Ruined by Fire and Water. Irreplaceable Records Stored in Basement of Commerce Building Destroyed.

In addition to the lesson which the Senator from Utah has drawn from this occurrence against the smoking of cigarettes, and his suggestion that there be a place provided by the Government where the cigarette stubs may be placed and regulations as to when smoking may be indulged in, I wish also to suggest another lesson that may be drawn from it, and that is the advisability of the Government constructing an archives building for storing its irreplaceable records that have been accumulating for 150 years.

In 1914, now more than six years ago, Congress passed an act authorizing the construction of a fireproof archives building, where the invaluable records of the various departments not

only might be stored secure from destruction by fire and water, but where they could be scientifically arranged and made available for the use of those to whom their use is valuable; but notwithstanding that authorization, under which the Government was empowered to acquire the property and to construct the building, and notwithstanding the fact that a preliminary appropriation for the drawing of plans has been made by Congress, and that the necessary appropriation has been estimated for by the Secretary of the Treasury from year to year, Congress has failed to make the appropriation; and I presume that records of several times the value of such a building, if it had been constructed within a reasonable time after Congress had authorized it—which, in my opinion, is equivalent to a direction—have been destroyed since the authorization went into effect.

I should like to call this matter to the attention of the chairman of the Committee on Appropriations of the Senate and to the attention of the Senator from Utah, who is a member of the Appropriations Committee, and I express the wish, that, in the interest of economy, in the interest of the preservation of the records of the Government, whose value to the American people can not be estimated in money, at least a preliminary appropriation be provided for the project of an archives building for the Government of the United States, which stands almost alone among the civilized Governments of the world in being without a properly equipped and modern building for the storage of its archives.

Mr. SMOOT. Mr. President, I will say to the Senator from Washington that not three weeks ago I called the attention of the Senate to this very subject matter. Not only would the erection of an archives building by the Government take care of the public records which are of such immense value to the country, but it would release space in the public buildings now occupied by such records, and would take care of all the employees who are now stationed in privately owned buildings in the District of Columbia. I repeat, that by the erection of such an archives building we would not only have a storage place which would secure the safety of the records, but we would release just that much space which could be utilized to advantage by Government employees, and thereby eliminate some of the high rent that is paid by the Government for privately owned buildings in the District.

CHAPLAINS IN PUBLIC HEALTH SERVICE.

Mr. McLEAN. Mr. President, I should like to call the attention of the Senate to several protests I have received against the action of the Secretary of the Treasury in removing the chaplains from the Public Health Service hospitals, where many wounded ex-service men are confined. I communicated these protests to the Secretary and have received a reply. It is very brief, and I should like to read it into the RECORD:

TREASURY DEPARTMENT,
OFFICE OF ASSISTANT SECRETARY,
Washington, January 10, 1921.

Hon. GEORGE P. MCLEAN,
United States Senate.

MY DEAR SENATOR: By direction of the Secretary, I beg to acknowledge receipt of your letter of January 8, 1921, inclosing telegrams from W. B. McCarthy, Milford, Conn.; and Charles E. Lockhart, commander of New Haven Post, No. 47, of the American Legion. The telegrams are returned herewith.

The department is without authority under existing law to continue the employment of chaplains in the Public Health Service. There is no appropriation from which their salaries may properly be paid. It is, therefore, with great regret that steps were taken by the department looking to the discontinuance of their service.

The work which they have done in Public Health Service hospitals in ministering to the spiritual welfare of disabled ex-service patients can not be overestimated. Their service in this respect has been splendid and in every way commendable. Unfortunately, the department is not authorized to provide for this service to its patients at the expense of the Federal Government. It is my personal belief that the churches and religious organizations of the Nation would be proud of the privilege and glad of the opportunity to continue their ministrations to these wounded and suffering veterans of the war without reimbursement by the Federal Government.

Thanking you for letting me see the two telegrams, believe me,
Sincerely, yours,

EWING LAPORTE,
Assistant Secretary of the Treasury.

In putting this letter into the RECORD, I do not mean to imply that I agree with the conclusion reached by the Secretary of the Treasury. It seems to me that the service ought to be continued, and if it is not continued by the churches that some means should be found whereby the chaplains could receive remuneration from the Government.

ATMOSPHERIC NITROGEN.

The Senate, as in Committee of the Whole, resumed the consideration of the bill (S. 3390) to provide further for the national defense; to establish a self-sustaining Federal agency for the manufacture, production, and development of the products of atmospheric nitrogen for military, experimental, and other purposes; to provide research laboratories and experimental plants for the development of fixed-nitrogen production, and for other purposes.

Mr. GRONNA. Mr. President, the question before the Senate, as I understand, is the motion of the Senator from Wisconsin [Mr. LENROOT] to recommit the nitrate bill to the Committee on Agriculture and Forestry. The friends of the measure feel that the recommitment of the bill at this time would mean the ultimate defeat of the proposed legislation at this session.

The pending bill has been before the Senate for some considerable time and amendments have been suggested to it by many Senators. I wish to take the time of the Senate for only a few moments, and I hope I may have the attention of Senators while doing so. I wish to suggest certain amendments to the bill. I might say that I am reasonably sure that these proposed amendments, or, at least, their substance, will be adopted, providing the vote to recommit the bill does not carry.

On page 1 of the bill, line 3, I suggest that the words "Secretary of War" be stricken out and the word "President" be inserted. That would place the corporation under the absolute control of the President of the United States.

On page 3, lines 23 and 24, I propose to strike out the words "Secretary of War" wherever they are found and to insert the word "President."

The Senator from South Carolina and the Senator from Georgia have offered amendments which would come in on page 5, at the end of subsection (d), so that the consumers of fertilizer would be given the preference to purchase from the corporation.

On page 6, I suggest an amendment on line 11, after the word "act," to strike out the period and to insert a colon and the following—and to this amendment I wish to call the attention of the Senator from New York, because I know that he objects to the language now found in the bill:

Provided, That the language of this act shall not be construed so as to authorize the corporation to exercise the power of condemnation vested in the President by the act of June 3, 1916, known as the national defense act.

That, I believe, would obviate the objection of the Senator from New York.

Then, on page 7, in line 19, I propose to strike out the words "Secretary of War" and insert the word "President," and on the same page, in line 23, after the word "properties," to insert the following:

not used or needed for the purposes named herein: *Provided*, That no lease or contract shall be made for a period longer than 50 years or on terms that will prevent the cancellation of said lease or contract when it interferes with the manufacture of explosives or fertilizers.

Then strike out the remainder of the paragraph. I will read the language proposed to be stricken out. It is as follows:

In the operation, maintenance, and development of the plants purchased or acquired under this act the corporation shall be free from the limitations or restrictions imposed by the act of June 3, 1916, and shall be subject only to the limitations and restrictions of this act.

Then, on page 12, line 3, after the word "the," I propose to strike out the words "Secretary of War" and insert the word "President," and on the same page, in line 10, after the word "prescribe," to insert "*Provided*, That no officer so appointed shall receive two salaries."

There has been criticism—and, of course, justly so—in reference to the question of anyone in the employ of the Government receiving two salaries. If an officer is in the employ of the Government part of the time and in the employ of a corporation such as proposed to be created under this bill part of the time, it goes without saying that only one salary should be paid.

Mr. President, if the motion of the Senator from Wisconsin [Mr. LENROOT] does not carry—and I hope it will not carry, because I feel that this measure should be disposed of in one way or the other—I wish to repeat that I am reasonably sure that the amendments which I have suggested will be adopted, perhaps not in the form in which I have submitted them, but in an improved form.

Mr. President, we have given this question a great deal of time; it is of vast importance to the American people. It is not fair to assume that it is only a certain section of this country that is interested in this proposed legislation, for there is not a State in the Union where the farmers do not need more fertilizer than can be had at a reasonable figure to-day. To say that for the Government of the United States to manufacture a small amount of commercial fertilizer will interfere with private business is not the fact.

The State which I, in part, have the honor to represent is not using any of this commercial fertilizer to-day; but let me say to you, Senators, that if commercial fertilizer could be obtained at a reasonable price we would use it, and instead of getting

5 or 6 bushels of wheat to the acre—and that is about the yield in the spring-wheat States—that would be doubled and trebled.

Mr. President, we cultivate in the spring-wheat States in the neighborhood of 20,000,000 acres, and when you consider that some years we produce less than 200,000,000 bushels—from 180,000,000 to 225,000,000 bushels—you can readily see the tremendously low average. We cultivate in the United States some 60,000,000 acres of wheat, winter wheat and spring wheat, and when you consider this year's production of 788,000,000 or 790,000,000 bushels, you can readily see that the average of production is tremendously low.

Mr. OVERMAN. Mr. President, I am astonished to hear that the average is only 5 bushels to the acre. What was the average 20 years ago?

Mr. GRONNA. Twenty years ago it was all the way from 15 to 30 bushels to the acre.

Mr. OVERMAN. So, really, your land has been exhausted by continuous cultivation?

Mr. GRONNA. It has been, as the farmers say, worn out. It needs fertilizer; and the grain farmers need this fertilizer just as much as the people of the South need it for cotton or for the production of vegetables.

Mr. President, the farmers of the country are greatly discouraged over conditions as they exist to-day. They have very good reason to be discouraged, because in nearly every line of agriculture the farmer does not receive more than from 40 to 50 per cent of the cost of his products. That is absolutely true. You may say, "What has that to do with this question?" It has this to do with it: It costs as much to plow an acre of ground that produces 6 bushels to the acre as it does to plow one that produces 18 or 20 bushels to the acre, and you can follow that clear down the line. Instead of expending all this energy upon the farm in cultivating this tremendously large area you can cut it down to one-half and still produce more than we are producing to-day. This applies to all the products of the soil.

Mr. President, I feel that the Members of this body should have an opportunity to vote upon this question at as early a time as possible. Those who are friends of the farmer recognize that there is merit in this legislation, both from an economic standpoint and from the standpoint which I mentioned the other day, and I repeat it, that untold millions would be saved to the people of this country if we could secure this product. It is absolutely necessary. It is so necessary that in my State and in the State of the Senator from South Dakota and other States, in order to secure nitrogen from the air, some years we do not raise a crop, but give the land constant cultivation so as to give it an opportunity to get some nitrogen from the air. That, however, is an expensive method. It simply means that it takes two years to raise one crop.

I stated the other day that from my point of view I should be willing to expend a great deal of money if it were possible to minimize war. I believe that this is the beginning, and the right beginning; that the Government of the United States itself shall produce the explosives used for military purposes, because those explosives are used only for destruction, and there ought to be no profit to any individual or any corporation upon any material of that sort used to destroy human life.

Mr. President, I have conferred with men whom I believe to be good lawyers, and I have been told that if the amendments are adopted which I have suggested, but which, of course, I can not offer at this time, because a motion is pending, there could be no possibility of the corporation usurping undue power, as has been suggested by some of the Senators on this floor.

I am sure every Senator here knows that I have no interest in this measure except from the same standpoint that the other Senators have, and that is the standpoint of the common good. I ask those of you who have given this question study and those of you who have not had the time to give it the study that has been given to it by the members of the committee at least to give us an opportunity to have a vote upon these amendments and upon the bill in the Senate.

Mr. POMERENE. Mr. President, it is with very great regret that I shall be obliged to vote to recommit the bill. I have looked upon this subject with a good deal of enthusiasm. When the Senator from South Carolina [Mr. SMITH] presented his amendment which provided the original appropriation of $20,000,000, I thought then that it was a move in the right direction, and I still think something can be done that is going to make this great water power available for humanity.

I share the opinion of the Senator from North Dakota [Mr. GRONNA] that we need more fertilizer for our farmers. The records are full of testimony as to the value of fertilizers for the production of farm products, and particularly wheat and cotton. I congratulate our friends from the South that they are using fertilizer more extensively than they did years ago, and I express very great regret that the farmers in the Northwest have not long before this learned the lesson which has been so profitable to the farmers in the South. They will learn it. They will be compelled to learn it.

The problem on the farm now is more mule and man power. The best way to get along with a given quantity of mule and man power is to increase the amount of fertilizer. No farmer who does his own work is so poor that he can not afford to buy fertilizer. If he has three men employed on his farm to do the manual work, it would be better for him to have two men on the farm and apply the expense of the third one to the purchase of fertilizer.

Mr. STANLEY. Mr. President, will the Senator yield?

Mr. POMERENE. I yield.

Mr. STANLEY. If the farmers of the West learned that lesson and used fertilizer to the same extent that they are using it, say, in Georgia, where would they get the fertilizer?

Mr. POMERENE. I will come to that in just a moment, if the Senator will permit me, in my own way.

A good deal of opposition has developed to this bill in its present form, and I want to be perfectly frank when I discuss that branch of the subject. A number of people from my own State have written me opposing this bill, and have said that we have enough fertilizer in this country now. I replied taking issue with them, as I always shall take issue with propositions such as that, by calling attention to the enormous amount of importations that we have had from Chile during the last few years.

In 1914 we imported, in round figures, 564,000 tons of Chilean nitrate of soda; in 1915 we imported 577,000 tons; in 1916 we imported 1,071,000 tons; in 1917 we imported 1,261,000 tons; in 1918 we imported 1,607,000 tons; in 1919 we imported 1,346,000 tons; and paid to the Chilean Government not only excessive prices for this nitrate of soda, but paid them their export duty as well.

Mr. SMITH of South Carolina. Mr. President, if the Senator from Ohio will allow me, it is only a part of the story, when we confine ourselves strictly to this nitrogenous product. That is almost duplicated in the importation of tankage and blood from South and Central America, particularly Argentina.

Mr. POMERENE. I thank the Senator; but I simply wanted to indicate that we are not producing as much fertilizer in this country as we ought.

Mr. SMITH of South Carolina. Yes; and my remarks were to reinforce that idea by stating that not only do these great imports come from that country but there are imports from other places.

Mr. POMERENE. Yes; I recognize that; and I take no exception to the interruption at all.

Now, some of these gentlemen come here with the proposition that we are about to produce sulphate of ammonia from the by-products of the coke ovens and that we are going to interfere with that branch of an American industry. Mr. President, I have not been able to give to this bill the attention I would like to, but I am of the opinion that when the farmers begin to understand the necessity of using a greater amount of fertilizer we will use the entire product of the coke ovens as well as of this plant which is under discussion now, and we can do it with very great profit.

But my distinguished friend the Senator from Alabama [Mr. UNDERWOOD], in his very eloquent argument of yesterday, expressed his opposition to referring this bill back to the committee, stating that that meant its death. Mr. President, there are 16 Senators on that committee. They are men who are very much interested in this subject. They have either had full hearings which satisfy their minds or they have not had full hearings. If they have had full hearings which satisfy their minds as to the course they should take, it is not going to require much time for them to present a report and give to the Senate the consensus of their views. If they have not had full hearings, then they owe it to the Senate and to the country to have full hearings, so that they can come to me with a report which I can sit down and read and study and try to come to some conclusion which will satisfy my own mind.

My good friend the junior Senator from Georgia [Mr. HARRIS] on yesterday lined up those of us who were insisting on sending this back to the committee with the fertilizer trust. He did not quite mean that; but permit me to say to him that not every one who says "Lord, Lord," shall enter the kingdom of heaven, and it is not everyone who boasts of his friendship for the farmer who is befriending the farmer. Before I vote for this bill I want to know if it is fertilizer I am handing to the farmer or a gold brick; and in the present state of my mind I do not know whether it is fertilizer or a gold brick the Senate is about to hand to the farmer.

Mr. President, originally twenty millions of money was enough for this plant. I find, as a matter of fact, that up to date nearly one hundred millions have been expended, and now this

bill seeks to appropriate $12,500,000 more to provide some additions to the plant whereby they can manufacture sulphate of ammonia.

But it has developed during the debate that the fertilizer at this plant can only be profitably produced by the aid of the water power, and I find that they have developed a steam plant there now with 120,000 horsepower, which is only to be used in emergency, so it was said in the first place, when the water power was low. But now the plan which is contemplated is that we shall make this fertilizer by steam power, at least until the dam is completed. In other words, the friends of this measure want us to produce sulphate of ammonia at a loss for two or three years, until the water power can be completed, and we are told that the estimates of the department are that it will cost $43,000,000 to complete this water-power scheme.

If we are to spend twelve million and a half ultimately for emergency purposes and are to operate this plant by steam power at a loss for three years, I prefer to vote for the forty-three million now with which to complete the dam.

Mr. STANLEY. Mr. President——

The VICE PRESIDENT. Does the Senator from Ohio yield to the Senator from Kentucky?

Mr. POMERENE. I yield.

Mr. STANLEY. The statement has been made repeatedly that it was developed at the hearings that sulphate of ammonia would be produced at a loss by steam power. Expert after expert has given in these same hearings, which I am sure the Senator from Ohio has overlooked, detailed statements of the cost of producing sulphate of ammonia by steam, including the royalties and every other detail, and all of them except Mr. Washburn, who has a direct interest, put it at $58, and a ton of sulphate of ammonia is now worth $70.

Mr. POMERENE. Mr. President, I recognize that there is more confusion in that record than there was confusion of tongues at the Tower of Babel, and I would like to have the committee interpret it, so that we may know what the truth is.

Mr. KING. Mr. President, as I read the record, it is conceded by the proponents of the measure, at least some of them, that $3,000,000 of this $12,500,000 is available for, and it is expected it will be used to meet, the losses incident to the operation of the plant until water power is generated.

Mr. POMERENE. I want to say that if the estimate of the cost which has been given by these experts is no more reliable than the estimates of the cost of the construction of the plant, then there is no confidence to be placed in anything they may say.

Mr. President, in going over this record last night I found that some of the experts of the War Department are of the opinion that cyanamid is a good fertilizer in its, shall I say, raw state. Others say not. The Secretary of War himself says he went to the plant and found that they had planted certain plats of ground, on one of which they used cyanamid as a fertilizer, on another sulphate of ammonia, and on another some other fertilizer, the name of which escapes me at this minute; and he expressed the opinion that while that plat on which the cyanamid was used was better than the plat on which there was no fertilizer used, it was not nearly so good as the plats on which other fertilizers were used. So that we are confronted in the first instance with a question from the Secretary of War as to the profitableness of this kind of fertilizer.

But let us go on further with this, and see what the situation is. Already there is the investment of a hundred million dollars. Under the bill as it was presented here and reported out by the committee they do not provide for any capital stock to represent this investment, but they say that the stock shall be no-par stock, and not a word is said as to the number of shares of this no-par stock which shall represent the value of this plant. I have not heard anyone say what this plant would cost if we were to attempt to rebuild it now from the ground up. I do not know what that investment is.

Mr. KING. Mr. President, there is testimony in the record to the effect that this plant now could be produced for substantially $15,000,000. I have not any doubt in the world that this plant, and perhaps a better one, within the next year or two can be reproduced for that amount.

Mr. POMERENE. Mr. President, I understand Mr. Washburn's company built this plant, and the Government paid him a million dollars. It is fair to say that he called attention to the fact that he must pay out of that the Federal tax, and that they would not have very much left. But he built it, none the less. Before that there was a smaller plant built in which they used the Haber process, costing three or four million dollars. It was built for experimental purposes. Mr. Washburn built the cyanamid mill No. 2. It was the one which was going to use his process.

Mr. President, a question has been raised as to the relative value of these two processes. The Senator from Kentucky [Mr. STANLEY] is clearly of the opinion that the cyanamid process is the best, and the reason he gives for that, in part, is this: There are more cyanamid mills than there are Haber process mills.

The Senator from New York [Mr. WADSWORTH] says that there is a large company in his own State which uses the Haber process, and, as they are investing their own dollars, it may be assumed that they have confidence in their project.

Mr. Washburn says that, while he used the cyanamid process, he has come to the conclusion now that he can not make cyanamid and compete with the by-products which come from the by-product coke ovens.

I do not say that is true; I do not know whether that is true or not. But I would not invest a hundred dollars of my own money in a proposition of this kind unless I knew something about it, and I dare say that there is no Senator on this floor who would invest his own money in a proposition of this kind with the present state of the record.

Mr. President, a lot of these fertilizer companies come with their representatives and say, "You must not interfere with private enterprise; it is wrong." They are asking us as the representatives of the people to scrap a hundred million dollar plant; for whose benefit? For their own. It seems to me they would be ashamed to come here with a proposition of that kind. I am willing to receive light from all sources, but what I want is light. I want to know whether, when we build this fertilizer plant, we are giving the farmer a pig in a poke. I do not know that. I have not yet had it demonstrated, at least to my satisfaction, that anyone knows very definitely.

More than that, last night in going over the record I was a good deal interested in some statements made by Mr. Washburn. Bear in mind, please, that he built the cyanamid plant, but he tells us that while the Government has the privilege under the contract to make the nitrates for explosive purposes, it has no right at all to make the nitrate for fertilizer purposes. In the first place, he says that the Air Nitrates Corporation have a right under their contract to buy the plant. On page 121 he says that they have the right to buy the plant under as favorable terms—and this is the exact language—"as the Government is willing to accept for it." Later on he says:

> The Government acknowledges the ownership of the patents by the American Cyanamid Co., and that company licenses the operation of the plants, under specific patents indicated by number, date, and title. The company's patents covering the manufacture and use of cyanamid fertilizer, phosphoric acid, or any of its processes, including the electric furnace phosphate process and ammonium phosphate, are not included in those for which rights are given.

Further on he says:

> Sixth and the last thing. The American Cyanamid Co. is to receive royalties at the one rate before the 1st of June, 1921, and at another rate afterwards; it is to receive a royalty per unit of nitrogen produced of six-tenths of 1 cent per pound of nitrogen to June 1, 1921, and 1½ cents thereafter; but should either party become dissatisfied after the 1st of June, 1921, with the 1½ cents fixed he may appeal to arbitration.
>
> I have already related to you the nature of the negotiations, and that I believed it to be the purpose of the negotiators on the part of the Government to go just as far as they could to save these great plants becoming the engines of our own destruction. And when you consider the bald fact that as we stand here to-day everything we received from the Government has profited us nothing—and of that we do not complain; that is as we wanted it. I have letters here addressed to the Government showing that we did not want any profit; but we did want protection after the war was over. And now the Government itself proposes to go into competition with us, and whatever the incentive, it is suggested by the gentlemen who have charge of this that they shall make cyanamid and sell it to our customers.

I shall not take the time to read the rest of it, but the American Cyanamid Co. are clearly taking the position that the Government does not have the right to make cyanamid for fertilizer purposes under its contract.

Mr. WOLCOTT. Mr. President——

The PRESIDING OFFICER (Mr. JOHNSON of California in the chair). Does the Senator from Ohio yield to the Senator from Delaware?

Mr. POMERENE. Certainly.

Mr. WOLCOTT. I did not hear all of what the Senator read. Is the position of the American Cyanamid Co. predicated on the terms of the contract entered into?

Mr. POMERENE. Yes; on the terms of the contract.

Mr. WOLCOTT. I would call this to the Senator's attention, bearing on the same subject: I have a recollection, which is somewhat distinct, that it appears somewhere in the hearings that the same witness, Washburn, testified that the Government did not have a right to manufacture cyanamid for fertilizer purposes for another reason, which is that the process used in that plant is bottomed on patents and patent rights owned by the American Cyanamid Co., which have been assigned or licensed to the Government only for the manufacture of nitrate for military purposes, and for the Government to go beyond

that purpose in the manufacture for fertilizer purposes would be practically a confiscation of their patent rights. I think there is some such testimony.

Mr. POMERENE. I have not had the time to read all of the testimony, but in the part which I have read I gained something of the same impression as the Senator from Delaware.

I have called the attention of the Senate to these facts to indicate the uncertain state of the record. I do not think the Senate is desirous of passing legislation of this kind, making an appropriation of a large amount, until we know what our rights are under the contract and under the patent. It seems to me we should also know the present state of the art. It seems to me that if the process can not be used profitably the Government should not take up the process. I am not sure that it can not be used profitably. I am not content with Washburn's testimony. I am told, though I have not read that part of the record, that in one place at one time he said that the sulphate of ammonia could be produced at $17 a ton and at another time he said $70 a ton. When he is asked by the distinguished chairman of the committee as to the value of the plant, he says, with regard to the child of his own brain and his own hand, that it could not be sold at any price.

I was delighted to know that the Congress of the United States had taken steps to harness up the water power that has been going to waste all these years. I want it for the benefit of the community, for the benefit of humanity, but in view of the record of the building of this plant I want some definite information about it. It is the duty of the committee, it seems to me, to give us that information, or at least the benefit of the consensus of their views.

Mr. POINDEXTER. Mr. President——

Mr. POMERENE. I yield to the Senator from Washington.

Mr. POINDEXTER. I understand the Senator to say that Mr. Washburn, who constructed the plant, had said that it could not be sold at any price.

Mr. POMERENE. That is the statement made by the distinguished chairman of the Committee on Agriculture and Forestry.

Mr. POINDEXTER. That would tend, then, to indicate that it was of no value to anyone; otherwise, I assume that some one would be willing to pay its value.

Mr. POMERENE. The construction I have placed upon the statement is that would be true if it came from an unbiased witness.

Mr. GRONNA. Mr. President——

Mr. POINDEXTER. I am not informed sufficiently to weigh the value of this testimony. I am just taking it for what it is worth. I should like to ask the Senator from Ohio, if the Senator from North Dakota will pardon me just a moment, if the testimony is reliable and valuable and we assume here that the plant is of no value to anyone as shown by the fact that no one is willing to pay anything for it, how can the Government make anything out of it? How is it of value to the Government if it is of no value to anyone else?

Mr. POMERENE. The Senator's question is just the identical question that has been in my mind. I want the judgment of the committee upon that proposition, among others.

Mr. GRONNA. Mr. President——

Mr. POMERENE. I yield to the Senator from North Dakota.

Mr. GRONNA. I have tried to be fair with those who opposed the bill before the committee. I wish to say that Mr. Washburn stated most emphatically that this was a very valuable plant, a complete plant—I think that is his exact language—but that it could not be sold, as the Senator from Ohio stated, for anything at this particular time. The report of the committee which examined the plant shows, and the same committee visited all the European countries and made the report, that nowhere could a more complete plant be found than the No. 2 plant built by the Air Nitrates Corporation or by Mr. Washburn.

Mr. POMERENE. I think the chairman has pretty accurately stated the testimony in that behalf. I wish it distinctly understood that it is not in a spirit of opposition to the plant that I am going to support the motion to recommit, but it is because I feel that the American people are entitled to exact information upon the subject before we go further.

I have little sympathy with those criticisms which point to sectionalism in the location of the plant. In my judgment, with the information I now have, it is the best possible location in the United States. I would like if the matter could be so arranged, under some scheme, after a careful study by the committee, as to have the work go on with the hope that we can salvage at least a part of the money we now have in the plant and turn it to use on the part of the farming community. That is all I care to say.

Mr. SMOOT. Mr. President, I had expected to speak at length on the pending bill, but I know that the Senate would like to vote to-day upon the motion to recommit it to the Commitee on Agriculture and Forestry, and I sincerely hope that that will be done. The discussion has already disclosed the fact that the pending measure is not a fertilizer bill. Since I have been a Member of the Senate I have never seen a measure in connection with which there has been so much camouflage as there has been in reference to the pending bill. It is a water-power bill pure and simple, and I think, if I desired to take the time of the Senate now—and if the bill is not recommitted I may do so later—I could prove beyond a doubt that that is the fact. If the Senate wishes to appropriate $140,000,000 in order to develop water power at Muscle Shoals, that is one question; but do not let the proposition be based on the representation that the main reason for such action is that it is going to make fertilizer cheap for the farmer. There is nothing in that contention, Senators.

When we vote for the bill we shall simply vote for the establishment of water power at Muscle Shoals, and that water power will either be leased by the Government of the United States to private individuals, or else the Government of the United States will lose not only what money it has put into the project but whatever appropriation it intends to make for the purpose under the provisions of the pending bill.

Mr. FLETCHER. If I may ask the Senator from Utah a question, I desire to ask whether in the development of water power the improvement of the navigation of the river would not be a part of the scheme?

Mr. SMOOT. The question is far-fetched. Navigation is such an unrelated matter that it ought not even to be mentioned in this connection. As a matter of fact, it would be impossible to get any engineer to consider that subject as bearing upon the bill.

Mr. SMITH of South Carolina. May I ask the Senator from Utah a question?

Mr. SMOOT. Let me answer the question of the Senator from Florida, and then I will yield to the Senator from South Carolina.

Mr. SMITH of South Carolina. Very well.

Mr. SMOOT. I have here a letter from Mr. Hugh L. Cooper bearing on this question. I take it for granted that there is no Senator who will say that Mr. Cooper is not qualified to speak in reference to this matter and to estimate what this project is going to cost; and having been interested, as he has been for years past, in this very project, I think his testimony ought to be taken with due consideration. The only question that arises with him or which he thinks ought to be considered at all is, Would it be better to lose the money which we have already invested in the project—which I will frankly say he does not believe we should do—or to make the appropriation of some $26,000,000 to complete the water-power dam, and then for the United States to lease the project and perhaps, by following that plan, be able to make 5 per cent upon its investment? This is not the time for the Government of the United States to invest its money upon a project on which it is liable to lose most of it, as has been stated by the proponents of the pending bill, if the work is not continued, and under the very best of circumstances for it to receive only 5 per cent upon its investment.

I know that Senators wish to take the vote upon the pending motion, and I am not going to discuss this question at length, because I should prefer that the vote be taken at this time.

Mr. SMITH of South Carolina. Mr. President, I wish to ask the Senator from Utah if in the cool and dispassionate manner in which he is proceeding he means to indict not only the officials of the War Department and the Agricultural Department but Senators who are advocating the passage of the proposed legislation as being so hopelessly stupid and so hopelessly incompetent to understand a certain proposal that they have become the puppets and tools of designing individuals who propose to develop the water power at Muscle Shoals and to use it for their advantage, and are not able to detect what is so manifest to the Senator from Utah?

I do not think the Senator from Utah wishes to stand here and seriously imply that his colleagues on the floor who are interested in the measure and that two departments of the Government which are advocating it are stupid, to put the best construction on his statement; and worse than stupid, to put the other construction on it.

Mr. SMOOT. The Senator from South Carolina may put any construction he desires upon my statement. I think if the Senator had listened to the testimony, as I think he did, and as I have studied it—or if any Senator will read the testimony which was given, even that of the Secretary of War, he will

come to the same conclusion that I have unless he desires that the Government of the United States go into the project for the purpose of developing water power at Muscle Shoals.

Mr. SMITH of South Carolina. Mr. President, the Senator from Utah does not mean to state at all that I sat and heard the Secretary of War and came to the conclusion that he was camouflaging the situation in order to develop water power at Muscle Shoals. The development of water power is to be desired, because, in the last analysis, it is the cheapest form of energy that can be used for the production of a very necessary ingredient for fertilizer. It was stated and reiterated——

Mr. SMOOT. If the Senator will allow me now to conclude, I desire to say I have heard the Senator make that statement a good many times.

Mr. SMITH of South Carolina. The Senator from Utah never heard me make the statement before, and I am surprised that he should stand here and attempt, as has been done all the time in this Congress, to discredit the various officials in whom we have under the law got to place confidence. It is a wonder that the public do not repudiate our Government and seek another form of government if those we put in charge of our affairs are half so mean as some of us seem to think.

Mr. SMOOT. Mr. President, I think the people of the United States did repudiate the present administration. I think there is no question of doubt that if we spend $140,000,000 or $169,000,000, if the project shall be completed according to the estimates that have already been submitted to Congress, that there will never be any product manufactured there. Even if the fertilizer plant about which Senators are talking be built, there will never be a product manufactured there which will go directly to the farmer to be used. I know the Senator from South Carolina said the other day that he had used a part of the products that would be manufactured by the plant, but no one can find anything in the entire testimony to the effect that they are going to produce an article such as that to which the Senator from South Carolina referred.

Mr. SMITH of South Carolina. If the Senator will allow me, that is the basic element which they have to produce in order to get the explosive ingredient. The product of the first process is the one which is available to the farmer.

Mr. SMOOT. Mr. President, what is produced at the Muscle Shoals plant will go not to the farmer at all, but to the fertilizer manufacturer. A very small part of the product will be put into fertilizer, and it will make no difference in price whatever to the farmer. I have no patience with all this camouflage about the farmer. Let us get right down to what this measure means, and if we are going to put the Government's money into the Muscle Shoals project let us know what the result is going to be, and, then, if the Congress of the United States says that they want to spend $169,000,000 on it, let the American people know that Congress did it, and let those who vote for it take the responsibility.

I am not at this time going into the details of the bill, as the Senator from New York [Mr. WADSWORTH] and the Senator from Wisconsin [Mr. LENROOT] have done, but I indorse every word which has been uttered by those Senators. I say that a reading of the bill can not result in any other impression than has been pointed out by them; no other construction can be placed upon the bill. I hope and trust that at least we will give the committee another chance to draw the bill in such form that if it shall become a law we will know something about what the cost will be to the Government and what is to be accomplished or intended to be accomplished by its passage.

Mr. KENYON. Mr. President, as I am a member of the Agriculture Committee but feel I must vote to recommit the bill, I desire to say a few words in explanation of my attitude. I hesitate so to vote more on account of the position of the chairman of the Committee on Agriculture and Forestry [Mr. GRONNA] than for any other reason, because I do not like to be out of accord with him.

He has given the subject a great deal of consideration and is earnestly in favor of everything that will benefit the farmers of the country. I believe it will be a great loss to the people of the United States when the Senator from North Dakota retires from this body in a few months, and I hope the committee, if the bill is recommitted, may be able to work out the problem before he leaves the Senate.

This bill has troubled me very much. I have not been able to find any member of the committee who was present when the bill was voted out. I think possibly the Senator from South Carolina [Mr. SMITH] may have been present, and one or two other Senators, but I am perfectly well satisfied that the Agricultural Committee did not give to this bill the consideration which they should have accorded it. I do not say that in any spirit of criticism. I myself was compelled to be away from the committee at the time on account of other duties in connection with other committees, and other Senators were similarly situated. When I vote to recommit the bill I do not vote against the principle of the bill. I am not frightened at all by the Government undertaking to go into some particular line of business if it may be essential to break a monopoly or essential for the general welfare, although I do not indorse the proposition as a general thing of the Government going into business; but if this measure would help to smash the Fertilizer Trust, that consideration would be very persuasive with me. However, I do not believe it will have that effect. If it would be helpful to the farmers, that would be more persuasive; but I am inclined to think that the farmers will have no benefit whatever from this bill, especially in its present form.

The high point in reference to this matter is struck by the Senator from North Dakota [Mr. GRONNA] in his proposition that there should be no profit to private industry in the manufacture of munitions of war. I will join on the committee with Senators who want to work out that kind of a proposition, that will embrace of necessity this plant at Muscle Shoals, and should provide for other plants, so that the Government will be the sole manufacturer of munitions of war. I believe that if that were true it would tend to decrease war, and I believe that the Senator from North Dakota in getting away from the fertilizer proposition and navigation has struck the real note in this matter.

But I confess to a good deal of suspicion about any bill that originates around Muscle Shoals. I do not mean that now as to Senators, but the proposition has been fraught with fraud and graft and corruption ever since the initiation of the movement at Muscle Shoals. I fought it then. There were only a few Senators who were opposed to it. It seemed to me a wrongful expenditure of public money. Now, we have come on down through these years, and anyone who reads the Graham report—and I have never seen it denied very much—will have to agree that for graft and fraud Hog Island is a piker compared to Muscle Shoals.

We have spent in this country I think a little over $100,000,000 in reclaiming some 3,000,000 acres of land, and that money will come back; and here we are with this proposition expending $100,000,000 and getting nothing. The record is a shameful record.

I realize that in this wider view, in this wider project of trying to work out something in the making of munitions of war by the Government, it probably will be necessary to take into consideration the plant at Muscle Shoals. It is probably a great water power, and I am not at all averse to doing that; but here are the cyanamid interests, and the Alabama Power Co., and all these other interests around Muscle Shoals that arouse one's suspicion. Talk about a lobby, as the Senator from Alabama does! There certainly has been a lobby here ever since I can remember for the Alabama Power Co., the Muscle Shoals, and possibly the cyanamid company. The senior Senator from Massachusetts [Mr. LODGE] back in 1916 placed in the RECORD, at page 5643 of the RECORD of April 7, the different companies associated together in these matters. We find Mr. Washburn and Mr. Worthington in many of these companies. We find the Dukes in these companies, in whose hands a good many people suspect this plant will finally wind up.

The Senator from Alabama talks about lobbying. I agree with him about that. I am suspicious of the articles that we are receiving from New York against this proposition—"Muscle Shoals facts," sent out by the Press Service Co., of New York, in different installments. I have written to the Press Service Co. to know who is paying for this. I should like to know where that end of the lobbying is. There is a lobby on all sides.

The remark of the Senator from Alabama yesterday concerning these lobbies I think is worthy of a good deal of consideration. I do not know where this lobbying business is going to stop. There are proper kinds of lobbies. Nobody wants Congress to be shut off here on the hill and have people unable to get to Congress; but it is reaching a point nowadays where Washington is swarming with lobbies of every kind and description—some good lobbies and some bad lobbies. You can not go to your office, you can not get through the corridors anywhere, without having some of these lobbyists talking to you about bills in Congress.

I am not particularly objecting to that if it is known just exactly what these lobbyists are and who they represent. There has been testimony before committees of social lobbies in the city of Washington, of gentlemen receiving funds from great interests to use in social lobbying. You can pick up the papers every day and read of dinners and dances and balls given by

the Lord knows whom—a favorite form of lobbying in the city of Washington. The records of our Agricultural Committee in a certain investigation show that very thing. I do not know that there is any way of stopping that kind of a lobby; but there is existing now in the city of Washington, and it is going to grow, lobbying of certain kinds in lumber interests, oil interests, and other big interests; men go out of the Senate and men go out of the House and join up with these lobbies. There is going to be more of it in the days to come. The "general practice" of law in Washington is coming to be synonymous with "general lobbying."

I have in my hand a list of gentlemen, some of whom are ex-Members of Congress and ex-officials of the Government, here in Washington in the interest of oil, lumber, and other questions before the departments. That is a lobby that is growing. I believe that in order to carry on legislation here in the months to come we ought to have some kind of a law with relation to lobbying. Kansas has that kind of a law, and I think a number of other States have laws requiring the registration of lobbyists, a statement of just whom the lobbyists represent, and the fees that are paid them. Nobody ought to object to that. Then when they come before a committee, when they meet you in the halls, they meet you on your way home, they sit next to you on the street car and try to talk to you about bills, you know who they are and what they represent.

Mr. WALSH of Massachusetts. Mr. President——

The PRESIDING OFFICER (Mr. CURTIS in the chair). Does the Senator from Iowa yield to the Senator from Massachusetts?

Mr. KENYON. I do.

Mr. WALSH of Massachusetts. Will the Senator please inform me whether or not there has been any effort made in Congress in recent years to establish a plan for the registration of lobbyists?

Mr. KENYON. I introduced a bill on that subject some years ago, but I will say to the Senator that it was a matter of derision. It never got very far.

Mr. WALSH of Massachusetts. Is it not a fact that nearly all State governments, especially the governments of the States that are considered progressive, have registration laws for lobbyists?

Mr. KENYON. I know that very many of them do. Does the Senator see any objection to a law of that kind?

Mr. WALSH of Massachusetts. I personally think it is a very unfortunate state of affairs to have the legislative branch of the United States Government without rules and provisions restricting and limiting the presence of lobbyists, compelling the registration of lobbyists, and making public the interests and special causes that they represent and the amount of fees or money collected and paid out by those interested in legislation, and I am surprised that some serious effort has not been made in the past to prevent the activities of lobbyists in and about Congress by at least a registration act.

While I am on my feet I want to say that I was much interested in hearing the Senator state that recently there has been a decided increase in the presence in Washington of gentlemen connected with lobbies. I hope it is not due to the fact that it is expected that during the next administration there will be more favorable opportunity for obtaining special-interest legislation than in the past. In any event, it is true, too true, that the discussion of tariff measures and of reforms in taxation laws has led to a stream of new arrivals in Washington to lobby for special legislation here. If some action is not taken we are going to be very much handicapped and embarrassed in doing our work here purely in the public interest during the next session of Congress.

Mr. OVERMAN. Mr. President——

The PRESIDING OFFICER. Does the Senator from Iowa yield to the Senator from North Carolina?

Mr. KENYON. I do.

Mr. OVERMAN. I think the Senator from Iowa introduced a bill on this subject, and I did also; and I will say to the Senator from Massachusetts that my bill was based largely upon the law of Massachusetts, which I think is a very good one. I think the Senator and I had better introduce our bills again, and perhaps they will receive consideration by the committee next time.

Mr. WALSH of Massachusetts. The registration law in Massachusetts was adopted during my public service in that State, and I must say that it has had a very wholesome effect upon ridding the halls of the legislature of the activities of undesirable lobbyists. It is a law that is very well lived up to, and it has had a tendency to help the dispatch of public business, and to have the lobbying that is necessary and important and proper carried on in an open and legitimate way.

Mr. KENYON. Of course, there is a lobbying that is perfectly legitimate and perfectly proper. Members of Congress do not want to keep themselves away from getting all information that is essential; but certainly there can be no valid objection to something that will let us know who the people are that are doing the lobbying, whom they represent, and what they are receiving in the way of fees. I have been informed on evidence that I think reliable that one institution here in Washington doing a lobbying business is paying out as much as $250,000 a year in fees. It would be interesting, when some one came from that organization or association to speak to Members of Congress on legislation, to know whether they were just interested pro bono publico or whether they were influenced by good-sized fees.

I noticed some time ago, when the Agricultural Committee was considering a bill where this water-power proposition at Muscle Shoals crept in, that Mr. Washburn always seemed to be very handy, and was always dropping in to advise the committee about it.

So apparently in this matter, as the Senator from Alabama suggests, there has been lobbying against the proposition, and my suspicion is aroused as to where that lobbying is coming from, as to whether it is coming from private interests who do not desire the Government to go into this business for fear it may hurt them. I would like to know about that. But the whole situation is to me so muddy, and has not received that consideration which it should have before the committee, that I am going to vote to return it to the committee. That does not indicate that on the final analysis of this matter I might not be for the principle of this bill. I will be for a proposition along the lines suggested by the Senator from North Dakota, which will work out some large, broad plan to take away from private industry the profits of munition making, and I hope that something of good may come to the farmer. But as far as this bill is concerned, I am strongly of the opinion that it is a gold brick for the farmer.

Mr. HARRIS. I would like to ask the Senator a question. I know he is one of the very best public men in the United States, and anxious to do anything he can for agriculture. Why should the fertilizer trust of the United States be so opposed to this? If this measure would not help the farmer, why should they be opposing it?

Mr. KENYON. I am not certain they are; but if they are, that is a very suspicious circumstance. The only time I could be present at the meeting of the committee was when Mr. Washburn was on the stand. Mr. Washburn had been before the committee originally urging the Muscle Shoals proposition. He was here this time fighting it. The Senator will find in the record that I asked him why he was doing it, as I could not understand his position at the time.

I do not see anything in this bill, however, I will say to the Senator, which prevents the trust getting the production, and I am afraid that is exactly what it will do. It will be a bunco game to the farmer. This bill must be changed in many respects before I can bring myself to vote for it.

Mr. HARRIS. Mr. President, I have an amendment to offer which does take care of the farmer, and requires the fertilizer manufacturers who buy this product to sell it at a reasonable price to the farmers.

Mr. UNDERWOOD. Mr. President, I do not intend to detain the Senate with another speech. I made one yesterday and said all I have to say about this matter. It is mighty easy to give a dog a bad name, and let it follow him through life, and I rise now to call to the attention of the Senator who has just taken his seat [Mr. KENYON] a few facts in reference to Muscle Shoals.

For more than a hundred years the people of Alabama and Tennessee have been interested in improving the navigation of the Tennessee, and these shoals, called Muscle Shoals, have been a block in the way of navigation. There is not any ulterior motive behind that. It is a very natural desire on the part of the people of those States, and has been for a hundred years, to secure navigation. At one time the Government went to the point of partially building a canal, which was not entirely completed, and was not useful for navigation because conditions changed.

I wish to address my remarks to the Senator from Iowa just for a moment, and then I will be through. The Senator said that one objection he has to this bill is that the environment at Muscle Shoals, the lobbies in reference to Muscle Shoals, the unwarranted expenditures in reference to Muscle Shoals from the beginning, turned him against the measure. I know the Senator was sincere when he made that utterance, but let us analyze it. Of course, in the early history of the Government there were some expenditures made down

there that neither he nor I know anything about. Four or five decades ago they built a small canal. I know nothing about that, and I presume the Senator does not. I suppose he is talking about what occurred in the last two decades.

The Senator should bear in mind that outside of a survey, ordered in a river and harbor act to determine the navigability and water power of these shoals, there has not been one dollar expended at Muscle Shoals by the Government where fraud or extravagance could be committed until the time of this Great War. It is true that there have been a large number of men from Alabama who have been interested in building a dam there. That was legitimate. When they did not dream of the Government building this dam, they were interested in getting private parties to build it, and of course that was natural. But the Government always withheld its hand and blocked the development of this the greatest water power that lies east of the Mississippi River outside of Niagara Falls. There is no question about that.

It is natural and proper for men who represent the people who live in that community to come here and advocate that development. But nothing was done. Up to the time of the war there is nothing for the Senator to hang his statement on that there was fraud or corruption, because there was no Government money spent there, outside of a survey, and that was by the United States engineers, and there was certainly no fraud or corruption in making that survey.

I recognize the fact that Mr. Washburn at one time wanted to get the right to build this dam and develop water power and build this plant in Alabama, though I do not think he applied directly for it. He eventually applied for authority to build a dam on the Coosa, as the Keokuk Dam was built, as dams all over this country have been built. There was no corruption in that. So that, although some kind of special interests in mind have applied for the use of this water power, it is nothing more than usual, and it is nothing more than is now authorized by the Congress of the United States in the general power policy, because the Government expects special interests to make application to build these water powers.

But the Government finally decided, through authority exercised by the President under the national defense act, to take this water power for Government use, and not to give it to special interests; and I heartily approved of that. I think it was a very wise step when the President of the United States started to locate the Government plant for making nitrogen for powder at the greatest water power this side of the Mississippi River. The Government ought to have a great water power which it can control, not only for purposes in time of peace, but as a reserve arm in time of war, which it can always use for governmental purposes; and this is the best. I do not think there is any competent engineer in the United States who would dispute the fact that this is the greatest and best water power in the thickly settled portion of the United States that is not on the border line, like Niagara.

As I said, when the Senator says he opposes this because there has been corruption from the beginning, there has been no opportunity for corruption.

Mr. POINDEXTER. Mr. President——

The PRESIDING OFFICER. Does the Senator yield to the Senator from Washington?

Mr. UNDERWOOD. I yield.

Mr. POINDEXTER. Conceding that this is the best water power in the United States, considering the center of population, this bill——

Mr. UNDERWOOD. I am not talking about the great powers in the Rocky Mountains.

Mr. POINDEXTER. I was not going to refer to those. Of course, there are powers out there of enormous value. I am confining the discussion, accepting the statement of the Senator from Alabama, to the Muscle Shoals power. If that is the case, why is there not an application from some private company with sufficient financial ability to develop this water power at private expense, instead of at Government expense, in the same way that the western powers are developed?

Mr. UNDERWOOD. The Senator must remember that the question of the development and use of water power has come within the last 15 years, and that for 12 of those 15 years we have had practically a legislative block against anybody developing water power; that the water-power bill was only passed within six months, and prior to its passage the Government itself had undertaken the building of this dam. So there was never any opportunity.

Mr. POINDEXTER. There is an opportunity now that the bill has been passed. This is on a navigable stream.

Mr. UNDERWOOD. Seventeen million dollars have been allocated for this dam, and all of it has not been spent, but will be spent in the next few months. So, practically speaking, with the $17,000,000 invested in a foundation, if the Senator wants to take this great water power and sell what we have there at a tax sale or a sacrifice, allowing private interests to come in there and utilize it, I have no doubt it can be done. I have no doubt that the private interests would realize the great value of this water power, and would do it. I say that if the Government will not go ahead and develop it in the interest of the masses of the people of the United States, then I do not think that great power should be blocked. If the Government will not do it in the interest of the people, then I think it is better to allow some one else to build the dam. But I do not agree with the Senator at all that this great water power should go to private interests.

Mr. POINDEXTER. Mr. President, I did not express any such opinion. The question I asked of the Senator was merely for the purpose of developing what seemed to me to be a perfectly obvious question arising out of the debate, for information. I have no hostility toward this project. In fact, I have not yet come to a final conclusion in regard to the matter.

Mr. UNDERWOOD. I beg the Senator's pardon; I thought his question was coming as a matter of debate, and not as a matter of information.

Mr. POINDEXTER. Entirely as a matter of information. But I want to make the suggestion, which, it seems to me, is an important element to be considered, that if it should be developed by private interests, that does not mean that it will be absolutely controlled by private interests. The water-power act provides for Government regulation and for Government control, and, as the Senator from Alabama very well remembers, the delay in the enactment of that measure was occasioned by the controversy over proper reservations to enable the Government to prevent abuses under private development. So it is not a question between unrestricted private development and private operation and Government operation, but the question is between private development subject to Government regulation and Government control, which gives the Government the power to do practically everything it could do or would desire to do if it invested the public funds in the matter and developed it itself.

Mr. UNDERWOOD. Of course, the Senator recognizes the fact that if this work was abandoned and turned over to private interests it would have to take this power under the general power act, and then a contract would have to be made with private interests, and of course they would have to be assured that they were going to get their profits out of it or they would not put their money in.

Mr. SMITH of Arizona. Mr. President——

The PRESIDING OFFICER. Does the Senator from Alabama yield to the Senator from Arizona?

Mr. UNDERWOOD. I yield.

Mr. SMITH of Arizona. I would suggest to the Senator from Washington the great difficulty that has been found in the development of water power under the present act. It is a reasonable fear, I think, that the individual has, for in the great question of the development of power on the Colorado River there was a contract underwritten by some eastern men for $50,000,000, I understand. They were to build it with $50,000,000, and were ready to proceed, except that the Secretary of the Interior—and I think wisely—said, "We will not permit a great power like this to go into the hands of individual men for individual profit." Of course, when the private contractors had to agree to take whatever the Government said as to rates, and to be regulated by the Government, the great enterprise fell to the ground.

I know the Muscle Shoals. I have been on the ground on some of my hunting trips, and there is not such a development of water power, as far as I know, in this country, outside of Niagara, and what can be done in the confined waters of the Colorado River.

Mr. POINDEXTER. I presume the Senator has not seen some of the water powers of the West.

Mr. SMITH of Arizona. It may be that I have not. Then they come within the exclusion of my statement. I do not mean a water power like that in the Yosemite. But you will find, I am afraid, that if this bill is beaten, under the regulation by the Government, the uncertainty of the constantly changing official who has control of it will keep timid capital away when it has to be produced in such enormous quantities to harness that water and get the power to develop the biggest stretch of country and to benefit more people than any other possible project in the United States.

Mr. UNDERWOOD. Mr. President, I did not rise to go into a discussion of this proposition, but I did not want the debate to close without making the statement I have made with

reference to Muscle Shoals. Up to the time of the war there was not any expenditure of money, there was not anything done, which could form the basis for graft or greed. During the time of the war the President ordered a nitrate plant to be built at Muscle Shoals. Like all other war building, there was great extravagance. There may have been some corruption in a minor way, but that was due to conditions which grew out of the war, nothing that the people who are now interested in the development had anything to do with, nothing that the Government had anything to do with except the starting of the enterprise. We found that trail through the entire war, wherever a Government contract was being fulfilled. No one contends for a moment that there was not war extravagance in building the plant, as there was in everything else we did during the war. A large portion of its cost ought to be charged off to the war. But, aside from that, there is nothing here to show corruption or to show stealing. It was absolute war waste and there is no use in the Senate having its judgment misled by charges of that kind.

We have this great plant which can be utilized, or it may lie there idle, to die. The effort of the bill is to utilize it in time of peace for the great farming interests of the country, and have it there for protection in time of war.

As to what I said yesterday in my speech about the lobby, I do not criticize men because they are interested in their own desires and their own wants. Human nature will never change. I try to judge no man so far as his motive is concerned. Of course, it is perfectly legitimate as a part of the argument in this debate to point out that there are certain great special interests that are lobbying here to prevent the passage of the bill and to prevent this development because they think it might work injury to their own private plants. They have a right to come here and tell their story, and they are here telling it. They desire the defeat of the project because they think it will be a competitor with them.

I have always believed that they have magnified the competition in their own minds. I think there is an ample field in the country for the plant to work in the interest of the farmers without seriously injuring the business of the private interests that are lobbying against the bill; but I think the issue comes to us whether we shall work the plant in the interest of the mass of the American people or whether we shall stifle this opportunity because there are certain great interests in the United States that are afraid of it.

Now, Mr. President, unless some Senator who is now present desires to proceed with a speech, I think we are about ready to vote, and I would suggest that the roll be called to secure the attendance of a quorum, in order that absent Senators may be notified.

The PRESIDING OFFICER. The Secretary will call the roll.

The reading clerk called the roll, and the following Senators answered to their names:

Ball	Gronna	McNary	Smith, Ariz.
Beckham	Hale	Moses	Smith, Md.
Borah	Harris	Myers	Smith, S. C.
Brandegee	Harrison	Nelson	Smoot
Calder	Heflin	New	Stanley
Capper	Henderson	Nugent	Sterling
Culberson	Johnson, Calif.	Overman	Sutherland
Curtis	Jones, N. Mex.	Page	Swanson
Dillingham	Jones, Wash.	Phelan	Trammell
Fernald	Kenyon	Phipps	Underwood
Fletcher	Keyes	Pittman	Wadsworth
France	King	Poindexter	Walsh, Mass.
Frelinghuysen	La Follette	Pomerene	Walsh, Mont.
Gay	Lenroot	Ransdell	Warren
Glass	McCumber	Robinson	Williams
Gore	McKellar	Sheppard	Wolcott

The VICE PRESIDENT. Sixty-four Senators have answered to the roll call. There is a quorum present.

Mr. HARRISON. Mr. President, I desire to occupy just a moment. There has been much said about lobbyists. The Senator from Iowa [Mr. KENYON] was very frank and very candid about it, and said that very recently we could hardly walk around the Capitol for lobbyists and that they were getting more numerous every day and that he supposed they would still increase in the near future. I agree with him in that statement, and I agree with the Senator from Massachusetts [Mr. WALSH] in that I hope there is no political significance in the increased attendance at this particular time.

There have been many eulogies passed on Mr. Washburn. I desire to read what Mr. Washburn said, just to refresh the memories of Senators before the vote on this important question, to show what his position is and on what his opposition to the particular legislation is based. Mr. Washburn is the head of the corporation that has now, or did have, the contract, which terminates in 1921—that is, so far as the fixed price of the royalty is concerned—and after that it is to be arbitrated. Here is what Mr. Washburn said in the testimony, at page 228 of the hearings:

Should they seek the ruin of the American Cyanamid Co., first, by taking away its customers, and swamping the market at low prices, which the Government can do, because its proposed corporation will pay no taxes, no interest, no depreciation?

That is the milk in the cocoanut. Mr. Washburn said that he bases his opposition principally on the fact that prices will be lower and his customers will be taken away from him. He goes on further, in answer to a question by the Senator from New York [Mr. WADSWORTH], who asked him to tell about the American Cyanamid Co., of which Mr. Washburn is president and about which a great deal has been said in the course of the discussion. Here is what he said:

The American Cyanamid Co. was organized in 1907. Its first capital of $1,000,000 was subscribed by my three associates and myself equally. We started out with an experimental $1,000,000 to see what we could do with the situation. The matter developed satisfactorily, and we sought capital and secured it abroad. It is the kind of an undertaking that American investors are not accustomed to. We think here in terms of physical property and physical assets, but people abroad have had a wider experience in things of this kind, and they give a value to an idea—and we had practically nothing but an idea to sell.

The property of the company to-day has a value of something like $10,000,000, and as fresh capital was required it was, in about equal part, furnished from abroad and by American investors.

We are the owners of two subsidiary companies.

May I say in this connection that every person who has approached me touching the legislation or who has written me touching the legislation, so far as I know, has been opposed to the bill. I have not received any petitions or letters from the farmers of the country asking me to support the bill, although the farming organizations, I understand, have resolved on other propositions, requesting Congress to pass it. I have no doubt, though, that they are thinking of us and expecting us to do our duty by them. That we must do. The letters I have received are from fertilizer concerns in my State who are opposing the proposition for the very reason that they are afraid that their concerns will be put out of existence. I do not think it will, although it may, and I hope it will force them to give to the farmers cheaper fertilizers.

Says Mr. Washburn:

We are the owners of two subsidiary companies. One is a large producer of phosphate rock in Florida—the Amalgamated Phosphate Co. We own all the stock of that company. We purchased it from the former owners, who were a number of people, for the most part fertilizer manufacturers who had combined their phosphate-rock holdings. The name of the company was significant—the Amalgamated Phosphate Co. It was an amalgamation of the phosphate properties of a number of fertilizer companies of importance, most of them. That company we operate. Of course, that has nothing to do with nitrogen.

Our purpose in purchasing that property was to furnish us with the raw materials for a product which is a form of ammonium phosphate and had the trade name of Ammophos, which we export in large quantities.

The other subsidiary company is this Air Nitrates Corporation, which performed this service for the Government, with which you are familiar.

There is one other company, and that is a California company, which manufactures hydrocyanic acid from cyanide, which this company also makes. We make cyanide from cyanamid at our plant, and we ship the cyanide to our California plant, owned by the subsidiary company there, and it is transformed into hydrocyanic acid. That is a growing and important business, and the acid is used for fumigating citrus fruit—oranges and lemons.

And so forth.

Senator WADSWORTH. * * * Has the company any interest in any of the larger fertilizer manufacturing concerns?

The Senator was getting at the source of the opposition to this bill when he was propounding these questions. He wanted to clear the matter up. So the Senator from New York, adroit, smart, able, the author of the bill, asked this question:

Senator WADSWORTH. Has the company any interest in any of the larger fertilizer manufacturing concerns?

Mr. WASHBURN. None whatever.

But the Senator from New York was not to be taken off his guard in that way, so he followed his question up by asking:

Have those companies any interest in yours?

Mr. WASHBURN. They own stock by reason of the purchases that were made of these phosphate properties in Florida.

That is the reason some of the fertilizer plants throughout the country are opposed to this proposed legislation. They are interested in it, admittedly so, by Mr. Washburn himself.

Now, here is what Secretary Baker in his testimony says about this man Washburn, who is now opposed to this legislation, and who has been eulogized in this debate. On page 351 of the hearings Secretary of War Baker said:

There is only one other aspect of this matter upon which I want to say a word, and that is the relation of this bill to the Air Nitrates Corporation. I think Mr. Washburn will say to this committee that long before the Government undertook to build a nitrate plant at Muscle Shoals he wanted to build one there; that Mr. Washburn regards it as the most favorable place in the United States not now occupied for

the building of a cyanamid process nitrate plant; that he was very anxious to have the Muscle Shoals Dam built and the power of the Muscle Shoals Dam placed at his disposal for le erection, as a private enterprise, of a cyanamid plant at Muscle Shoals. It has been one of his activities for many years to bring that about. I make no comment upon it or characterization of it. He was in that business, and he thought that he could benefit the farmers and himself, too, if he could induce the Government to build the Muscle Shoals Dam and sell the power at a very low rate, in order that he might sell cyanamid and its derivatives as a fertilizer.

So that Mr. Washburn until he got the plant there believed that a plant ought to be put there and operated in the interests of the agriculture of this country. Now that the Government has the plant and has a contract with Mr. Washburn, by which he has agreed that the Government may operate under his processes, it seems to me Mr. Washburn ought not now to take the view either that that is an improper place or that it is unwise to continue the operation of the plant.

Senators, when you vote on the proposition if you fail to vote to carry on the work, then you vote practically to throw away $85,000,000 which the Government has already expended on the Muscle Shoals plant. In my opinion, it is an economical venture upon the part of the Government. We shall be providing an insurance in time of war against our destruction and a guaranty of the development of our agricultural interests in time of peace. We ought to pass this legislation in order that we may continue that great work, which will protect our country in time of war and help our farmers at this crisis to obtain cheaper fertilizers.

Mr. LENROOT. Mr. President, I ask for the yeas and nays on my motion to recommit the bill.

The yeas and nays were ordered, and the Assistant Secretary proceeded to call the roll.

Mr. FALL (when his name was called). I have a pair with the junior Senator from Wyoming [Mr. KENDRICK]. In his absence I withhold my vote.

Mr. FERNALD (when his name was called). I have a pair with the junior Senator from South Dakota [Mr. JOHNSON]. In his absence I withhold my vote.

Mr. HENDERSON (when his name was called). I have a general pair with the junior Senator from Illinois Mr. [McCORMICK]. In his absence I withhold my vote.

Mr. JONES of New Mexico (when his name was called). I have a pair with the junior Senator from Missouri [Mr. SPENCER], which I transfer to the junior Senator from Arkansas [Mr. KIRBY] and vote "nay."

Mr. McCUMBER (when his name was called). I have a general pair with the senior Senator from Colorado [Mr. THOMAS], but understanding that he would vote as I intend to vote upon this question I feel at liberty to vote. I vote "yea."

Mr. PHIPPS (when his name was called). I have a pair with the junior Senator from South Carolina [Mr. DIAL]. I transfer that pair to the junior Senator from West Virginia [Mr. ELKINS] and vote "yea."

Mr. POMERENE (when his name was called). I have a general pair temporarily with the senior Senator from Iowa [Mr. CUMMINS]. I understand that his vote on this question, if he were present, would be the same as mine. I therefore feel at liberty to vote, and vote "yea."

Mr. SMITH of Georgia (when his name was called). I transfer my pair with the senior Senator from Massachusetts [Mr. LODGE] to the junior Senator from Rhode Island [Mr. GERRY] and vote "nay."

Mr. WILLIAMS (when his name was called). I have a general pair with the Senator from Pennsylvania [Mr. PENROSE]. I understand that if he were present he would vote "yea." I transfer my pair to the Senator from Missouri [Mr. REED] and will vote. I vote "nay."

Mr. WOLCOTT (when his name was called). I have a general pair with the Senator from Indiana [Mr. WATSON]. In his absence I am not at liberty to vote and therefore withhold my vote.

The roll call was concluded.

Mr. SIMMONS. I have a general pair with the junior Senator from Minnesota [Mr. KELLOGG]. I transfer that pair to the Senator from Nebraska [Mr. HITCHCOCK] and vote "nay."

Mr. BRANDEGEE (after having voted in the affirmative). I am paired with the senior Senator from Tennessee [Mr. SHIELDS]. I transfer that pair to the senior Senator from Colorado [Mr. THOMAS] and allow my vote to stand.

Mr. FERNALD. I transfer my pair with the junior Senator from South Dakota [Mr. JOHNSON] to the senior Senator from Minnesota [Mr. NELSON] and vote "yea."

Mr. HARRISON. I have been requested to announce that the Senator from Oregon [Mr. CHAMBERLAIN] and the Senator from South Dakota [Mr. JOHNSON] are detained from the Senate by reason of illness.

Mr. GORE. I desire to announce that the Senator from Missouri [Mr. REED] is absent from the Senate because of illness.

Mr. CURTIS. I desire to announce the following pairs:

The Senator from New Jersey [Mr. EDGE] with the Senator from Oklahoma [Mr. OWEN]; and

The Senator from Iowa [Mr. CUMMINS] with the Senator from Arizona [Mr. ASHURST].

The result was announced—yeas 32, nays 33, as follows:

YEAS—32.

Ball	France	Lenroot	Pomerene
Borah	Frelinghuysen	McCumber	Sherman
Brandegee	Gore	McLean	Smoot
Calder	Hale	Moses	Sterling
Colt	Jones, Wash.	New	Sutherland
Curtis	Kenyon	Page	Townsend
Dillingham	Keyes	Phipps	Wadsworth
Fernald	King	Poindexter	Warren

NAYS—33.

Beckham	Johnson, Calif.	Ransdell	Swanson
Culberson	Jones, N. Mex.	Robinson	Trammell
Fletcher	McKellar	Sheppard	Underwood
Gay	McNary	Simmons	Walsh, Mass.
Glass	Myers	Smith, Ariz.	Walsh, Mont.
Gronna	Nugent	Smith, Ga.	Williams
Harris	Overman	Smith, Md.	
Harrison	Phelan	Smith, S. C.	
Heflin	Pittman	Stanley	

NOT VOTING—31.

Ashurst	Gerry	Knox	Penrose
Capper	Harding	La Follette	Reed
Chamberlain	Henderson	Lodge	Shields
Cummins	Hitchcock	McCormick	Spencer
Dial	Johnson, S. Dak.	Nelson	Thomas
Edge	Kellogg	Newberry	Watson
Elkins	Kendrick	Norris	Wolcott
Fall	Kirby	Owen	

So the Senate refused to recommit the bill to the Committee on Agriculture and Forestry.

Mr. WADSWORTH. Mr. President, I offer the amendment which I send to the desk.

The VICE PRESIDENT. There is a pending amendment, which will be stated by the Secretary.

The ASSISTANT SECRETARY. The pending amendment is the amendment of the Senator from South Carolina [Mr. SMITH], which is as follows:

On page 5, line 19, after the word "others," insert a colon and the following proviso:

"*Provided*, That in the sale of such products not required by the United States, preference shall be given to those persons engaged in agriculture."

To which a substitute has been offered by the Senator from Georgia [Mr. HARRIS], in the following words:

Insert a comma and the words "preference being given to farmers, and all such products sold to producers of fertilizers shall be with the agreement that they shall resell to farmers at reasonable prices."

The VICE PRESIDENT. The question is on the substitute.

Mr. LENROOT. Mr. President, before the substitute is voted upon I desire to ask the Senator from Georgia whether he thinks the provision that the producers of fertilizers shall agree to sell at reasonable prices offers any protection whatever to the farmer? How would it be enforced?

Mr. HARRIS. Mr. President, I think the men who are appointed under the next administration to handle this matter will be the very best men in the country, and I think they would decline to sell to any fertilizer manufacturers who would not agree to sell the fertilizer at reasonable prices to the farmer.

Mr. LENROOT. Suppose that they do agree to sell at reasonable prices, what happens then?

Mr. HARRIS. Then, if they decline to carry out their agreement, they can decline to sell them any further fertilizers.

Mr. LENROOT. Yes; but after you have sold, and they agree to sell at reasonable prices, who is to determine the matter?

Mr. HARRIS. That would only be one sale, and they would be interested in a great number of sales afterwards.

Mr. LENROOT. The point of my inquiry is this: I have an amendment that will really be of some value to the farmer, in that it provides that wherever this fertilizer is sold to producers the purchaser must consent to regulation of price on resale by this corporation. Then there will be something of value.

I sincerely hope the Senator will withdraw his amendment, and allow the amendment of the Senator from South Carolina to be adopted, and then I will propose my amendment as a further proviso.

Mr. SMITH of South Carolina. Mr. President, if the Senator from Georgia will allow me, I think my amendment does all that the corporation proposed in this bill can do so far as selling to the farmer is concerned, giving him preference in the purchase; and then, as the Senator from Wisconsin indicates, as to whatever is not purchased by the farmer and is sold to a fertilizer concern, before the sale to this fertilizer concern is made they shall enter into an agreement with it as to what price it shall charge in reselling the fertilizer to the farmer.

I think that would be very much better than the form in which the Senator has proposed his substitute, for the reason, as the Senator from Wisconsin points out, that if you sell to these fertilizer manufacturers, and they are to resell at a

reasonable price, you have no one to determine what will be a reasonable price. I think the proviso or the intimated amendment the Senator from Wisconsin proposes would come nearer reaching the object that we have in this bill than that proposed by the Senator from Georgia.

Mr. WILLIAMS. Mr. President, if I understand the amendment offered by the Senator from South Carolina, it does nothing more than is being done now. Whenever the product is not needed for military defense as an explosive, the farmer now receives the preference in the sale.

Mr. SMITH of South Carolina. No; this bill does not so provide, and that is the reason why I offered the amendment.

Mr. WILLIAMS. But as a matter of practice of the department, he does now, does he not?

Mr. SMITH of South Carolina. There has not been sufficient manufactured to test out that question.

Mr. WILLIAMS. What the Senator wants to do, then, is to make that clear?

Mr. SMITH of South Carolina. To make that clear, and that is the only object of my amendment. The amendment of the Senator from Wisconsin proposes that after the farmer has been supplied, if this product is sold to the manufacturers of fertilizer, there shall be an agreement between this corporation and the manufacturers as to the price at which they will sell the fertilizer made from the ingredients manufactured by this corporation.

Mr. WILLIAMS. But if you waited, in order to do that, until after the farmer had been supplied there would be practically no waiting at all, because, of course, the farmer can consume all the surplus.

Mr. SMITH of South Carolina. Yes; I rather think that is true, but doubtless there are hundreds and hundreds of farmers who, despite this, will not purchase directly. They do not now, even though there is a saving. There are a great many—not anything like a majority, but a great many—who must purchase from their local merchant, and their merchant gets it from the manufacturer.

Mr. WILLIAMS. He can, or he can purchase in their name directly from the Government.

Mr. SMITH of South Carolina. Yes; he could do that.

Mr. WILLIAMS. And after you make this clear he can do that.

Mr. SMITH of South Carolina. Yes; but I think even the amendment of the Senator from Wisconsin would be a pretty good safeguard. However, I think the object to be attained is attained by making it clear in the bill that the farmer is to have the preference, and then, after him, the others.

Mr. HARRIS. Mr. President, it is immaterial to me which amendment is adopted, whether my substitute or the amendment of the Senator from South Carolina.

On January 4 I introduced an amendment which is practically the same as that introduced by the Senator from South Carolina four days after my amendment. He changed the wording a little, but it is the same amendment. It does not make any difference to me which amendment is agreed to, but I should like to have the Senate hear the amendment and the substitute read, and also the amendment to be offered by the Senator from Wisconsin [Mr. LENROOT], so that the Senate can decide for themselves which form they prefer.

The VICE PRESIDENT. The Secretary will state the amendment offered by the Senator from South Carolina, the substitute offered by the Senator from Georgia, and if the Senator from Wisconsin will send up his proposed amendment that will be stated, and then the Senate can, and the Chair hopes will, vote.

The ASSISTANT SECRETARY. The Senator from South Carolina proposes the following amendment:

On page 5, line 19, after the word "others," insert a proviso in the following words: "*Provided*, That in the sale of such products not required by the United States, preference shall be given to those persons engaged in agriculture."

Mr. WILLIAMS. Mr. President, I suggest to the Senator that he put the word "Government" after the word "States."

Mr. SMITH of South Carolina. I am following the text. Just before that in the text it says:

To sell any or all of its products not required by the United States.

I am simply conforming to that language.

Mr. WILLIAMS. What the Senator really means is, "not required by the United States Government for military purposes."

Mr. SMITH of South Carolina. Yes.

Mr. WILLIAMS. Of course, "the United States" is a pretty broad term, including pretty nearly everybody—in fact, all of the 106,000,000 of population of the United States.

Mr. SMITH of South Carolina. That is the only reason why I used that term.

Mr. WILLIAMS. Suppose the Senator just puts in the word "Government," to make it perfectly plain—"not required by the United States Government."

Mr. SMITH of South Carolina. I have no possible objection to the modification of the wording.

Mr. WILLIAMS. That is what the Senator means.

The VICE PRESIDENT. The Secretary will state the substitute and the amendment to be offered by the Senator from Wisconsin.

The ASSISTANT SECRETARY. To that amendment the Senator from Georgia [Mr. HARRIS] has offered a substitute in the following words: After the word "others," insert a comma and these words:

Preference being given to farmers, and all such products sold to producers of fertilizers shall be with the agreement that they shall resell to farmers at reasonable prices.

The amendment that will be proposed by the Senator from Wisconsin [Mr. LENROOT] is as follows: At the end of line 19, on the same page of the bill, add to the proviso——

Mr. LENROOT. If the proviso is adopted, it will be added to the proviso.

The ASSISTANT SECRETARY (reading)—

Provided further, That if such products are sold to others than users of fertilizers, the corporation shall require as a condition of such sale the consent of the purchaser to the regulation by the corporation of the prices to be charged users for the products so purchased, or any product of which the products purchased from the corporation shall form an ingredient.

Mr. HARRIS. Mr. President, I withdraw my substitute, as the other two amendments will accomplish the purpose I have in view.

Mr. WADSWORTH. Mr. President, I do not intend to oppose this amendment or the amendments that have been suggested in this connection. I simply remind the Senate to look this thing squarely in the face and understand that if these amendments are adopted and this bill is enacted into law, from now on the Government of the United States is going to fix the price of fertilizer of all kinds and descriptions.

The VICE PRESIDENT. The question is on the amendment offered by the Senator from Wisconsin to the amendment of the Senator from South Carolina.

Mr. SMITH of South Carolina. Mr. President, the vote now is on the amendment offered by myself, is it?

The VICE PRESIDENT. No; on the amendment offered by the Senator from Wisconsin to the Senator's amendment.

The amendment to the amendment was agreed to.

The amendment as amended was agreed to.

Mr. GRONNA. Mr. President, I offer the following amendment which I send to the Secretary's desk.

The VICE PRESIDENT. The Secretary will report the amendment.

The ASSISTANT SECRETARY. On page 6, line 11, after the word "act" at the end of the line, insert a colon and the following:

Provided, That the language of this act shall not be construed so as to authorize the corporation to exercise the power of condemnation vested in the President by the act of June 3, 1916, known as the national defense act.

Mr. GRONNA. Mr. President, the Senator from New York [Mr. WADSWORTH] objected to the authority contained in the act of June 3, 1916, which gives to the President the power to condemn property of all kinds, and, of course, the bill would extend that authority to this corporation. I am offering the amendment just to satisfy those who are opposed to granting such authority to this corporation.

Mr. WADSWORTH. Mr. President, I do not know whether it is going to be possible to get the Senate to listen to any discussion of this phase of the bill. I observe that the attendance is already dwindling.

The Senator from North Dakota [Mr. GRONNA] has introduced an amendment to the effect that this corporation shall not have the power to condemn, but he forgets, I think, that the President of the United States still has the power to condemn, under section 124 of the national defense act, and can condemn any property and then turn it over to the corporation. To be perfectly frank, the amendment of the Senator from North Dakota does not satisfy my objection.

Let us read just for a moment and see what we are up against here. I know that there is a tremendous push on in the Senate to commit the people of the United States to this project.

Mr. UNDERWOOD. Will the Senator yield for a question?

Mr. WADSWORTH. I will.

Mr. UNDERWOOD. I cooperated with the Senator from North Dakota [Mr. GRONNA] in preparing the amendment he offered, really to meet the objection of the Senator from New York. As far as I know, the proponents of the bill, and the men who are in favor of it, have no desire whatever to place in

the hands of this corporation the power of condemnation, and I am sure that the Senator from North Dakota and the balance of us who are in favor of the bill will agree, if the Senator will just suggest the language of an amendment which will relieve the situation that is in his mind. I doubt whether the Senator's construction is proper, but we do not care to take issue with the Senator on that, and we are willing to agree with him on it, if he will just indicate wherein the amendment does not cover the point. There is no desire on the part of those who are in favor of the bill to continue to turn over to this corporation any power of condemnation.

Mr. WADSWORTH. I was about to come to that when the Senator asked me to yield.

Mr. UNDERWOOD. I think it is only a question of reaching an agreement on the words to be used.

Mr. WADSWORTH. It is more difficult than the Senator thinks. The trouble with this question is that the overwhelming majority of Senators who are supporting the bill have never read it. It is more difficult than the Senator from Alabama thinks to cure this thing, and we have just started.

Mr. UNDERWOOD. I will say to the Senator that I do not think there is any dufficulty about curing it at all. I think it is always easy enough to find language which will cure a proposition if you want to negative it, and if the Senator does not think this accomplishes it, let him suggest language that in his opinion will do it.

Mr. WADSWORTH. Let us see about it. The power of condemnation carried under the bill is in subdivision (e) on the bottom of page 5. That is the subdivision which provides that by direction of the President the corporation is "to act as his agent in carrying out and performing any or all of the duties imposed upon him by section 124 of the act of June 3, 1916." The power of condemnation is not the only thing which is contemplated under subdivision (e). The use of the Wilson Dam is contemplated under subdivision (e).

Mr. UNDERWOOD. Of course that is not a question that goes to condemnation.

Mr. WADSWORTH. Just a moment, if I may. The Senator says it is an easy thing to amend the bill and to stop the power of condemnation. The amendment of the Senator from North Dakota does not do it.

Mr. UNDERWOOD. Why not?

Mr. WADSWORTH. Because the President is still allowed to condemn any property, and specifically to turn it over to this corporation, and I am opposed to lodging in the hands of the President by specific act in time of peace the power to go far and wide over the country and condemn any property he chooses and turn it over to this corporation.

Mr. UNDERWOOD. Mr. President——

Mr. WADSWORTH. If the Senator will permit me to continue just a moment, I will suggest to him the only thing that will cure that situation, and that is the repeal of section 124 of the national defense act in so far as the power of condemnation is lodged in the hands of the President.

Mr. BRANDEGEE. Mr. President, why would not a provision to the following effect, to wit, that no property shall be taken by eminent domain for the purposes of this corporation, cure the defect the Senator suggests?

Mr. SMITH of South Carolina. Mr. President, does not the Senator realize that in time of war some emergency might arise when it would be proper for the President to use that power?

Mr. BRANDEGEE. Of course, in time of war emergencies are likely to arise, I will admit, but no emergency arose in the last war which could not have been provided for by Congress, and Congress in time of war could immediately give this power to the President.

Mr. UNDERWOOD. I agree to what the Senator from Connecticut has said. I think if the language we suggest does not cover it, the language he suggests would, and although it might take away the power of condemnation of the President in time of war, we have no desire to have the President exercise that power in time of peace, and if another war came the Congress would readily return the power to the President. I think we are taking time about a matter we are not in dispute about, and if we follow the language of the Senator from Connecticut I think it would be agreeable.

Mr. GRONNA. Mr. President, I want to say that I listened to the debate on this bill at the time it was taken up, and in cooperation with the friends of the measure I suggested an amendment of this kind. If it does not meet the objection of the Senator from New York, I am perfectly willing to take the language suggested by the Senator from Connecticut. I have no objection to it whatever.

Mr. WADSWORTH. Mr. President, I would simply like to have it put in written form and read and attached to certain lines and pages of the bill. We must recollect, Mr. President, that we are starting in to rewrite this bill, and I would like to have it in writing first.

Mr. UNDERWOOD. I suggest that we pass over this particular amendment until that can be done.

Mr. GRONNA. Then, Mr. President, I offer the following amendment——

Mr. LENROOT. Before we pass it over——

Mr. WADSWORTH. I think I have the floor.

The VICE PRESIDENT. The Senator from New York has the floor.

Mr. WADSWORTH. I will yield for the putting of a question, but not for the offering of an amendment. I yield to the Senator from Wisconsin.

Mr. LENROOT. I want to ask the Senator whether he can conceive of any possible purpose or object in having this subdivision in the bill except to repeal such restrictions as may be thrown around the situation by section 124 of the national defense act? Why should it be in the bill at all?

Mr. WADSWORTH. There is no reason whatever, Mr. President.

Mr. LENROOT. Then I would like to ask the Senator from Alabama whether he is willing to agree to a motion to strike it out?

Mr. UNDERWOOD. I understand it is necessary to have this section in the bill to enable the President at some future day to transfer the power at Muscle Shoals Dam, if it is ever completed, to this corporation, and that is the only desire.

Mr. LENROOT. Does the Senator think a proposition costing $50,000,000 of new money should be transferred to this corporation without any return upon the capitalization of $50,000,000 that the Government put in?

Mr. UNDERWOOD. If the Senator will allow me, I deny the statement the Senator from Wisconsin has kindly put in my mouth. It is not $50,000,000; it is $27,000,000. In the next place, I have not touched on the question of the capitalization. I merely say that at some future day the dam at Muscle Shoals, if it is ever built, should be harnessed up with this corporation, and I do not care to take the power out of the bill that would allow that to be done. Outside of that, I care nothing for what is in the section.

Mr. LENROOT. The Senator does know that it repeals restrictions and limitations now found in section 124 of the national defense act?

Mr. UNDERWOOD. As I said to the Senator, I state candidly that the only object I want to attain is to give the President the power at some future time, when the dam is finished, to work it in connection with this nitrate plant. That is my only purposes. If some other language that is not objectionable can accomplish that purpose, as far as I am individually concerned, I am perfectly willing to agree to it.

Mr. LENROOT. Why should not the corporation buy this water power, if completed, if it is going to be run upon a business basis?

Mr. UNDERWOOD. That is another problem.

Mr. WADSWORTH. I can answer the question, if the Senator wishes.

Mr. UNDERWOOD. I will say candidly, if the Senator wants me to answer it, that I would like to see this corporation make nitrogen as cheaply as possible. But I am not saying that that is not a disputed question which might come up.

Mr. WADSWORTH. May I say to the Senator from Wisconsin that the great advantage in having the corporation own the dam is that they can charge to the expense or the cost of producing the product a ridiculous price for the water power; and that is what they have done in these estimates.

Mr. LENROOT. Without returning to the Government interest upon the investment.

Mr. WADSWORTH. An example of it is found in these estimates. If there were ever silly business estimates, these are they. They state that they can put out this product at a certain price, and they give the items of cost. They leave out interest on the money still to be invested, they leave out insurance, they leave out deterioration of the plant, and they put the water power in at three-fourths of a mill per kilowatt-hour, when it is worth 4 mills. In other words, they leave out these items in order to crowd down the cost of producing this material and show a paper profit. There was never a more patent fraud against the taxpayers of this country than is contained in these estimates, upon which the Senate must base its judgment in passing the bill; and I shall have something to say about the people who made the estimates.

Mr. LENROOT. May I add that according to the engineers' estimates they would have to receive 4 mills in order to pay the Government 5 per cent upon its investment of new money.

Mr. WADSWORTH. Certainly. The testimony of the Government itself displays the fallacy of this thing from a business standpoint, and the misleading character of the estimates is self-evident.

Mr. POINDEXTER. Who made the estimates?

Mr. WADSWORTH. I can tell the Senator from Washington who made the estimates, and in doing so perhaps I would better read some quotations from a letter written by Mr. Glasgow to the Secretary of War, and also some quotations from a memorandum presented by Mr. Glasgow to the Secretary of War. I quoted from the letter very briefly yesterday, but there is a good deal more in it of interest. We will find out where these estimates came from, and what the men who made the estimates expect to do in connection with the corporation after it is started.

Mr. POINDEXTER. May I ask if the estimates were accepted and adopted as the basis of the consideration of the matter by the Secretary of War?

Mr. WADSWORTH. They are the basis of this whole legislation.

Mr. POINDEXTER. Were they accepted by the Secretary of War?

Mr. WADSWORTH. They were. Mr. President, I know it is hard to get attention to this thing, because it is a business proposition and no one cares much about business when the taxpayer's money is concerned. Under date of October 22, 1919, Mr. Glasgow addressed a letter to the Secretary of War, dating it from the Brighton Hotel, 2123 California Avenue, Washington, D. C., in which he discussed the future of the nitrate plants at Muscle Shoals, and after going into the thing rather exhaustively he urges upon the Secretary of War the wisdom of forming a Government corporation to take these plants over and operate them. He discusses at some length prices and costs and expresses it as his opinion that the best thing for the Government to do is to organize a corporation. I read paragraph 23 of that letter, as follows:

23. In other words, we recommend that a corporation should be formed to take over all of the fixed-nitrogen assets of the War Department, together with the funds obtained from Congress, and to perform all of the duties of administering these plants and funds in peace time, while continually enhancing their military value. There could be a nominal amount of common stock, of no par value, issued to the United States and held by the Secretary of War, in exchange for the fixed-nitrogen assets of the War Department, and 5 per cent preferred stock could be sold to the United States at par, from time to time as required, to provide the necessary additional funds of $12,100,000 described in paragraph 21 above.

You will note the bill is built exactly upon these lines. Then he continues:

The Secretary of War would be chairman of the board. Mr. Roberts and Col. Burns might be president and vice president, respectively, as well as directors. The Chief of Ordnance might be another director. I should be willing to serve, if you wish it, as director—in Europe—and an additional vice president and directors could be appointed as the organization develops and important members materialize. All of the officers and directors would, of course, be appointed and removable by the Secretary of War.

That is just what is done in the bill. Now, Mr. President, I read from a portion of the memorandum sent to the Secretary by the same gentleman under the same date. In paragraph 5 he says:

5. The military members of the personnel of the fixed-nitrogen administration will be paid by the Army as heretofore, without charge to said administration, but the fixed-nitrogen administrator is authorized to pay to any Army officer such additional remuneration as he may deem advisable, subject to the approval of the Secretary of War if the total remuneration exceeds $6,000 per annum.

It is provided in the act that that can be done. These are the people who drew the bill and made the estimates. I read again from the same letter:

6. The fixed-nitrogen administrator shall have full administrative and executive authority to carry out the policies approved by the Secretary of War, giving effect to the act of Congress approved (date?) and to this end shall have power, free of civil-service regulations, to employ, pay, control, and discharge the personnel; to fix individual remuneration not exceeding $6,000 per annum; to repay employees their actual and appropriate expenses for traveling done by order of the administration; to pay appropriate expenses in connection with the exhibition of the plants and processes to governments, institutions, or individuals with whom we may desire reciprocal relations; and, in general, the same authority in the pursuit of efficiency which is enjoyed by the best administered manufacturing corporations. He is empowered to make or cause to be made all appropriate expenditures for the affairs, operations, plants, and properties of the fixed-nitrogen administration, and whatever extraordinary expenditures may be authorized by the Secretary of War; but not, in any case, to exceed the funds appropriated and available.

Mr. KING. Will the Senator permit a question?

Mr. WADSWORTH. Certainly.

Mr. KING. I was under the impression that there is a statute, either general or one in the military law, that forbids officers of the United States from receiving additional compensation.

Mr. WADSWORTH. Yes; but this would be passed later, and would supersede the prior statute.

Mr. KING. That is true. Then it is obvious that the purpose is to supersede existing law and permit officers of the Government to receive double compensation.

Mr. WADSWORTH. It is double salary for them, and the directors are already agreed upon and their salaries suggested to the Secretary himself.

Mr. POINDEXTER. May I ask if those men prepared the bill?

Mr. WADSWORTH. They prepared the bill and made all the estimates, and not one piece of information came to the Committee on Agriculture and Forestry from anyone else with respect to the business conduct of the organization, not one shred of testimony except from these same men; that is, testimony having to do with the dollars and cents side of the question.

Mr. KING. Were they officers, or at least some of them, who were employed in the Ordnance Department of the Government during the recent war?

Mr. WADSWORTH. Some were. The memorandum from which I am reading is a supposititious order issued by the Secretary of War, presented by Mr. Glasgow to the Secretary following the letter from which I quoted a moment ago. This is the kind of order which these people suggested should be issued by the Secretary of War. I have just read from it that portion of the order having to do with the extra pay for Army officers who may be directors or officers of the corporation. Here is another suggestion as contained in the supposititious order, gotten up by the authors of the legislation. The Senator from South Carolina [Mr. SMITH] never heard of this legislation prior to its introduction, nor did any Member of the Senate.

Mr. A. G. Glasgow—

Continues this supposititious order—

who as organizing fixed-nitrogen administrator has been the special representative of the Secretary of War in establishing this new department, has now returned to London, where he will continue to act as special representative (in Europe) of the Secretary of War in fixed-nitrogen matters. Mr. George J. Roberts, now special assistant to the Chief of Ordnance in charge of fixed-nitrogen matters and deputy fixed-nitrogen administrator, is hereby appointed fixed nitrogen administrator of the War Department. The annual salary of the fixed-nitrogen administrator during Mr. Roberts's incumbency shall be $12,000.

Mr. POINDEXTER. I would like to ask the Senator from New York if there is anything in the bill that would prevent the Secretary of War from practically putting into effect what he has just read as an order?

Mr. WADSWORTH. The bill specifically authorizes it, and most of the War Department witnesses who came before the Committee on Agriculture and Forestry were the men who were to be the beneficiaries of the supposititious order.

Let us read some more from this order:

The fixed-nitrogen administrator is authorized to appoint Col. J. H. Burns deputy fixed-nitrogen administrator, with such powers as he may depute to such deputy, at a total remuneration of $8,000 per annum; and to use, alter, reduce, or develop the organization of the former nitrate division (including the fixed-nitrogen research laboratory) as he may deem necessary to secure the most efficient results from the nitrate plants.

Mr. Roberts and Col. Burns were the principal witnesses before the committee. Mr. Glasgow could not appear before the committee because shortly after writing the letter to the Secretary of War—well, I will quote from his letter in order that we may see what happened:

I have to be urgent because I am sailing for London November 1.

There is nothing before the Senate in the way of a discussion of the dollars and cents side of the problem, except that presented by Mr. Roberts and Col. Burns and Col. Gaillard. I do not know how it happened that they left Col. Gaillard out of this list of officers, but they did. Not one of these men ever ran a nitrate plant. Mr. Roberts has never been in the business, Col. Burns has never been in the business, Mr. Glasgow has never been in the business. Col. Gaillard was employed by the American Cyanamid Co. at one time, and upon the outbreak of the war very properly took a commission in the Ordnance Department and did good service there. I am not criticizing these gentlemen at all. I know them all. I am acquainted with Mr. Glasgow, but I have heard him discussed upon the floor of the Senate as "this great expert." He has never had anything to do with the business and is not an expert.

Mr. POINDEXTER. But he is willing to be the European director.

Mr. WADSWORTH. Yes; he is willing to be the European director. Mr. Roberts has been described as "this great engineer." He is not an engineer. He never had anything to do

with this kind of business, either the designing of plants or the estimating of the costs of producing the material. Col. Burns has been described here as "this great expert." He never had anything to do with the nitrate business. The only gentleman who has had anything to do with the atmospheric fixation of nitrogen is Col. Gaillard. He joined in the recommendations and he appeared before the Committee on Agriculture and Forestry of the Senate and testified that the cyanamid plant at Muscle Shoals had been operated for two weeks to see whether it would work in the turning out of cyanamid. It was a test operation. It cost them $168 a ton to produce cyanamid. Mr. Gaillard, I think, testified that he was not present during the test.

On the figures presented by these men, who are to be taken care of on high salaries under this corporation, it is now proposed that the Senate of the United States, trustees for the people of the country and for their money, shall turn over property worth $140,000,000. It is the most astounding proposal I have encountered in my legislative experience.

Mr. LENROOT. Mr. President——

Mr. WADSWORTH. I yield to the Senator from Wisconsin.

Mr. LENROOT. There was one other witness who appeared before the committee, I think, referred to in Mr. Glasgow's letter, a certain Col. Joyes, who the committee reported made what they termed the unconscionable contract with the Alabama Power Co.

Mr. WADSWORTH. He did not testify as an expert.

Mr. SMOOT. Mr. President, I wonder whether we can not have the Members of the Senate present to listen to these facts, because I know they are facts, and let them then determine whether there shall be a majority of the body who will vote for the measure.

Mr. WADSWORTH. That would not do a bit of good. The bill provides an opportunity to get something for nothing at the expense of the people, and it will go through.

Mr. SMOOT. I am afraid that it will.

Mr. WADSWORTH. It makes more jobs, it makes more places, and distributes more public money.

I have an amendment which constitutes a desperate effort to save something for the people of the country out of this wreck. I have mentioned it before, but I have not brought it to a distinct discussion. The corporation, under the provisions of the bill as drafted, is going to take over all these properties and, as we have learned from absolutely reliable and conclusive sources, the properties will have cost $140,000,000. If the Wilson Dam is finished according to the present estimate—which may still further increase—$140,000,000 is a conservative estimate of the investment of the people of the United States in the enterprise.

Under the bill there is no obligation imposed upon the corporation to earn more than 5 per cent on a capitalization of $12,500,000. They may take the property of the people, which belongs to the people and not to the Government, and run it at a vast annual loss, just the way the merchant marine is being run to-day by the Shipping Board, just the way the War Department is to-day operating barges on the Warrior River, on the Mississippi River, and on the New York State Barge Canal, at large annual losses. I propose to attempt to put the thing upon a business basis. As I said the other day, I am perfectly willing to wipe out or write off 50 per cent of the cost of the nitrate plants on the ground that they were built during the war and were necessarily exceedingly expensive, and that it would not be fair, from a strictly business standpoint, to compel them to be capitalized at the full cost. We have spent about $100,000,000 to date.

The amendment which I propose to the bill is as to the capitalization features of it. It will provide that the corporation shall issue bonds in the first instance representing 50 per cent of the cost of the structure now finished, and that if any more structures are turned over to it or more building is done, including the dam itself, more bonds shall be issued, but in that case the bonds shall be equal to the actual expenditure; that such bonds shall bear 5 per cent interest; and that if at the end of any fiscal year this business corporation has not earned a sufficient sum to pay interest upon the outstanding bonds, it shall forthwith cease operations and shall not resume until so authorized by the Congress. Assuming a cost of $100,000,000 up to date, the initial bond issue would be $50,000,000 under my amendment. If the dam and its subsidiary works and power houses are turned over upon completion three years from now to the corporation, then the corporation must issue additional bonds covering the completed cost of the dam or any other structures or facilities that may be turned over to it. Is there a business man in the Senate who would contend against a proposal of that kind?

Mr. WOLCOTT. Mr. President——

Mr. WADSWORTH. I yield to the Senator from Delaware.

Mr. WOLCOTT. To whom does the Senator propose that the bonds shall be issued?

Mr. WADSWORTH. To the United States Government.

Mr. WOLCOTT. From the corporation to the Government?

Mr. WADSWORTH. Yes, sir.

Mr. WOLCOTT. Under the Senator's plan what is there to restrain the corporation from meeting the 5 per cent and then charging that 5 per cent in against the operating costs of the plant, thus circumventing the purpose which the Senator's plan would have in mind?

Mr. WADSWORTH. Mr. President, this is the way in which the amendment reads in that regard:

> If at the end of any fiscal year the corporation shall not have earned sums sufficient to meet the interest on said bonds as evidenced by audit of the accounts of said corporation by the Secretary of the Treasury—

They would have to corrupt the Secretary of the Treasury before they could do what the Senator from Delaware suggests they might do—

> the corporation shall forthwith cease operations, and shall not resume until authorized so to do by the Congress.

Mr. WOLCOTT. Of course, the Senator means the corporation must have earned net enough to pay.

Mr. WADSWORTH. Yes; net.

Mr. WOLCOTT. Does the Senator's amendment cover that? Does it provide that the net earnings must be 5 per cent?

Mr. WADSWORTH. That is a good suggestion of the Senator from Delaware. I will consider adding the word "net."

However, here is the situation, Mr. President, and any business man can understand it. The bill comes here based upon fraudulent estimates. I do not say that they were intentionally fraudulent, and perhaps I should withdraw the word "fraudulent," but they are estimates that are entirely deceiving; they are not worth the paper on which they are written. There have been deliberately omitted in the estimates of cost the items of insurance, deterioration, interest on money yet to be spent, and the water power has been put in at one-fifth of its value. Further than that, Mr. President, common labor has been estimated at $2.80 a day, at 35 cents an hour for an 8-hour day, whereas Gen. Taylor has testified before one of the House committees that common labor is getting $3.60 a day in that region. The thing is so undefensible that I should think it would rile the sensibilities of even the Senators who a little while ago evidenced their support of the bill.

Mr. WOLCOTT. Will the Senator from New York yield?

Mr. WADSWORTH. I yield.

Mr. WOLCOTT. Will not the amendment which was adopted a while ago providing, if not directly, in substance, that the corporation should sell directly to the consumer increase the cost of operation?

Mr. WADSWORTH. It will increase the cost of operation.

Mr. WOLCOTT. Because that will involve the maintenance of a retail organization, so to speak.

Mr. WADSWORTH. It will involve the maintenance of a retail selling organization.

Mr. WOLCOTT. If my impression is correct, as a rule, or very frequently, the farmers who purchase fertilizer give their notes for the purchase price.

Mr. WADSWORTH. They do. Ordinarily it can not be sold to them otherwise than on notes.

Mr. WOLCOTT. So that the corporation, if it is to meet the spirit of the amendment, will have to take the notes of the farmer, which means that the corporation will have to have an additional working capital and an additional clerical force; and the adoption of the amendment would, to an extent at least, increase the cost per ton of the manufactured product.

Mr. WADSWORTH. The adoption of the amendment of the Senator from South Carolina and the Senator from Georgia will certainly increase the cost of operating the plant.

Mr. STANLEY. Will the Senator yield to me?

Mr. WADSWORTH. I yield to the Senator from Kentucky.

Mr. STANLEY. My understanding is that there is no provision in this proposed act—and its author has expressly so stated—for selling in small quantities at retail, for the reason that it was desired to exclude the item of a retail agency.

Mr. WOLCOTT. The Senator from Kentucky could not have been present when the Senate adopted the amendment to which I have referred.

Mr. STANLEY. I was here when the amendment was adopted.

Mr. WOLCOTT. I say the spirit of the amendment is that the corporation shall sell to the consumer.

Mr. WADSWORTH. That is retail business.

Mr. WOLCOTT. If it does not mean that, it means nothing.

Mr. STANLEY. The Senator from South Carolina stated—and it is true—that it was anticipated under the amendment that a great number of farmers would buy the fertilizer in large quantities; in carload lots, for instance. The amendment was designed to enable the farmer, if he cared to do so, to buy in large quantities directly from the producer. There is no purpose of starting a retail agency.

Mr. WOLCOTT. Will the Senator from New York yield to me further?

Mr. WADSWORTH. I yield.

Mr. WOLCOTT. I think if the corporation is to be set up to do a manufacturing business it is entirely proper, in fact it is desirable, that it should be permitted to sell directly to the consumer and thus eliminate the middleman, who stands between the manufacturer and the consumer of fertilizers; but the fact remains, if that desirable thing shall be done, that the cost per ton will necessarily be increased by the doing of that very desirable thing.

Mr. STANLEY. Mr. President, the Senator from Delaware did not apprehend what I meant to say. The conditions governing the sale of fertilizers are such that great quantities of the fertilizer can go to the warehouse directly without the intervention of any retail agency. The users of the fertilizer buy it in large quantities. A farmer who tills several hundred acres of land can use a carload, or several farmers together can secure carload lots. There are cooperative associations all over the Southern States and elsewhere that use the character of fertilizer which will be produced and that will be able to buy directly from the plant. It will not be necessary to go to the additional expense of establishing retail selling agencies in order to reach the consumer.

Mr. WADSWORTH. This is a matter upon which we have no testimony whatsoever; but there are a number of Senators who do not care whether there is any testimony regarding it. We are acting absolutely in the dark. The Senator from Kentucky indicates that there will be no intermediate cost in shipping fertilizer from the Muscle Shoals plant by carload lots direct to the consumer. There will be the cost of collection, for it is not nearly so cheap to make 10,000 collections as it is 10. How much that cost is going to be nobody knows. It is very easy to vote to do these things with other people's money; to put $140,000,000 into the hands of a corporation and not even know what kind of business they are going to do; but there is no Senator here who would put his own money in this venture.

Mr. KING. Mr. President——

Mr. WADSWORTH. I yield to the Senator from Utah.

Mr. KING. With the permission of the Senator, I should like to ask if selling direct to the consumer would not involve necessarily the construction of large storehouses for the purpose of caring for the product and holding it until it may be called for from time to time by agriculturists throughout the United States?

Mr. WADSWORTH. I do not know.

Mr. KING. And if it would not necessitate a large administrative force?

Mr. WADSWORTH. I do not know.

Mr. KING. And would not the spirit, to use the expression of the Senator from Delaware, of the amendment recently adopted, if not the letter of it, really require the placing of the product at the disposal of the small farmer rather than at the disposal of cooperative organizations such as suggested by the Senator from Kentucky? Would not the plan contemplated by the amendment impose upon the corporation the expense of thousands and hundreds of thousands of dollars per annum to provide selling agencies for the purpose of distributing the product?

Let me say to the Senator before he answers the question, if he cares to answer it, that I have heard suggestions made from time to time that in anticipation of the passage of this bill the Department of Agriculture, or at least some persons directly or indirectly connected with the Department of Agriculture, are already arranging for the distribution, through the Farm Bureau agencies in the various counties throughout the States, of the product of the Muscle Shoals plant. So unquestionably a little later on, if this bill shall pass, the effort will be made to tie the Agricultural Department to the corporation and to use various agencies of the Government to distribute the product to the ultimate consumer, to every farmer in every section of the United States, and thousands of employees of the Government—and many more will be added to the roll—will be utilized for that purpose.

Mr. WADSWORTH. Mr. President, I do not think the Senate realizes the extent of this proposal. It is staggering in its possibilities. The corporation can set up under the terms of this bill the greatest Government monopoly in the world. It can crush and destroy anybody and everybody, and it can spend just as much of the taxpayers' money as it desires to spend for any purpose, so long as it can persuade Congresses of the future to make appropriations to meet the deficiencies. Senators all know how difficult it is to deny a deficiency item after Congress has authorized an undertaking.

Mr. WOLCOTT. Mr. President, did the Senator ever know of a deficiency item that was disallowed by Congress?

Mr. WADSWORTH. Not in my recollection, and especially when Congress has authorized a certain project to be carried on.

Mr. WOLCOTT. That is what I mean. I have been a Member of Congress, of course, only a comparatively short time; but I was wondering the other day if there was any instance in the whole history of the congressional legislation of this country when Congress has declined to authorize a deficiency item incurred by an authorized project or venture. May I ask the Senator from Utah [Mr. SMOOT] if he knows of any such instance?

Mr. SMOOT. Not during the last 18 years, I will say to the Senator.

Mr. WOLCOTT. That covers the period of the Senator's service?

Mr. SMOOT. Yes.

Mr. WOLCOTT. So I think I am safe in saying that if the nitrate project at Muscle Shoals shall be adopted as a governmental project, we will be in that business and will hereafter pay all the bills, whether they are authorized in the first instance, or whether they come to us by way of a deficit or a deficiency.

Mr. WADSWORTH. We will do that unless my amendment is adopted stopping automatically the operation of the corporation when it becomes unable to pay its debts.

Mr. WOLCOTT. Then would we not, may I suggest to the Senator from New York, be in this situation: We would have the same arguments put forward here in this body to revive the operation of the corporation that we are hearing in connection with the proposition to originate it, and, on top of that, there will be the additional argument that we have invested $50,000,000 more and can not let it go? Would not Congress, notwithstanding the safeguard the Senator's amendment seeks to throw about this proposal, be compelled to continue it? We would be helpless to stop it.

Mr. WADSWORTH. Mr. President, the suggestion of the Senator from Delaware brings up a great many possibilities, and I dare say that his forecast is an accurate one; but, nevertheless, I should like to see the evil day postponed by the adoption of the amendment. The same argument the Senator says will be produced 10 years from now is being advanced to-day in the Senate. The argument is, "We have invested all this money and therefore we must not stop spending money. The only way to go on is to go on and spend more," and nobody seems to care whether it is throwing good money after bad or not.

Mr. SMOOT. And after we put $140,000,000 in the plant, then it will be said "certainly we should not lose that amount."

Mr. WADSWORTH. Yes; it will be said that we need a hundred million dollars more.

Mr. SMOOT. They will want $140,000,000 more.

Mr. POINDEXTER. Mr. President——

Mr. WADSWORTH. I yield to the Senator from Washington.

Mr. POINDEXTER. The Senator says his amendment will automatically stop the operation of the corporation when it becomes unable to pay its debts; but, under the operation of the general principle just stated by the Senator from Delaware, the Government then would have to pay its debts, for the debts which caused the corporation to cease its activities would then become a deficit, and the Government would have to pay them regardless of their amount.

Mr. LENROOT. Mr. President——

Mr. WADSWORTH. I yield to the Senator from Wisconsin.

Mr. LENROOT. I should like to ask the Senator from New York whether he remembers the fact that the Glasgow letter, which he holds in his hand, recommends that two and a half million dollars of the twelve and a half million dollars shall be set aside for the purpose of paying losses in the first three years of the operation of the plant?

Mr. WADSWORTH. Certainly; that is while the plant is being operated by steam power. It is estimated that they are going to lose two and a half million dollars for the first three years by running on steam power. We all know that the dam will not be finished for three years; and yet the majority of the Senate persists in going ahead and incurring a loss of two and a half million dollars to the taxpayers of the United States.

They like to go ahead because the going looks good just at this particular time.

Mr. KENYON. Mr. President, I presume when the amendment to the sundry civil bill providing an appropriation of $10,000,000 for this dam is proposed it will be argued that we should adopt such an amendment because of the passage of this bill.

Mr. WADSWORTH. Certainly; the argument will be that this corporation bill having been acted upon favorably, we must appropriate $10,000,000 for the dam. There is no end to the thing. It runs in a vicious circle, and at every point in the circle the taxpayer is fleeced.

Mr. STANLEY. Mr. President, will the Senator yield?

Mr. WADSWORTH. I had hoped to proceed with my remarks. They will not be very long. I hope to get some action on this amendment.

Mr. STANLEY. Just for this remark: The Senator made the statement that it is admitted that the plant would lose $2,500,000 the first three years in the event it were operated with steam power. Would the Senator mind telling me on what basis he makes that statement? I do not mean to question the statement, but I should like to know upon what testimony he bases it.

Mr. WADSWORTH. I can not turn to it at this moment.

Mr. LENROOT. I have it—not the $2,500,000, but this is what Mr. Glasgow says.

Mr. WADSWORTH. The inference is that they will lose it.

Mr. LENROOT (reading)—

> In common with the creation of any new industry, the Muscle Shoals enterprise must sustain initial losses. These are provided for by the "general purposes fund," described in paragraph 20.

And paragraph 20 sets aside $2,500,000 for this purpose.

Mr. WADSWORTH. They estimate that that is necessary to cover the probable losses.

Mr. STANLEY. That is, in the event of loss.

Mr. WADSWORTH. They estimate that that is a necessary sum to be set aside.

Mr. STANLEY. Is that from the Glasgow letter?

Mr. LENROOT. Yes.

Mr. WADSWORTH. Mind you, may I say to the Senator from Kentucky, we do not know anything about this thing except what Mr. Glasgow and his colleagues have told us. There is no other testimony about dollars and cents.

Mr. STANLEY. In that connection, Mr. Glasgow makes the calculation that we will make $2,900,000 by operating this plant without steam power.

Mr. WADSWORTH. No; with water power.

Mr. STANLEY. With water power; that is what I say.

Mr. WADSWORTH. And when he did that he left out all those items that I reminded the Senator of a moment ago, and which every business man knows can not be left out, to say nothing of taxes. That estimate is not worth the paper it is written on.

Mr. President, there is just one more phase of the dollars-and-cents side to which I should like to refer.

There appeared upon my desk yesterday a memorandum submitted by the Koppers Co., builders of by-product coke and gas oven plants, benzol-recovery plants, and tar-distilling plants, its address being Union Arcade, Pittsburgh, Pa. I do not know anything about this concern, but I imagine that a good many Senators have received this same memorandum, having to do with the production of ammonium sulphate in by-product coke ovens.

I find some very interesting statements here which bear out in part, at least, some of the testimony before the committee as given by Dr. Whitney, of the Agricultural Department. It has a very distinct bearing upon the possibilities of this Government corporation ever being able to make a penny, even if they do underestimate labor by 80 cents a day, as they have done; even if they do cut their water-power costs by five, as they have done; even if they do leave out insurance, as they have done; even if they do leave out deterioration, as they have done; and even if they do leave out interest on money still to be spent, as they have done. They have left out all those things, and with those out I do not think they can make a profit.

I find here that this memorandum states, and I imagine the figures are reliable:

> The by-product coke industry is now the principal producer of ammonium sulphate, which is one of its most important by-products. The American industry is now making about 400,000 tons of ammonium sulphate per year.

Mr. WILLIAMS. Mr. President, I have just come in, and I have not caught the connection. Who is saying all of this that the Senator is reading?

Mr. WADSWORTH. This is a memorandum which has been sent to several Senators, I think—one appeared upon my desk—by a concern which manufactures by-product coke ovens.

Mr. WILLIAMS. And who would be competitors of this Muscle Shoals concern in the market?

Mr. WADSWORTH. I assume so.

Mr. WILLIAMS. Yes.

Mr. WADSWORTH. Still, it has some bearing upon whether this concern of ours, the United States Government, can meet this competition.

Mr. WILLIAMS. Oh, there is no doubt about it. It has an immense bearing if you take it unbiased, or if you believe it is true, either one.

Mr. WADSWORTH. It is true, because that figure of 400,000 tons is about 100,000 tons less than Dr. Whitney, of the Department of Agriculture, testified was being produced in this country this year. He testified to 500,000 tons, and he estimates that within 10 years the production will rise to 900,000 tons of ammonium sulphate annually, upon which this plant is dependent, and it will all be produced as the by-product of coke ovens.

Mr. WILLIAMS. Mr. President, if that be true—and of course I am not disputing the superior information of the Senator from New York; I know him so well, and I know so well his habits of inquiry—but if that be true, then these people in a free and competitive market with the Muscle Shoals corporation could beat them to a finish, could they not?

Mr. WADSWORTH. I think so.

Mr. WILLIAMS. Now, if they could beat them to a finish, whence the anxiety of the Senator from New York to keep them from having an opportunity to compete?

Mr. WADSWORTH. Mr. President, I have some anxiety for the taxpayers of this country, the people who contribute into the Treasury the money that is going to be spilled out and wasted in losing money in this corporation. We have put in $100,000,000 already.

Mr. WILLIAMS. Do I understand that the Senator's only motive, then, is the amount of the appropriation?

Mr. WADSWORTH. No; my motive is, if I can, to prevent the Government going into a commercial business in which it is bound to lose money.

Mr. WILLIAMS. I beg the Senator's pardon, but the Government, by his own statement, will not lose money. It may lose sales to the farmers and other people, but in the meanwhile it will be making munitions of war.

Mr. WADSWORTH. No; it will not be making munitions of war. How can it make munitions of war if the plant is going to be fixed over to make ammonium sulphate in form to be put into fertilizer?

Mr. WILLIAMS. Ah! It will not be fixed to make nothing but that. It will be fixed to make that in a certain sense, but it will not be fixed to do nothing except that.

Mr. WADSWORTH. That is true.

Mr. WILLIAMS. And the Senator is not going to tell me, he and I having the degree of mutual confidence in one another that we have, that this plant will be helpless to do anything except that.

Mr. WADSWORTH. Oh, no; I do not mean that.

Mr. WILLIAMS. The Senator is not going to tell me that.

Mr. WADSWORTH. No.

Mr. WILLIAMS. Now, the prime object of it all is to make this thing for the Government as a matter of military defense.

Mr. WADSWORTH. No; I do not grant that assumption.

Mr. WILLIAMS. And all the balance of it is what we might call by-product. Now, suppose they lose on the by-product. Why should the Senator be so uneasy, representing all these people who he says are going to make the by-product cheaper——

Mr. WADSWORTH. I do not represent anybody that is going to make the by-product. I do not think there is a coke oven in my State.

Mr. WILLIAMS. I beg the Senator's pardon. I did not mean representing them; I meant quoting from them.

Mr. WADSWORTH. Very well.

Mr. WILLIAMS. In the Senator's argument he has quoted from all those people. When I said "representing," I did not mean that he was representing them in any personal or political relation. I merely meant that his argument was representing them, and his argument so far has represented them. Now, why should he be so uneasy about them, if this is such an easy game?

Mr. WADSWORTH. That is what it is meant to be.

Mr. WILLIAMS. Yes; and if it is so easy that they can whip it to a finish in the first six months of competition, why worry about it? Now, really, back of it all is there not some degree of doubt in the Senator's mind as to whether they could whip them to death?

Mr. WADSWORTH. Unless the Government subsidizes this plant, subsidizes the commercial business into which it is en-

tering, I do not believe it can meet the competition of the by-product coke ovens. Of course, it can meet any kind of competition anywhere if it is willing to subsidize itself.

Mr. WILLIAMS. Oh, there is not any doubt about that, and as to that I agree quite with the Senator—that whenever the Government chooses to go into business and exercise its sovereign power against private industry, the Government must succeed and private industry must go to the wall; but that is not the question here. After all is said and after all is done, suppose we should have another war. I do not want any more. You do not want any more. Nobody does; but suppose we should. Where are you going to find the explosive stuff that is necessary to carry it on unless the Government is going to have it in advance?

The Senator's argument reminds me just a little bit of an overseer I had on a plantation once. He was trying to prove to me that it was cheaper to hire men at $2.50 a bale to haul cotton to the market than it was to use my own wages squad and my own wagons and my own mules. He computed how much the wear and tear upon my wagons was, and how much it would cost to feed and hire my mules at so much a day—of course, they were not costing me that, because I owned the mules—and how much the wages hands would cost per day if I had to hire them; and after he got through with it all I said, "John, the truth about this is that if I pursue your policy I will be $250 cash out of pocket, and if I do not pursue it I will save the cash."

Now, the Senator's chief quarrel with this is that the Government does not count the interest on the plant.

Mr. WADSWORTH. That is only one of several items.

Mr. WILLIAMS. And that the Government does not count what it has already supplied of one description or another, and especially interest on the plant, and the dividends that might be gained by private industry; and yet we have that thing there, and we have nearly completed it, and it requires a few more dollars, comparatively, to put it into operation.

Mr. WADSWORTH. Mr. President, I do not know where I left off. I was discussing the possibility of this enterprise competing with the by-product coke ovens. I do not think it can do it unless the Government is willing to subsidize the plant; in other words, unless we are all willing, as Members of the Congress, as trustees of the funds of the people, to appropriate money every year to meet deficits in the management of this plant.

The Senator from Mississippi said a good deal about preparedness. This plant will produce about 110,000 tons of ammonium sulphate per year. That is the product which will be the most valuable in the manufacture of explosives. That amount per year would not be one-twentieth, one-thirtieth, of what would be necessary to supply the armies of the United States for a year in a war anything like the last one.

Let me suggest to the Senator that, conceding, as I think he must, that this plant can not produce ammonium sulphate as cheaply as the by-product coke ovens, it must therefore be necessary to subsidize it, to permit it to lose money, and to pay it in deficiency appropriations. The instant you do that, and establish the policy of a Government subsidized commercial business, no one else will go into the business. You will not get another coke oven built. You will not get anybody else to go into the business of atmospheric fixation of nitrogen. Why would they, if they are going to be met with such competition? When you have done that, you have reduced the resources of the United States for its national defense down to the Government plant alone, or what the Government is willing to let live elsewhere.

I am just as much a devotee of preparedness as the Senator from Mississippi, and perhaps even more, upon occasion, and as a devotee of preparedness in this country I say that this bill as drawn strikes a deadly blow against it, because it discourages private industry from branching out and increasing its business, those industries upon which the Government must, in the long run, depend in time of war for the great bulk of its supplies. You never can get a Government monopoly large enough in time of peace to produce all the munitions of war needed in time of war.

Mr. WILLIAMS. Mr. President, I quite agree with that; nor do I desire to see that done. If we could get a Government monopoly large enough to produce everything the United States Government would need in the shape of explosives in time of war, we would have a gigantic plant which would overshadow the entire country. But what I am thinking is that the Government itself should have somewhere a producer of these things that should furnish a productive element to stop and check private profiteering.

I am quite willing to agree with the Senator from New York that this plant can not possibly produce all the explosives the Government of the United States might need in another World War. I am quite willing to agree with him that it could not produce over one-tenth of what we might need. I think he said one-twelfth or one-twentieth. But let that go as it may. The Senator must understand the immense importance of having somebody in the market producing at the least price that the Government can secure the supplies that the Government must have for war purposes, and thereby holding a check upon private profiteering in this business.

The Senator might say in answer to that that the private companies producing all these things which the Government might need would compete with one another to a sufficient point to obviate the objection I have just made. But the history of the late war shows that that is not true, and a knowledge of human nature also shows that it is not true.

Outside of what this plant can give incidentally to the agriculture of the country, there is the point that they can make these explosives for the Government and can ascertain what their cost is, and that that cost price must have its influence in the competitive market if we ever go to war.

Mr. WADSWORTH. Mr. President, I offer the amendment.

Mr. STANLEY. May I ask the Senator from New York a question which I think is very vital to this discussion?

Mr. WADSWORTH. Certainly.

Mr. STANLEY. What does the Senator from New York consider the cost of production of a ton of sulphate of ammonia by a by-product coke oven? What is the cost of the production in a coke oven?

Mr. WADSWORTH. I asked that question of the Senator from Kentucky about a week ago, and he gave it to me as about 16 cents a pound, as I recollect.

Mr. STANLEY. I beg the Senator's pardon; I said there were about 16 pounds of sulphate of ammonia in a ton of coke. In reducing a ton of coal to coke there is exhaled from the coal in the process, among other things, 16 pounds of sulphate of ammonia.

Mr. WADSWORTH. Does the Senator contend that this plant can produce it as cheaply as a by-product coke oven?

Mr. STANLEY. I think that is the gist of the whole thing. I contend that nobody knows what it costs to produce a ton of sulphate of ammonia.

Mr. WADSWORTH. Why did the Senator ask me, then?

Mr. STANLEY. Because I say I do not know. I do not believe it is ascertainable, but I understood the Senator to say that we could not produce a ton of sulphate of ammonia in this plant as cheaply as they produce it in a coke oven. If the Senator made that statement, he would have to know, a priori, what the cost was, or he could not have made the comparison.

Mr. WADSWORTH. Mr. President, of course I am not in either the atmospheric fixation of nitrogen business or the coke-oven business; but no one can tell me that this plant, built as it is, and with this cyanamid process, can turn out ammonium sulphate, in a legitimate business way, as cheaply as a by-product coke oven can, which turns it out automatically. The Government must have had some such idea as that in mind, because it urgently invited industries all over the country, where facilities were available, to build by-product coke ovens, and hundreds of them were built, and the Government got large amounts of ammonium sulphate from those coke ovens. The indications are that there will be no more beehive ovens built in this country, or very few, the value of the by-product ovens being so much more because they produce all these by-products.

Mr. STANLEY. It is 50 per cent greater.

Mr. WADSWORTH. Fifty per cent greater. Of course, the Government can compete with them by extending a subsidy to this corporation. If it does that, then it stops any future development of the by-product coke industry in the manufacture of ammonium sulphate, and you have done an injury to preparedness rather than rendered help, because the Government can not make all these things itself.

My amendment is merely for the purpose of securing this corporation upon a business foundation and seeing to it that it conducts its business in a way at least approximating the way that individuals are compelled to conduct their business; in other words, to earn something on the investment; that is all. Then it will not destroy other businesses, and it will not rob the taxpayers.

Mr. KING. Mr. President, if I correctly understood the position of the able Senator from Mississippi [Mr. WILLIAMS], he would justify the measure before us upon the theory that the Federal Government should have a check upon those who produce commodities which it is compelled to purchase. The Government, in times of war at least, requires explosives, and therefore in order to prevent profiteering in that commodity it should construct powder plants and explosive factories and manufacture not only in war times but in peace times powder

and other explosives. There is much to be said in favor of the proposition that the Government should manufacture war munitions and explosives for its own use. However, I think experience has demonstrated that economies are not obtained by governmental ownership and operation of plants and factories for the manufacture of powder or war munitions. The recent experience of the Government in the manufacture of airplanes, ordnance, and other products required by it in the prosecution of the war furnish no argument in support of the proposition that money may be saved to the Government by its undertaking these various enterprises. The Ordnance Bureau of the Government literally spent billions of dollars, and it can not be contended that its operations were satisfactory in any particular. There was not only lack of achievement, but there was waste and inefficiency.

Reference has been made to the Shipping Board as an illustration of the waste and extravagance and incompetency which attend governmental ownership or control or operation of those matters which properly come within the domain of private endeavor. Of course, there are some undertakings which must be controlled by the Government. But even those matters which are purely of a governmental character are controlled and directed at great cost and with results entirely disproportionate to the benefits derived. The record of the United States would not seem to indicate the wisdom of maintaining large governmental manufacturing plants for the production of explosives in peace times. If explosives and war material are produced in excess of the requirements of the Government in peace times, they are either wasted or they must be thrown upon the market and be absorbed in the commercial transactions of the people. Even if the Government in war time erects plants for the manufacture of powder and other explosives, it is questionable whether such plants should be operated in peace times other than for the production of a sufficient quantity of explosives for the peace requirements of the country.

It is a matter of common knowledge that neither in war times nor in peace times can the Government operate munition plants as cheaply as can individuals or corporations. The frightful expense of bureaucracy and Government operation and control of business is revealed in substantially everything which the Government undertakes. Government in the United States is a very costly undertaking. Our cities and States, and the Federal Government itself, are burdened in a most oppressive manner in order to obtain sufficient revenue to meet current expenses. We have in this country a bureaucracy which puts to shame the bureaucratic forms which we so often criticize in other countries, and if the Federal Government, in addition to the discharge of legitimate functions of government, shall undertake business operations and engage in commercial activities, the army of Federal employees will be increased beyond number, and the oppressive burdens of the present and the past will be regarded as but silken threads measured by the heavy clanking chains which a triumphant bureaucracy, with its attendant evils and vices and extravagances and burdens, will press upon the people.

Democracy means a government of the people, not a government of officeholders and a government for and by officeholders. A democracy does not mean a government which controls the private business of the people or which enters into those fields of activity which must, among a progressive and enlightened people, engage the efforts of individuals. It is true we are drifting toward paternalistic government, and socialistic schemes are being devised and advocated with earnestness, and persistent efforts are made to secure their adoption by the Government. Following war, and during periods of readjustment and when business is disordered and discontent is abroad in the land, clamorous appeals for paternalistic propositions become more frequent, and those appeals are often pressed with a zeal, and, indeed, with a fury that make them well-nigh irresistible.

We should examine with the utmost care propositions which involve a departure from the paths of safety, which commit the Government to intervention in enterprises which in the past have been the concern of private endeavor. If the position of the distinguished Senator from Mississippi is correct, and the Government should engage in business undertakings for the purpose of checking profiteering in those articles or commodities which the Government from time to time requires, then it can not halt when it shall have constructed plants to manufacture explosives.

The Government requires iron and steel. It is known that most of the iron mines in the United States are owned by a limited number of individuals and corporations. Shall the Government acquire iron mines and operate them in order to hold a check upon those who mine and sell iron ore? Shall it erect steel plants for the purpose of producing the steel required for the battleships and in the construction of guns and other munitions of war? The Government requires clothing for the Army and Navy. In order to prevent extortionate prices being charged by the manufacturer of cloth, wool, and cotton, shall the Government construct woolen factories and cotton factories and other plants in order to produce the clothing required? If this argument be valid, then the Government likewise, in order to keep a check upon the price of wool, should engage in the sheep business, and that would require the ownership of lands, the erection of warehouses to protect the wool, and a multitude of other incidental and ancillary enterprises. Shoe factories would be required to check profiteering in the sale of shoes. Lead and copper are required.

Therefore, in this view the Government would be required to operate lead and copper properties and erect smelters to treat the ores. It seems to me the argument of the Senator proves too much. If carried out logically, it would commit the Government to practically every undertaking which commands the attention of the American people.

Mr. President, I am as anxious as any Senator that agriculturists shall obtain fertilizer at as cheap a price as possible. I have no sympathy with individuals or corporations who try to restrain trade or prevent or destroy competition or form trusts and monopolies. Upon a number of occasions in this Chamber I have denounced trusts and corporations which seek to prevent competition. I have urged that the Sherman antitrust law should be strengthened, and that, as amended, it should be vigorously enforced. I believe in the competitive principle and can not too strongly condemn those who seek to destroy it.

I have repeatedly declared that if trusts and combinations in restraint of trade and organizations for the curtailment of production and the destruction of competition were permitted to go unchecked, it would force a change in our economic policy and lead to the assertion by the Federal Government of a drastic and perhaps oppressive control over the private enterprises of the American people. Undoubtedly, during the war, trusts and combinations rather brazenly preyed upon the people. The Sherman antitrust law and the Clayton Act and the Federal Trade Commission act, if vigorously enforced, can do much to free the fields of private endeavor and of business activity from combinations in restraint of trade or which seek to prevent competition. If there are fertilizer trusts, they should be prosecuted, and all other combinations or organizations which are denounced by statute should be proceeded against. The States should vigorously act against combinations of the character referred to. The Federal Government and the State governments are not impotent to deal with trusts and conspiracies in restraint of trade. Those who violate the law should be prosecuted and fined and imprisoned, and offending corporations should be dissolved.

Mr. President, in my opinion the passage of the measure before us will not only be unwise but it will constitute a dangerous precedent. Moreover, no benefit would result to the American people. Those who believe that this measure, if it becomes a law, will prove of benefit to the agricultural interests are, in my opinion, mistaken. If the proposition had been submitted that the American people were to spend at Muscle Shoals from $150,000,000 to $175,000,000, as they will be compelled to expend if this bill becomes a law, I feel sure that but a small per cent of the electors would have supported the same. Everyone recognizes the importance of agriculture and appreciates the disadvantages to which the farmers are subjected. All students of history know that the prosperity of the State and the progress of the people are dependent upon the agriculturists. Their prosperity means national prosperity. Whatever makes for their welfare inures to the advantage of all, and no person who loves his country will interpose obstacles to the happiness and prosperity of the farming classes of our country.

The eloquent statements made by the Senator from South Carolina [Mr. SMITH] with respect to the importance of agriculture, and the hardships so often encountered by the farmers, find a ready response in my heart. If there is any class of our citizenship which deserves prosperity it is those who produce from the soil those things essential to the life of the people.

There are too many parasites in society—too many who unduly profit upon the toil and labor of the farmer. I am anxious for the workingmen to not only be well compensated but liberally paid for their labors, and I sincerely desire that the agriculturists throughout our broad land shall reap golden harvests as the result of their labors and the days and night of arduous toil which they must put forth in order to harvest their products. If this bill would benefit the farmers, I should be constrained to look upon it in an entirely different light, notwith-

UMI

standing my belief that it will be regarded as a precedent in the immediate future, and in years to come, for dangerous and destructive legislation.

The proponents of this measure assume that the nitrate plant, if operated by the Government, will reduce the cost of fertilizer to the American farmer. The record, in my opinion, disproves their position. The plant, after a hundred and fifty or a hundred and seventy-five millions of dollars shall have been expended, will produce but a very small per cent of the fertilizer required by American agriculturists. Indeed, the per cent will be so small as to have but little, if any, influence upon the price in the market. It is my firm belief that the product produced by this plant can not be sold at the market price which will then obtain, in competition with fertilizers produced by private corporations. The Treasury of the United States will be called upon annually to meet large deficits that will result from the operation of this plant by the Government.

In this way, instead of cheapening the product, its price will be increased. The cost of production by the Government would be so much greater than the cost of producing the fertilizer by private enterprise that there may be a tendency to increase the cost in order to approximate more nearly the level of the Government cost. Of course, the Treasury of the United States will be inexhaustible, and recourse will be had to it to meet the annual deficits which will inevitably result.

The Shipping Board knocks at the door of Congress for annual appropriations to meet its deficits, though it has had billions of dollars and has not been required to make any dividends or submit any accounting or make any returns to the Government. This plant will produce but a little more than a hundred thousand tons per annum. Private enterprise will produce many times that amount.

The demands of the farmers of the United States will call for millions of tons of fertilizer for annual consumption. This plant will not only put no check upon profiteers but, as stated, it will, in my opinion, be a burden to the taxpayers of the United States.

I stated that this measure would constitute a precedent. Senators know that there is a school of thought in our country which is demanding that the Government embark in various enterprises which are clearly within the field of private endeavor. There are radicals and socialists and various forms of political and economic thought which loudly call for the nationalization of what are demonstrated basic industries as well as other industries and enterprises which have been brought to a high standard of perfection by the genius and the industry of the American people. If the Government can build dams at an expense of millions of dollars and construct factories and manufacture explosives for commercial use and fertilizers for the agriculturists, it is manifest that demands will be made that its power extend to other lines and along other avenues.

And in this connection it is pertinent to inquire whether a policy of that character, broadly announced and from time to time executed, would not deter individuals from engaging in enterprises which the proponents of paternalistic and socialistic schemes insist the Government should enter upon; and if governmental experiment and operations in the fields of private business culminate in deficits which are met by appropriations from the Treasury, and if the Government officials, in order to control the fields in which they are operating, should actually or potentially, temporarily or otherwise, reduce prices beyond the level of fair profit, upon the understanding that the Treasury would meet the losses, unquestionably private enterprise would halt, and in some instances individuals and corporations would be driven from the business which they had honestly and earnestly striven to develop. That policy, of course, would inevitably result in many individuals and corporations being driven from the field.

Mr. STANLEY. Mr. President, will the Senator from Utah apprise me as to what private enterprise will be driven out of business by the passage of this act, assuming that we will manufacture this product at a loss and will sell it for less than the cost of production—assuming all that, what interests will be hurt?

Mr. KING. Mr. President, the hearings in the House and in the Senate indicate, as I interpret the testimony, that this plant will produce such a small proportion of the fertilizers required by the farmers of the United States that if it were manufactured at a loss and if it were sold for less than the cost of production, it would not affect in any appreciable manner any of the fertilizing companies operating in the United States.

Aside from the stupendous cost of this project, the mere production by the United States of fertilizer and its sale to the farmers of our country would not be of so much consequence. But what I am contending is this, that this project will entail upon the people of the United States an expenditure of at least $150,000,000, and in my opinion a sum in excess of that; but that will not be all. It will involve the loss of interest upon that amount, and in addition there will be an annual deficit which will amount to stupendous sums which the Government will be compelled to meet from taxation imposed upon the people. The fertilizer produced, if a fair interest were to be paid upon the capital invested and other factors were taken into account, which must be considered in fixing the price of the product of any plant conducted upon a business basis, will cost very much more than the price at which it will be sold by individuals and corporations who are engaged in the production of the same commodity.

The loss thus resulting must be paid by the Government. But if the Government sells the product from this plant at a loss, and as a result of so doing reduces the price in the market, there will be demands from many sections of the country for the Government to either take over the fertilizing plants in the United States or that it shall construct other plants and continue to sell their products at prices lower than those asked by private enterprises even though such a course required further appropriations by the Government to meet the resultant losses.

There is no question but what if this plant shall be constructed under this bill efforts will be made by those operating it to popularize its achievements, and therefore its product will be offered at lower prices than the market provides, though such a course will result in further drains upon the National Treasury. Demands for the nationalization of industry will be made and the burdens which the people have to bear will be ignored because those burdens will indirectly be brought before the people. They will operate much as indirect taxation operates. The people pay hundreds of millions of dollars indirectly as a result of inequitable tariff measures.

The Senator from Alabama [Mr. UNDERWOOD], as I interpret his remarks, stated in reply to a question propounded by the Senator from Minnesota [Mr. KELLOGG], that he was not certain but what it was not a function of the Federal Government to construct dams in navigable streams for the purpose of developing hydroelectric power. May I not suggest in passing that if the Government constructs dams at Muscle Shoals and develops electric energy and erects fertilizer plants, is there any reason to believe that insistent demands will not come from all parts of the country that it construct other dams and build other hydroelectric plants, and in turn follow such efforts by the erection of factories and mills and engage in all sorts of business activity? I suggest to Senators that whenever a Government embarks upon a paternalistic and socialistic policy it is impossible to foresee the result or to forecast the consequences. I confess, Mr. President, that I look with disfavor upon measures which increase the power of the Federal Government, strengthen the hands of bureaucracy, multiply the bureaus and boards and executive instrumentalities of the Federal Government, and embark the United States upon the uncertain and tempestuous seas which bear the fleets of courageous and enterprising citizens of this Republic.

I concede to the Federal Government full authority to perform its legitimate functions. I would guard with jealousy the rights of individuals and the authority and prerogatives of the States. The communism of Russia and the efforts to destroy our economic system, founded upon the recognition of the right of private ownership in property and the right of individuals to contract with respect to their mutual relations, meet with no approval at my hands. There are, of course, evils in an economic system founded upon what is called "capitalism," but that system has builded the edifice of civilization and brought about the highest standard of intellectual development. There are those who would destroy not only our political fabric, but our economic system. They would nationalize our industries, deny the right of individual ownership of property, and thrust the American people into the chaos and welter of socialism with all of its evils and banalities. We are besieged with demands for Federal interposition in almost every avenue trodden by individuals. Conditions, inevitable as a result of the war, lead to unwise demands for legislation and to the adoption of deadly and destructive policies.

If this bill becomes a law and the Government is to engage in business to check profiteering in every field of activity in which the Government may be interested, then I can see no point where the Government will cease. If that policy should be adopted, there is no end until the nationalization of industry results and our national structure is changed or destroyed.

Mr. STANLEY. Mr. President, I heartily concur in the general principles so ably and lucidly enunciated by the Senator

from Utah [Mr. KING]. I agree with the Senator from New York [Mr. WADSWORTH] that it is a pernicious principle under ordinary circumstances for the Government to engage in destructive competition with private individuals or with private business. This is not a proposition, as the Senator from Mississippi [Mr. WILLIAMS] has repeatedly said, to engage in private business or to engage in competition with men in private business. The purpose of the legislation was to secure munitions in time of war. As I understand, to secure munitions in time of war this apparatus was to produce a valuable fertilizer in time of peace. It is impossible to have the apparatus ready in time of war, as every witness and all the experts before the committee have testified, unless it is operated in time of peace, and as an incident to that operation we secure the sulphate of ammonia.

Mr. KING. Will the Senator permit an interruption?

Mr. STANLEY. Certainly.

Mr. KING. The Senator stated that the plant was constructed for the purpose of furnishing nitrates in time of war.

Mr. STANLEY. Yes.

Mr. KING. In substance, the Senator made that statement. My information is, and it is based upon the discussion here and an examination of the testimony taken before the various committees of Congress, that the plant was completed as designed, and that it was designed for the manufacture of ammonium nitrate for explosive purposes; that tests were made after its completion; and that it measured up to the highest standard of mechanical efficiency. My understanding, based upon the record, is that not only was the plant, necessary for the manufacture of ammonium nitrate, complete but that there was a steam-power plant erected by the Government at considerable cost, so that now the Government may manufacture some thirty or forty thousand tons per annum of nitrogen, just as was originally determined upon and in accordance with the plans and specifications prepared by the Government.

The object of the Government has been accomplished. It designed the plant to manufacture 40,000 tons of nitrate for explosive purposes. It has constructed such a plant. It will produce the amount called for. Nothing more is needed. If the object of the Government was to construct a plant for explosive purposes and it has the plant, why expend $50,000,000 to $75,000,000 more; why project the Government into other enterprises; why go on and build dams which will cost in the neighborhood of forty or fifty million dollars? Why enlarge the bill? Why add to it by several million dollars for the purpose of engaging in the manufacture of fertilizer?

Mr. WILLIAMS. The Senator must also assume that he is perfectly willing for it to be a losing project.

Mr. KING. No; I am not assuming that.

Mr. WILLIAMS. Obviously the bill is to keep it from being a losing project, to collect sufficient from the by-products and incidentally to enable the Government to make what it has need of as a military necessity without loss to the Government. The Senator would have us stop the plant just where we produce what the Government had to have at a loss instead of going further to enable the Government to produce what it needs at a profit, considering what profit it can gain upon the incidental by-products.

Mr. KING. Will the Senator from Kentucky pardon me further?

Mr. STANLEY. Certainly.

Mr. KING. Of course I do not agree with the conclusion stated by the Senator from Mississippi. The Senator from Mississippi assumes that by the expenditure of $50,000,000 or more in the future we can manufacture something at a profit. I deny that. There is a difference between the Senator's conclusions and my own with respect to that.

I think that the Federal Government, if it engages in the manufacture of fertilizer, no matter if it spends $50,000,000 or $100,000,000 more, will not be able to compete with private enterprise and it will make fertilizer at a loss. The Federal Government will be just as extravagant and inefficient in this as it has been in the Shipping Board operations. It will fail as much in its manufacture and sale of fertilizers in producing a profit as it has failed in the producing of a profit in the shipping industry and in other enterprises in which the Government has engaged.

Mr. WILLIAMS. Of course the Senator knows that I think as a rule Government operation of almost anything is comparatively inefficient as compared with private enterprise, which is seeking a private profit.

Mr. KING. The Senator and I agree on that.

Mr. WILLIAMS. But if the Senator were as certain of his conclusion as he seems to be, how does the Senator account for the fact that the corridors and lobbies of the Capitol are now filled with men interested in the private production of these products, who seem to think that it is to their interest to keep the Government from having anything to do with it? The Senator must know that the galleries and lobbies and corridors are filled with men who are attempting to influence Senators and Congressmen against this scheme.

Mr. KING. The Senator does not know that I have heard of but two persons appearing in Washington in opposition to this bill. How many have appeared for it I can not say. If I may be permitted to answer the question of the Senator from Mississippi, I would state that if there is any person engaged in the manufacture of fertilizer who anticipates that the Government, by engaging in the business as a result of the construction of this plant alone, is going to influence the price of fertilizer, that individual does not exhibit very good sense, in my judgment.

Mr. WILLIAMS. That may be, but, at the same time, I have just listened to an argument in which a Senator quoted very largely from a private enterprise that would be a competitor of the Government with regard to this by-product, and that enterprise has secured his aid, as a Senator of the United States, to exploit their views by quotations, not by anything else, of course, and we all know that those interests are around here. The Senator must know it. These interests are perhaps in the plural, and they are here upon the plea that private enterprises may be hurt by United States Government competition; yet the Senator gets up and says that no effort of the Government to produce the product can possibly hurt private enterprise, and still the private enterprises are here and obtaining a hearing solely upon the ground that they will be hurt.

Mr. KING. In order to convey my idea, let me suggest the following illustration: The Federal Government has appropriated $3,000,000,000 or more to construct a merchant marine. I can imagine if the Senator from Mississippi were engaged in the shipping business he would object to the Federal Government being called upon to pay the millions and tens of millions of dollars of losses annually resulting from the operation by the Government of its two or three thousand ships. It is quite likely the Senator from Mississippi, if he were engaged in the shipping business, would not object if the Government constructed a war vessel and ancillary to it, constructed a boat or two as transports, which in time of peace it might use for traffic or freight purposes. He would not feel that a few boats would constitute competition that might in any manner prove harmful or disadvantageous to him.

But if the Federal Government's Treasury is to be opened to the demands of the shipping corporation for an indefinite period, and it may recoup its losses by constant appropriations from the Treasury, then, my friend from Mississippi would object to such appropriations. Now, if I may make the application of that illustration.

I do not know to whom the Senator refers when he speaks of private enterprises opposing this bill. I know what the record shows, and that is all I am speaking from. The record indicates that there are a number of by-product coke ovens in the United States which are producing approximately 500,000 tons of sulphate of ammonium per annum, and that the output will greatly increase in the future. It may be, and I take the Senator's word for it, that there are some individuals engaged in the manufacture of sulphate of ammonium from by-products who are objecting to the Federal Government engaging in the manufacture of sulphate of ammonium for fertilizing purposes. They may feel, though I do not know what their views are, that the Federal Government, if it builds this plant, may construct other plants. Then they may feel that the views of the Senator from Alabama [Mr. UNDERWOOD] may prevail, that upon all of the interstate streams other hydro-electric plants may be erected by the United States, and that the Government will be induced to erect other nitrate plants and other factories for various other purposes.

Mr. WILLIAMS. That may be the reason, and that is the reason. If I were engaged as a private shipbuilder, and the Government wanted to enter into the shipbuilding business, I might, as the Senator says, and very properly too, come to Washington to resist that upon the ground that if the Government went into the business it would ruin my business. But I would not come to Washington with that plea coming out from one corner of my mouth and with the plea at the same time coming out of the other corner of my mouth that the Government could not possibly hurt me at all in the shipbuilding business, because it cost the Government too much money. That is what I am objecting to.

I can very well understand why a man engaged in a private enterprise might object to the Government going into it, with a view that it would ruin him, but I can not understand why he

would say that and in the same breath say that the Government would lose money and that he would make money, and that in the sale of by-products, as he says about the coke ovens, that they would beat the Government to a finish. Both of those arguments can not be true; both of them can not be correct. One or the other may be. In my opinion neither is. I think the main object of the plant is to hold a check upon profiteering in war times at the expense of the Government and the people of the United States.

I think, if we find that by confining ourselves entirely to the production of explosives for war purposes we must lose money, and then agree, in order not to lose money, that we must largely add to the plant in order to produce by-products which will make money, it is no argument to say that upon the purely governmental purpose we lose. It is also no argument to say that upon the nongovernmental purpose we are coming into competition with private business.

Mr. STANLEY. Mr. President, in answer to the questions asked me by the Senator from Utah [Mr. KING], I desire to say that, in the first place, we can not lock up this plant—it is now a complete operating plant—and go back to it in 5 or 10 years and find no plant there. It is a notoriously admitted fact—it was proven in the hearings, although no proof was needed—that if you take exquisite apparatus like a nitrogen plant and paint it and lock it up and leave it for five years, you will go back and find it dismantled and obsolescent. It is in proof here by every expert who has been asked the question—though no experts were needed to furnish such proof—that if this plant were put in a stand-by condition it would take four or five hundred thousand dollars a year to protect it; that when its operation were again resumed it would take a year in which to prepare it to make one single ounce of powder, to say nothing of the great difficulty in again assembling the expert personnel.

Mr. President, it has been stated here, and it is admitted in the record, that in the first instance the plant would be operated at a loss, and Mr. Arthur Glasgow, after being discredited as a witness to prove anything, is the sole witness upon whose testimony that statement is based. In his report he does say that—

> A "general-purposes fund" will be required to provide (*a*) for the payment prior to June 1, 1921, of operating fee and royalty, and (*b*) for the expense of creating the organization and the business starting at nil.

You can not make money on it from the very first day you operate, of course. He continues:

> Both (*a*) and (*b*) are to be charged to "good will," which will be carried as an asset account until it is extinguished by profits.

He gives elaborate statements in the same letter in which he shows that sulphate of ammonia can be produced by the use of steam power at $59 a ton, which is a $10 or $12 profit.

Mr. LENROOT. Mr. President, will the Senator from Kentucky yield to me?

Mr. STANLEY. I yield.

Mr. LENROOT. Does not Mr. Glasgow say in the same letter that those figures are academic rather than practical?

Mr. WADSWORTH. Do they not leave out all of the other elements of cost to which I referred?

Mr. STANLEY. I am not discussing the question now of whether or not the figures are academic; but when you make Mr. Glasgow your witness and say it is admitted in the record that this plant will be operated at a loss, you—not purposely, of course, but inadvertently—quote only a part of his statement, and the complete statement is to the effect that the plant will not be operated at a loss.

Mr. LENROOT. Will the Senator from Kentucky yield?

Mr. STANLEY. Certainly.

Mr. LENROOT. When Mr. Glasgow says that the figures are academic and then immediately follows with the statement that the plant will be operated at a loss, there can be but one conclusion.

Mr. STANLEY. I beg the Senator's pardon. He does not state that it will be operated at a loss. He says that it will be operated at a loss "starting at nil"; that is, in the first part of the year, and he says that the loss will be temporary. Any business will be operated at a loss for a month or a week, for it must be operated some time at least before the product can be obtained and sold.

Mr. LENROOT. Will the Senator from Kentucky yield further?

Mr. STANLEY. Certainly.

Mr. LENROOT. If the time during which there will be a loss is a month or a week, or any such short length of time as that, would a loss fund of $2,500,000 be provided?

Mr. STANLEY. The $2,500,000 is not provided for that purpose alone; that is a mistake.

Mr. President, there has been a cry raised here that some business will be destroyed by this proposed legislation, and again and again I have propounded the question, What business? It is a strange thing that the straw man, the bugaboo, is raised in the Senate every day that the Government is going into private business and is preparing to destroy legitimate private business; but no man can find the business, because it is not to be found. I heartily concur with all that the Senator from New York has said in regard to the Government engaging in private business. I am against the Government going into private business; I am against Government control of anything that a private individual can control under ordinary circumstances. This case, however, does not come under that category at all. Ours is the only civilized country in the world that today is not making or preparing to make nitrogen, that is not operating or preparing to operate a plant employing some process by which this essential of war can be extracted from the air, unless that government has a natural resource. To-day we are face to face with a danger that the Senate does not seem to realize, that it seems to forget in quibbling over whether this process will make cyanamid or make sulphate of ammonia at $58 or $60 or $16 a ton, which consideration sinks into utter insignificance when we face the fact that war is not now any more uncertain than it was three years or four years ago. The skies are not so clear; Europe is not so peaceful; the East is not so angelic in its attitude toward us that we need not fear at any moment to hear the fierce blasts of war break on our ears. When that shall happen, unless we have the good will and support of Great Britain, our great guns are unloaded; our hundreds of millions, yea, billions, spent for all the instruments of war are comparatively worthless. The meager supply of our blast furnaces would be exhausted in a few weeks. England has the key to America's arsenal. She can lock up every pound of Chilean nitrate; she can lock up every pound of nitrate of potassium; she controls the shipping; she controls the railroads that carry that nitrate to the sea; and she controls the great trust that makes the product, and boasts that unless it can show its stockholders that it controls 80 per cent of the output it will not operate at all.

Mr. LENROOT. Will the Senator from Kentucky yield?

Mr. STANLEY. Certainly; I yield.

Mr. LENROOT. Is not the Muscle Shoals plant now completed for the manufacture of explosives?

Mr. STANLEY. It is.

Mr. LENROOT. What more is required to be done to utilize it for that purpose?

Mr. STANLEY. It must be operated to be efficient.

Mr. LENROOT. It is complete now for operation, is it not?

Mr. STANLEY. Yes, sir.

Mr. LENROOT. And is not the testimony that it can, at an expense not to exceed $400,000 a year, be maintained constantly for the production of explosives?

Mr. STANLEY. It is not; and if it were, it would be absurd.

Mr. LENROOT. That is the testimony of Secretary Baker.

Mr. STANLEY. I beg the Senator's pardon. Mr. Scott, a member of the British munitions board; Col. Joyes; Dr. Lamb; and every expert who knew anything about it—and if he did know anything about it, he must have known that—testified as did the Secretary of War, who says that if you put this plant in a stand-by condition and leave it, in four or five years it will be worthless. Any man who ever handled machinery knows—he does not need to be an expert to know—that a machine will instantly deteriorate when it is not in use. Cover the machinery of the Muscle Shoals plant with paint, let the men who are experts in its use scatter—one east, one west, and one over the cuckoo's nest—and it is in the testimony here uncontradicted that it will take from six months to a year at infinite cost to begin the operation of the plant at all.

We need no testimony to that effect. The Senator from Wisconsin and the Senator from New York both know, if they have ever had any experience with machinery—and I assume they have, because they are versatile gentlemen—that whether it be a sewing machine or a delicate retort, if it is put in a stand-by condition and left it will immediately deteriorate.

More than that, the manufacture of high-power explosives, like the manufacture of sulphate of ammonia, is a new business. As the testimony shows, it is growing every day; new discoveries are constantly being made. The use of nitric acid as the base of smokeless powder and other explosives is only 34 years old. It is only within the last generation or two that we have used the tremendous explosives now employed. Every

other country in the world is advancing by constant use and operation of just such plants as that proposed at Muscle Shoals.

Mr. WADSWORTH. Mr. President, will the Senator yield?

Mr. STANLEY. Certainly; I yield.

Mr. WADSWORTH. Will the Senator mention one Government that has gone into the business itself?

Mr. STANLEY. The hearings show—and I will put excerpts from the hearings in the RECORD to that effect, if need be—that the nine plants of France are to be either operated by the Government or with Government assistance.

Mr. WADSWORTH. Mr. President, that is scarcely an answer.

Mr. STANLEY. The hearings show that the Japanese Government is experimenting with every known process; the hearings show and report after report of the British commission indicates that it is desirable for the Government to take such action. The Parliament of Great Britain and commissions of the British Government recommend the establishment of such plants either by assistance to private concerns or, if need be, by the Government itself.

Mr. WADSWORTH. Mr. President, will the Senator point out one Government that has itself gone into the business? This is the first proposal which I have encountered which will put a Government into the business of operating such a plant upon a commercial basis. In England, France, Germany, Norway, and Italy all such plants are run by private individuals.

Mr. STANLEY. They are built by the Government.

Mr. WADSWORTH. In some instances governmental assistance was extended in the building of the plants, but the people who have had that assistance are to pay it back to the Government and conduct the business as any other business is conducted. This is the first time I have been able to discover any proposal that the Government should do this thing itself in a commercial way.

Mr. STANLEY. There is no difference between Governments building plants and seeing that they are operated and operating them themselves.

Mr. WADSWORTH. There is a vast difference.

Mr. STANLEY. Does the Senator from New York mean to state that all the cyanamid plants of France and of Germany are run by private individuals?

Mr. WADSWORTH. They are run by private enterprise.

Mr. STANLEY. Without Government assistance and Government subsidy?

Mr. WADSWORTH. They may have had some Government assistance in building plants; but those who received such assistance are to pay back the money; that is my recollection of the matter.

Mr. STANLEY. I have not the time to read from the hearings now in detail, but I will, with the permission of the Senate, incorporate in my remarks excerpts showing the preparations which are being made by several Governments for this very purpose.

Mr. SMITH of South Carolina. Mr. President, is it not a fact that in the hearings it was stated, as I think on investigation it will be found, that the very countries the Senator from New York has named have such plants in operation; and that even where the Governments are cooperating with private individuals the Governments control all the output and regulate all the matters pertaining thereto?

Mr. WADSWORTH. I do not know what degree of control is exercised. Of course, in time of war the Government takes complete control; it takes possession of the entire output for explosive purposes; but the plants that are being developed to-day upon the most modern basis in England and in France and in other countries are being developed primarily by private enterprise.

Mr. SMITH of South Carolina. As agencies of the government.

Mr. WADSWORTH. Not necessarily as agencies of the Government; and they are not regulated by the Government in the sale of their goods, but are controlled by the Government only potentially for war purposes.

Mr. SMITH of South Carolina. I think if the Senator will investigate that he will find that the statement I have made is correct. I can not put my hand at this moment on the exact place in the testimony, but I will place in the RECORD excerpts from the testimony to that effect, if it be necessary to the argument. I do not, however, deem that it is necessary, because it does not make one particle of difference what France does or what England does or what Germany does.

Mr. WADSWORTH. They are constantly being cited as examples for us to follow.

Mr. SMITH of South Carolina. I have not cited them.

Mr. WADSWORTH. The Senator from South Carolina has done so, as has also the Senator from Kentucky.

Mr. SMITH of South Carolina. I desire to state, if the Senator from Kentucky will allow me——

Mr. STANLEY. Certainly.

Mr. SMITH of South Carolina. We should act in accordance with common sense and in accordance with governmental necessity and the necessity of the people of this country. It is for us to decide, not according to precedent or because of what other countries have done, what we shall do with the Muscle Shoals property, with the view of its benefit to agriculture and to the Government in time of war.

That is a question for us to decide—whether we are going to use this plant as the Constitution provides we shall, in time of war for the production of things to defend the country and in times of peace for the production of those things that would tend to better the conditions of living; and if, in our judgment, we see fit to do as we have done in the Agricultural Department in appropriating vast sums to stamp out diseases of cattle and to stamp out diseases of plants, if we see fit to utilize this new discovery for the purpose of benefiting agriculture, it is our duty to do it.

Of course, we can go on here and argue to the end of time as to whether or not it is a proper function of the Government to enter into private business. As a general proposition, that may not be true; but I submit that when it comes to the betterment of that class that does not manufacture, that does not bank, that goes into none of the finer and more organized forms of our domestic life, but constitutes the helpless bedrock upon which everything else depends—when there comes an exigency of circumstances that can be for their benefit, we say the Government must keep its hands off, and add a further burden to the crowd that notoriously pays the taxes and bears the burdens of modern civilization. It is that to which I object.

Mr. LENROOT. Mr. President——

The VICE PRESIDENT. Does the Senator from Kentucky yield to the Senator from Wisconsin?

Mr. STANLEY. I yield.

Mr. LENROOT. The Senator has made the statement that this is the only Government that has not gone into this matter. If he will turn to page 51 of the hearings before him, he will find that in Germany, where the industry is more highly centralized, it is all under the control of a board of directors representing the three groups of producers of fertilizers, having a board of directors consisting of four members, and the Government has one member of that board of four.

Mr. STANLEY. Mr. President, I will simply quote from the hearings.

Col. Joyes gave this matter most exhaustive study here and abroad. He said, on page 46 of the hearings:

> The German Government nitrogen administrator required the gas works and coke ovens to deliver all possible by-product ammonia, but no great increase could thus be made.
>
> The Government further increased ammonia production by requiring increases of existing cyanamid plants and construction of new ones, the Government assisting by large loans, etc., and even building out of public funds two large cyanamid plants.
>
> * * * * * * *
>
> France undertook the establishment of plants to produce by fixation at home nitrogen substitutes for Chilean nitrate sufficient in amount for all her home munitions manufacture.
>
> The process selected as the backbone of this program was the cyanamid process and the plans contemplated adding to the prewar capacity (which was about 8,000 tons of nitrogen per annum) an aggregate annual production of over 50,000 tons of contained nitrogen, giving in all some 60,000 tons of nitrogen—to be available a small part before 1918, part in 1918, and all by May, 1918.
>
> This program was largely financed by public funds, two of the nine plants being Government owned, three being Government controlled, and the others having probably some assistance in their financing.

If there is any evidence that these plants have since been turned over or given away to private institutions, I have not that evidence.

As to the argument that some private concern or private business will be destroyed—some of the people fighting this bill have sent out the map which I have in my hand. Each one of the apples on this tree represents some separate and distinct useful thing that is made from the by-products of a coke oven. The basis of paints, colors and dyes, medicines, munitions, road-building material, a thousand and one essential things—inflammable gases, toluol, and other munitions of war, all come from the coke ovens. Out of the four or five hundred different by-products of the coke oven, there is one little item of about 4 pounds of nitrogen. To say that the coke ovens of this country would be stopped because of the fact that somebody else is making this little 4 pounds of nitrogen or 15 or 16 pounds of sulphate of ammonia is absurd.

In 1919 the by-products of coke ovens approximated $75,000,000 in value, of which sulphate of ammonia amounted to a few millions.

It is charged that these coke ovens will undersell this plant. The contention is not tenable. Nobody knows what it costs a coke oven to produce 4 pounds of nitrogen. It is a mere by-product, a mere incident to the operation. Coke is made, as everybody knows, in order to smelt iron ore, and the production of coke depends upon the production of pig iron. In 1919 there were 19,650,000 tons of coke produced in beehive ovens and 25,997,580 tons in by-product ovens, making a total of forty-five million six hundred and odd thousand tons of coke produced. Will any man say that this stupendous operation, involving billions of dollars in sales, will stop because the Government makes 40,000 tons of nitrogen or makes 200,000 tons of sulphate of ammonia? It is a mere incident. This great business would not be affected by it enough to know it.

Is it urged here—and I am not inveighing against either the iron industry or the coal industry—that the earnings of the coal and steel people have been so small in the last four years that they would be bankrupted because the Government makes a few tons of sulphate of ammonia? The truth is that the price of this product is not fixed by the coke oven at all. This by-product being a by-product, a mere incident to the manufacture, they do not start out to manufacture sulphate of ammonia. They start out to make coke, and they start making coke whenever the demand for pig iron justifies it. When the blast furnaces start the production of pig iron, the coke furnaces start to furnish the coke; and the price of sulphate of ammonia is going to be governed, outside of its use in the arts, by the price of nitrate of soda, and the price of nitrate of soda is controlled absolutely by a British trust and the greed of the Chilean Government, which now places an impost duty of $12.53 upon the exportation of every ton of it. The reason why this bill is feared, and the only reason, is that it will furnish an accurate estimate of the real value of a ton of sulphate of ammonia, and neither the nitrate trust nor the operators of the beehive ovens nor the fertilizer trust want the world to know or want the farmer to know the cost of producing a pound of the most essential element in a complete fertilizer.

If the Government manufactures this fertilizer, as it will do, at from $40 to $50 a ton, and it is sold, as it has been sold for the last several years, at from $90 to over $100 a ton, there will be a check upon the profits of these people, there will be a protection to the farmer, and that is the reason why this bill is fought. There is no private industry, and there never will be, that can be affected by this measure. Outside of the coke ovens, the rest is garbage and tankage and dried blood and other such products that are incidental to the killing of beef or the cleansing of cities or other operations of that kind. There is no great industry in the United States that will be affected by the passage of this bill.

The VICE PRESIDENT. The Chair believes in the traditions of the Senate, and that in accordance with them the presiding officer should not take part in the discussions. On a close question of this kind, however, the Chair thinks he is entitled to have some little information. During the course of the discussion the Chair would like to know, when this plant is completed, how much it will produce in a year and how much the needs of the United States Government are.

Mr. WOLCOTT. Mr. President, I see the distinguished Senator from North Dakota [Mr. GRONNA], who is chairman of the Agricultural Committee, and the distinguished senior Senator from Alabama [Mr. UNDERWOOD], Senators on the two sides of the aisle who are in favor of this bill, present in the Chamber. I want to take the liberty of asking these two very able Senators a question.

I should like to know from the chairman of the committee whether or not, if this proposition were stripped of its preparedness feature, the Senator would think the legislation would be wise? That is to say, if it did not so happen that the product manufactured would supply a necessary ingredient for the making of explosives, but the product would be used solely as a fertilizer, would the Senator from North Dakota then advocate the passage of such a bill as this?

Mr. GRONNA. Mr. President, is the Senator asking me that question?

Mr. WOLCOTT. I should like to have the Senator answer that question; yes.

Mr. GRONNA. I am very frank to state that the primary object of operating this plant is to manufacture explosives for the Government in times of war; and, of course, it is the object and purpose to manufacture these products in times of peace in sufficient quantities to supply the Government with these products, to store them, and then to use the by-products for fertilizer.

Mr. WOLCOTT. The Senator has not answered my question, I understand, of course, what the argument is. I should be rather dull if I had not caught the drift of the argument to that extent; but I want to know, if the Senator cares to commit himself, if the plant were not a manufacturer of something that was necessary for the national defense, whether the Senator would then advocate the passage of the bill creating this plant to manufacture fertilizers only?

Mr. GRONNA. I do not think it would be possible to pass such a measure.

Mr. WOLCOTT. I take it that the Senator does not care to answer my question.

Mr. GRONNA. I shall be very glad to answer the Senator's question if I can do so.

Mr. WOLCOTT. I did not ask the Senator for an opinion as to whether it would be possible to get such a bill through the Congress. I just wanted to know the Senator's individual view, as to whether he would favor a proposition for the United States Government to construct a fertilizer plant if that plant could not at the same time make a necessary ingredient in the manufacture of explosives.

Mr. GRONNA. May I ask the Senator why he asks that question? Is it for the purpose of getting a categorical answer or my views on this bill?

Mr. WOLCOTT. I have heard some talk about this bill, I will say to the Senator, which I am trying to clear up, and I want to get the views of other Senators. I will say to the Senator that I do not know how I am going to vote on this bill. With all the time I have had at my disposal I have been studying these hearings, which has led me into somewhat of a labyrinth of technical information, and contradictory sorts of things, and I am very much at sea. Had I been called upon to vote for this bill a week and a half ago I would not have hesitated to vote for it. But as I have proceeded with it I find myself losing some of the original ardor I had. If the Senator does not care to answer the question, very well. I want to know whether it is the opinion of the Senator from North Dakota, and I would like to know also from the Senator from Alabama, that the United States ought for the first time to embark upon an enterprise which is purely commercial in its nature. I want to get the view of the Senator on that general proposition.

Mr. GRONNA. I will answer the Senator very frankly. If that were the only question involved, of course, so far as I am concerned, I would not advocate this bill. The Senator has indicated that he has been somewhat at sea as to what position to take with reference to this bill. Of course, if I possess any information which the Senator does not possess, I shall certainly be very glad to give it to him or answer any questions I can answer.

Mr. WOLCOTT. I take it that all the information is contained in the hearings, and I am trying in my feeble way to cull some of it out.

Does the Senator from Alabama [Mr. UNDERWOOD] think that if this measure were stripped of all preparedness features we ought to entertain it here at all?

Mr. UNDERWOOD. I am rather surprised that my friend, the Senator from Delaware, knowing my record as a Democrat, should ask that question. But I will answer it. I do not want to mislead him. I am glad to have the record disclose the fact. I belong to that democratic school of philosophy which believes that the Government which governs least governs best, and I have never changed my views. I do not believe, as a rule, that it is a wise thing for a Government to engage in private business. But, as I indicated on the floor to-day and yesterday, when you come to the war needs of the Government, the necessity to protect the life of the Nation, then I do not think the Government should rest its defense on either the patriotism or the cupidity of individual enterprise. It should take care of itself, and I know of no plant that is more necessary for the Government to own and control and operate than a plant that supplies the nitrogen which gives the life to a war, which gives the possibility to war, and owning that plant it ought not to sell it to individuals and take the chances of individuals having it ready for defense in time of war. It ought to own it and control it as a war machine, and as a war machine, it seems to me, it would be utter folly for it to shut it up in time of peace and let it become obsolescent, and not use it along peace lines, where it can be both useful and kept up to date; and it is only, of course, because it is a necessary part of the machinery of war that I favor the Government going into this business. But being necessary as a machinery of war, I would put it to the useful purpose of supplying the great mass of the agricultural people of this country with something which will make bread cheaper.

I think I have answered the Senator's question, and, if he will allow me, the Vice President asked a question, and I would like to have the privilege of taking a moment to answer it.

Mr. WOLCOTT. I will say to the Senator that I do not propose to submit any remarks at this time. I do not know that I shall do so at all. I was anxious to get the point of view of the Senator. If I understand the Senator correctly, it is his judgment that Senators ought to vote upon this measure, not in the interest of farmers at all, but that they ought to vote upon the measure solely with respect to the question of national preparedness?

Mr. UNDERWOOD. I would not say not in the interest of farmers at all. I say the great fundamental reason why we should operate, own, and control this plant, and the justification for it, is national defense. But I do not see, when we do own it and control it, why we should not give the benefit of the operation to the farmers. It would be in their interest.

Mr. WOLCOTT. I value the Senator's opinion very highly. It is a question in my mind as to the relative value of reasons. The Senator states that the preparedness reason is the controlling one in respect to this bill.

Mr. UNDERWOOD. That should be the first reason, of course.

Mr. WOLCOTT. The interest of farmers is secondary. Does the Senator think that if the first reason, the controlling reason, can be removed from the situation by other arrangements, the secondary reason still ought to be sufficiently potent to put through the bill?

Mr. UNDERWOOD. I do not think that question is involved, because the Government has already decided it.

Mr. WOLCOTT. If I may interrupt the Senator further, I do not know that that question is entirely decided, in my mind, at least. There is a serious question in my mind whether it is true that the safety of the United States is jeopardized unless we pass the bill.

Mr. UNDERWOOD. I can not say that the failure to pass the bill would jeopardize the safety of the country, but the failure to vitalize the nitrate plant may at some future day jeopardize the safety of the country.

Mr. WOLCOTT. Let us assume that a Senator believed that it was not necessary to continue the operation of this plant under the bill in order to preserve the United States nitrogen supply. If the Senator entertained that belief, would he, because of the fact that farmers could get nitrates under the bill, still favor the proposition?

Mr. UNDERWOOD. I have already stated to the Senator, I think very clearly, so that there can not be any question about my answer, that I am not in favor of the Government going into private business, and the only place where I am willing to have it invade private business is under the war arm of the Government, to protect the life of the Nation, which I am unwilling to leave in the hands of cupidity. I think that is a full and complete answer, and I can not assume, even for the sake of the argument, that the Government has not already engaged in this business, because it has invested in a plant variously estimated as being worth from $80,000,000 to $100,000,000. It is there. It is not a theory; it is a fact; we are engaged in it.

Now, if the Senator will allow me, I would like to answer the question asked by the Vice President.

Mr. WOLCOTT. I will yield the floor to the Senator.

The VICE PRESIDENT. The Senator from Alabama will pardon me if I say that the reason for my inquiry arose from the fact that in the course of this discussion I have heard several times that the plant is completed, and then I have heard that it would cost $50,000,000 to complete it. I should like to know the fact about it.

Mr. UNDERWOOD. I think I can state without contradiction that there is a plant known as nitrate plant No. 2, which is the great, costly plant that has been completed by the Government in all its details; that it was operated by the Government for a few weeks before the armistice as an operating plant, complete, and that it demonstrated a productive capacity of 120,000 tons of this nitrogen product. The basis for the contention that it is not completed is that the dam at Muscle Shoals is not complete; $17,000,000 have been allocated already for the building of that dam, most of which has been used. It is estimated that it will cost about $23,000,000 or $25,000,000 more to complete the dam. That part of the work is not complete.

The nitrate plant has a capacity of 120,000 steam horsepower. It can operate the nitrate works without the dam, but the idea is that with the dam you can make the product so much cheaper that the dam and the nitrate plant should be harnessed together.

But the Muscle Shoals Dam is not in this bill, except incidentally. Of course, there are some of us who would like to finish the dam and have it ultimately a part of this project, but it is not in the bill. It is a separate project. It is a project which will probably come up for consideration in the sundry civil appropriation bill in a week or two, but is not directly involved in the vote on this bill.

The VICE PRESIDENT. Does the Senator know how much the Government uses of this product per year in the hour of peace?

Mr. UNDERWOOD. The Vice President means the product of the nitrate plant?

The VICE PRESIDENT. Yes.

Mr. UNDERWOOD. Very little. It really has not been operated, except for a few weeks during the war.

The VICE PRESIDENT. I do not mean as coming from that plant, but how much does the Government use of that product, obtaining it wherever it does?

Mr. UNDERWOOD. I can not answer the question, although I have seen the facts stated.

Mr. WOLCOTT. Will the Senator yield?

Mr. UNDERWOOD. Certainly.

Mr. WOLCOTT. I made some inquiry upon that very subject to-day. As I recall, the only thing that the Government uses nitrate for is the manufacture of powder in the plant at Indianhead and at Dover, N. J., and the figures given me by the Navy Department and by the War Department are that the normal consumption of nitrate of soda at the Indianhead powder plant is 5,390,000 pounds a year, which, reduced to tons, is 2,197 tons of nitrate of soda used in the manufacture of powder in the Navy plant.

In the Army plant at Dover, N. J., the ordinary peace-time consumption of nitrate of soda for the manufacture of powder is about 3,000,000 pounds, which, in terms of tons, is 1,300 tons per year. Therefore the Government uses, in the manufacture of powder in the two plants, a total of 3,497 tons of nitrate of soda, which, expressed further in terms of sulphate of ammonia, I understand to be about 2,522 tons of sulphate of ammonia used in the manufacture of powder by the Government.

Mr. UNDERWOOD. It is very small. That relates to the nitrate plant. But the Government does not manufacture all its own powder, and of course nitrogen that is used by private persons to manufacture powder for the Government could be more cheaply delivered from this plant than it could from the Chilean saltpeter, and the larger proportion of powder that is consumed by the Government is that which it obtains from private interests and not from its own Government plant. But in the last analysis I think it is fair to say that the consumption of powder in peace times by the Government is comparatively small.

Mr. LENROOT. Mr. President——

The VICE PRESIDENT. Does the Senator from Delaware yield to the Senator from Wisconsin?

Mr. WOLCOTT. I yield the floor.

Mr. LENROOT. I want to ask the Senator from Alabama a question, because in his statement of facts I am sure he inadvertently omitted to state that, while the plant is complete for the manufacture of explosives by the use of steam power, it is not complete for the purpose of manufacturing fertilizer.

Mr. UNDERWOOD. That is true; that is, of all kinds of fertilizer. Of course, it manufactures cyanamid; it is complete for that, and that is a fertilizer itself. But there are other kinds of fertilizer which probably it will want to make, and for the other products of fertilizer it is not a complete plant.

Mr. LENROOT. It is the other kind that they expect to make commercially.

Mr. UNDERWOOD. I think they intend to make both.

Mr. KING. Mr. President, the Senator from Kentucky [Mr. STANLEY], as I understood him, discussed the great cost incident to maintaining the plant without operating it. In the hearings before the War Expenditures Committee of the House Col. John K. Clement, who was the commanding officer at the plant, expressed his opinion that the deterioration of the plant could be overcome by painting and greasing, and that this had already been done. Then he used these words:

> I believe that it could be protected against any serious damage or injury from deterioration for an indefinite period.

Col. Fred H. Wagner expressed his opinion that the plant "could be completed, closed down, and held for a future emergency without maintaining an expensive organization for the purpose of operating it."

Dr. Charles L. Parsons testified as follows:

> I do not see any reason why they should not be kept in reasonably good order with comparatively light expense. They should be oiled and turned over once in a while, and things of that kind. I do not see any reason why they could not be kept for years perfectly available for use at a week's notice.

That is the testimony, Mr. President, with reference to the procedure which would be adopted in the event this plant were

not completed for the manufacture of fertilizer, and it is quite apparent that there would be no deterioration; indeed, that the deterioration would be very much less than if the plant were operated.

In reply to one suggestion made by the Senator from Alabama, my recollection of the record is that the output of the plant—and I am speaking now of the nitrate for explosive purposes in peace times—would be used for commercial purposes and sold to private manufacturers of explosive materials which are used in mining and industrial pursuits. There is a large amount of dynamite used in the mines and in building operations. As I read the record, instead of the plant in peace times—and I am speaking now of the plant used for the manufacture of explosives—producing a product for the Government, it would produce a product to be sold for commercial purposes, so that in peace times its products would be entirely disposed of for commercial purposes. The nitrate supposed to be made for explosives would be sold for commercial purposes to individuals who might require them, and the fertilizer, of course, would be sold to individuals who might require it.

Mr. JONES of Washington. Mr. President, I understood the Senator from Alabama [Mr. UNDERWOOD], in answer to the inquiry of the Vice President, to state that it would cost about $23,000,000 or $27,000,000 additional to complete the Muscle Shoals Dam. I understood the Senator from Wisconsin [Mr. LENROOT] on yesterday to state that it would cost $43,000,000 to complete the dam. I would like to ask the Senator from Wisconsin where the difference comes. That is a considerable difference, being some sixteen or twenty million dollars.

Mr. LENROOT. In reply to the inquiry of the Senator from Washington, I will state that I put in the RECORD the other day the letter of Col. Cooper, the engineer in charge of the Muscle Shoals Dam. That letter is dated November 27 of last year, wherein he stated:

> The best estimate that can be made at this time of the total cost of the project, including the two lift locks and all of the navigation facilities, is around $50,000,000.

I have understood that $7,000,000 has been actually expended. If more than that has been expended the additional amount which will be required out of the Treasury will be the difference between the sum that has been expended and the $50,000,000.

Mr. UNDERWOOD. I will say to the Senator that it has been roundly estimated at $50,000,000, but when I said "complete the dam," I was referring to it as a completed project for the use of the plant. There is about $8,000,000 that will go into dynamos and electrical machinery, which will be a surplus power that it is not necessary to put there. Of course, the contracts have already been let for the machinery that is to go on the dam to work the plant, but there is something like 200,000 or 300,000 more horsepower for which the machinery has not been provided, and in my estimate I was only including the necessary money to complete the dam to be used for this plant.

Deducting from it the money that has already been spent, $17,000,000 that has been allocated, I think it will be found from that standpoint that my statement is correct. Of course, if we are to put in the money, and it ought to be put in in the end, that will be absolutely used to develop all the horsepower that goes over the dam, then it would cost about $50,000,000.

Mr. JONES of Washington. I would like to ask the Senator how much has actually been spent on the plant?

Mr. UNDERWOOD. There is $17,000,000 allocated, and I think it has all been spent except four or five million dollars.

I will say to the Senator that the hearings on the sundry civil appropriation bill will commence to-morrow, and I have an amendment to that bill to make the necessary appropriation for the completion of the dam. In order that we might not have any difference of opinion or any doubt about it, I have asked Col. Cooper, who is a great engineer and the resident engineer on the dam, to come before the Committee on Appropriations to-morrow morning and make a full statement about it, so that we may have no dispute regarding the facts. I know the Senator from Washington is a member of the committee, and I think, if he is present at the committee meeting, he will get the information in the morning more accurately than I can give it to him.

Mr. JONES of Washington. The reason why I asked the question was because of the apparent differences in the statements of facts. I wanted to have the record harmonized as much as possible.

Mr. UNDERWOOD. There is a difference between the Senator from Wisconsin and myself, and yet it is not really a difference of fact. It grows out of the angle from which we look at the proposition. I think we will have the estimate of the engineers before the Committee on Appropriations in the morning and have the information then as a matter of record, coming from the engineers who are building it, so that we may have no further dispute about it.

The VICE PRESIDENT. The question is on the amendment of the Senator from New York [Mr. WADSWORTH].

Mr. WADSWORTH. If there is to be opposition to the amendment, I should like to have the yeas and nays and to have a quorum. I do not make that suggestion now, however.

Mr. UNDERWOOD. I think we have finished the debate on it, and I do not believe it will be necessary to have a call for a quorum to vote on the amendment. Could we not agree to vote on the amendment at a quarter past 12 to-morrow and then let it go over, if the Senator wants a quorum here when the vote is taken?

Mr. WADSWORTH. I can not control the Senate nor can the Senator. I will promise the Senator not to say anything more about it.

Mr. UNDERWOOD. I ask unanimous consent that the amendment offered by the Senator from New York may be voted on at 12.15 to-morrow, and that we may take a recess now until noon to-morrow.

Mr. WADSWORTH. Would not that require the presence of a quorum?

The VICE PRESIDENT. It would not. Is there objection to voting on the amendment at 12.15 to-morrow?

Mr. KING. Will that preclude from discussing it any Senator who is not now here and who is not familiar with it?

The VICE PRESIDENT. He would have 15 minutes.

Mr. WADSWORTH. I am perfectly willing, but the amendment which I have offered is absolutely basic to the bill and there are not 15 Senators who know what it is.

Mr. UNDERWOOD. If the Senator wants to make it 12.30——

Mr. WADSWORTH. I do not suggest any time. I have finished debating it myself, mostly to empty seats.

Mr. UNDERWOOD. I merely want to reach a vote.

The VICE PRESIDENT. Is there objection to the request of the Senator from Alabama for unanimous consent?

Mr. KING. I object.

Mr. UNDERWOOD. Does the Senator from New York desire to call for a quorum this afternoon?

Mr. WADSWORTH. No; I think we had better put it over until to-morrow.

Mr. SMITH of South Carolina. Does the Senator intend to move a recess or an adjournment?

Mr. WADSWORTH. I have no objection whatever. I have finished debating this particular amendment.

Mr. KING. Let me say to the Senator, I do not intend to make any observations on it, but I think it would be unfair, with an amendment so important, to preclude any Senators who are not here and who have not heard the proposition from discussing it if they desire to do so.

Mr. McKELLAR. If any Senator desired to discuss it at that time and requested the opportunity to do so, the Senate would certainly give him the necessary time by unanimous consent.

Mr. UNDERWOOD. The Senate will meet at 12 o'clock and there will be 30 minutes available for the discussion of the amendment. I hope the Senator from Utah will not object.

Mr. KING. I ask the Senator from Alabama whether he thinks, with a proposition so important as this, it would be fair to cut off the right of Senators who are not here to discuss it?

Mr. UNDERWOOD. I certainly would not think of doing it if we had not debated it for nearly a week.

Mr. KING. I am speaking of the amendment.

Mr. UNDERWOOD. It has been debated for nearly a week.

Mr. WADSWORTH. I suppose it has been mentioned altogether for about 15 minutes in the eight days.

Mr. UNDERWOOD. If the Senator from New York does not desire the debate to close, I have nothing further to say. I thought he was through.

Mr. WADSWORTH. I am entirely through and I have made no objection to the request of the Senator from Alabama.

Mr. McKELLAR. Will the Senator from Utah agree to vote on the pending amendment at 1 o'clock to-morrow?

Mr. KING. I repeat that I do not care to make any observations respecting the matter myself, but if the Senator from Alabama thinks other Senators will desire to be heard——

Mr. UNDERWOOD. I do not think anyone will want to discuss it. I think if we fix it at a quarter past 12 that will give us time to get a quorum and it will be satisfactory to all concerned.

Mr. WADSWORTH. Do I understand that the Senator from South Carolina and the Senator from Alabama do not accept the amendment?

Mr. UNDERWOOD. Not the amendment relative to the amount of capitalization. There are some amendments which the Senator has offered that I would be willing to accept, but not this one.

Mr. WADSWORTH. I did not expect the Senator would accept it. Twelve-thirty is agreeable to me.

Mr. SMITH of South Carolina. The Senator means to vote on this particular amendment?

Mr. WADSWORTH. So far as I am concerned.

Mr. GRONNA. May I inquire if objection was made to the unanimous-consent agreement?

Mr. KING. I objected to it.

The VICE PRESIDENT. Objection is made.

RECESS.

Mr. GRONNA. I move that the Senate take a recess until 12 o'clock to-morrow.

The motion was agreed to; and (at 5 o'clock and 10 minutes p. m.) the Senate took a recess until to-morrow, Wednesday, January 12, 1921, at 12 o'clock meridian.

HOUSE OF REPRESENTATIVES.

TUESDAY, *January 11, 1921.*

The House met at 12 o'clock noon.

Rev. H. P. Fox, pastor of Hamline Methodist Episcopal Church, Washington, D. C., offered the following prayer:

Almighty God, our Father in heaven, we thank Thee that Thou has given unto us the privileges of citizenship in America. We pray Thee that Thou wilt help us to understand that so rare and splendid a privilege carries with it great and grave responsibilities. And we pray Thee that Thou wilt help those who are elected to official positions, that they, too, shall appreciate not only the honor of citizenship but the additional honor of official responsibility. We pray that they may be given wisdom and grace from on high, that they shall measure up to the innumerable requirements, and may discharge their functions as befitteth men who are citizens of a great democracy. Bless our Nation. Bless, we pray Thee, our Chief Executive. Comfort all those who stand in places of grave responsibility and need the sustaining, strengthening hand of God.

Lead on America, we pray, toward greater achievements in the future than even the past has been. Guide and counsel her that she may be strong to do the will of God among the nations of the earth, and fulfill her high destiny. We ask it for Christ Jesus' sake. Amen.

The Journal of the proceedings of yesterday was read and approved.

LEGISLATIVE, EXECUTIVE, AND JUDICIAL APPROPRIATIONS.

On motion of Mr. WOOD of Indiana the House resolved itself into the Committee of the Whole House on the state of the Union for the further consideration of the legislative, executive, and judicial appropriation bill H. R. 15543, with Mr. LONGWORTH in the chair.

Mr. WOOD of Indiana. Mr. Chairman, I am of the opinion that general debate is closed. The gentleman from Mississippi [Mr. SISSON] is not here, and I would suggest that we proceed with the reading of the bill, with the understanding that when the gentleman from Mississippi comes in, if he desires to have a little time, he may have it by unanimous consent under the five-minute rule. That will save time, and we can get along with the reading of this bill.

The CHAIRMAN. The Clerk will read the bill under the five-minute rule.

The Clerk, proceeding with the reading of the bill, read as follows:

For miscellaneous items, exclusive of labor, $100,000.

Mr. BLANTON. Mr. Chairman, I move to strike out the last word, which is not a word but the figures "$100,000."

I do this merely for the purpose of calling attention to this item, which is, for miscellaneous items, $100,000. They can itemize the little appropriations in this bill of $200 or $300, some of them as small as that, but when it gets up to a big item like $100,000 they call it miscellaneous. "Miscellaneous" embraces everything.

From suggestions made by a number of the chairmen I had been hoping that this mode of appropriation was going to be stopped by the new Appropriations Committee; and as an humble Member of the House I want to register my protest here against this manner of appropriating the public money, "for miscellaneous items, $100,000." And in that connection I want again to register my protest against the manner of framing these bills in the Committee of the Whole House on the state of the Union. Here we have a bill that appropriates $112,705,748.75, and a little handful of Members are here on the floor considering it. This is the time and this is the opportunity when, if there was anything wrong in this bill, the only way on God's earth to get it out would be right at the very time the item was read. If the item is once passed there is no chance on earth to change it, and the membership know it, except by "motion to recommit," which always fails or the defeat of the whole bill; and yet we are reading a bill of this character, taking money out of the Public Treasury by the hundreds of millions of dollars, and the new party in power that has promised so much to the people can not even furnish more than a little handful of men here to consider this measure.

Mr. MOORE of Virginia. May I ask my friend a question?

Mr. BLANTON. Why, certainly.

Mr. MOORE of Virginia. Is there any practical suggestion that the gentleman can make with a view to compelling Members to remain here if they do not care to do so?

Mr. BLANTON. My only purpose is to let the people of the country know that the men who went before them on the hustings as candidates and the representatives of candidates are not carrying out the promises they made to the people who placed them in power. Oh, they say, they are off attending committee meetings. I attended an important committee meeting this morning and also visited several departments. I want to say, as I have heard one of the greatest statesmen of the country here, the ex-Speaker, say that this is the most important committee that ever sits in the business of the House of Representatives. It is the Committee of the Whole House on the state of the Union that frames the appropriation bills, that takes the money out of the people's Treasury. They can offer whatever excuse they want to the people. You offer excuses, but the people do not swallow them.

Mr. MOORE of Virginia. May I ask the gentleman another question?

Mr. GREEN of Iowa. Will the gentleman yield?

Mr. BLANTON. I yield to the gentleman from Virginia first, because I believe what he has to say might have more substance in it than what the gentleman from Iowa might have to say. [Laughter.]

Mr. MOORE of Virginia. I only wanted to say this to the gentleman: I am fully in accord with his purpose to save money as far as we can properly do it, but I have often had some doubt as to whether a saving will be effected by having a larger number of Members present than commonly attend the meetings of the Committee of the Whole. I know, for example, that in the British House of Commons a quorum in committee of the whole as well as in the House is 40, and legislation seems to be about as carefully and maturely considered there as it is here.

Mr. BLANTON. I can answer the distinguished gentleman from Virginia.

The CHAIRMAN. The time of the gentleman has expired.

Mr. BLANTON. I ask that I may have two minutes more, just to answer the question of the gentleman from Virginia.

The CHAIRMAN. The gentleman from Texas asks unanimous consent to proceed for two minutes. Is there objection?

There was no objection.

Mr. BLANTON. I can answer the gentleman from Virginia by calling his attention to this fact: He has been in this committee because he stays here. He has been here and has seen questions arise in this committee, important questions concerning vital legislation and concerning big appropriations, when three-fourths of the committee present would vote an item in or out of the bill. Then in the House when you have the question put up to a final vote on the proposition and the bells ring over in our offices and a horde of Representatives come rushing over here from the House Office Building to register their vote, yea or nay, they walk in at the door and ask, "What is the vote on?" Then somebody, a page boy or a doorkeeper, gives him his version of what the proposition is, and he votes yea or nay, according to what he thinks will probably save him with his constituency, while the vote of the committee, based upon judgment and based upon understanding of the few present, is set aside by that great horde, ignorant of the question at issue, that marches over here to register their vote. This happens not once, but every Member of this House has seen that occurrence time and time again. That is why I say that the Republican Party, which has promised so much to the people of this Nation, ought to keep a quorum here at least when we are appropriating money by the millions.

The CHAIRMAN. The time of the gentleman has expired. The question is on the amendment offered by the gentleman from Texas.

The amendment was rejected.

The Clerk read as follows:

For reporting the debates and proceedings of the Senate, payable in equal monthly installments, $30,000.

Mr. MANN of Illinois. Mr. Chairman, I move to strike out the last word. I notice that the appropriation for reporting the debates in the Senate, as carried in this bill, is less than it is in the current law, although this bill provides for the long session of Congress, while the current law provides for the short session of Congress.

Mr. WOOD of Indiana. The amount in the bill is the amount that the Senate submitted in the estimates, and it is to be assumed that they are providing all that is needed.

Mr. MANN of Illinois. Probably they made a mistake.

Mr. WOOD of Indiana. If they did, they can correct it when the bill comes over there.

Mr. SHERWOOD. Mr. Chairman, a parliamentary inquiry.

The CHAIRMAN. The gentleman will state it.

Mr. SHERWOOD. It is vital to know what is to become of those piles of lumber out in front of the Capitol.

The CHAIRMAN. The Chair does not consider that a parliamentary inquiry. The Clerk will read.

The Clerk read as follows:

HOUSE OF REPRESENTATIVES.

For compensation of Members of the House of Representatives, Delegates from Territories, the Resident Commissioner from Porto Rico, and the Resident Commissioners from the Philippine Islands, $3,304,500.

Mr. CAMPBELL of Pennsylvania. Mr. Chairman, I offer the following amendment as a new paragraph.

The Clerk read as follows:

Amendment by Mr. CAMPBELL of Pennsylvania: Page 9, after line 24, insert a new paragraph to read as follows:

"On and after March 4, 1921, the compensation of Senators, Representatives in Congress, Delegates from Territories, and Resident Commissioners from Porto Rico and the Philippine Islands shall be at the rate of $10,000 per annum each."

Mr. WOOD of Indiana. Mr. Chairman, I make the point of order.

Mr. BLANTON. Mr. Chairman, I make the point of order against the amendment. It is legislation on an appropriation bill and out of order.

The CHAIRMAN. The Chair sustains the point of order.

Mr. BLANTON. If the gentleman desires to talk about it, I will reserve it.

Mr. CAMPBELL of Kansas. Mr. Chairman, I make the point of order.

Mr. BLANTON. Mr. Chairman, I make the point of order.

The CHAIRMAN. The Chair sustains the point of order, and the Clerk will read.

The Clerk read as follows:

Chaplain: For chaplain, $1,200, and $600 additional so long as the position is held by the present incumbent.

Mr. WOOD of Indiana. Mr. Chairman, I offer the following amendment, which I send to the desk.

The Clerk read as follows:

Committee amendment: On page 10, strike out lines 10 and 11, and insert in lieu thereof the following:

"Chaplain: For chaplain, $1,200; for compensation of Henry N. Couden, chaplain emeritus of the House of Representatives, in accordance with the resolution adopted January 6, 1921, $1,500."

Mr. WOOD of Indiana. Mr. Chairman, the last portion of this amendment is in accordance with the resolution which passed the House a few days ago fixing the salary of Dr. Couden at $1,500. The other portion of the amendment is to provide for the elimination of the $600 additional, which the bill provides shall be paid to the Chaplain so long as the position is held by the present incumbent.

The CHAIRMAN. The question is on agreeing to the amendment offered by the gentleman from Indiana.

The amendment was agreed to.

The Clerk read as follows:

Under Superintendent of the Capitol Building and Grounds: Chief engineer, $2,160; four assistant engineers at $1,440 each; machinist, $1,400; electrician, $1,400; 24 elevator conductors, including 14 for service in the House Office Building, at $1,200 each, who shall be under the supervision and direction of the Superintendent of the Capitol Building and Grounds; laborer, $800; 3 charwomen; in all, $41,040.

Mr. JOHNSON of Washington. Mr. Chairman, I move to strike out the last word in order to ask the chairman of the committee why it is that janitors in some cases are paid $1,000 and in others $720 a year? The janitor to the Committee on Elections No. 1 receives a salary of $1,000 a year.

Mr. WOOD of Indiana. These are the salaries that have been carried right along, and are in accordance with the estimates that were submitted. I suppose some of them have more janitor service to perform than others.

Mr. MANN of Illinois. If the gentleman will yield, I can answer the question specifically in regard to the Committee on Elections No. 1. The salary of the janitor to that committee was raised to $1,000 when I was chairman of that committee, because I had a very efficient man, and the Committee on Accounts recognized that fact and brought in a resolution fixing his salary at $1,000. If the gentleman will get as efficient a man, perhaps the Committee on Accounts will do the same thing for him, if it has not already done so.

Mr. JOHNSON of Washington. As a matter of fact, then, where the pay is in excess of $720 it is probably due to a resolution from the Committee on Accounts?

Mr. WOOD of Indiana. Yes.

Mr. MANN of Illinois. Either by resolution of the Committee on Accounts or, in a few cases, by action of the House in the consideration of the bill, although that has been rare.

Mr. JOHNSON of Washington. Mr. Chairman, I withdraw the pro forma amendment.

The Clerk read as follows:

For police force, House Office Building, under the Sergeant at Arms: Lieutenant, $1,200; 13 privates, at $1,050 each; in all, $14,850.

Mr. SMITH of Idaho. Mr. Chairman, I move to strike out the last word for the purpose of asking the chairman of the committee whether or not the committee considered the advisability of increasing the salary of the police force at the Capitol. I notice they receive only $1,050 each. I think that with the exception of Members of Congress, they are the only people who receive any compensation for services rendered to the Government who have not had their salaries increased during the last three or four years.

Mr. WOOD of Indiana. Mr. Chairman, the trouble about that is that some of them are paid different salaries. Some of them get only $840 a year, but inasmuch as reclassification is to be had, when this matter will be attended to scientifically, we did not undertake to interfere with it now.

Mr. SMITH of Idaho. But the reclassification does not apply to employees at the Capitol, as I understand it.

Mr. WOOD of Indiana. It applies to some of these policemen.

Mr. SMITH of Idaho. I think only those who are engaged in Government service outside of the legislative branch.

Mr. WOOD of Indiana. I apprehend that it will be taken care of.

Mr. SMITH of Idaho. It is not included in the reclassification reports, nor in the bill. It seems to me these men should receive larger compensation because they are on duty for eight hours every day.

Mr. WOOD of Indiana. They are getting the bonus.

Mr. SMITH of Idaho. That is true, but it is a mighty small salary for the character of service rendered. The policemen in the city as I understand it get $1,600 and $1,800 per year.

Mr. SNELL. Mr. Chairman, will the gentleman yield?

Mr. SMITH of Idaho. Yes.

Mr. SNELL. Could any of these men take a position as a regular policeman in the city? Are they physically fit to do so?

Mr. SMITH of Idaho. I do not know whether they could or not, but it costs them just as much to live as it does a policeman on the city force.

Mr. SNELL. Are they not getting as much as they could earn any place in the world at the present time?

Mr. SMITH of Idaho. I think that is not a good argument, because there are a great many Members of Congress who, in my judgment, would not be able to earn half the salary they are now receiving.

Mr. SNELL. That may be, but that does not apply here.

Mr. SMITH of Idaho. Possibly it does not. I really think this worthy class of employees should have further recognition in the general appropriation bill. And, Mr. Chairman, I move that the bill be amended by striking out the sum of "$1,050" and inserting "$1,400."

The CHAIRMAN. The Clerk will report the amendment.

The Clerk read as follows:

Amendment by Mr. SMITH of Idaho: Page 14, line 21, strike out "$1,050" and insert in lieu thereof "$1,400."

Mr. WOOD of Indiana. Mr. Chairman, I make the point of order against the amendment.

Mr. SMITH of Idaho. And, as a further amendment, I move that the figures "$1,200," in line 20, be changed to "$1,600."

The CHAIRMAN. The Clerk will report the amendment.

The Clerk read as follows:

And, on page 14, line 20, strike out "$1,200" and insert in lieu thereof "$1,600."

Mr. WOOD of Indiana. Mr. Chairman, I make the point of order against the amendment.

The CHAIRMAN. The point of order is sustained.

The Clerk read as follows:

For maintenance, repair, and operation of a motor truck for delivery of mail, $600.

Mr. ESCH. Mr. Chairman, I desire to offer the following amendment.

The CHAIRMAN. The Clerk will report the amendment.

The Clerk read as follows:

Amendment by Mr. ESCH: Strike out lines 12 and 13, page 17, and insert the following: "For hire of vehicles for carrying mails, $4,200, or so much thereof as may be necessary.

Mr. ESCH. Mr. Chairman, this restores the existing appropriation for the carrying of mails of the House Postmaster. The provision in the bill as it now stands allows for maintenance, repair, and operation of a motor truck for the delivery of mail, $600. It would be utterly impossible to repair, maintain, and operate a motor truck for a year at the rate of $600. The present arrangement whereby $4,200 was allowed is for the use of three autos, two Ford machines and one heavy truck. One of these autos is used for the delivery of the CONGRESSIONAL RECORD and other mail to Members residing in various parts of the city of Washington. This delivery is made prior to 7.30 a. m., and this auto alone averages 25 miles a day. Another auto is used for delivery during the daytime and makes on an average of 75 miles per day. Then there is a truck used for the haulage of the heavy sack mail. It was possible to secure the use of those three autos and their operation by an arrangement made by the House Postmaster with a party who operates these three trucks, provides the operators, provides the gas, repairs, and maintenance for the sum of $4,200 for the current fiscal year. It was not possible to do this under the bids which were offered prior to July 1, last year, the bids being from $6,500 to $7,000. In this situation the House Postmaster wrote to Chairman GOOD of the Committee on Appropriations, stating his dilemma, $4,200 being the amount allowed in the law. Mr. GOOD justified or concurred, as I understand it, in an arrangement whereby the House Postmaster secured through Superintendent Woods of the Capitol three trucks assigned to him from the Army. Those three trucks were not adapted for mail-delivery purposes, so the party who got the contract remodeled these three trucks so that they would be suitable for delivering the mail at a cost of $1,200. He has since paid out $500 for repairs and equipment. That would leave but a very small margin for the contractor. The service that has been given to Members of the House under the existing management has been of the best.

If this appropriation in the bill is carried, together with the following paragraph, the postmaster of the city of Washington will haul the mail from the depot to the House Office Building and from the House Office Building to the depot, and the men operating the trucks will not be under the jurisdiction of the House Postmaster. Those trucks and their operators will be under the jurisdiction of the city postmaster, and I do not believe that in any event we will get as good and efficient service as we are securing under the arrangement which has been made under existing law. For this reason I have asked to restore the appropriation which we have in the existing law to cover the succeeding fiscal year. I do not believe that the provisions in the bill will result in economy. Why, the next paragraph provides that the postmaster of Washington shall do this carrying without reimbursement. This would mean if he can do it without reimbursement he has got more men or trucks than he needs now. It does not seem possible to me that he can operate the trucks that will be necessary to haul the mail from the depot to the House Office Building and from the House Office Building back to the depot every day, something like 13 truck deliveries outgoing and incoming, without expense. He could not do this without using two or three trucks and the employment of two or three men. He would have to maintain a 24-hour service with three men working 8 hours each.

The CHAIRMAN. The time of the gentleman has expired.

Mr. ESCH. Under these circumstances I believe the amendment I have offered should be passed.

Mr. WOOD of Indiana. Mr. Chairman, I hope the amendment offered by the gentleman from Wisconsin will not be adopted. We had very full hearings upon this proposition, not only from the Postmaster of the House Office Building but also from the city postmaster in charge of the city post office. This is the situation presented by the Postmaster of the House Office Building, that he could not take care of the mails within the appropriation and was asking for an additional appropriation and submitted a statement made by the contractor in Pennsylvania—who was not here and paid no attention to this business at all, but had relegated all supervision to some boy—that he was doing this at a loss and could not afford to do it for this amount next year. It did not impress the committee with a very great amount of favor. We then sent for the city postmaster, and the postmaster assured us that he had plenty of trucks; that he had more trucks than they were using; that they have plenty of time; that they would deliver the mail just as often as the Postmaster of the House Office Building wanted it delivered; that he had the facilities with which to deliver it, and was willing to deliver it as Congress desired it should be delivered as expressed by the postmaster; and it strikes me that we would be very foolish indeed in order to satisfy the caprice and whim of the Postmaster of this House to throw away $4,000 a year, at least.

We are promised the utmost efficiency, and if it is not had we certainly can have it, for we will still retain jurisdiction in the premises. And in order that there might not be any inefficiency whatever in the delivery of the mail to the Congressmen we have provided that the mail shall be handled by the city postmaster at the suggestion and under the direction of the Postmaster of the House, who should have the interest always of every Member of the House at heart.

Mr. SMITH of Idaho. Do I understand the Postmaster of the House of Representatives suggests this new plan?

Mr. WOOD of Indiana. No. We changed it after the hearing and after we found out that there was plenty of equipment in the possession of the city postmaster and that he could deliver this mail with the force he had and without any additional force, and would deliver it just as often as the Postmaster of the House desired it should be delivered. And at a saving of $4,000 per year.

Mr. MADDEN. And the schedule to be arranged by the House Postmaster?

Mr. WOOD of Indiana. The schedule to be arranged by the House Postmaster. It is simply the House Postmaster who does not want this thing done.

Mr. SMITH of Idaho. Has it not been the custom for a great many years for the mail to be carried under the direction of the Postmaster of the House from the city post office?

Mr. WOOD of Indiana. Yes; it has. But he says he can no longer deliver it under the appropriation we have made. We find after investigation that we can have it delivered just as promptly and we can save $4,000 a year.

Mr. SMITH of Idaho. I do not quite understand how you can save $4,000, because it will certainly cost the Postmaster $4,000.

Mr. WOOD of Indiana. The city postmaster said he has all the machines necessary to deliver it, and that he has all the force necessary to deliver it, and that it will not require the addition of a single machine or a single man.

Mr. SMITH of Idaho. Very evidently there is somebody down there who is not working, if that is the case.

Mr. WOOD of Indiana. That may be. I expect you will find that in all the departments.

Mr. IRELAND. If that be true, is it working any economy in having that additional help down there, that is unnecessary, to take the supervision of that out of the hands of the House and give it to the postmaster of Washington?

Mr. WOOD of Indiana. There is no provision taking it out of the hands of the House. If the gentleman will read the provisions he will find that this mail is to be delivered absolutely under the direction of the Postmaster of the House.

Mr. IRELAND. What sort of service is promised?

Mr. WOOD of Indiana. According to the schedules fixed by the Postmaster of the House. If he wants it delivered twelve times a day, it will be delivered twelve times a day.

Mr. ESCH. We do not subject the carriers of the city postmaster to any control by the House Postmaster. The House Postmaster can fix the schedules. I will concede that, but who has control over the carriers or the chauffeurs—the men operating these vehicles?

Mr. WOOD of Indiana. The city postmaster has. If the Postmaster of the House fixes a schedule requiring the city postmaster to deliver this mail at stated times, why, the city postmaster will have to deliver it, because of the fact that we ourselves are retaining this jurisdiction, and if the city postmaster fails to do it, I expect we have a remedy that would apply and that would bring about a change very quickly.

Mr. ESCH. Will the gentleman yield?

Mr. WOOD of Indiana. Yes.

Mr. ESCH. I notice that we are dealing very generously with the Senate in this particular. I appreciate it may not be proper for us to interfere with appropriations for the Senate, and I notice, on page 7, we say:

For maintaining, exchanging, and equipping motor vehicles for carrying the mails, and for official use of the offices of the Secretary and Sergeant at Arms, $7,000, or so much thereof as may be necessary.

The CHAIRMAN. The time of the gentleman from Indiana has expired.

Mr. WOOD of Indiana. Mr. Chairman, I ask unanimous consent for five minutes more.

The CHAIRMAN. Is there objection? [After a pause.] The Chair hears none.

Mr. ESCH. I notice on the bottom of page 6 it provides for the Senate post office eight mail carriers and one wagon master and three riding pages.

Mr. WOOD of Indiana. The Senate takes care of its own offices, but I think it would be a matter of very great economy, and save very nearly the amount carried in the mail service for the Senate, if like arrangements were made in regard to that mail. There is no question but that we will get our mail delivered if we desire it to be delivered. If we do not, it is our own fault. And so far as the maintenance of the machines is concerned, the House Postmaster says that under this arrangement he would need only one machine, and that machine for the purpose of delivering the CONGRESSIONAL RECORD around to the different Members of the House throughout the city, and that the appropriation made for its upkeep is sufficient.

Mr. IRELAND. He delivers much heavy mail to the Members also.

Mr. WOOD of Indiana. Yes; in the same machine.

Mr. MANN of Illinois. Will the gentleman from Indiana yield?

Mr. WOOD of Indiana. Yes.

Mr. MANN of Illinois. Do I understand the House Postmaster states that $600 is sufficient for maintenance, repair, and operation of a motor truck for the delivery of mail?

Mr. WOOD of Indiana. It is a little Ford machine. That is the calculation we made from the testimony submitted by the gentleman, and also from a member of our committee who has run all kinds of trucks.

Mr. MANN of Illinois. I do not know what member of your committee it is, but I submit that anyone who knows anything about a machine knows they can not operate a machine for $600 a year, and furnish the man and furnish the oil and the repair to the machine.

Mr. WOOD of Indiana. The gentleman from Illinois is not advised with reference to what he has to furnish. A man is already furnished, and it is a part of the patronage, and he will be there, whether he runs this machine or what he runs. This $600 has nothing to do with paying the chauffeur.

Mr. IRELAND. If, as stated, this machine runs 75 to 100 miles a day, your allowance is not even going to pay for the gasoline.

Mr. WOOD of Indiana. Twenty-five or thirty dollars more probably will do it.

Mr. BRAND. What is it costing now under the present regulations to deliver mail to Congressmen?

Mr. WOOD of Indiana. It is costing something over $4,000, and the Postmaster of the House states to us that he can not have it delivered to us at that cost next year. We are eliminating $4,000, except $600, and arranging to have it delivered by the city post office.

Mr. IRELAND. You are allowing $7,000 to another body for the same service. They handle four times the mail we do.

Mr. WOOD of Indiana. Possibly that is true.

Mr. IRELAND. You have an excellent service in the House.

Mr. WOOD of Indiana. Yes; we have an excellent service in the House now, and we will have hereafter.

Mr. IRELAND. I am not so sure, if you try to handicap your employees.

Mr. WOOD of Indiana. Let us try it.

Mr. IRELAND. If you want to experiment at the cost of the service, all right.

Mr. BRAND. Mr. Chairman, will the gentleman yield?

Mr. WOOD of Indiana. Yes.

Mr. BRAND. Is this the suggestion of the committee or of the post office?

Mr. WOOD of Indiana. This is the suggestion of the committee, based upon the testimony of the postmaster of the city and the Postmaster of the House. I will state in fairness to the city postmaster that he is not soliciting this thing, and I will state in fairness to the House Postmaster that he is opposed to it, and I will state to the House, in fairness to the Government, that efficiency will not be in the least interfered with, and the work can be done at a saving of $4,000 a year.

Mr. IRELAND. If it costs that much to deliver the mails, certainly it will cost the city postmaster that much.

Mr. WOOD of Indiana. It will not.

Mr. IRELAND. Then he has too many employees and too great an allowance. Why not economize in the department?

Mr. MANN of Illinois. Mr. Chairman, I move to strike out the last word.

The CHAIRMAN. The gentleman from Illinois moves to strike out the last word.

Mr. MANN of Illinois. I suppose it would be possible to abolish the Postmaster of the House entirely, and have the mail delivered to the Members of the House from the city post office by carrier service. But for years the House has maintained a Postmaster. Every legislative body maintains a postmaster for its convenience. So far as my observation goes, the present Postmaster of the House is the best Postmaster and gives the best service that has been received since I have been a Member of the House. [Applause.] Certainly there was great complaint only two or three years ago about the House post office service. I have heard of no complaint recently.

Now, there is no more reason, in my judgment, why the House should have its mail delivered by the city postmaster to the House Office Building than there is why it should have its mail delivered by carriers under the city postmaster. If the House wants to obtain prompt and efficient service, and wants to keep that service within the control of its own officers from the time the mail is ready to be delivered from the station or the city post office, it should maintain its own service. Members of the House are constantly sending packages within the city of Washington from their offices to their homes. The city postmaster will not take them. It is a great convenience to the Members. It is a necessary convenience to the Members. The city postmaster will not take them, as I say, and there is no provision here under which they can be delivered, because the $600 here proposed will not be sufficient.

Now, the talk that the city postmaster can deliver this mail to the House Office Building without cost to the Government shows either that the city postmaster is now grossly extravagant and ought to have his force reduced or it is wild talk. No service can be rendered without expense. The city postmaster now has a force sufficient to make deliveries of the mails to the House post office a certain number of times a day, and if they are idle and if they are not doing anything they ought to be discharged. If the city postmaster is operating more trucks than he has use for he ought to stop it. But to say that he can render this service without expense to the Government is idle. It can not be true, in the nature of things, and if we want to serve the convenience of Members of the House—and the delivery of that mail is a great convenience—if we want to serve the convenience of the House we ought to retain control of the operations of the Postmaster of the House and of the mail coming to the post office of the House.

Mr. WOOD of Indiana. Mr. Chairman, it is just simply a question whether this House wants to waste money or whether it wants to save money. The committee has been proceeding upon the theory that we were trying to save some money without reducing efficiency. When the gentleman states that there is no provision made for the delivery of these packages and things around to the Members of the House gratuitously, he is mistaken. We made provision, and all the provision that is asked by the Postmaster of the House Office Building is for one machine, which, he says, he uses for the purpose of a hack horse for the Members of this House for the delivery of their packages and boxes and whatever they want delivered, so that the gentleman may have ample provision for anything that he wants delivered.

Another thing I want to call attention to is an illustration of the duplication that is going on here. We handle this mail delivered to the House twice when it ought to be handled only once. When it is delivered to the city post office there is a force down there that takes that mail and throws it into as many names as there are Members of this House. Then it is bundled up and resacked and brought up to the House Office Building and it is there rethrown into as many names as there are Members of the House.

Mr. IRELAND. Mr. Chairman, will the gentleman yield?

Mr. WOOD of Indiana. Yes.

Mr. IRELAND. If it is once segregated, it does not need to be segregated again.

Mr. WOOD of Indiana. We think not. We have provided, if this provision obtains, that that duplication should cease. If gentlemen here would take a little time and read the hearings and inform themselves of the facts, instead of coming in here as the partisan advocates of some one, then, perhaps, they would present a better showing as to the situation.

There is no member of this committee that desires to reduce the efficiency of the mail service to the Members in the least. There is no member of this committee but is just as much interested in having the mails properly and efficiently delivered as anybody else in the House. There is no member of this committee that wishes to cast any reflection upon the present Postmaster of the House in the House Office Building. He has done

his work well, and we think we are going to try to help him do it even better. But we do not like the idea and we do not think it commendable that a contract for delivering this mail should be let out to somebody in Pennsylvania, as was done in this case.

Mr. JONES of Pennsylvania. Mr. Chairman, will the gentleman yield?

Mr. WOOD of Indiana. Certainly.

Mr. JONES of Pennsylvania. Has not the Postmaster stated before the committee that he will not be able to give the efficient service to the Members if the amendment is not adopted?

Mr. WOOD of Indiana. No. He said if we would not increase the appropriation above the amount carried in the bill he would not be able to do it. The evidence discloses beyond peradventure that the city postmaster can do it. It seems that this is the situation in the Post Office Department: A lot of these trucks are used part of the time and some of them all the time. There are many men engaged in the city post office that are very busy for a portion of the time and not busy for another portion of the time.

It is necessary to keep them, because they are required at the peak of their activities. The city postmaster tells us that without any increase and without in anywise reducing the efficiency of this delivery he can take care of these mail deliveries. He has not solicited it. He did not want it, but we asked him in the interest of economy and in the interest of efficiency that he take this burden upon himself.

Mr. MANN of Illinois. I am sure the gentleman did not mean to convey the idea, though I got the idea that the city postmaster thought that when the peak of the load was over, then he could take time to deliver the mails to the House Office Building?

Mr. WOOD of Indiana. No; we asked him if he could deliver this mail on the schedule adopted by the House Postmaster, and he said he could.

Mr. MANN of Illinois. That would naturally come when the peak of the load came on. Then his force would be busy, and he would have to wait until the peak was passed.

Mr. WOOD of Indiana. I expect the city postmaster, if he knows his business, knows more about his requirements than either the gentleman from Illinois or myself.

Mr. MANN of Illinois. I have had a good deal of doubt about it, considering the very inefficient city delivery from the city postmaster. We get good delivery here at the House of Representatives and horrible delivery in our homes.

Mr. WOOD of Indiana. That is due to other causes.

Mr. MANN of Illinois. That is due to the city postmaster and the condition of his efficiency.

The CHAIRMAN. The question is on the amendment of the gentleman from Wisconsin [Mr. ESCH].

The question was taken; and on a division (demanded by Mr. WOOD of Indiana) there were—ayes 45, noes 16.

Accordingly the amendment was agreed to.

The Clerk read as follows:

The postmaster at Washington, D. C., without reimbursement therefor shall convey between the city post office and the post office of the House of Reresentatives, arriving and departing mail of the House of Representatives in accordance with such schedules as may be furnished him by the Postmaster of the House of Representatives.

Mr. MANN of Illinois. I make a point of order against the paragraph.

The CHAIRMAN. The Chair sustains the point of order.

The Clerk read as follows:

For furniture, and materials for repairs of the same, including not to exceed $12,000 for labor, tools, and machinery for furniture repair shop, $30,000.

Mr. MANN of Illinois. I move to strike out the last word. The next item in the current law is a provision for packing boxes. It was left out of this bill. I think there is an item in the bill for packing boxes for Senators.

Mr. WOOD of Indiana. Nine hundred and seventy dollars.

Mr. MANN of Illinois. It is not a matter of any very great importance to me personally, but in view of the fact that there is such a turnover—I believe that is the commercial phrase now used in industrial plants—such a turnover in the next House from the present House, so many new Members coming in and so many old Members going out—although this would not apply, of course, to the Members of the present House and would apply to the new Members of the next House—I was wondering what the special reason was for refusing to make provision for packing boxes, especially for the new Members of the next House.

Mr. WOOD of Indiana. I will state the reason that actuated the committee. We appropriated $6,000 for this purpose last year. The Clerk, who has the expenditure in charge, ascertained that he could not get the boxes without paying three times as much as the appropriation and three times as much as he formerly paid for them. In view of that fact, no boxes were purchased, and I think the Clerk should be commended for his action. In view of the testimony, and because of the high price of these boxes, we felt that we were not warranted in making this appropriation at this time. I expect that the gentleman can get along without a cedar box for one session until the price comes down within reason or the boxes can be manufactured for somewhere near what they were previously manufactured for.

Mr. MANN of Illinois. Of course, cedar boxes are not essential. They are a comparative innovation in the House. The purpose of providing packing boxes was to furnish boxes which could be used in carrying official documents back and forth between Washington and our homes, including a box for shipment of plants from the Botanic Gardens. I am not criticizing the omission of the appropriation. I am frank to say that I have been here long enough to get an accumulation of packing boxes. I expect I am like most of the members of the Committee on Appropriations. I have enough so far as my personal demands are concerned.

Mr. WOOD of Indiana. You might give some of your surplus to some new Members.

Mr. MANN of Illinois. Very likely I may.

Mr. GARNER. Will the gentleman yield?

Mr. WOOD of Indiana. Yes.

Mr. GARNER. I should like to ask the gentleman why it is that they put in the appropriation for the Senate packing boxes and did not put it in for the House?

Mr. WOOD of Indiana. That was the estimate made in the Senate, and the gentleman from Texas understands that it would be lese majesty to attempt any cutting in our neighbor's household.

Mr. GARNER. In other words, if the Senators want 10 boxes apiece, you are going to give them, although you do not think it is necessary for a Member of the House to have one?

Mr. WOOD of Indiana. I think there are a great many things that are included in the Senate estimates, as the gentleman from Texas well knows, that would not be warranted over on our side, things that have grown up out of long years of practice and sanction, and the gentleman knows how jealous we are of any infraction of our prerogatives, and we are not inviting trouble. We have enough of our own.

Mr. GARNER. You thought you would set a good example for the Senate?

Mr. WOOD of Indiana. Yes.

Mr. GARNER. Have you any hope that they will follow it?

Mr. WOOD of Indiana. Not a great deal.

Mr. AYRES. Mr. Chairman, I ask unanimous consent to return to page 8 for the consideration of the item in line 10, for the purpose of offering an amendment.

The CHAIRMAN. The gentleman from Kansas asks unanimous consent to return to line 10, page 8, for the purpose of offering an amendment. Is there objection?

Mr. BLANTON. Reserving the right to object, I want to know is the gentleman's amendment a proposal to add to or to take from?

Mr. AYRES. To take from. It is to strike out the item of $970 for packing boxes for the Senate.

Mr. MANN of Illinois. I object.

The CHAIRMAN. Objection is heard. The pro forma amendment is withdrawn, and the Clerk will read.

Mr. SMITH of Idaho. Mr. Chairman, I desire to offer an amendment, at the bottom of page 18, to insert the following:

For packing boxes, $6,000, or so much thereof as may be necessary.

The CHAIRMAN. The gentleman from Idaho offers an amendment, which the Clerk will report.

The Clerk read as follows:

Amendment by Mr. SMITH of Idaho: Page 18, after line 26, insert as a new paragraph the following:

"For packing boxes, $6,000, or so much thereof as may be necessary."

Mr. BLANTON. Mr. Chairman, I make the point of order against the amendment. It is unauthorized by law.

The CHAIRMAN. The Chair is not informed whether there is authority in law for this or not.

Mr. BLANTON. There is no such law. It has been carried in the appropriation bills year after year.

Mr. SMITH of Idaho. Mr. Chairman, will the gentleman withhold his point of order for a moment?

Mr. BLANTON. Mr. Chairman, I think we ought to stop this monkey business.

The CHAIRMAN. The Chair sustains the point of order, and the Clerk will read.

The Clerk read as follows:

Documents: Chief of division, $3,000; assistants—one $1,500, one $840; two translators, at $1,200 each; stenographer and typewriter, $960; junior messenger, $420; in all, $9,120.

Mr. FESS. Mr. Chairman, I move to strike out the last word. The report this morning of a very disastrous fire last night in one of our Government buildings, which details the total loss of some of the most important documents belonging to the records of the Government, emphasizes again and anew the very great importance of the Government taking expeditious action in the erection of an archives building, fireproof, to make impossible such loss as the Government suffered last night. Some time ago I requested the office of the fire department here in the Capital to give me a record of the number of fires that have occurred in the public buildings of Washington. He gave me the record, starting with 1873, bringing it up to 1916. The list of fires in Government buildings requires a column and a half in the RECORD to detail, something over 200 fires having taken place in Government buildings in Washington since 1873. There were some fires where a total loss occurred. A fire occurred back in 1825 in the library, which caused very nearly a total loss of the famous collection of the Jefferson books. Out of 55,000 volumes in that library at that time only 20,000 were saved.

Some time ago some photographs were taken of the repositories of documents in various sections of the city. I have those photographs here, and a mere look at them will indicate the dismal condition of the storing of some of the rarest documents we have. Take the Treasury Building down here, for example. The attic of that building is shelved with wooden shelves, and documents are put upon those shelves in such way that you can not find some of our documents, and it is questionable whether they could be located. Underneath the sunken yard in front of the Treasury Building there is circular wooden shelving, and all of the spaces are filled with very valuable Government documents.

I am wondering whether the membership of the House know where the vast collection of very important documents in respect to the Expeditionary Forces in recent service are now deposited. They are located down here at Sixth and B Streets in a temporary building. A fire in those buildings would consume them, without doubt. The records of the Civil War, vastly important, had to be taken out of the War and Navy Building when the war came on to make room for clerks who were essential. Those documents have been stored in a garage at Twenty-fourth and M Streets, where it is very easy to have them destroyed by fire. This is only a suggestion of how our documents are scattered.

The CHAIRMAN. The time of the gentleman from Ohio has expired.

Mr. FESS. Mr. Chairman, I ask unanimous consent to proceed for five minutes more.

The CHAIRMAN. Is there objection?

There was no objection.

Mr. FESS. Ours is the only Nation of any significance that has not a national archives building. The Federal Government has lagged behind many States in providing protection of its records. Many of the States have archives buildings, which are fireproof. Many others have made no provision. Archives of the various States are stored in old-fashioned buildings in Maine, Delaware, South Carolina, Georgia, Louisiana, Indiana, Tennessee, Illinois, Michigan, Missouri, and West Virginia. There have been fires in those record repositories in West Virginia, Missouri, and Louisiana. Some of those old buildings, however, have the protection of having steel cases. New buildings providing for archives are to be found in Massachusetts, Rhode Island, Pennsylvania, Connecticut, Alabama, Mississippi, Kentucky, and Texas. In those States the archives are located in the capitol buildings, with fireproof protection. Separate archives buildings, apart from the capitol, fireproof, are to be found in New Hampshire, Maryland, Virginia, Wisconsin, Iowa, New York, North Carolina, and Minnesota. In Illinois and Michigan new archives buildings are now under construction.

Realizing the importance of this matter, in 1916 the National Government took the first steps toward the construction of a building of national archives. A commission was appointed to select a site. Recently it was located between Twelfth and Thirteenth Streets and B and C Streets NW., which is just southeast of the Post Office Department and northwest of the National Museum. The site is a good one and not generally expensive. It is now covered with old shacks, and the Treasury I think estimated the cost at about $480,000 for the entire space.

Mr. MACGREGOR. Mr. Chairman, will the gentleman yield?

Mr. FESS. Yes.

Mr. MACGREGOR. In the construction of these new buildings why do they not raze some of those old shacks on Pennsylvania Avenue and make that street a credit to the city of Washington?

Mr. FESS. If the proposal to erect a modern fireproof building on the site selected is carried out it will be very satisfactory to the people generally, I think. Of course, I agree that the style of buildings near the Capitol is a disgrace to our Nation.

Mr. REED of New York. Can the gentleman tell us where the Constitution and the Declaration of Independence and the treaties are stored?

Mr. FESS. I do not know whether they are in the Library or not.

Mr. REED of New York. They are in the State, War, and Navy Building, which is not fireproof, and they are in a nonfireproof safe.

Mr. FESS. I was not aware just where they are, and I agree they should not be stored in fire shacks. I do not know of any demand for a building that is so imminent and important as this proposed archives building. I have a statement from the head of the manuscript division in Canada. In his letter he makes this remark:

As a matter of fact during the past decade each year has seen our records employed as the deciding factor in suits whose value amounted to more than the total cost of the public archives since the inception of the office in 1872.

I did not get to consult with the committee as to what amount of appropriations we make to simply rent space for the purpose of housing our archives. I see there is an item here of $1,800 for some place, but that does not anywhere near comprehend the amount of money. I understand it is something like $70,000. Some years ago it was reported $50,000. This would amount to 4 per cent on $1,475,000.

Since there is an authorization to purchase the lot which has now been located by the commission, and there is also authorization for appropriation for the erection of a modern building, I appeal to the Appropriations Committee of the House to take action without delay toward the erection of this building. The fire last night is an emphasis of its necessity. [Applause.]

The CHAIRMAN. The pro forma amendment is withdrawn, and the Clerk will read.

The Clerk read as follows:

Legislative reference: To enable the Librarian of Congress to employ competent persons to gather, classify, and make available, in translations, indexes, digests, compilations, and bulletins, and otherwise, data for or bearing upon legislation, and to render such data serviceable to Congress and committees and Members thereof, $25,000: *Provided*, That not to exceed one person shall be employed hereunder at a rate of compensation exceeding $3,000 per annum.

Mr. LUCE. In view of the imperative demand for economy I am not disposed to go beyond the recommendation of the committee with an amendment to increase the appropriation here advised, however desirable such an increase might seem to me. But I think I may be pardoned in taking just a moment of the time of the committee to call again to the attention of Members the facilities of the Library and the opportunities afforded by this appropriation for Members to secure help in the investigation of questions relative to their work. This I undertake to do because I am a member of the Committee on the Library and therefore am supposed to have more than ordinary interest in its affairs. It seems to me that as Members of the House come to learn more and more of the opportunities for help within their reach and to resort to those opportunities, the value of this function of the library work will be the more highly esteemed, and that in the course of time it will prove possible to secure an appropriation commensurate with the real deserts of the service. Permit me to give just one illustration of how this type of work could be put to the benefit of the Congress and of the Nation. I read that in the course of the last 10 months in Japan there have been repeated attempts by great pools involving banks, business men, and the Government to sustain prices artificially and thereby aid certain classes and interests desiring help by reason of the financial depression which visited Japan a little earlier than other parts of the world. I also read that every attempt on the part of the Government and the banks to support unsound credits by organized measures has resulted in further breaks in the market and further disorder, so that the situation in Japan is worse than it was 10 months ago. In view of the proposals here that we attempt much the same sort of thing, it seems needless to dwell upon the value that would accrue to the Congress and the country by having specific and detailed information of the harm that has been occasioned in Japan within those 10 months by such endeavor. A thousand instances might be cited where we could likewise profit if we would but resort to the experience of other lands, and if we would but refresh our memories as

to the experience of our own country in the matter of the problems coming before us. There is nothing new under the sun, and to profit by the experience of our neighbors and our fathers would be our wisest course. Therefore, sir, I suggest that Members of Congress familiarize themselves with the facilities already at hand, and I hope that the information available may be resorted to by them more and more, thus eventually bringing to its fullest use our wonderful treasury of knowledge across the square. [Applause.]

Mr. FREAR. Mr. Chairman, I move to strike out the last two words. Mr. Chairman, I regret very much that the subcommittee saw fit to reduce this appropriation, and yet I want to say this word for the subcommittee. I do not believe there is anyone in this House but appreciates the thankless work which the present subcommittee has been doing. Its members have worked faithfully with a very disagreeable task before them in passing on hundreds of items, and I would be one of the last to criticize any action they may take, but I do feel that few Members know the value of the Legislative Reference Bureau.

On economic, financial, and other matters, when we can not in our offices obtain the facts, it is a wonderful aid to us to have this bureau prepare a needed compilation, which it can easily do if given a sufficient force. Mr. Chairman, in my own State of Wisconsin I believe we spend $75,000 on our legislative reference bureau every year, or three times what we appropriate here for the entire American Congress. We have an able bureau there, well equipped and invaluable to the State. We go to the bureau here and there for facts that are impossible for us to ascertain with limited means in our offices. If a Member desires only to take simply a newspaper statement or something like that with which to make his argument or offer in support of his bill, why, of course, the bureau is of little use to him, but if he wishes to go to the bottom of the subject and find out what has been done, as the gentleman from Massachusetts has just said, in other countries and in many of the different departments of our own country, then this bureau can furnish it to him. Going to the Congressional Library we only get what limited time and service their clerical force can give to us, but here is a legislative bureau established by the Congress for the purpose of furnishing to Members of the House and Members of the Senate the best information that is accessible and with which we can prepare our bills or through which we can secure data enabling us to discuss matters intelligently. As I have said, in my own State I know we spend three times as much for State use as the American Congress spends for the use of over 500 Senators and Representatives, and even in these days of economy we feel that it is a good investment. It is just like having the best men equipped with the best kind of tools with which to perform a given kind of work compared to the work of a novice. In reference to the budget bill that was presented to this House and passed last session, I know the reference bureau rendered valuable service in furnishing data for arguments urged here upon the floor. It has been equally true of many other matters that involve many millions of dollars to the Government in individual cases. I have before me a little compilation on the sales-tax question. It covers thirty-odd pages in volume, prepared for the Ways and Means Committee by this bureau. The same kind of data was furnished our committee as to the excess-profits laws of foreign countries. No individual Member of Congress could ascertain that intelligently without weeks of work if he desired to offer the facts in the House, because of lack of understanding of the subject and of help required to make the investigation. So I say I regret very much that the subcommittee has cut down the appropriation. I am in hearty sympathy with the efforts of this subcommittee to economize as far as possible, but I trust next time the members will see fit to extend to this Legislative Reference Bureau an appropriation sufficient to make it of much greater service to Congress, because it is a good investment. [Applause.]

The CHAIRMAN. The pro forma amendment is withdrawn, and the Clerk will read.

The Clerk read as follows:

Repairs and improvements: For procuring manure, soil, tools, fuel; purchasing trees, shrubs, plants, and seeds; materials and miscellaneous supplies; traveling expenses and per diem in lieu of subsistence of the director and his assistants not to exceed $300; street car fares not exceeding $25; office equipment and contingent expenses in connection with repairs and improvements to Botanic Garden; exchange, care, and maintenance of motor-propelled delivery vehicles; purchase of botanical books and periodicals not to exceed $100; general repairs to buildings, heating apparatus, packing sheds, storerooms, and stables; painting, glazing; repairs to footwalks and roadways; repairing and putting comfort stations in sanitary condition; repairs and improvements to director's residence; construction of two fumigating plants; all under the direction of the Joint Committee on the Library, $28,000: *Provided*, That within 30 days after the approval of this act the Secretary of War is authorized and directed to deliver to the Botanic Garden, without payment therefor, two 1-ton motor trucks.

Mr. GARD. Mr. Chairman, I reserve a point of order against the proviso in lines 5 to 8, inclusive, on page 27. I note there are a number of these items in the bill which are characterized in the report as limitations but which seem to me to be legislation on an appropriation bill. I do not know I shall make the point of order, but seek information from the chairman.

Mr. WOOD of Indiana. With reference to these trucks I will state the purpose of the committee in providing as we did for them. There are a number of them. The committee having found a necessity for the trucks and then seeking some plan to get the trucks without having to pay for them out of the immense storehouse of trucks we have in the War Department, we inserted a provision that they should be transferred from the War Department to these several departments.

Mr. GARD. Clearly, as I take it, they are not limitations, since they would call for the expenditure of money rather than limitation.

Mr. WOOD of Indiana. There is no doubt each one of them would be subject to a point of order, but it is one of the exceptions that I think should be permitted, because of the fact it is resulting in the saving of money in the Treasury.

Mr. BLANTON. Will the gentleman yield?

Mr. GARD. Yes.

Mr. BLANTON. If the gentleman will permit me, I would like to call attention to the fact that this director of the Botanic Garden is one of the ablest and most efficient and most industrious employees I know of in the Government service. He is on the job continually, and is one of the most obliging men I ever saw. He is busy all the time in and about the business of the garden.

Mr. GARD. I know Mr. Hess very well, and I agree with what the gentleman says; he is a very fine gentleman and renders an excellent service, but that has nothing to do with this inquiry.

Mr. BLANTON. I do not think that anything we can turn over in this place would be misspent.

Mr. GARD. That has nothing to do with the personnel of the superintendent of the Botanic Garden. The item provides turning over by the Secretary of War, without payment therefor, two 1-ton motor trucks. Just what necessity there may be for two 1-ton motor trucks in the Botanic Garden I do not know. I notice throughout the bill, in different parts of it, this item is repeated. For instance, there is an item for the transfer of a passenger-carrying automobile and the transfer of three light motor trucks, and different items of the same character which, while under the head of limitations in the report of this committee, clearly, to my mind, are not limitations. I do not desire to do anything to impede the progress of economy. If this be economy, I shall not object.

Mr. WOOD of Indiana. I submit to the gentleman whether it is better to buy these machines in the market or ask the War Department to deliver them from their abundance of machines for the use of these various bureaus?

Mr. GARD. That leads me to the inquiry as to the necessity for these things. If they are needed, I expect the gentleman's attitude of transfer is good, but if there is no necessity it would be unwise to transfer them now or buy them in the first instance.

Mr. WOOD of Indiana. In each instance we found the necessity before we entered the order.

Mr. GARD. I would like this information. What is the procedure under this, when this direction is made?—

That within 30 days after the approval of this act the Secretary of War is authorized and directed to deliver to the Botanic Garden, without payment therefor, two 1-ton motor trucks.

What is the procedure about that? Who selects the trucks?

Mr. WOOD of Indiana. In the case under consideration the Superintendent of the Botanic Garden designates the character of machine he wants.

The CHAIRMAN. The time of the gentleman from Ohio has expired.

Mr. GARD. Mr. Chairman, I ask unanimous consent that my time may be extended for five minutes.

The CHAIRMAN. Is there objection? [After a pause.] The Chair hears none.

Mr. WOOD of Indiana. Following the direction of the Superintendent of the Botanic Garden in this case, we ordered the transfer made. So far as the trucks are concerned, I understand the gentleman who wants a truck will go and pick out the one that is peculiarly fitted to his particular business.

Mr. McLAUGHLIN of Michigan. Was this delivery anticipated before the 4th of March or after?

Mr. WOOD of Indiana. We require that it shall be done within 30 days. Otherwise there would not be any until after July.

Mr. McLAUGHLIN of Michigan. Where does the gentleman get the idea that the official who wishes the truck goes and picks it out and indicates the one he wants, and that it is turned over to him?

Mr. WOOD of Indiana. I know that has been the practice with reference to some of these when we entered an order heretofore.

Mr. McLAUGHLIN of Michigan. Do you know whether that was the practice under the order to the Secretary of War to turn over to the Department of Agriculture trucks for use on the roads?

Mr. WOOD of Indiana. I understand that they turned over a lot of old skeletons.

Mr. McLAUGHLIN of Michigan. Is there any assurance they will not turn over skeletons to the Botanic Garden?

Mr. WOOD of Indiana. The only assurance we have is that they have got substantially what they wanted. We do not undertake to deliver these trucks.

Mr. McLAUGHLIN of Michigan. The gentleman knows the construction put upon the word "trucks" by the Secretary of War?

Mr. WOOD of Indiana. Yes. We are going to have a new Secretary.

Mr. McLAUGHLIN of Michigan. It meant only the running gear, and he took the tops off.

The CHAIRMAN. Does the gentleman from Ohio [Mr. GARD] yield the floor, and to whom?

Mr. GARD. I have the floor.

Mr. McLAUGHLIN of Michigan. I thought the gentleman from Indiana [Mr. WOOD] had the floor.

Mr. GARD. I have no objection to yielding to the gentleman.

Mr. McLAUGHLIN of Michigan. I simply suggest the language be made just what the gentleman intends it shall be and leave as little as possible to the Secretary of War.

Mr. WOOD of Indiana. We hope to have a new constructionist.

Mr. GARD. My inquiry is this: Here is a direction to the Secretary of War to do certain things, without apparently any knowledge of what existing conditions are. This is an appropriation bill. Of course, the policy of the appropriation bills is, or should be, to appropriate money merely, and where legislation is necessary that should belong to the proper committee, in this instance the Committee on Military Affairs, to determine the policy of the transfer of these trucks. How many of them there are, when they should be transferred, the procedure of transfer, and everything of that kind, would seem to me to be more properly expressed by the committee having the legislative power of determination by investigation, and then recommendation after such consideration, rather than to get it tacked on an appropriation bill.

Mr. SNYDER. I would like to ask the chairman, if he will permit me, where the provision is for chauffeurs and operators for these trucks after they are turned over to the various departments?

Mr. WOOD of Indiana. In the case that we have now under consideration one of the gardeners would run that machine, as I understand.

Mr. SNYDER. Then it does not create a new position?

Mr. WOOD of Indiana. No; it does not create a new position, and I do not know of any instance where these orders will.

Mr. SNYDER. Does not the gentleman think that the next step will be to create a position?

Mr. WOOD of Indiana. That may be true. There is a never-ending sausage, you know, from year to year.

Mr. REED of New York. Mr. Chairman, will the gentleman yield?

Mr. WOOD of Indiana. Certainly.

Mr. REED of New York. Was it not testified that there is an employee there now who can run these trucks?

Mr. WOOD of Indiana. Yes. I may say that these are not original trucks. They are intended to replace old and worn-out trucks, so that it is not a new addition.

Mr. GARD. Mr. Chairman, I am constrained to make a point of order against this provision, against the proviso on line 5.

The CHAIRMAN. The point of order is sustained.

Mr. DUNBAR. Mr. Chairman, I move to strike out the last word.

The CHAIRMAN. The gentleman from Indiana moves to strike out the last word.

Mr. DUNBAR. I want to ask the chairman to what extent the Secretary of War has sold motor trucks as requested by Congress?

Mr. WOOD of Indiana. Well, to a very limited extent. I think it is almost impossible to get any direct information. The Secretary of War has not paid very much attention to the orders of Congress with reference to this matter.

Mr. DUNBAR. There are in various cantonments throughout the country a great many motor trucks, are there not?

Mr. WOOD of Indiana. Hundreds of thousands.

Mr. DUNBAR. It seems to me that while these committees are supposed to attend to their own duties and be known distinctively as appropriating committees and lawmaking or legislating committees, if they keep within their respective jurisdictions and scope, it is going to cost this country a great deal of money. If we have hundreds of thousands of motor trucks, or tens of thousands of motor trucks in the various cantonments throughout this land, and two of them are needed in the Botanic Garden, it does not seem to me that a point of order under those conditions should prevail, or if a point of order can be made it does not seem to me that it should be made. If these trucks are needed in the Botanic Garden and we have trucks throughout the land that are rusting, they should be made available to do work and service to the Government.

Now I want to ask our chairman another question. Is there not some way by which these two trucks can be obtained to do useful work?

Mr. WOOD of Indiana. Yes; they could be obtained, as suggested by the gentleman from Ohio [Mr. GARD], by the proper legislation coming from a committee. In this case it would be the Committee on the Library, which has charge of the Botanic Garden. But this would be a simpler way to do it. But we have to bow to the inevitable, no matter how technical it is, when the point of order is invoked.

Mr. MOORE of Virginia. Mr. Chairman, may I ask the gentleman a question? I quite agree with the view expressed by the gentleman from Ohio [Mr. GARD]. But it seems to me very inexpedient for us to take the position that there shall be no legislation whatever on appropriation bills, because such legislation is so often useful. I am talking about the inexpediency of strict adherence to the rule. It strikes me that if it is insisted that there shall be no legislation whatever on appropriation bills it will become very desirable for the subcommittees of the Committee on Appropriations to point out in their several reports legislation which they suggest as proper to be enacted, so that the legislation suggested can be considered by the proper committees and the Members of the House as well. So far as the proposition of the gentleman from Ohio is concerned, I would not object to it going into this bill, but if that is impossible it seems to me that the plan I indicate ought to be adopted as an alternative. Otherwise the House committees and the Members of the House will not be advised as to legislation that might prove altogether desirable and useful. [Applause.]

Mr. WOOD of Indiana. I think the suggestion is a very good one.

The CHAIRMAN. The pro forma amendment is withdrawn. The Clerk will read.

The Clerk read as follows:

For carrying on the work of the Bureau of Efficiency as authorized by law, including salaries and contingent expenses; supplies; stationery; purchase and exchange of equipment; printing and binding; traveling expenses; per diem in lieu of subsistence; not to exceed $100 for law books, books of reference, and periodicals; and not to exceed $100 for street car fare; in all, $125,000: *Provided*, That not more than 15 persons shall be employed hereunder at a rate of compensation in excess of $3,000 per annum.

Mr. MacGREGOR. Mr. Chairman, I move to strike out the last word.

The CHAIRMAN. The gentleman from New York moves to strike out the last word.

Mr. MacGREGOR. I am not convinced of the efficiency of the Bureau of Efficiency. I had supposed that the Bureau of Efficiency had to do with changing these departments around, and changing divisions around, as was done in a case that was called to my attention the other day, where one office in one of the departments was moved eight times in 26 days. This has nothing to do with that?

Mr. WOOD of Indiana. Oh, no.

Mr. MacGREGOR. What department has to do with that?

Mr. WOOD of Indiana. Well, some of the departments that have not very much else to do. [Laughter.] Those that have nothing at all to do are in a constant state of moving. [Laughter.] The Bureau of Efficiency has nothing to do with that. There is a joint committee of the House and Senate that has space-allotment jurisdiction. That joint committee allots space. I do not know whether the case the gentleman has in mind comes under their jurisdiction or not. But the Bureau of Efficiency has nothing to do with space.

Mr. MacGREGOR. I was informed the other day by an official in the Navy Department that years ago they were moved around rapidly, resulting in a destruction of furniture in the process of moving running up into thousands of dollars.

Mr. WOOD of Indiana. No doubt that is true.

Mr. MacGREGOR. I note in the hearings that the Bureau of Efficiency credits itself with saving to the Government $2,000,000 by saving interest charges. Can the gentleman from Indiana illuminate us on that item?

Mr. WOOD of Indiana. I do not recall exactly what that has reference to, unless the hearings themselves divulge it. It may have something to do with their recommendations in regard to the abolition of the subtreasuries. I do not know whether that is so or not.

Mr. MacGREGOR. They are trying to prove that they are saving the Government a great deal of money. They credit themselves with the saving of about $4,139,940 to the Government, and included in that is $2,000,000 in interest charges. I was interested in trying to ascertain where they get that from.

Mr. WOOD of Indiana. It was estimated by the Treasury Department that by abolishing the subtreasuries there would be a saving of something like $2,000,000. Whether or not this has reference to that I can not say.

Mr. DUNBAR. Mr. Chairman, I move to strike out the last two words. I notice that the bill provides limitations for the Bureau of Efficiency regarding the amount of money they may spend for law books, and also the amount of money they may spend for street car fares. Now, does the chairman of the Committee on Appropriations believe that we should dictate to the Bureau of Efficiency to the extent of telling them that they shall not expend more than $100 for street car fares? Does the gentleman suppose the Bureau of Efficiency has not discretion enough to know whether or not it would be advantageous to efficiency to spend more than $100 for street car fare and for law books? As they are the supreme authority as to what constitutes efficiency, why should we try to dictate to them how much money they shall spend for street car fare and how much for law books?

Mr. BEGG. In the light of all the remarks that have been made about bad administration or maladministration in the departments, should not this be headed "Bureau of Inefficiency"?

Mr. DUNBAR. I do not know anything about that. I have no right to say that they are inefficient, so far as the Bureau of Efficiency is concerned.

Mr. BEGG. If half the speeches made about them on the floor of the House are correct, they have not done anything.

Mr. DUNBAR. I do not think we ought to limit the Bureau of Efficiency and tell them how much they should spend for street car fare.

Mr. BRIGGS. Mr. Chairman, I rise to oppose the pro forma amendment. I want to ask the chairman of the committee whether he took occasion to investigate the work that the Bureau of Efficiency has been doing for some time past and if he can give the House some distinct idea just what have been the accomplishments of this bureau and what is the justification for the retention of it?

Mr. WOOD of Indiana. The Bureau of Efficiency has been of very great service to the Government. It has been prevented from doing still greater service by reason of the obstructions placed in its way by some of the old-fashioned bureaus and the old-fashioned management of them. But wherever it has had an opportunity to exercise its function it has resulted, without a single exception as far as my knowledge goes, in an increase of efficiency in the department where it has applied its work, and also in the saving of money. That is noticeably true in the Post Office Department. It is likewise true in The Adjutant General's Department. It has been tried in various departments.

Mr. BRIGGS. Will the gentleman state in what respect these savings have been accomplished or these departments made more efficient through the intervention of the Bureau of Efficiency?

Mr. WOOD of Indiana. By the introduction of new methods.

Mr. BRIGGS. What new methods, for instance—anything concrete?

Mr. WOOD of Indiana. In the Post Office Department by new methods of handling the mail and by new methods of handling their business and new methods of accounting and new methods of filing. There are innumerable things which are small in themselves but which in the aggregate amount to millions of dollars in money. Many of the departments are still pursuing the same archaic, obsolete methods that they pursued a century ago when there was no necessity for the improvements, and have never made them, and some of the departments still cling to those methods because of the fact that they have had them so long that they think it is sacrilege to change them.

Mr. BRIGGS. Have the departments in which these suggestions have been made from the Bureau of Efficiency been observing those recommendations and following them out, as far as the gentleman knows?

Mr. WOOD of Indiana. Yes; and many of them commend them. Some of them have resisted the attempts of the Bureau of Efficiency and have resented being interfered with. One of the advantages that we hope to have in the new budget system, whereby a different scheme of efficiency may be provided, will be the fact that whatever is proposed will be permitted to function and the attempt will not be thwarted.

Mr. BRIGGS. Has the Bureau of Efficiency ever undertaken to indicate to Congress the overlapping of work by various departments and how the working force could be reduced and more efficiency could be brought about in the departments?

Mr. WOOD of Indiana. Yes; time and time again. They are doing it at all times.

Mr. MOORE of Virginia. May I suggest this to the gentleman? I do not know what the Bureau of Efficiency has done or is doing or proposes to do; but does not the existence of the Bureau of Efficiency and of the Joint Committee on Reorganization, that has just been created, and the prospective existence of the bureau of the budget represent the very sort of duplication that we want to avoid?

Mr. WOOD of Indiana. To a certain extent.

Mr. MOORE of Virginia. If I may ask the indulgence of my friend a moment longer, the bureau of the budget is directed by the bill that has passed the House to do the very kind of work that the Bureau of Efficiency is doing. The joint legislative committee is directed to do the same kind of work. Pretty soon we will have three agencies in the field duplicating the efforts of one another.

Mr. WOOD of Indiana. I suppose there is some truth in that; but, as I understand it, if the budget system is adopted, the Bureau of Efficiency will be absorbed in that scheme. As I understand, this Committee on Reorganization is for the purpose of bringing about the consummation of the very things that we desire to have operated in the future through the budget system.

Mr. MOORE of Virginia. Expressing my own personal view, I think it would be a great mistake for the joint committee not to coordinate its efforts with those of the bureau of the budget, assuming that that bureau is soon going to be formed; and if these two agencies work together I can not see the necessity for maintaining the Bureau of Efficiency, although the gentleman may have facts that would indicate that it is important to do so.

The CHAIRMAN. The time of the gentleman from Texas has expired.

Mr. BRIGGS. Mr. Chairman, I ask unanimous consent for an extension of two minutes.

The CHAIRMAN. Is there objection?

There was no objection.

Mr. WOOD of Indiana. I just stated to the gentleman that I think when the budget system is put into operation, as we hope it will soon be, and this reorganization has been had, the present Bureau of Efficiency will be absorbed and become a part of that system.

Mr. MOORE of Virginia. I can not think there is any doubt that the bureau of the budget will be functioning in a comparatively short time. If the bill now pending in the Senate is not enacted into law, there is every reason to believe that a similar bill will be enacted into law shortly after the 4th of March. This proposed appropriation does not become effective until the next fiscal year.

Mr. WOOD of Indiana. I think the gentleman will find that in the budget bill there will be a provision to take over this activity.

Mr. BRIGGS. Mr. Chairman, does the gentleman from Indiana subscribe to the statements in the hearings that this Bureau of Efficiency has saved these large sums of money reported, $2,000,000 in one case, and so forth?

Mr. WOOD of Indiana. I do not know that I would subscribe to the exact amount. It is a part of human nature to take unto itself as much praise as possible. Men feel that if they do not blow their own horns, others will not. I do know, however, that they have saved millions of dollars to the Government.

Mr. BRIGGS. Does the joint committee which we appointed expect to cooperate with the Bureau of Efficiency?

Mr. WOOD of Indiana. I have nothing to do with either of them, but I take it for granted that, in the interest of good government and the consummation of the very thing for which

the Reorganization Committee was created, there will be such cooperation.

The CHAIRMAN. The time of the gentleman from Texas has again expired, and the Clerk will read.

The Clerk read as follows:

For temporary employees for the Civil Service Commission, $50,000: *Provided*, That no person shall be employed hereunder at a rate of compensation exceeding $1,800 per annum.

Mr. SNELL. Mr. Chairman, I move to strike out the last word. Yesterday I asked the gentleman from Indiana [Mr. WOOD] in respect to temporary employees. He stated that it was necessary to continue them on account of the war activities, which we are not able to cut off at the present time. At this time, when we are trying to decrease the civil-service force in Washington, it does not seem to me to be necessary to carry additional employees for the purpose of giving civil-service examinations. Will the gentleman please explain this item, so that we may see whether it is not possible to cut it at this time?

Mr. WOOD of Indiana. I would say to the gentleman that we reduced this item $50,000.

Mr. SNELL. I noticed that.

Mr. WOOD of Indiana. I think it would be a great mistake to cut it out entirely, because of the fact, as I stated yesterday, that some of these war activities are still necessary in winding up the odds and ends of the war. In consequence of that there is devolved on the Civil Service Commission additional work to keep up the necessary temporary employees or the employees that we hope will be employed only temporarily, and that in proportion as they are discharged the necessities in the Civil Service Commission for provision to take care of that excess will likewise diminish. We have been diminishing them, and we felt that we have cut off as much as it is possible to do or as we should do at this time.

Mr. SNELL. It would seem to me that if we are cutting down the general force there would not be any necessity for additional men to prepare civil-service examinations to take on more employees. That is what I can not understand.

Mr. WOOD of Indiana. There is a constant turnover, and if the gentleman will read the hearings submitted by those in charge of the civil-service he will find that they are now away behind, so far as their ability to supply the demands of the Government is concerned, with certain character of clerks, most of them of the higher grades; that they have great trouble in getting them, and that they are holding examinations all over the country every month.

Mr. SNELL. It would not take a great many employees here to take care of those special examinations.

Mr. WOOD of Indiana. They are special only in the sense of the limited time we hope to employ them.

Mr. SNELL. It seems to me that if we are going to start to cut down, the proper place would be to start here, and not give so many examinations to people who are trying to get on the rolls.

Mr. MANN of Illinois. Mr. Chairman, will the gentleman yield?

Mr. SNELL. Yes.

Mr. MANN of Illinois. I suppose a large share of this work about examination is vested with officers outside of Washington, such as the Postal Service, where it is not being cut down, but increased.

Mr. WOOD of Indiana. That is true.

Mr. MANN of Illinois. Does the new retirement act put a lot of additional work on the Civil Service Commission?

Mr. WOOD of Indiana. It does, but they have an independent appropriation for that.

Mr. ACKERMAN. Mr. Chairman, I move to strike out the last two words. Why is it necessary at the present time, when we are endeavoring to reduce the number of employees, that advertisements should be posted, notably one which I saw within the last fortnight in the New York post office, reading as follows:

Stenographers and typists: Government urgently needs hundreds of you in Washington; permanent positions, good salaries, opportunity to acquire higher education by night study. See representative of Civil Service Commission at post office or courthouse, any city.

Mr. WOOD of Indiana. I would state that the necessity presumably for that advertisement is because of the constant demand for clerks. It may be interesting to note, as I stated yesterday, that the turnover in a lot of these departments amounts to as much as 40 and 50 per cent a year. More than half, in one case, I think, of the clerical force went out last year. Of course, new ones have to be obtained. That is one of the great reasons for this. I think there will not be such a turnover, in fact I am thoroughly convinced in my own mind there will not be, within the next year, and I think there will be a notable decrease in the turnover because of the fact that there are not so many inviting places on the outside which will attract civil-service employees away from the Government's employ.

Mr. ACKERMAN. It seems to me that these employees that are about to lose their places in Washington, being in Washington, could be employed, rather than attracting additional employees to Washington.

Mr. WOOD of Indiana. The trouble is that those who quit the service go away. Then there is another proposition with which perhaps the gentleman is not familiar. Under the law these civil-service employees must be drawn from the States of the Union in proportion to their population.

Mr. MADDEN. Mr. Chairman, I move to strike out the last word. During the war, with all the men who were taken out of every activity and put in the Army and with those who had not been taken into the activity of the Army finding ready employment anywhere they wished to go, it was almost impossible to get an eligible list for the civil service. The result was that there were not as many examinations had during the war period as will be had from now on. The Civil Service Commission, of course, is anxious to get an eligible list for every department in the Government. When they advertise that examinations are open to certain classes of employment and ask that those who wish to take the examinations apply to the local civil service secretary, it does not mean that they are offering a position to anybody. It simply means they are taking the necessary precaution to have an eligible list to draw upon when a vacancy occurs in any department. The Civil Service Commission will have undoubtedly more work to do from now on for some time to come than they had during the war, for more people will apply for positions if times get hard than applied for them during the period of prosperity.

Mr. MOORE of Virginia. Will the gentleman yield?

Mr. MADDEN. I will.

Mr. MOORE of Virginia. Is not this a pertinent suggestion in view of the necessity of having an examination. There is a provision of law relative to the quota of employment so far as the respective States are concerned, and very often, while it is found that while the eligible list contains a number of names that those names belong to States that already have their full representation?

Mr. MADDEN. Yes. That is also one of the reasons why these advertisements are necessary; but aside from that, I think it is a very wise precaution for the Civil Service Commission to take in any event, for if we have no eligible list any department that wants help must of necessity take them from the street, and they can only employ them temporarily when taken from the street, and of course they can not expect to get expert help that way, nor can they hope to educate them into being experts during a temporary period, and while it may appear to gentlemen that these advertisements are for places, as a matter of fact they have no such intention. They only give notice to the public that they are to be examined and indicate the places for which the examinations are to take place, and it is then up to those who may wish to enter the Government service either to take or refuse the examinations as they may choose, but having taken them and having passed does not insure them employment at all, for very often after they become eligible and may stand at the head of the list and may be sent for it may prove that they are not qualified to fill the place for which they passed the examination. It is still within the power of the appointing authority to refuse to employ them, even though they may be at the head of the eligible list.

Mr. SNELL. Will the gentleman yield for a question?

Mr. MADDEN. I will.

Mr. SNELL. Are there not a great many employees of these various departments who we expect to disassociate from the civil service list who will be available to fill these vacancies?

Mr. MADDEN. After they are once separated from the service, if discharged, they can not get back into the service again without a new examination.

Mr. SNELL. I mean who want to be transferred to various other departments?

Mr. MADDEN. If they transfer them they are not separated from the service, and you do not reduce the force.

The CHAIRMAN. The time of the gentleman has expired.

Mr. MACGREGOR. Mr. Chairman, I move to strike out the last word. Mr. Chairman, the statement has been made that the number of employees in the Post Office Department has increased. The record shows that it has decreased. In 1916 the post-office employees was 297,681; July 31, 1920, it was 279,072, so there has been a reduction in the employees of the Post Office, according——

Mr. MANN of Illinois. That is on account of the fourth-class postmasters.

Mr. MACGREGOR. I also want to call attention to the fact that we have a very large number of employees for instance in the War Department of 147,212, equal almost to the size of the Army. We have in the Navy Department 90,000 civilian employees, equal almost to the size of the Navy. I would like to ask the chairman of the committee to explain this. In the navy yards on June 30, 1917, they had 2,538 clerks; June 30, 1918, 4,154; June 30, 1919, 4,687, and June 30, 1920, two years after the war, 5,841, an increase over the time when we were actually in war in the number of civilian clerks employed in the navy yards.

Mr. WOOD of Indiana. What page is the gentleman reading from in the hearings?

Mr. MACGREGOR. I am reading from the hearings, but I do not know what page. But that is the fact, there was a large increase on June 30, 1920.

Mr. WOOD of Indiana. We made an appropriation for the Navy Department similar to the one we made in The Adjutant General's office, whereby a considerable increase in their clerical force was made for the purpose of getting out the war records within a certain time, and that accounts for a large proportion of that increase, temporary in character, which will finish its work within the current year. I am also informed there were a great many girls who had a yeoman status during the period of the war, and under the law they were authorized to be transferred and have a civil-service status after the war, which also accounts for a number. They were employed in the Navy as yeomanettes during the war and they became civil-service employees after the war.

Mr. BRITTEN. May I suggest also that many enlisted men in the service of the Navy up to a couple of years ago did all kinds of clerical work in the various navy yards and naval stations of the country. By act of Congress we arranged it so as to dispense with them and now civilian employees are enrolled instead, and that accounts for a great many additional civilian employees in comparison with the years just prior to the war.

Mr. HICKS. Will my colleague yield?

Mr. MACGREGOR. Yes.

Mr. HICKS. Do I understand him to say that those hearings show there are 90,000 civilian employees in Washington?

Mr. MACGREGOR. Not in Washington.

Mr. BRITTEN. That includes all the civilian employees in the various navy yards where construction work is going on.

Mr. MACGREGOR. But these clerks now, as I recall, are in the navy yards and not in Washington.

Mr. HICKS. And probably on the list of mechanics.

Mr. MACGREGOR. These are clerks. They have reduced the number of skilled employees.

Mr. BRITTEN. I think the gentleman is in error about there being 90,000 clerks in the Navy Department.

Mr. WOOD of Indiana. Absolutely. There is not anything like approaching that number.

Mr. MACGREGOR. I have not said so. There are 90,000 civilian employees.

Mr. BEGG. Mr. Chairman, I offer an amendment. On page 29, line 14, I move to strike out the words "$50,000" and insert "$35,000."

The CHAIRMAN. The gentleman from Ohio offers an amendment, which the Clerk will report.

The Clerk read as follows:

Mr. BEGG offers the following amendment: Page 29, line 14, strike out "$50,000" and insert in lieu thereof "$35,000."

Mr. BEGG. Mr. Chairman and gentlemen of the committee, I do this for the purpose of finding out, more than for any other reason, if there is really a necessity for $50,000 of an appropriation for temporary employees in the Civil Service Commission plus the $305,000 carried in the bill. I am very frank to say I am not convinced by the arguments that have been presented. The gentleman from Illinois [Mr. MADDEN] suggests that it is a wise provision to continually hold examinations in order to fill possible vacancies in the future. That may be true, but it seems entirely inconsistent with everything that is said on the floor of this House by every man on both sides, and which goes undisputed, and which the country at large believes it to be the fact. If this is not a fact, we on this floor better quit pretty soon giving it out as a truism, that there are too many employees in this city of Washington. I get letters, and I take it the rest of you do, saying "Whatever else you do, you best hurry up and get rid of some of the surplus employees in the city of Washington." This advertisement that the gentleman from New Jersey read a moment ago does say, without any equivocation, "The Government urgently needs hundreds of you in Washington," and the chairman of this subcommittee that brings in this bill, if he is quoted correctly in the newspapers, says that he proposes to turn loose 12,000 employees. Now, if the chairman of the subcommittee is sincere, and if he is giving us nothing but the facts, and if he is going to turn loose 12,000 clerks in the city of Washington, why in the name of all that is decent and fair do we hold examinations in New York City and other cities of the United States, if it is not because the Government needs more employees at permanent positions and good salaries? Now, gentlemen, let us be consistent and fair, not only fair with ourselves but fair with the country at large. Let us not stand on the floor of this Hall and get off a lot of cheap talk of there being 40,000 too many employees in the Government service. If the Government is not short, and there are too many employees, let us stand the gaff, and let loose some of them; stand back of the chairman and fire 12,000 of them, and cut down these appropriations to hold examinations in order to get another horde of people clamoring at the doors and wanting to get on the Government pay roll.

Mr. CLARK of Missouri. Will the gentleman yield?

Mr. BEGG. I gladly yield to the gentleman.

Mr. CLARK of Missouri. If you stop these examinations, you would throw these civil-service examiners out of office.

Mr. BEGG. That is true.

Mr. CLARK of Missouri. And the only way to stop these civil-service examinations is to take those salaries away.

Mr. BEGG. I agree entirely with the gentleman. But just as soon as that is undertaken to be done there are a thousand reasons brought into this House why it should not be brought about. And I sincerely hope that my amendment prevails. It seems to me, if we are sincere, we will begin to pare and begin to trim, and cut some of them off.

Mr. WOOD of Indiana. Mr. Chairman, I hope that the amendment proposed by the gentleman will not carry. I will state that we entered with very great detail into the hearings relative to the Civil Service Commission. In this item they asked for a lump-sum appropriation of $100,000, and we cut it to $50,000. We also eliminated from the statutory forces, until I think the total elimination of clerical employees in the Civil Service Commission amounts to between 40 and 50 persons. As I stated a while ago, now, when everything is so chaotic and wrought up in labor circles in this country, and where the turnover is as great as it has been, and is now, we should be careful not to cripple this bureau. Each one of the heads of these bureaus that appeared before the committee were impressing upon us as strongly as they knew how the necessity for increasing the wages of their clerical forces for the purpose of stopping as much as possible their turnover, amounting to 40 per cent and 50 per cent in many instances, and consequently requiring these civil-service examinations—for they can not be filled except from the civil-service list, except temporarily.

I wish to call attention to a concrete case in the city of Chicago. I thought perhaps the gentleman from Illinois [Mr. MADDEN] would call attention to that. The condition in the post office at Chicago became so deplorable and they were so unable to get people from the civil-service list to fill appointments necessary to that great post office that they had to go out and take anybody they could. That condition continued there for a considerable time.

Mr. MADDEN. Yes; it is continuing now. We have 2,500 of them there now of that sort.

Mr. WOOD of Indiana. Conditions are getting better, but the work now devolving upon the Civil Service Commission is greater in proportion than it was during the war, so that I think we would make a very great mistake to cripple this activity of the Government, which, if it properly functions, should be a source of saving to the Government through inefficient service being replaced by efficient service.

Mr. VESTAL. Mr. Chairman, will the gentleman yield?

Mr. WOOD of Indiana. Certainly.

Mr. VESTAL. I understood the gentleman to make the statement a moment ago that if one of the civil-service employees was separated from the service it would become necessary for him to take an examination again before he can get back to work.

Mr. MADDEN. If he is discharged; yes, sir.

Mr. VESTAL. I understand that within a year, if these civil-service employees are separated from the service, they may be reinstated.

Mr. MADDEN. They can be reinstated if they resign. If they are discharged they can not be.

Mr. BYRNS of Tennessee. Mr. Chairman, I agree with the gentleman from Ohio [Mr. BEGG] in what he said with reference to the reduction of the force of employees, but I wish to state to the gentleman that this is not the place to do it. The place to reduce the employees of the departments is in the different appropriations carried for those respective departments.

I want to call the attention of the Members to what will result if they undertake to cut the appropriations of the Civil Service Commission to a point where it will not have a sufficient force to carry on the necessary activities of that commission. As has been stated here, during the war the Civil Service Commission was unable to secure eligible lists for many of the positions in the Government. That was due to the fact that men and women were able to get better and more lucrative employment in other avenues of business. The result is that the Civil Service Commission in many instances has not now a sufficient eligible list to supply vacancies as they occur.

Mr. BEGG. Mr. Chairman, will the gentleman yield?

Mr. BYRNS of Tennessee. I do.

Mr. BEGG. I might suggest to the gentleman that they quit holding examinations such as he describes for positions in Washington and hold them for those places such as the gentleman from Illinois [Mr. MADDEN] speaks of, in the post office in Chicago, which would keep the regular force busy without any temporary employees doing the work.

Mr. BYRNS of Tennessee. These examinations are being held to supply necessary eligible lists for certification. The necessity is not confined to postal employees alone. As has been stated here, the advertisement in itself does not mean that the Civil Service Commission intends to appoint those who pass the examination and secure places for them from the eligible list.

Mr. BEGG. Will the gentleman permit just one word on that?

Mr. BYRNS of Tennessee. I want to submit this to the gentleman first, and then I will yield. If the Civil Service Commission is not permitted to keep up its eligible list, so as to provide a sufficient list to fill vacancies that may occur, then the departments and activities of the Government where there are vacancies will have to appoint temporary clerks outside of the civil service. Those temporary clerks will be picked up here in Washington or vicinity, possibly upon the recommendation of some one, and they may not possess those qualifications they ought to have and will not be appointed as required by law.

There is another reason why the Civil Service Commission should not be reduced too much at this time. They are charged with certain duties under the civil-service retirement act.

Mr. BEGG. There is a special appropriation for that, as the chairman of the committee said.

Mr. BYRNS of Tennessee. Those clerks now being let off on account of reduction in force are under the civil service and are entitled to be carried on the civil-service rolls, and in order to secure appointments to vacancies in some other bureaus they must be certified by the commission. The committee has already reduced the Civil Service Commission in its estimates by 50 per cent in its temporary employees. The commission very insistently urged, as a reading of the hearings will show, that they ought to have $100,000, but the committee denied that and gave them $50,000.

Mr. CARAWAY. Mr. Chairman, will the gentleman yield?

Mr. BYRNS of Tennessee. Certainly.

Mr. CARAWAY. Does not the gentleman think that all the departments of the Government here could do their work more efficiently if they had only half of their present force?

Mr. BYRNS of Tennessee. I would not wish to state that so broadly.

Mr. CARAWAY. If the gentleman will go down there and see what the conditions are in the departments I believe he will admit that 50 per cent of them could do the effective work of the departments.

Mr. BYRNS of Tennessee. I do not think I would put it as broadly as the gentleman states it. There are undoubtedly a great many departments which have an excess of clerks.

Mr. JONES of Texas. Mr. Chairman, will the gentleman yield?

Mr. BYRNS of Tennessee. Yes.

Mr. JONES of Texas. If I understood the purpose of the amendment, it was to cut out the examinations that are held throughout the country.

Mr. BYRNS of Tennessee. I do not know that it would cut them all out, but it would have a tendency to do that.

Mr. DOWELL. Mr. Chairman, the chairman of the committee has stated that this allowance last year was $100,000 and it has been cut to $50,000. I recall hearing the gentleman state yesterday that the committee had been unable to receive any assistance whatever from any of the departments of the Government relative to economy in the transaction of the business of the departments.

Now, I believe, if we are going to undertake to dispense with the extra clerks in Washington, we ought to start now, and I am in favor of this amendment, and I would favor it if it cut out this entire appropriation. It occurs to me that $305,000 is sufficient for this department in time of peace to secure all the assistance that we need in Washington. If we dispense with some of the 40,000 clerks that the gentleman from Illinois [Mr. MADDEN] so vigorously a few months ago protested we ought not to have, we would not need so many employees in this bureau, and I think we should start now to cut out all of the unnecessary employees. The chairman of the committee has frankly stated that he does not know that this is necessary. He said that the departments would not give him any assistance. I am in favor of the House giving him some assistance to cut this appropriation, and I heartily favor the amendment of the gentleman from Ohio [Mr. BEGG].

Mr. JONES of Texas. Mr. Chairman, if I understand the purpose of the amendment, I do not believe its adoption would be wise. As I understood the gentleman who presented it, he stated that it would do away with a great many examinations that are held in the country.

Mr. BEGG. No; it would not. I just wanted to cut down the temporary employees $25,000.

Mr. JONES of Texas. My reason for wanting to address the House in opposition was the understanding I obtained from Members that it would do away with a great many of the examinations held over the United States, and, of course, that would keep the people from the various sections of the United States from having an opportunity to come here and secure these positions.

Mr. BEGG. All I was after was to cut out the employees here.

Mr. JONES of Texas. I wanted to find out about that. If that was the purpose of his amendment, I have no objection.

Mr. SMITH of Idaho. Will the gentleman from Indiana yield for a question?

Mr. WOOD of Indiana. Certainly.

Mr. SMITH of Idaho. When the Civil Service Commission was first authorized and began to operate there were examiners traveling around the country holding examinations. What is the present method of holding examinations?

Mr. WOOD of Indiana. They hold these examinations in all the principal post offices throughout the United States, and a board is selected from the post-office employees, generally supervised by the postmaster.

Mr. SMITH of Idaho. So that as a matter of fact there is very little expense in sending out traveling examiners?

Mr. WOOD of Indiana. There will not be nearly so much expense hereafter. We have taken out some of those examiners.

The CHAIRMAN. The question is on the amendment of the gentleman from Ohio [Mr. BEGG].

The question being taken, on a division (demanded by Mr. BEGG) there were—ayes 28, noes 35.

Mr. DOWELL. Mr. Chairman, I ask for tellers.

The CHAIRMAN. The gentleman from Iowa asks for tellers. Those in favor of ordering tellers will please rise and stand until they are counted. [After counting.] Eleven Members, not a sufficient number, and tellers are refused.

Accordingly the amendment was rejected.

The Clerk read as follows:

Field force: District secretaries—2 at $2,400 each, 1 $2,200, 4 at $2,000 each, 5 at $1,800 each; clerks—1 of class 4, 1 of class 3, 1 of class 1, 7 at $1,000 each, 6 at $900 each, 5 at $840 each; messenger boy, $480; in all, $45,680.

Mr. PARRISH. Mr. Chairman, I move to strike out the last word, for the purpose of asking the chairman of the committee concerning an item we have just passed, the Bureau of Efficiency, on page 28. What is the reason or necessity for the Bureau of Efficiency, in view of the resolution which has become a law, by which we have a joint committee to look into this very subject?

Mr. WOOD of Indiana. If the gentleman had been present when we had this item up, there was a very full discussion on the proposition, and the gentleman can save time by reading it to-morrow.

Mr. PARRISH. I was temporarily out of the Chamber at the time. That was the reason I asked the question.

The CHAIRMAN. The Clerk will read.

The Clerk read as follows:

No detail of clerks or other employees from the executive departments or other Government establishments in the District of Columbia, to the Civil Service Commission or its field force, excepting the fourth district, for the performance of duty in the District of Columbia, shall be made for or during the fiscal year 1922. The Civil Service Commission shall, however, have power in case of emergency to transfer or detail any of its employees herein provided for to or from its office force, field force, or rural carrier examining board.

Mr. GARD. Mr. Chairman, I reserve a point of order against the paragraph included between line 22, on page 29, and line 5,

on page 30, for the purpose of making an inquiry of the chairman of the committee.

The CHAIRMAN. The gentleman from Ohio reserves a point of order.

Mr. GARD. What is the reason for this legislative provision concerning the detail of clerks or employees from the executive departments?

Mr. WOOD of Indiana. I think there are about 120 details from the various departments, not all in the city of Washington, but operating throughout the country, who assist in these examinations. It was the desire of the Civil Service Commission to have all these details transferred directly to them and made statutory; but in view of the fact that they came from all the different departments and some of them came from the department where appropriations are carried outside of this bill and outside of the Committee on Appropriations, it was impossible for us to ascertain them; and in order to make the reductions where they should be made this provision was inserted. These details are essential in the conduct of these various examinations.

Mr. GARD. It says that no detail shall be made during the fiscal year 1922.

Mr. WOOD of Indiana. That relates to the District of Columbia, excepting the fourth district.

Mr. GARD. The gentleman said they were necessary.

Mr. WOOD of Indiana. They are.

Mr. GARD. This would seem to provide that the details should not be made. What is the fourth district?

Mr. WOOD of Indiana. It comprises almost all the Southern States excepting Maryland, and perhaps Virginia and West Virginia.

Mr. MANN of Illinois. If the gentleman will permit, I think formerly a very large proportion of the employees under the Civil Service Commission were there by detail from other departments. I am under the impression, though I am not sure about that, that the original law authorized details to be made; and if we had cut out the appropriation which it was proposed to reduce a moment ago, the Civil Service Commission, unless some provision were made about details, would get all the clerks they wanted by getting details from other departments. The abuse grew to be so great that some years ago Congress put in a provision of law forbidding details to the District of Columbia except in certain cases. That is what this provision is. It is not new in the law.

Mr. GARD. The latter part of it is new, is it not?

Mr. MANN of Illinois. No.

Mr. WOOD of Indiana. No.

Mr. GARD. Lines 2 to 5?

Mr. MANN of Illinois. No; not any part of it is new.

Mr. GARD. I was under the impression that the latter part was new legislation.

Mr. MANN of Illinois. I think not. I think that is in the current law.

Mr. WOOD of Indiana. It is just exactly the same as the current law.

Mr. GARD. I withdraw the point of order.

Mr. WINGO. I move to strike out the last word. I will ask the chairman of the committee what is the idea in prohibiting this detail of clerks from the executive departments here in Washington to go into any district except the fourth district? Why do you permit them to detail employees from the executive departments in Washington to go into the Southern States to hold these examinations and not in other States?

Mr. WOOD of Indiana. It relates entirely to the District of Columbia. It is not for the purpose of making any discrimination against the South or doing anything to the South. As I understand, it is for the purpose of providing, in spite of the general provision of law, that these details may be made in the fourth district, and they use them in the District of Columbia.

Mr. WINGO. Possibly I expressed myself incorrectly. Why permit them to put people on the rolls, to take the rural carrier examination board, for instance, and say, "We will detail you to come to Washington from the Southern States?"

Mr. WOOD of Indiana. They do not do that.

Mr. WINGO. This authorizes that. This is a prohibition against every part of the country except the fourth district, which the gentleman explains includes all of the South except Maryland, Virginia, and West Virginia.

Mr. WOOD of Indiana. Yes.

Mr. WINGO. What is the necessity of detailing a member of the rural carrier examining board in Fort Smith, Ark., say, to go to Washington to assist in holding an examination in the District of Columbia?

Mr. WOOD of Indiana. I do not think there is any necessity for it at all, and I do not think it is done.

Mr. WINGO. This will permit it.

Mr. WOOD of Indiana. It says they may do it. As I state, this is a mere matter of convenience of the operation of the office in the District of Columbia. As stated by the gentleman from Illinois [Mr. MANN], the Civil Service Commission at one time was simply an adjunct of the Department of the Interior, and all of their employees were by detail. The growth of the Civil Service Commission has been a matter of evolution from the time of its creation in the Interior Department until this time. Possibly amendments should be made to it, but, so far as the practice is concerned, none of the things which the gentleman fears might be done is done.

Mr. WINGO. The language is a little complicated. I interpret the language to mean that they could not detail clerks from these executive departments here in Washington to go out and do these things except in the fourth district, but the gentleman says it is just the opposite. I confess it is confusing to me. Here is the point I have in mind. I see no necessity for ordering applicants for examination as rural carriers, for instance, to go from the county seat of one county to another county for the purpose of taking the examination, when there is a second-class office in the county, and the examination is to be held for that county and there is a local representative among the clerical force as a clerk in the post office. The gentleman catches what I am driving at.

Mr. WOOD of Indiana. I understand.

Mr. WINGO. Why put the applicant to the expense of going to another place, or why have a civil-service employee in one town in Arkansas, say, go to another town in Arkansas to hold an examination when you have a civil-service examiner on the clerical force in that town?

Mr. WOOD of Indiana. Do they do that?

Mr. WINGO. Yes; they do.

Mr. WOOD of Indiana. I do not know about that practice, but the confusion the gentleman has with reference to this item is perhaps due to the fact that there is a sort of double-jointed arrangement here. This is the home office, and this is the headquarters of the field office for this fourth district.

Mr. WINGO. The first part of the language provides that no detail of clerks or other employees from the executive departments in the District of Columbia to the Civil Service Commission shall be made. In other words, you can not detail anybody from the Post Office Department to the Civil Service Commission or to its field force.

Mr. WOOD of Indiana. Except in the fourth district.

Mr. WINGO. Except the fourth district. It does not mean they are limited to work here in the Civil Service Commission. According to that it means that they can not take anybody from the executive departments in Washington and detail them either to the Civil Service Commission or its field force, excepting the fourth district. I may be in error, but that is the way I read the language.

Mr. WOOD of Indiana. It is because of the fact that this is the headquarters, where a great volume of business is transacted, and it becomes necessary to make these details in this district to take care of that volume of business.

Mr. WINGO. Why is it peculiarly true as respects the fourth district?

Mr. WOOD of Indiana. Because of the fact that this is the headquarters for all of the United States in that respect.

Mr. WINGO. It is the headquarters for all of the other districts?

Mr. WOOD of Indiana. That is true.

Mr. WINGO. That is what I do not understand. I move to strike out the words "excepting the fourth district."

The CHAIRMAN. The gentleman from Arkansas offers an amendment, which the Clerk will report.

The Clerk read as follows:

Amendment offered by Mr. WINGO: Page 29, line 25, after the word "force" strike out "excepting the fourth district."

The CHAIRMAN. The question is on agreeing to the amendment.

The amendment was rejected.

The Clerk read as follows:

DEPARTMENT OF STATE.

For Secretary of State, $12,000: Undersecretary of State, to be appointed by the President, by and with the advice and consent of the Senate, $7,500; Assistant Secretary, $5,000; Second and Third Assistant Secretaries, at $4,500 each; Director of the Consular Service, $4,500; officers to aid in important drafting work—8 at $4,500 each, 5 at $4,000 each, 15 at $3,500 each, 15 at $3,000 each, 17 at $2,500 each, to be appointed by the Secretary, any one of whom may be employed as chief or assistant chief of division or as chief of bureau, or upon other work in connection with the foreign relations; assistant so-

licitors of the department, to be appointed by the Secretary—5 at $3,000 each, 2 at $2,500 each; chief clerk, who shall sign such official papers and documents as the Secretary may direct, $3,000; law clerks—1 $2,500, 2 at $2,250 each, 3 at $2,000 each; law clerk and assistant, to be selected by the Secretary to edit the laws of Congress and perform such other duties as may be required of them, at $2,500 and $1,500, respectively; 2 translators, at $2,100 each; private secretary to the Secretary, $2,500; private secretary to the Undersecretary, $2,000; clerk to the Secretary, $1,800; clerks—27 of class 4, 30 of class 3, 40 of class 2, 63 of class 1 (3 of whom shall be telegraph operators), 40 at $1,000 each, 10 at $900 each; lithographer, $1,400; chief messenger, $1,000; eight messengers; 27 assistant messengers; 4 messenger boys at $420 each; packer, $720; 7 laborers; 4 telephone switchboard operators at $720 each; chauffeur, $1,080; 10 charwomen; in all, $603,640.

Mr. CONNALLY. Mr. Chairman, I make the point of order against the language on page 31, line 16, "Undersecretary of State, to be appointed by the President, by and with the advice and consent of the Senate, $7,500"; and on page 32, lines 10 and 11, to the language "private secretary to the Undersecretary, $2,000," on the ground that it is not authorized by law and constitutes a change of existing law.

The CHAIRMAN. Does the gentleman from Indiana desire to be heard on the point of order?

Mr. WOOD of Indiana. As I understand it, these offices were not created by any statute. They have been carried here through the administration of Dr. Wilson, and there may be some necessity for them during the next administration.

Mr. CONNALLY. I would say to the gentleman that this bill does not become effective until next July.

Mr. WOOD of Indiana. I understand that it does not, but the present administration will have had an undersecretary during all of the time of its existence. I think it is a little unfortunate that the gentleman makes this point of order.

Mr. ROGERS. Mr. Chairman, will the gentleman yield?

Mr. WOOD of Indiana. Yes.

Mr. ROGERS. My recollection is that for some years this office was carried and authorized under the name of the Counselor of the Department of State. Three or four years ago a change was made in an appropriation bill which provided that hereafter the counsellor should be known as the Undersecretary of State. In other words, I think there is permanent legislation for this, although it is in an appropriation bill.

Mr. WOOD of Indiana. My understanding is that there is not any law authorizing this. For the purpose of saving time, let me suggest to the gentleman that if his opposition is merely to the name, an amendment will be offered, or can be offered, to restore the office of counselor, because the same position exists under a statute, although the name has been changed.

Mr. CONNALLY. I will say to the gentleman from Indiana that the statutory designation of this office is counselor. Two years ago, I believe, the Committee on Appropriations undertook to change the designation of the office from counselor to Undersecretary of State.

I made a futile effort to prevent that, and I direct the attention of the Chair to the discussion, which will be found, February 24, 1920, in which the then chairman of the committee ruled that it was out of order.

Mr. BYRNS of Tennessee. Mr. Chairman, I think the language is subject to a point of order or at least, as the gentleman from Texas stated, it did go out on a point of order when it came up originally in the House. The title of "Undersecretary of State" was placed in the former bill in the Senate and was subsequently agreed to in conference between the two Houses. The first year the point of order was made it went out and was not restored, but the second year the Senate did restore it and it was agreed upon in conference. Now the reason for it was this. The name of counselor conveys no idea of the duties of the position, because he is in no sense a legal adviser to the Secretary of State and performed none of the duties which you naturally expect a counselor to perform and the committee and Congress thought it was a wrong title, and that the position ought to bear a title which would give to the public and those who had to do with the State Department some idea of just what the duties of the office are. That was the reason for the insertion of that language and change of title. I think it is subject to the point of order, but I hope it will not be pressed. Gentlemen know that the Secretary of State is now and has been for several weeks in South America on official business. His duties are being performed by the Undersecretary and I can see no reason why the title should not be retained for it clearly expresses the duties devolving upon that official, who is Acting Secretary in the absence of the Secretary.

Mr. WOOD of Indiana. I will state to the Chair that I have nothing to say in defense of the point of order or in opposition.

The CHAIRMAN. The Chair is ready to rule. The Chair is not advised of any law which establishes or creates the office of Undersecretary of State at $7,500 and sustains the point of order.

Mr. WOOD of Indiana. Mr. Chairman, I offer the following amendment.

The CHAIRMAN. The Clerk will report the amendment.

The Clerk read as follows:

Amendment offered by Mr. WOOD: Page 31, line 16, after the figures "$12,000," insert "counselor for the department, to be appointed by the President by and with the advice and consent of the Senate, $7,500."

Mr. CONNALLY. Mr. Chairman, I reserve a point of order on that. I will ask the gentleman from Indiana if there is a statutory authority for that?

Mr. WOOD of Indiana. I call the attention of the gentleman to the appropriations act of 1916, which reads as follows, the first portion:

For Secretary of State, $12,000; Assistant Secretary, $5,000; Second and Third Assistant Secretaries, at $4,500 each; Director of Consular Service, $4,500; counselor for the department, to be appointed by the President, by and with the advice and consent of the Senate, $7,500.

Section 6 of this act provides as follows:

All officers and employees of the United States whose salaries are herein appropriated for are established and shall continue from year to year to the extent they shall be appropriated for by Congress.

That makes that statutory.

Mr. CONNALLY. I do not press the point of order. It seems that it does permanently establish the office of counselor.

The CHAIRMAN. The question is on the amendment.

Mr. CLARK of Missouri. Mr. Chairman, I move to strike out the word. Mr. Chairman, the history of the "Undersecretary of State" business is that about the time President Taft was going to be inducted into office he either asked individually or somebody asked for him that we create the office of Undersecretary, because these foreigners who came over here did not understand the counselor business and wanted to confer with somebody as near the Secretary of State as they could get. Well, I bullyragged that out of Congress simply by ringing the changes on "Undersecretary of State" being "so English, don't you know." That put an end to it. The House never tried it any more, but the Senate, being close to the throne, put it in by way of an amendment, and the House agreed to it. Of course, it was utter nonsense, the whole business; we might just as well go on with "counselor" as "Undersecretary of State." There is as much reason for putting that in the statute as our abolishing the rank of commodore in the Navy, a title that has been held for years and years by heroic fighting commodores, but in the foreign navies they did not have any commodores and they were all made rear admirals.

The CHAIRMAN. The question is on agreeing to the amendment.

The question was taken, and the amendment was agreed to.

Mr. WOOD of Indiana. Mr. Chairman, I offer another amendment.

The CHAIRMAN. The Clerk will report it.

The Clerk read as follows:

Amendment offered by Mr. WOOD of Indiana: Page 32, line 10, after the figures "$2,500" insert "private secretary to the counselor of the department, $2,000."

The question was taken, and the amendment was agreed to.

The Clerk read as follows:

For temporary employees in the Department of State, $250,000: *Provided*, That no person shall be employed hereunder at a rate of compensation exceeding $4,500 per annum and not more than eight persons shall be employed hereunder at a rate of compensation exceeding $1,800 per annum.

Mr. NEWTON of Minnesota. Mr. Chairman, I offer an amendment.

The CHAIRMAN. The Clerk will report the amendment.

The Clerk read as follows:

Amendment offered by Mr. NEWTON of Minnesota: Page 32, line 21, strike out "$250,000" and insert in lieu thereof "$350,000."

Mr. NEWTON of Minnesota. Mr. Chairman, I believe, if the gentleman from Indiana will bear with me, that there has been a reduction in the temporary force in the State Department here in Washington of $152,000?

Mr. WOOD of Indiana. Yes, sir.

Mr. NEWTON of Minnesota. Mr. Chairman, I think I can agree with almost every Member of the House generally upon measures of economy, but we must face the situation growing out of the war. Our State Department has increased duties and increased responsibilities, for in the short space of six years our shipping tonnage has increased from something like 1,000,000 tons to almost 10,000,000 tons. That means a great deal of increased work upon the part of our Consular Service. We have also added passport control to the work of the State Department and the viséing of passports of those desiring to come into this country. From passport control and every control of visés during the present year the State Department will receive a revenue of something like $7,000,000. The total appropriation for the foreign service for this year was something like $10,-

000,000. To properly handle this the State Department here in Washington must have a force over and above what they had before. Yet it is being decreased.

Mr. SNELL. Will the gentleman yield?

Mr. NEWTON of Minnesota. I do.

Mr. SNELL. Inasmuch as we passed almost unanimously, though not quite, a bill prohibiting immigration here, would we need this force for viséing passports?

Mr. NEWTON of Minnesota. The gentleman forgets the bill has not yet become a law. Nobody knows what the body at the other end of the Capitol is going to do with the measure. And let me further inform the gentleman that the restrictive measure passed by the House does not prohibit all immigration. On the contrary, it permits certain blood relatives to come here, and anybody at all familiar with immigration coming here knows that a considerable number of immigrants are blood relatives of those who are already in the country. Even admitting that the bill becomes a law, there will still be need for the viséing of passports.

Mr. ROGERS. Will the gentleman yield?

Mr. NEWTON of Minnesota. I yield.

Mr. ROGERS. Can the gentleman tell the committee how many persons are being employed during the current fiscal year within the appropriation of $402,000?

Mr. WOOD of Indiana. Three hundred and forty-eight.

Mr. ROGERS. How many would be employed if the recommendation of the Committee on Appropriations should be accepted by the Congress? My first question is, how many are employed this fiscal year for the $402,000?

Mr. WOOD of Indiana. As a matter of calculation, it would be about five-eighths of 247.

Mr. ROGERS. Just the other way, is it not?

Mr. WOOD of Indiana. No.

Mr. ROGERS. I wanted to find out, first, how many men and women are being employed during the current fiscal year within the $402,000, and, second, how much of that number would be reduced by the recommendation of the committee?

Mr. WOOD of Indiana. It would be reduced, in round numbers, about 140.

Mr. ROGERS. Can the gentleman tell us where 140 unnecessary clerks are now being employed? Would they as a practical matter be taken out of the number of clerks in the visé and passport control office?

Mr. WOOD of Indiana. Not of necessity. I think under the lump-sum appropriation that the State Department has the discretion to use that sum in providing services where services are needed. I expect it is true, as stated by the gentleman, that the work in the visé department, as the law now stands, has wonderfully increased. This thing I wish the committee to take into consideration, namely, that we have made wonderful increases in appropriations for this department. The appropriation in 1916, a year before we entered into the war, was $385,500; the appropriation in 1922, as recommended by this bill, is $905,140, or very nearly three times what it was in 1916.

The CHAIRMAN. The time of the gentleman from Minnesota has expired.

Mr. NEWTON of Minnesota. Mr. Chairman, I ask unanimous consent for five minutes more.

The CHAIRMAN. The gentleman from Minnesota asks unanimous consent for five minutes more. Is there objection? [After a pause.] The Chair hears none.

Mr. WOOD of Indiana. It is not the purpose to unduly cripple, or cripple at all, the State Department, and we think with a little practice of economy they can get through with the appropriation made.

Mr. ROGERS. I should like to ask the gentleman if in his survey of the general situation within the department he has been enabled to find 140 clerks whose services could reasonably be dispensed with; and if so, where?

Mr. WOOD of Indiana. I can not, of course, give the details of it now. We did think we found a place where we could dispense with practically 140 of them without materially hampering the business, and this is the result of our judgment. The fact of the business is the State Department is like these other departments. It grew abnormally during the war and has been very slow to reduce their number since the war and have tried to convince us, by reason of the new conditions that have come up in the course of making a new map of the world, that these clerks would be essential, and possibly there would be necessity for increase when they settled things over there. But, so far as the trade relations are concerned, the committee will remember that we had quite a controversy here last year as to how much of that they are attending to and how much they are not attending to and how much the department of foreign commerce is attending to. There is a great duplication in that respect, which we are hoping to clear up some time or other, but it seems impossible to do it now.

Mr. NEWTON of Minnesota. I agree with the gentleman as to the duplication and the advisability of concentrating that work in the State Department, but the gentleman must admit that a great deal of the work connected with our foreign commerce, connected with the shipping, is peculiarly for the Consular Service, and one in which the representatives from the Department of Commerce have nothing whatever to do.

Mr. WOOD of Indiana. I think if the gentleman will take the figures I submit of the appropriation made in 1916, and then consider that we are now giving them three times what they had before the war, it will be hard to conceive that the State Department has increased three times by virtue of the war, or anything approaching it.

Mr. ROGERS. I do not know what the experience of the other Members of the House has been, but I know I have more difficulty in getting letters from that department than any other department, and when I complain, as I do complain, they allege they have not a sufficient force available in Washington to answer all the ordinary correspondence of the department.

Mr. NEWTON of Minnesota. If I may say this to the gentleman, it seems to me that with these two greatly increased duties of the Department of State certainly some attention should have been paid by the committee to their request, which I believe should have been for more than the appropriation for the present year.

Mr. WOOD of Indiana. They asked for $1,500,000.

Mr. NEWTON of Minnesota. I do not think there is any sound economy in depriving of its necessary funds a revenue-producing branch of the Government which is closely connected with the furtherance of our foreign trade and commerce. I do not think we should handicap them by a denial of the necessary funds.

Mr. SMITH of Idaho. Mr. Chairman, I rise to ask the chairman of the committee whether or not this reduction of the lump-sum appropriation is in accord with the advice from the State Department, as disclosed in the hearings before the committee? Did the Secretary not ask for more clerks instead of intimating that they could get along with what they have?

Mr. WOOD of Indiana. They ask for about $1,000,000 more than we gave them.

Mr. SMITH of Idaho. As I understand it, a large proportion of these temporary employees are in the visé division, where there are probably 150 clerks engaged in that work, which the gentleman from Minnesota [Mr. NEWTON] states brings in about $7,000,000 per year, as a result of the work transacted in that particular branch of the service. I am told that most of the reduction will come from that division and some few from the index division.

Mr. WOOD of Indiana. It will not come from that division unless they see fit to make it come from there. It may be possible that they will do it there so as to reflect back to Congress as much as possible the idea of their inability to take care of that work.

Mr. SMITH of Idaho. I understand the employees in the other branches of the State Department are on the statutory roll.

Mr. WOOD of Indiana. They asked that all of them be placed on the statutory roll, but we did not place them there.

Mr. MANN of Illinois. Mr. Chairman, I move to amend the amendment offered by the gentleman from Minnesota [Mr. NEWTON] by striking out "$350,000" and inserting in lieu thereof "$200,000."

The CHAIRMAN. The gentleman from Illinois offers an amendment, which the Clerk will report.

The Clerk read as follows:

Amendment offered by Mr. MANN of Illinois to the amendment offered by Mr. NEWTON of Minnesota: Strike out "$350,000" and insert in lieu thereof "$200,000."

The CHAIRMAN. The question is on agreeing to the amendment of the gentleman from Illinois to the amendment of the gentleman from Minnesota.

The question was taken; and the Chairman announced that the noes appeared to have it.

Mr. MANN of Illinois. Mr. Chairman, I ask for a division.

The CHAIRMAN. A division is asked for.

The committee divided; and there were—ayes 17, noes 32.

So the amendment to the amendment was rejected.

The CHAIRMAN. The question now is on agreeing to the amendment offered by the gentleman from Minnesota [Mr. NEWTON].

The question was taken, and the amendment was rejected.

The CHAIRMAN. The Clerk will read.

The Clerk read as follows:

No money appropriated by any other act shall be used during the fiscal year 1922 for employment and payment of personal service in the Department of State in the District of Columbia.

Mr. HICKS. Mr. Chairman, I offer an amendment, which the Clerk has.

The CHAIRMAN. The Clerk will report the amendment offered by the gentleman from New York.

The Clerk read as follows:

Amendment offered by Mr. HICKS: Page 33, line 4, after the word "Columbia," insert:

"New York, N. Y., passport bureau: Passport agent, $2,000; clerks—2 of class 4, 3 of class 3, 3 of class 2, 2 of class 1; messenger; messenger boy, $480; stationery, furniture, fixtures, and other miscellaneous expenses, $2,500; in all, $20,820.

"San Francisco, Calif., passport bureau: For salaries and expenses of maintenance of the passport bureau, $7,500."

Mr. WOOD of Indiana. Mr. Chairman, I make a point of order against the amendment.

The CHAIRMAN. Does the gentleman from New York desire to be heard on the point of order?

Mr. HICKS. Yes. Mr. Chairman, that proviso, of course, was in the current law. But in regard to the point of order, I presume that the gentleman from Indiana makes it because it was not authorized. Is that the ground for the point of order?

Mr. WOOD of Indiana. Yes. There is no authorization.

Mr. HICKS. I would like to call the attention of the Chair to this fact, that in the statute there is this provision about the issuing of passports:

The Secretary of State may grant and issue passports and cause passports to be granted, issued, and verified in foreign countries—

And so forth. On that broad authorization, by which the Secretary of State is authorized to issue passports, I claim that he could issue them in Washington, in New York, or in San Francisco; that in order to issue passports he must have clerical help and he must have an office; and as that broad authorization gives him the right to issue passports that right extends not only to the city of Washington, but it can be carried to the city of New York or the city of San Francisco, and therefore it is authorized by law.

The CHAIRMAN. Does the gentleman from Indiana desire to be heard?

Mr. WOOD of Indiana. Yes; on the same theory, because we have the right to have a Secretary of State; we could have a number of different Secretaries of State scattered all over the country, according to their own discretion. It is pretty far-fetched to say that because of the fact that the Secretary of State shall issue passports he can establish as many offices for the purpose of issuing passports as he may desire. Carry this thing to its logical conclusion, and the Secretary of State, without regard to what Congress does, could have a Secretary of State in every hamlet in the United States.

As to the matter of issuing passports, while it comes within the purview of the duties of the Secretary of State, the law granting him the privilege of issuing passports does not confer upon him authority to establish offices from which they may be issued.

This amendment is for an office for the issuance of passports in New York just as completely equipped as the office in the city of Washington is, and it is not authorized by law, and it is entirely a creation of the Department of State.

Mr. HICKS. Mr. Chairman, will the gentleman permit a question?

Mr. WOOD of Indiana. Yes.

Mr. HICKS. In Washington the Secretary of State may designate a space and must also have clerks to take care of this work. There is no authorization, then, according to the gentleman's contention, for that work being done in the city of Washington.

Mr. WOOD of Indiana. There would be just as much logic in saying that the activities of the Interior Department could be taken away from Washington and the Secretary take and establish his office, or an independent office, and make that his principal office and this his secondary office.

Mr. SMITH of Idaho. Mr. Chairman, may I ask the gentleman a question?

Mr. WOOD of Indiana. Yes.

Mr. SMITH of Idaho. In discussing the advisability of eliminating the passport offices in New York and San Francisco, did the gentleman take into consideration the convenience of the people who desire to secure passports on short notice? Under existing conditions a person on the Pacific coast may go to the passport office at San Francisco and make his application. The particulars can be telegraphed to the State Department and on receipt of a response a passport can be issued to him the same day, which would enable him to take the next steamer, whereas if this office is eliminated it will be necessary to send the formal application to Washington, where it will take three or four days to pass upon it here and five or six days for the passport to be issued and five days for it to be transmitted to San Francisco, so that it will take nearly three weeks' time to obtain a passport.

Mr. WOOD of Indiana. That is aside from the point.

The CHAIRMAN. The Chair suggests to the gentleman that the time is running, and the Chair is ready to rule.

Mr. WOOD of Indiana. All right.

The CHAIRMAN. The Chair thinks it would be a violent presumption to hold that mere authority to issue passports would authorize the creation of a bureau, with employees and office expenses, and therefore the Chair sustains the point of order. The Clerk will read.

The Clerk read as follows:

Office of the Secretary: Secretary of the Treasury, $12,000; Assistant to the Secretary, $5,000; three Assistant Secretaries, at $5,000 each; clerk to the Secretary, $3,000; executive clerk, $2,400; stenographer, $1,800; 3 private secretaries, 1 to each Assistant Secretary, at $1,800 each; Government actuary, under control of the Treasury, $4,000; clerks—1 of class 4, 4 of class 3, 2 of class 2; chief messenger, $1,100; 2 assistant chief messengers, at $1,000 each; messengers—3 at $900 each, 5 at $840 each; in all, $69,000.

Mr. WOOD of Indiana. Mr. Chairman, I desire to offer an amendment.

The CHAIRMAN. The gentleman from Indiana offers an amendment, which the Clerk will report.

The Clerk read as follows:

Amendment by Mr. WOOD of Indiana: On page 34, line 3, strike out "$69,000" and insert in lieu thereof "$69,600."

Mr. WOOD of Indiana. The purpose of this amendment is to correct a footing.

The CHAIRMAN. The question is on the amendment offered by the gentleman from Indiana.

The amendment was agreed to.

The Clerk read as follows:

The following sums shall be deducted from the following appropriations in this act, respectively, and shall be credited to the appropriation for the "office of chief clerk and superintendent, Treasury Department," and be available for the employment of personnel in such office: "Expenses of loans," $50,000; "salaries, Bureau of War Risk Insurance," $30,000; "collecting the war revenue" and "enforcement of narcotic and national prohibition acts," $50,000; in all, $130,000: *Provided*, That no person shall be employed hereunder at a rate of compensation exceeding $1,800 per annum.

Mr. MANN of Illinois. Mr. Chairman, I move to strike out the last word. I wish the gentleman from Indiana would explain this paragraph, which is to make appropriations in one place in the bill and then transfer them to some other place. This provides, apparently, for clerical help and other help in the office of the chief clerk, to be paid for out of appropriations made for something else.

Mr. WOOD of Indiana. The forces employed are now paid out of these various appropriations and transferred by reason of details; and the chief clerk thought that by transferring these accounts to him it would result in a saving of a great amount of unnecessary work, and also the saving of a great many people. It does not add to the appropriation.

Mr. MANN of Illinois. I understand, and I am not criticizing; but it seems odd. I suppose it seems odd to the gentleman himself to carry several items of appropriation in one place in the bill, and before you get to them provide that when you do get to them instead of appropriating for the purpose named you transfer that appropriation and use it for something else, in part.

Mr. WOOD of Indiana. That is the point. In this way we see what is being done, and in the other way we do not see it.

Mr. MANN of Illinois. It may be that the committee do not desire to do this permanently. One would suppose that the proper method of getting at it would be to make an appropriation under the office of the chief clerk, and eliminate to that extent the appropriations in these other places, though I am not undertaking to say that is the way it ought to be done. I do not know.

Mr. WOOD of Indiana. That might have been the more scientific way of doing it. As I stated, this is done at the suggestion of the chief clerk, who informs the committee—and we found it to be true—that the same amount of funds are being transferred now to pay details; and it saves bookkeeping and saves a great deal of unnecessary work, and he says it will result in the saving of several clerks. In consequence of that, we reduced the appropriation.

Mr. MANN of Illinois. I am not seeking to criticize. I understand very well that there is one thing that the Committee on Appropriations can never find out. That is when they make an appropriation they can never find out whether it is going to be used for the purpose for which it is made, or whether details

are going to be made out of that appropriation to do something else. Of course, you can find out after it is done, but you never can tell in advance.

Mr. GARD. I move to strike out the last two words. I will ask the chairman of the subcommittee, is it the purpose of this paragraph contained in lines 1 to 11, inclusive, on page 36, to create a new division in the office of the chief clerk and superintendent by reason of these jugglings and transfers of appropriations which are made?

Mr. WOOD of Indiana. No; it is not. The fact of the business is it makes it possible to reduce the force in that office, and as a result of that transfer the force is reduced.

Mr. GARD. It refers to different appropriations—one "Expenses of loans," one "Salaries, Bureau of War Risk Insurance," one "Collecting of war revenue," and one "Enforcement of narcotic and national prohibition acts." There are different appropriations for all these activities. I was wondering why the subtraction did not follow the individual appropriation.

Mr. WOOD of Indiana. It did, because of the fact that we took these amounts away from these other appropriations. The Chief Clerk of the Treasury Department has the supervision of a great many buildings connected with that department, and the sums appropriated to these various activities under the Treasury Department have to contribute their proportionate share for this maintenance. It is largely a matter of bookkeeping, but by making these detailed statements Congress finds out the exact amounts that are taken from these several departments and referred to the chief clerk's office for these various activities, so as a matter of enlightenment we know more about it now than we have ever known before.

Mr. GARD. I was wondering whether we were creating inadvertently a new and expensive bureau in the Treasury Department.

Mr. WOOD of Indiana. No; we were convinced that this is not the nucleus of a new bureau. We are watching for those, and have tried to eliminate some of them, and have succeeded, and we did not intend at any rate to create another one, and we do not think we have done so.

The CHAIRMAN. The Clerk will read.

The Clerk read as follows:

For salaries of employees, office equipment, fuel, light, electric current, telephone service, maintenance of motor trucks, and other necessary expenses for carrying into effect the Executive order of December 3, 1918, regulating the transfer of office material, supplies, and equipment in the District of Columbia falling into disuse because of the cessation of war activities, $120,000: *Provided*, That no person shall be employed hereunder at a rate of compensation in excess of $2,500 per annum, and not more than three persons shall be employed at a rate in excess of $1,800 per annum each: *Provided further*, That the said Executive order shall continue in effect until June 30, 1922, without modification, except that proceeds from the transfer of appropriations thereunder shall be covered into the Treasury as miscellaneous receipts: *Provided further*, That the heads of the executive departments and independent establishments and the Commissioners of the District of Columbia shall cooperate with the Secretary of the Treasury in connection with the storage and delivery of material, supplies, and equipment transferred under the foregoing order: *Provided further*, That within 30 days after the approval of this act the Secretary of War is authorized and directed to transfer to the Secretary of the Treasury without payment therefor two light motor trucks for use of the General Supply Committee: *Provided further*, That typewriters and computing machines transferred to the General Supply Committee as surplus, where such machines have become unfit for further use, may, in the discretion of the Secretary of the Treasury, be issued to other Government departments and establishments at exchange prices quoted in the current general schedule of supplies or sold commercially, provided the price obtained is in excess of the exchange prices.

Mr. GARD. Mr. Chairman, having made the point of order against a similar provision, I make a point of order against the paragraph containing the proviso in lines 5 to 9, inclusive, on page 39, to and including the word "committee."

The CHAIRMAN. The Chair sustains the point of order.

Mr. SNYDER. Mr. Chairman, I make the point of order against that part of the paragraph beginning with the words "provided further," page 29, line 9, down to and including the word "prices," at the end of line 16.

The CHAIRMAN. The Chair understood the point of order of the gentleman from Ohio [Mr. GARD] to include that language.

Mr. GARD. No, Mr. Chairman; I made the point of order to the language ending with the word "committee," in line 9, page 39, the first proviso.

Mr. SNYDER. Mr. Chairman, I make the point of order on the ground that there is no authorization in law for it.

Mr. WOOD of Indiana. Mr. Chairman, will the gentleman withhold the point of order?

Mr. SNYDER. No; I make the point of order.

The CHAIRMAN. Does the gentleman from Indiana desire to discuss the point of order?

Mr. WOOD of Indiana. Mr. Chairman, I think that it is subject to the point of order, but I also think it is very unwise in the gentleman or in any other Member to raise the point of order.

Mr. SNYDER. I shall withhold the point of order and reserve it, if the gentleman desires.

Mr. WOOD of Indiana. Mr. Chairman, there has been more graft and fraud committed against this Government in respect to typewriters than any other commodity. We have sought by the means injected into this bill to prevent a continuation of the same. We have millions and millions of dollars invested in typewriters that are of absolutely no consequence to the Government at all and will not be unless there is some provision of this kind carried in this bill. There were 2,000,000 typewriters purchased by the War Department during the war. How many were used we have never been able quite to find out. There are hundreds and hundreds and thousands of them yet that could be used by the different departments and thus save, if you please, the expenditure of moneys to the value of those typewriters, if gentlemen would not raise the technical objections of a point of order.

Mr. WINGO. Does not this reduce expenditures?

Mr. WOOD of Indiana. It does reduce expenditures, there is no question about that; but it does not show that it does on its face. It would save the Government of the United States thousands and hundreds of thousands of dollars this year if this clause were permitted to remain in the bill. Otherwise we will again be subjected to all of the machinations and everything else practiced in the purchase of typewriters.

Mr. MANN of Illinois. Mr. Chairman, will the gentleman yield?

Mr. WOOD of Indiana. Yes.

Mr. MANN of Illinois. Did the gentleman state that the War Department purchased 2,000,000 typewriters during the war?

Mr. WOOD of Indiana. That is exactly what they did.

Mr. MANN of Illinois. Was the man who did that a lunatic or a knave?

Mr. WOOD of Indiana. I do not know what classification you would put him under.

Mr. MANN of Illinois. He must be one of the two.

Mr. WOOD of Indiana. Yes. It is in keeping with the conduct of the man who purchased mosquito bar to put mosquito bars over everybody in France, who went over there to find out that they had no mosquitoes there, and with the man who bought $20,000,000 worth of ambulance harness only to find out that they did not use any harness at all.

Mr. MANN of Illinois. There might be some excuse for that. A man might be misled, but nobody could be misled into the idea that every other soldier in the Army was to be employed to operate a typewriter. It must be that the typewriter manufacturers got in their work. Maybe there was a dollar a year man here who was interested in typewriters.

Mr. WOOD of Indiana. There is no doubt about that, and every conceivable kind of typewriter was purchased. Last year after we had tried our best to find out from the gentleman who ought to know with respect to these typewriters, but could not do it from the man who was supposed to have knowledge of such a thing, somebody went down and in half an hour found 5,000 typewriters in a gargage in this town under the supervision of the War Department.

Mr. SNYDER. Mr. Chairman, in reserving the point of order on this item I have not done so at the request of any man connected with the typewriter business in my district, although we have perhaps the largest one in the world there. I make the point of order upon this upon the theory that there is no authorization for it in law, because it is putting the Government into a commercial business, something which I have always opposed, as everyone in this House knows, from the very beginning.

Mr. WOOD of Indiana. This is the kind of commercial business that we propose to put the Government in. We have asked the Bureau of Supplies, whose business it is to furnish supplies, to gather these typewriters together, and we have provided the manner in which they shall be distributed around among the various departments. We also have required the Secretary of the Treasury to make requisition upon the Secretary of War to get these typewriters, and he is getting them, and we are getting the benefit of them under the present arrangement. Otherwise we will not get that benefit.

Mr. SNYDER. Mr. Chairman, the statement has been made here that probably the typewriter manufacturers got in their work and influenced the War Department to buy these 2,000,000 typewriters. I do not think that is a fair statement, and being interested to some extent in some of the typewriter manufactories, I feel sure that that statement can not be justified. If the War Department, as it did in the purchase of every other

commodity, should bring the manufacturers here to Washington and say to them, "Go home and bring all of the typewriters you can to us, and bring them as fast as you can," should the typewriter manufacturers now be penalized because of the fact that they carried out that request or order of the War Department and other departments in Washington?

The CHAIRMAN. The time of the gentleman from Indiana has expired.

Mr. SNYDER. Mr. Chairman, I make the point of order to the language upon the ground that there is no authorization for it in law.

The CHAIRMAN. The Chair sustains the point of order.

MESSAGE FROM THE SENATE.

The committee informally rose; and the Speaker having taken the chair, a message from the Senate, by Mr. Crockett, announced that the Senate had passed bills of the following titles, in which the concurrence of the House of Representatives was requested:

S. 4737. An act granting the consent of Congress to the Prescott Bridge Co. to construct a bridge across Lake St. Croix at or near the city of Prescott in the State of Wisconsin; and

S. 4603. An act extending the time for the commencement and completion of the bridge or bridges authorized by an act entitled, "An act to authorize the Gulf Ports Terminal Railway Co., a corporation existing under the laws of the State of Florida, to construct a bridge over and across the headwaters of Mobile Bay and such navigable channels as are between the east side of the bay and Blakely Island, in Baldwin and Mobile Counties, Ala.," approved October 5, 1917.

The message also announced that the Senate had passed the following concurrent resolution, in which the concurrence of the House of Representatives was requested:

Senate concurrent resolution 38.

Resolved by the Senate (the House of Representatives concurring), That the two Houses of Congress shall assemble in the Hall of the House of Representatives on Wednesday, the 9th day of February, 1921, at 1 o'clock in the afternoon, pursuant to the requirements of the Constitution and laws relating to the election of President and Vice President of the United States, and the President of the Senate shall be their presiding officer; that two tellers shall be previously appointed by the Vice President on the part of the Senate and two by the Speaker on the part of the House of Representatives, to whom shall be handed, as they are opened by the President of the Senate, all the certificates and papers purporting to be certificates of the electoral votes, which certificates and papers shall be opened, presented, and acted upon in the alphabetical order of the States, beginning with the letter A; and said tellers, having then read the same in the presence and hearing of the two Houses, shall make a list of the votes as they shall appear from the said certificates; and the votes having been ascertained and counted in manner and according to the rules by law provided, the result of same shall be delivered to the President of the Senate, who shall thereupon announce the state of the vote, which announcement shall be deemed a sufficient declaration of the persons, if any, elected President and Vice President of the United States, and, together with a list of the votes, be entered on the Journals of the two Houses.

The message also announced that the Senate had passed S. J. Res. 244, providing for the payment of expenses of conveying votes of electors for President and Vice President, in which the concurrence of the House of Representatives was requested.

The message also announced that the Vice President had appointed Mr. WALSH of Montana and Mr. FRANCE members of the joint select committee on the part of the Senate as provided for in the act of February 16, 1889, as amended by the act of March 2, 1895, entitled "An act to authorize and provide for the disposition of useless papers in the executive departments," for the disposition of useless papers in the War Department.

LEGISLATIVE, EXECUTIVE, AND JUDICIAL APPROPRIATION BILL.

The committee resumed its session.

The Clerk read as follows:

Repairs to typewriting machines (except bookkeeping and billing machines) in the Government service in the District of Columbia may be made at cost by the General Supply Committee, payment therefor to be effected by transfer and counterwarrant, charging the proper appropriation and crediting the appropriation "General Supply Committee, transfer of office material, supplies, and equipment."

Mr. SNYDER. Mr. Chairman, I make the point of order to the paragraph just read upon the same grounds.

The CHAIRMAN. The Chair sustains the point of order, and the Clerk will read.

The Clerk read as follows:

Division of Appointments (including section of surety bonds): Chief of division, $3,000; assistant chief of division, $2,250; executive clerk, $2,000; clerks—3 of class 4, 4 of class 3 (including one transferred from section of surety bonds), 6 of class 2 (including one transferred from section of surety bonds), 4 of class 1, 2 at $1,000 each, 1 $900; messenger; assistant messenger; in all, $36,710.

Mr. SABATH. Mr. Chairman, I am not in favor of creating new positions. On the contrary I am in favor of eliminating all useless employees, but the committee intends to eliminate a division, though small, which, however, has been performing a very important work in safeguarding not only the Government but all of the people in the United States who, due to conditions, accept bonds from surety companies. Personally I should be in favor of the committee's action, but in the interest of the Government and the people who accept these bonds I feel it my duty to insist that this division should not be eliminated.

The CHAIRMAN. The time of the gentleman has expired.

Mr. SABATH. I ask for five minutes additional.

The CHAIRMAN. Is there objection? [After a pause.] The Chair hears none.

Mr. SABATH. Now, in 1916 the Secretary of the Treasury, Mr. McAdoo, made the following recommendation:

Under the act of Congress of March 23, 1910 (36 Stat., p. 241), amending an act of August 13, 1894 (28 Stat., pp. 279–280), the jurisdiction of the Attorney General over surety companies was transferred to the Secretary of the Treasury. On July 16, 1914 (38 Stat., p. 468), the section of surety bonds, which had previously been a part of the Division of Appointments, was created as a separate and distinct part of the work of the Secretary's office. This section as now organized is rendering valuable service to the various departments and has been directly responsible for saving large sums of money to the Government in connection with its bonding business. The act of March 23, 1910, should be amended so as to extend the supervision of the Secretary of the Treasury over surety companies doing business with the Government and thereby secure a larger measure of protection for the Government with respect to its bonds than is now possible under existing law.

Now, instead of enlarging this bureau or this division the committee has completely crippled it, yes, eliminated it, as they just leave two employees in charge, two clerks, neither of whom has the ability nor the experience to pass upon the financial statements of the surety companies, as the law and the regulations of the department demand. Oh, I realize it is not desired by some of the surety companies to make these quarterly reports, but it is in the interest of the Government and the people that these companies should make these reports and that there should be some one in charge who understands the business and who can keep the Government and the different bureaus as well as the country informed as to the standing, as to the assets as well as the liabilities, of these various surety companies. Now, I am familiar with the conditions, and I know that this little section, which costs the Government only $9,370 annually, has rendered valuable service to every department of the Government, and is rendering valuable service to thousands upon thousands of our people who are obliged to secure bonds from the surety companies. It is for that reason that I offer this amendment believing that the elimination of this section is unwarranted, unjustifiable, and would mean a great loss to the Government and to the American people.

Mr. BLANTON. I make the point of order that it is legislation and unauthorized.

The CHAIRMAN. The Chair would ask the gentleman from Illinois if there is any law authorizing this bureau?

Mr. WOOD of Indiana. Mr. Chairman, I wish to add in support of the point of order that under this heading the appropriation provides for "chief of section, $2,000; clerks—two of class 1, one of $1,000; assistant messenger; in all, $6,120." The amendment proposed provides for an appropriation of $43,000 and the creation of a lot of new places. It is clearly subject to the point of order.

The CHAIRMAN. The Chair sustains the point of order.

Mr. SABATH. Mr. Chairman, I would like to be heard on that. These appropriations have been made for the last 10 years.

The CHAIRMAN. Will the gentleman state the provision authorizing this?

Mr. SABATH. The act of March 23, 1910, amending the act of August 13, 1894, authorized the creation of this bureau—or, rather, this division—and ever since that time the appropriations have been made.

Mr. WOOD of Indiana. How much?

Mr. SABATH. Up to $9,370. My amendment is only for $6,370, the same amount that was appropriated last year. I am not asking for any larger appropriation. As to the amount that the gentleman states, that includes his appropriation in that entire paragraph, $36,710, and I add thereto the additional amount of $6,370, making a total of $43,080.

The CHAIRMAN. The Chair will ask the gentleman if that act to which he refers creates any of these officers and specifically provides for their salary?

Mr. SABATH. I do not think the act provides for their salaries, but it is not new legislation.

The CHAIRMAN. The Chair does not think there is any specific legislation which authorizes these positions and the salaries provided for in the gentleman's amendment, and therefore sustains the point of order.

Mr. SABATH. Mr. Chairman, I ask unanimous consent to revise and extend my remarks and to embody therein some records.

The CHAIRMAN. The gentleman from Illinois asks unanimous consent to revise and extend his remarks. Is there objection? [After a pause.] The Chair hears none.

Mr. SABATH. In revising my statements and extending my remarks, after carefully reviewing the statements of the chairman of the subcommittee, simple justice to the Treasury Department as well as my interest in the whole Government and in the general insuring public constrains me to submit evidence to show that the statement of the chairman of the subcommittee—that the several auditors of the Treasury Department pass upon the validity of bonds given either by public officials for the performance of their official duties and the disbursement of public moneys or by contractors for the purpose of guaranteeing the performance of their contracts with the Government—is not founded on fact.

The Treasury Department as now constituted and organized has six auditors having jurisdiction conferred upon them under the provisions of an act of Congress approved July 31, 1894 (28 Stat., p. 205), with respect to the character and kind of accounts to be settled by them. Section 3 of the act in question provides as follows:

SEC. 3. The Auditors of the Treasury shall hereafter be designated as follows: The first auditor as Auditor for the Treasury Department; the second auditor as Auditor for the War Department; the third auditor as Auditor for the Interior Department; the fourth auditor as Auditor for the Navy Department; the fifth auditor as Auditor for the State and Other Departments; the sixth auditor as Auditor for the Post Office Department. * * *

See also section 7 of the same act for further details as to the jurisdiction conferred upon these several auditors.

I find upon investigation that all public official bonds given either with individual or corporate sureties originating with all departments, independent bureaus, or establishments of the Government everywhere, with the exception of the bonds given by postmasters of the first, second, third, and fourth classes and the bonds of postal employees, are referred by the respective departments accepting and approving the bonds of these public officials to the section of surety bonds of the Treasury Department for permanent file in accordance with existing law. See section 5, act of Congress approved March 2, 1895 (28 Stat., p. 807).

Upon the receipt of these bonds from the other departments of the Government by the section of surety bonds, if given with corporate sureties, an examination is made to ascertain whether the agent or agents signing the bonds on behalf of the bonding companies have evidence on file with the Treasury Department giving such agents authority to bind their respective bonding companies.

If upon investigation it is found that these agents have such authority, the bonds are thereupon referred by indorsement to the Solicitor of the Treasury Department, who in turn examines them as to their legal sufficiency, and if found to be legally sufficient are returned to the section of surety bonds for permanent file in jackets and specially prepared metal filing cases, where the bonds are protected against spoliation and possible loss or destruction, easily accessible to any department of the Government either for the purpose of reference or for the purpose of suit.

Each public official disbursing public moneys is required to execute, in triplicate form, cards known as signature cards, upon which appear the autographic signature of such official, and when the bond shall have been passed upon and approved by the Solicitor of the Treasury as to legal sufficiency these signature cards are completed, showing the date of the execution of the bond, the date of its approval, the date of the oath of office of the official himself, and, in addition, the name of the bonding company.

One of these cards is forwarded to the proper auditor, another to the Division of Bookkeeping and Warrants of the Secretary's office of the Treasury Department, and the third card filed with the Division of Accounts of the Treasurer's Office of the Treasury Department.

The auditor, upon the receipt of this card notice with the autographic signature of the public official appearing thereon, and with the other data furnished him by the section of surety bonds, accepts such card notice as final and conclusive evidence that the official is properly bonded and that requisitions for public funds referred to the auditor in the first instance may be honored, giving the auditor at the same time the opportunity of comparing the autographic signature on the requisition with the autographic signature on the card notice.

From this statement it must appear that the auditors neither approve, disapprove, accept, nor reject bonds given by public officials for the performance of their official duties, covering the disbursement of public moneys, the action of the Solicitor of the Treasury on the one hand as to the legal sufficiency of the bonds and the action of the section of surety bonds on the other hand as to the solvency of the bonding companies and the authority of its signing agents being accepted by the auditors as conclusive evidence as to the proper execution and validity of such bonds.

Directing attention now to bonds given by contractors guaranteeing the performance of public contracts, a similar procedure, though somewhat modified as to details, is followed in the acceptance of such bonds. To illustrate: If a contract is awarded by the Navy Department for the construction of a battleship, that department is charged with the duty of taking adequate and proper security to protect the Government against loss under the contract.

If the security offered is the bond of a surety company, the Navy Department at once examines the rating sheets published quarterly by the Treasury Department and ascertains whether the particular bonding company is an authorized company for the purpose of writing Government bonds. If it is and the bond is executed properly, the contract and bond are thereupon referred to the section of surety bonds en route to the office of the Auditor for the Navy Department for the purpose of enabling the section of surety bonds to determine whether the agent or agents signing the bond on behalf of the bonding company are authorized so to do. If evidence of such authority is found on file with the Government, the bond is thereupon stamped with the approval of the Treasury Department and forwarded to the office of the Auditor for the Navy Department, together with the contract and other related papers, for permanent file.

The Auditor for the Navy Department accepts the action of the section of surety bonds as final and conclusive evidence that the bond itself has been properly executed and that the surety is financially able to keep and perform its contracts of suretyship. It will thus be seen that the auditor has nothing to do with the acceptance or approval of the bond itself in this kind of a case and relies absolutely upon the action of the section of surety bonds of the Treasury Department.

If it should be found that the agent or agents signing a particular bond have no authority on file with the Government, action is thereupon taken by the section of surety bonds requiring the home office officials of the bonding company to ratify and confirm the act or acts of its agent or agents. This ratification in completed form becomes a part of the permanent record in the case and estops the bonding company from denying its liability under the bond because, perchance, the agent or agents did not possess the proper authority for signing the bond in the first instance. This action taken by the section of surety bonds, it may be readily seen, affords the Government complete protection and is a proper prerequisite before the final acceptance and approval of such bond.

The chairman of the subcommittee is in error in stating that the section of surety bonds receives, permanently files, or forwards bonds originating only with the War and Navy Departments.

I find upon investigation that the bonds given by public officials covering disbursement of public moneys originating with the other departments of the Government, with the exceptions noted, as the Post Office bonds, are forwarded by the respective departments to the section of surety bonds for action and for permanent file therein, as hereinbefore explained.

The same procedure is followed with respect to all contract bonds originating with the several departments of the Government, including the District of Columbia, with the single exception of the Post Office Department.

I find further upon investigation that the section of surety bonds is the only agency of the Government which has undertaken to tabulate and to annually compile statistics in connection with the bonding work performed by it.

Each bond, upon its receipt by the section of surety bonds, is recorded by having a card punched recording its date of execution, the penalty of the bond, the rate of premium charged per thousand of penalty, and the total amount of premium charged for the execution of the particular instrument. I find that these statistics have been annually tabulated since January 1, 1912, and are available for the use of the Government or Congress, should it become necessary to survey, as in my judgment it should, the entire bonding work of the Government. I find further that it has involved no additional expense to the Government to keep and preserve this statistical data.

I think I have furnished sufficient evidence to show that the statement of the chairman of the subcommittee to the effect that various kinds of bonds "are still passed upon and are under the supervision of the various auditors in the various departments" is not in accordance with the facts in the case.

I think I have also shown that the work of the section of surety bonds, briefly outlined above, is not duplicated by other

agencies of the Government, and it can not be denied that the precautions which are being exercised by the section of surety bonds at a minimum expense to the Government are both wise and proper. If this supervision by the section of surety bonds is destroyed, it will necessarily result in setting up, at greatly increased cost to the Government, individual organizations in the various departments to do the very identical work which the section of surety bonds is now performing at a very small cost to the American people.

The trend of modern organization is in the direction of reasonable centralization of coordinated effort, and I can see no argument which can be advanced or suggested in favor of any plan or method to replace the present system, if it is the desire and purpose of the Congress to conduct the business of the Government in an efficient and economical manner with respect to its bonding work.

I find upon reading the hearings that the chairman of the subcommittee is mistaken in saying that tables and exhibits were filed as a part of those hearings, and, believing that it is the desire of the chairman of the subcommittee to pass upon this important matter in a fair and impartial manner, I desire to introduce these tables, showing the number of bonds which have been handled by the section of surety bonds for the several departments of the Government during the year 1919.

EXHIBIT I.

Statement showing number of bonds received by the section of surety bonds during the calendar year 1919, recorded, and either filed therein or forwarded to the several auditors of the departments.

Directing attention to the statement of the chairman of the subcommittee that it is the purpose of the Congress to continue the work involved in examining the quarterly and annual financial statements of bonding companies doing business with the Government and rating these companies for the benefit of all bond-approving officers of the Government and the general insuring public as to the relative solvency and financial condition of such companies, I am at a loss to understand how he expects this work to be done unless adequate facilities are provided therefor.

The chairman of the subcommittee calls attention to the fact that bonding companies are subject to the supervision of the insurance departments of the various States. This is true, but because of such supervision at stated and remote intervals, that is no reason why the Government should be at the mercy of conditions which it can not control, and be deprived of the opportunity of determining for itself, within reasonable bounds, at least, the fact whether a bonding company writing Government bonds is a solvent institution and is able to keep and perform its contracts of suretyship with the Government.

In fact, this duty is plainly imposed by existing law upon the Secretary of the Treasury, and it is likewise his duty to revoke the authority of any bonding company whenever in his judgment such company does not afford or offer to the Government adequate security and protection.

If it is the purpose of the chairman of the subcommittee to destroy this work of examination by the Treasury Department, and I do not believe that that is his purpose, it can only result in a chaotic condition, each department of the Government attempting in its own way to pass upon the solvency of bonding companies under rules and regulations promulgated by that department. In my judgment, this decentralization of supervision would be unwise, and certainly would be uneconomical.

I must take issue with the chairman of the subcommittee in his statement that every other department has the same jurisdiction, as well as all of the offices of the various departments, in passing upon the solvency and financial condition of bonding companies doing business with the Government. The act of March 23, 1910 (36 Stat., p. 241), confers this jurisdiction exclusively and absolutely upon the Secretary of the Treasury, and it can not be concurrently exercised under existing law by any other department, independent bureau, or establishment of the Government. The action, however, of the chairman of the subcommittee in cutting off the appropriation for the exercise of this authority by the Secretary of the Treasury may result in a divided responsibility, though that could be accomplished only by an amendment of existing law. I am reluctant to believe that Congress would sanction such a change, either in the interest of efficiency or economy.

The chairman of the subcommittee, in his remarks, refers to the practice of the Post Office Department, and from his statements it might be inferred that the Post Office Department is now engaged in passing upon the solvency and the financial condition of bonding companies doing business with the Government. This is not in accordance with the facts. The Post Office Department, as well as every other department of the Government, relies, absolutely and implicitly, upon the action of the Treasury Department in certifying to the continuing solvency of bonding companies doing business with the Government, which certification is in the form of rating sheets issued four times a year by the section of surety bonds.

This rating sheet exhibits at a glance the relative standing of bonding companies as to their capitalization and their assets as determined by a critical and technical audit of the sworn financial statements of such companies, furnished to the Treasury Department quarterly in accordance with existing law.

I am satisfied that the chairman of the subcommittee has misconceived the extent, the character, and the value of the work performed by the section of surety bonds in the examination and the audit of the financial statements of bonding companies to determine their solvency.

Another most important matter which has probably escaped the attention of the chairman of the subcommittee is the rigid and systematic enforcement of the 10 per cent limitation, now a mere matter of regulation, so far as the Government is concerned, but in most of the States a matter of law.

No bonding company, under the regulations of the Treasury Department, is permitted to expose itself on a single risk or hazard in excess of 10 per cent of its capital and surplus, as fixed and determined by the section of surety bonds of the Treasury Department, unless such assumption of excess liability is adequately protected either by reinsurance with other companies authorized to do business with the Government or in some other manner acceptable to the Treasury Department as provided by its regulations.

No State or Federal agency attempts to enforce as does the Treasury Department the 10 per cent limitation, and I believe that I may safely say that this work, performed exclusively by the section of surety bonds of the Treasury Department, is not only appreciated by every insurance department of every State in the United States, but unquestionably has protected the Government itself and the general insuring public against the temptation on the part of bonding companies to assume on single bonds indefinite and uncertain liability, regardless of their net resources, capitalization, and surplus. (See Exhibit II.)

EXHIBIT II.

[Regulations applicable to surety companies doing business with the United States under the act of Congress approved Aug. 13, 1894, as amended by the act of Congress of Mar. 23, 1910.]

[1910. Department Circular No. 54. Section of surety bonds.]

TREASURY DEPARTMENT,
OFFICE OF THE SECRETARY,
Washington, September 21, 1910.

1. The following regulations will govern the issuance of certificates of authority to bonding companies to do business with the United States as sureties on recognizances, stipulations, bonds, and undertakings, under the provisions of the act of Congress of August 13, 1894, as amended by the act of Congress of March 23, 1910, and the acceptance of such obligations from such companies so long as they continue to hold such certificates of authority from the Secretary of the Treasury.

2. Every company applying for certification will be required to submit to the Secretary of the Treasury an application in writing, signed by its president, and accompanied by the following papers:

(a) A certified copy of its charter or articles of incorporation, together with a certificate of the insurance commissioner, or other proper officer of the State under whose laws the company was organized, that it is fully and legally organized under the laws of such State and is authorized to transact, and is transacting therein, the business described in its charter or articles of incorporation, and the period during which it has been exclusively engaged in the transaction of fidelity, surety, or casualty business.

(b) A copy of the State laws, certified by the proper officer of the State, under which the company was incorporated and received authority to transact business.

(c) A copy of its constitution and by-laws, and evidence of the election of its officers and directors.

(d) A list, signed and sworn to by its president, secretary, and treasurer, of the names and post-office addresses of its stockholders; the number of shares bought by each, and the method of purchase (whether for cash or otherwise); when and how payment was made in each instance; the amount paid in by each stockholder on account of capital and the amount, if any, paid in as surplus.

(e) A full statement, signed and sworn to by its president, secretary, and treasurer, in such form as the Secretary of the Treasury may prescribe, showing its assets and liabilities and such other information respecting its business a may be required.

3. If, from the evidence submitted in the manner and form herein required, the Secretary of the Treasury shall find that such company has authority under its charter to do the business provided for by the acts above referred to, and if the Secretary of the Treasury shall be satisfied from such company's financial statement and from any further evidence or information he may deem it proper to require, and from such examination of the company, at its own expense, as he may cause to be made, that such company has a capital fully paid up in cash of not less than $250,000, is fully solvent and financially and otherwise qualified to do the business contemplated by law, and is able to keep and perform its contracts, he will, subject to the further conditions herein contained, issue a certificate of authority to such company, under the seal of the Treasury Department, to transact business for a term expiring on the 1st day of May next following. Such certificate of authority shall, so long as the company remains fully qualified under the law and the regulations of the Treasury Department, be renewable annually.

4. No such company will be granted authority to do business under the provisions of the acts above referred to unless it has a capital stock paid up in cash of not less than $250,000, and unless it shall have and maintain on deposit with the insurance commissioner, or other proper financial officer of the State in which it is incorporated, or in one of the other States of the United States, for the protection of all its policyholders in the United States, not less than $100,000 in the stocks or bonds of the United States, the District of Columbia, or one of the States of the United States, or the legally authorized bonds of a county, or incorporated city, village, or township within the United States, which shall be income paying and shall be valued not above their current market value, or in bonds and mortgages on improved unincumbered real property within the United States as security for loans thereon not exceeding 60 per cent of the value of such property, and unless such company is engaged in the business of fidelity insurance and suretyship with or without also making contracts of insurance in one or more of the classes generally known as casualty risks, and is so engaged exclusively, and unless such company intends to engage actively in the execution of bonds running to the United States.

5. The cash capital and other surplus moneys and funds of any such company may be invested in or loaned upon the pledge of any securities of the kind in which its deposit is hereby required to be made, or in the stocks, bonds, or other evidence of indebtedness of any solvent institution incorporated under the laws of the United States or any State thereof, except its own stock, or in such real estate as it is authorized to hold by its charter or by the laws of the State under which it is incorporated. No part of the capital of any such company shall be or remain invested in or loaned upon any security or real estate subject to any prior lien.

6. In computing the financial condition of any such company its assets will be valued not above their current market value, and except as to cash in bank or on hand, and as to uncollected premiums charged on policies or obligations written within the last three months, no assets shall be credited to a company unless invested as above provided. Bills and accounts receivable, loans on personal security indorsed or not, loans to company's offices or directors, advances on contracts, furniture, fixtures, and supplies, and, generally, all assets not of a liquid character readily convertible into cash for the payment of losses, will

be deducted as "Assets not admitted." In case of any doubt on the part of the Secretary of the Treasury as to the value of any asset, the same will be valued in his discretion according to the best information obtainable.

7. There will be charged as liabilities in addition to the capital stock of any such company the amount of all its accrued debts and outstanding losses and claims (less amounts due from solvent reinsurers authorized under the regulations of this department) and an unearned premium reserve computed upon its current gross premiums on unexpired obligations (less authorized reinsurance) at not less than 50 per cent of the premiums charged for one year or less, and pro rata upon premiums charged for more than one year from date of obligation or renewal.

8. Every company now authorized to do business under the acts of Congress above referred to shall be subject to all of the foregoing provisions of this order from and after December 31, 1910.

9. No company having authority, under the acts of Congress above referred to, to do business with the United States shall be accepted as sole surety on any recognizance, stipulation, bond, or undertaking under this department which shall execute any recognizance, stipulation, bond, or undertaking on behalf of any individual, firm, association, or corporation, whether or not the United States is interested as a party thereto, the penal sum of which is greater than 10 per cent of the paid-up capital and surplus of such company, except on transportation or warehousing bonds, on which the limit of any such company on any one of such bonds shall be 50 per cent of its paid-up capital and surplus.

10. Two or more companies may be accepted as sureties on any recognizance, stipulation, bond, or undertaking under this department the penal sum of which does not exceed the limit herein prescribed of their aggregate paid-up capital and surplus. In such cases each company shall limit its liability, in terms, upon the face of the bond, to a definite specified amount, such amount to be in all cases, however, within the limitations herein prescribed. In cases where the law especially requires it every such recognizance, stipulation, bond, or undertaking shall be executed by the principal and sureties jointly and severally.

11. No portion of any recognizance, stipulation, bond, or undertaking shall be included in determining the limitations herein prescribed which shall have been reinsured, at the time of execution and delivery of the original obligation, or within 20 days thereafter, in a company authorized to do business under the acts above referred to, within the limitations herein prescribed, or in such companies organized under the laws of the United States, or of any State, having a capital stock paid up in cash of not less than $250,000, or in such corporations of other countries as are licensed in any State of the United States to do a fidelity and surety business, and have a deposit capital or other assets in this country of not less than $250,000 available to holders in the United States of fidelity and surety policies: *Provided*, That all such companies, domestic or foreign, shall submit themselves to all the regulations of the Treasury Department applicable to certified companies, including such examination, at the companies' expense, as the Secretary of the Treasury may deem it necessary and proper to make. The limit of reinsurance which may be accepted from any such company on any one bond shall be determined and fixed by the Secretary of the Treasury, but shall not exceed in any case 10 per cent of the capital stock and net surplus of domestic companies or 10 per cent of the deposit capital or other assets in the United States available to the holders in the United States of fidelity and surety policies of alien corporations. The Secretary of the Treasury reserves the right to refuse at any time to further approve or accept reinsurance from any of such companies if in his judgment such company does not afford the United States or the policyholders of such companies in the United States the protection contemplated by this regulation.

12. No portion of any recognizance, stipulation, bond, or undertaking shall be included in determining the limitations herein prescribed upon which such company shall have been secured at the time of execution and delivery of the original obligation by the deposit in pledge, or by conveyance in trust, for its protection, of property equal in value to such excess.

13. No portion of any recognizance, stipulation, bond, or undertaking executed on behalf or on account of a fiduciary holding property in a trust capacity shall be included in determining the limitations herein prescribed, upon which such company shall have been secured by deposit or other disposition, of a suitable and sufficient portion of the estate so held that no further sale, mortgage, pledge, or other disposition can be made thereof without such company's approval, except by the decree of a court having proper jurisdiction.

14. In determining the limitations herein prescribed the full penalty of a bond will be regarded as the liability, and no offset will be allowed on account of any estimate of risk which is less than the full penalty of the bond, except in the following cases:

(a) Appeal bonds; in which cases the liability will be regarded as the amount of the judgment appealed from, plus 10 per cent of said amount to cover interest and costs.

(b) Bonds of executors, administrators, trustees, guardians, and other fiduciaries; in which cases a certificate of the judge of the probate court, setting forth the measure of liability upon which he fixed the penalty of the bond, will be accepted by the department as evidence of the amount at risk when such certificate is filed with the supplement covering the bond. Credit will also be allowed for indemnifying agreements executed by sole heirs or beneficiaries of estates releasing the surety from liability: *Provided*, That a copy of such agreement shall, in each instance, be filed with the supplement covering such risk, together with satisfactory proof as to outstanding debts.

(c) Contract bonds given in excess of the amount of a contract; in which cases the amount of the contract will be regarded as the liability.

(d) Bonds for banks or trust companies as principals, conditioned to repay moneys on deposit, where, by any law or decree of a court, the amount to be deposited shall be less than the penalty of the bond; in which cases the maximum amount on deposit at any one time will be regarded as the liability.

Each company will be required to report quarterly to the Secretary of the Treasury, as provided by paragraph 15 hereof, every such obligation the penal sum of which is greater than 10 per cent of its paid-up capital and surplus, together with a full statement of the facts which tend to bring it within the provisions of this paragraph.

15. Every such company will be required to file with the Secretary of the Treasury, on or before the last day of January of each year, a statement of its financial condition at the close of the preceding year, upon the form provided by the Treasury Department. On or before the last day of April, July, and October of each year every such company will be required to file with the Secretary of the Treasury a statement of its financial condition at the close of the preceding three months, upon the forms provided by the Treasury Department.

An additional 30 days will be allowed for the audit of the annual statement and 15 days for the audit of the quarterly statements and for correspondence necessary to correct defects or to explain items suspended or disallowed. With each of said statements every such company will be required to file with the Secretary of the Treasury, upon the forms provided by the Treasury Department, a schedule of the single obligations which it has executed during the preceding three months in excess of the limitations herein prescribed, showing the manner in which each of such excesses has been covered under these instructions.

16. The amount of paid-up capital and surplus of every such company shall be determined by an audit of the annual and quarterly financial statements filed with the Secretary of the Treasury as herein provided, or by reports upon current examinations made by the insurance departments of the several States, or by such examination of the companies, at their own expense, as the Secretary of the Treasury may deem necessary.

The qualifying powers of the respective companies will be published promptly on the 1st day of March and the 15th days of May, August, and November of each year, and the ratings of companies which fail to file or to complete their statements within the time herein provided will be omitted. Pursuant to their request, the Secretary of the Treasury will keep the other executive departments advised from time to time as to the status and qualifying power of the various companies under these instructions.

17. In the event that it becomes necessary to waive the limitations herein prescribed on any recognizance, stipulation, bond, or undertaking given to the United States, notice of such waiver and the manner in which the excess is required to be covered shall in each instance be immediately transmitted by letter to the head of each of the other executive departments.

18. Failure on the part of any company to comply with the provisions of these instructions will be considered sufficient ground for refusing further to accept such company as surety on obligations under this department during the continuance of such delinquency, and in the event of persistent failure to observe the provisions of these instructions the authority of such company will be revoked.

FRANKLIN MACVEAGH, *Secretary.*

I note that the chairman of the subcommittee states that certain information has been coming to the Committee on Appropriations every year; and evidently the information which has reached the gentleman, and possibly other members of the Appropriations Committee, is unquestionably at variance with the facts in the case, which suggests to me that the informant is not connected with the Treasury Department and can not be cognizant of the true character of the work now performed by the section of surety bonds.

Directing attention to the point of order raised by the gentleman from Texas [Mr. BLANTON] opposing the proposed amendment, the purpose of which was to provide for the clerical force eliminated by the proposed merger of the section of surety bonds with the Division of Appointments, I find that the acts of Congress to which I referred, viz, the acts of August 13, 1894 (28 Stat., pp. 279–280), as amended by the act of March 23, 1910 (36 Stat., p. 241), were acts prescribing the conditions under which bonding companies are permitted to qualify for the purpose of writing Government bonds.

These acts impose certain duties and responsibilities upon the Secretary of the Treasury, and one of these duties is to pass upon the financial condition and the continuing solvency of bonding companies doing business with the Government, so that all bond-approving officers of the Government when accepting corporate surety bonds may be satisfied that the bonding companies certified by the Treasury Department are acceptable, solvent, and financially able to keep and perform their contracts of suretyship as required by existing law.

I should have cited the act of Congress of July 16, 1914 (38 Stat., p. 468), providing for a separate and distinct organization, to be thereafter known as the section of surety bonds, by transferring certain employees then carried upon the statutory roll of the Division of Appointments of the Secretary's office to the newly established section of surety bonds.

The language used by Congress in creating the section of surety bonds is as follows:

Section of surety bonds: Chief of section, $2,000 (in lieu of law and bond clerk transferred from Division of Appointments); clerks, two of class 1 (transferred from Division of Appointments); one at $1,000 (transferred from Division of Appointments); one assistant messenger (transferred from office of Commissioner of Internal Revenue); in all, $6,120.

A full discussion of the reasons which prompted Congress to recognize the wisdom of establishing a separate and distinct organization in the Treasury Department in dealing with these bonding companies in the interest of the whole Government will be found on page 6357 of the CONGRESSIONAL RECORD containing the proceedings of April 7, 1914.

In the discussion which arose as to the necessity for the creation of a separate and distinct organization it was clearly developed to the satisfaction of this House that the work of supervision over bonding companies doing business with the Government had no relationship whatsoever to the work then and now performed by the Division of Appointments of the Secretary's office of the Treasury Department.

In this discussion the gentleman from Illinois [Mr. MANN] moved an amendment, which was unanimously adopted, changing the name from section of surety bonds to division of surety bonds. When the bill, however, reached the Senate the word "section" was restored, and under that designation the work has been continued until the present time.

Congress in creating this new organization in the Secretary's office had before it the recommendation of one departmental committee, though other committees had made similar recommendations, advising that the work then performed by the Division of Appointments of the Secretary's office relating to the examination of bonding companies be separated and a new organization set up to take care of this important work, and accordingly this action was taken by the then Secretary of the Treasury—Hon. Franklin MacVeagh—and under a Republican administration.

Without intending to protract unduly my remarks, I have deemed it advisable to incorporate as a part of such remarks a copy of the report of the last committee which investigated this bonding work of the Government. (See Exhibit III.)

EXHIBIT No. III.

[Copy.]

OFFICE OF CHIEF CLERK AND SUPERINTENDENT,
June 19, 1911.

The SECRETARY OF THE TREASURY.

SIR: The general departmental committee on economy and efficiency begs leave to invite your attention to the report of the committee on the Appointment Division. The first recommendation made in that report is as follows:

That the bond section be made a separate division of the Secretary's office, with the following organization:

1 chief of division	$3,500
1 law clerk, who shall act as chief in the absence of the latter	2,500
1 clerk, class 4	1,800
1 clerk, class 2	1,400
1 stenographer and clerk, class 1	1,200
1 assistant messenger	720
Total	11,120

The reasons assigned by the committee for this recommendation are that the work of the section is of sufficient importance to require the entire attention of a person of special ability, who has had special training to fit him therefor; that the work relating to bonds as performed in this section has little connection with appointments; the most important part of the work, it is stated, is that performed in relation to the examination and authorization of surety companies under the act of August 13, 1894, as amended by the act of March 23, 1910, which has no relation whatever to appointments or other changes in the personnel; that 91 per cent of the bonds given were for the performance of contracts wholly disconnected from appointments, 6 per cent of the bonds given were in pursuance of appointments made in other departments, and only 2½ per cent of the bonds given were pursuant to appointments made in this department; that the work is of such importance that the person in charge of it should report directly to the Secretary or an Assistant Secretary in charge. The committee cites instances which go to show the necessity for a more efficient organization of the bond section and closer supervision of surety companies. It is believed this can be better done if the employee in charge is under the direct supervision of the Secretary or an Assistant Secretary.

In this connection, attention is invited to your letter of April 26, 1910, addressed to the Speaker of the House of Representatives, in part as follows:

"The formation of a separate division is necessary and preferable to the conduct of the work as a branch of the Appointment Division. The work embraces the supervision of all the surety companies and the bonding business of all the executive departments except the Post Office, and is not confined to the Bonding Division of the Treasury Department or to bonds required pursuant to appointments made under this department. It is of a technical, legal, and financial character, and it is of the utmost importance that the officer in charge shall report directly to the Secretary or to an Assistant Secretary of the Treasury the result of his examination of the companies and other matters of a confidential character which such work necessarily involves."

The general committee believes the foregoing reasons to be well founded and of sufficient importance to justify the separation of the bonding section as now organized from the Appointment Division at this time. A new bond clerk is about to be installed, and it is believed that with the report of the committee to guide him, and under an efficient reorganization of the work of this section, it will be possible to attain a much higher standard of efficiency.

In view of the foregoing, we now have the honor to recommend that the bonding section be divorced from the Appointment Division and that it be placed in charge of Assistant Secretary Bailey.

Respectfully,

JAMES L. WILMETH,
LAWRENCE O. MURRAY,
CHAS. A. KRAM,
CLAUDE GILBERT,
Committee.

Approved.

R. O. BAILEY,
Assistant Secretary.

Approved.

FRANKLIN MACVEAGH,
Secretary.

ORDER.

JUNE 19, 1911.

It is hereby ordered that, on and after this date, the bond section in the Appointment Division shall be separated therefrom and placed under the Assistant Secretary in charge of public buildings and miscellaneous divisions. The administrative authority heretofore exercised by the Appointment Division shall hereafter be vested in the clerk in charge of the bond section, under the immediate supervision of the said Assistant Secretary. The clerks and employees of the Appointment Division who are engaged in whole or in part in the work relating to bonds will be detailed to the bonding section. All desks, typewriters, and other equipment now in use in the bonding section will be made available for the use of the new bonding section established by this order.

Certain preliminary work now performed in the bond section relating to presidential appointments is hereby transferred to the Appointment Division, with direction that when a commission or letter of appointment has been signed, appointing an officer who is required to give bond, the same shall be transmitted to the bond section by the Appointment Division, all subsequent work relating thereto to be performed in the bond section.

FRANKLIN MACVEAGH, *Secretary.*

The committee takes occasion to refer to a special communication addressed to the then Speaker of the House of Representatives under date of April 26, 1910; and for the purpose of emphasizing the reasons why this work should not now be again attached to the Division of Appointments of the Secretary's office of the Treasury Department I quote in full the recommendation of the then Secretary as to why this important work should function as a separate and distinct organization:

The formation of a separate division is necessary, and preferable to the conduct of the work as a branch of the Appointment Division. The work embraces the supervision of all the surety companies and the bonding business of all the executive departments except the Post Office and is not confined to the Bonding Division of the Treasury Department or to bonds required pursuant to appointments made under this department. It is of a technical, legal, and financial character, and it is of the utmost importance that the officer in charge shall report directly to the Secretary or to an Assistant Secretary of the Treasury the result of his examination of the companies and other matters of a confidential character which such work necessarily involves.

These reasons are just as potent now as they were when made on April 26, 1910. In fact, they are more potent now than then for the reason that the number of bonding companies doing business with the Government has increased considerably, and I am advised that there are now 32 of these companies doing business with the Government, with the prospect of several more applying for such privilege in the near future.

I am satisfied, therefore, that if the chairman had been advised that the section of surety bonds was created by act of Congress and that it was not new legislation that the point of order made by the gentleman from Texas [Mr. BLANTON] would not have been sustained.

Another very important kind of work performed by the section of surety bonds of the Treasury Department in conjunction with the other departments, independent bureaus, and establishments of the Government relates to claims filed on behalf of the Government under its bonds with defunct and insolvent bonding companies.

Whenever a bonding company ceases to do business, either by reason of merger with another company, voluntary liquidation, or receivership proceedings due to insolvency, it becomes the duty of the Secretary of the Treasury to revoke the authority of such company and to notify all bond-approving officers of the Government everywhere of such revocation.

It also is the duty of the section of surety bonds to ascertain all actual, contingent, or prospective liability of such retiring bonding company under all Government bonds executed or reinsured by it while a going concern. In the case of an insolvent, defunct bonding company the additional duty devolves upon the Secretary of the Treasury of requiring all claims against such company to be put in proper shape for filing, due proof made thereof and the claims filed with the receiver or liquidator within the period of time allowed by the court for filing such claims.

This form of centralized supervision by the section of surety bonds over outgoing bonding companies has resulted in a saving of many thousands of dollars to the Government which otherwise might have been lost and probably would have been lost to the Government without this centralized form of supervision.

I am advised that these savings are largely in excess of $100,000 and that the section of surety bonds is now engaged in rounding up throughout the entire Government service claims against the following defunct and insolvent bonding concerns:

1. Illinois Surety Co., Chicago, Ill.
2. New England Equitable Insurance Co., Boston, Mass.
3. Casualty Co. of America, New York City, N. Y.
4. Empire State Surety Co., Brooklyn, N. Y.
5. Equitable Surety Co., St. Louis, Mo.
6. United Surety Co., Baltimore, Md.

During the period of the official existence of the section of surety bonds, as a separate organization, I find that 22 bonding companies have either merged with other bonding companies, entered into voluntary liquidation of their business, or have passed into the hands of receivers or liquidators appointed by the court or by the insurance departments of the several States because of the admitted insolvency of such companies.

If the section of surety bonds is destroyed by failing to make adequate and due provision for the necessary clerical help to carry on this important work it will necessarily result in jeopardizing the Government's interests with respect to claims arising under the bonds of defunct and insolvent bonding companies.

The fact that this section of surety bonds has been directly responsible for saving more than $100,000 to the Government is ample justification, in the absence of any further reason which might be offered, for continuing it and for strengthening rather than weakening its facilities in protecting the interests of the Government and the American people.

Mr. SABATH. Mr. Chairman, I desire to offer an amendment.

The CHAIRMAN. The Clerk will report the amendment.

The Clerk read as follows:

Amendment offered by Mr. SABATH: Page 41, line 1, after the word "messenger," strike out all on lines 1 and 2 and insert "law and bond clerk, $2,250; 2 clerks at $1,200, $2,400; 1 clerk, $1,000; 1 assistant messenger, $720; in all, $43,080."

Mr. BLANTON. Mr. Chairman, I reserve a point of order.

Mr. SABATH. Mr. Chairman, I move to strike out the last word for the purpose of getting some information from the chairman of the committee. I notice that the committee has eliminated the former appropriation for the surety bond section. Can the gentleman give any reason for the elimination of that appropriation?

Mr. WOOD of Indiana. Yes. There seems to be a mistaken idea that the surety bond section had to do with passing on all of the bonds the Government takes for the purpose of securing itself against loss. The surety bond section had to do with a very small per cent of these bonds. In fact, the principal bonds that it had to do with were the disbursing officers' bonds in the Army and the Navy.

All contractors' bonds, all post-office bonds, all the other bonds amounting to millions as compared with the amount involved in the surety bond section are still passed upon and are under the supervision of the various auditors in these various departments. We came to the conclusion there was no necessity for the information that the chief of the surety bond section obtained from the very sources that passed upon them before and which will have to pass upon them now, so we concluded it was an unnecessary appendage and resulted in no good to the Government.

Mr. SABATH. Was there any evidence introduced before the committee showing the actual work that section has been performing, namely, in examining all the surety companies that have been permitted and are permitted to give bonds to the Government?

Mr. WOOD of Indiana. Yes; there is evidence in reference to it and also a table filed in the hearing.

Mr. SABATH. And also the evidence that they are compelling each and every surety company to show every three months a statement showing the standing and the amount of bonds written for the Government and also to others?

Mr. WOOD of Indiana. Yes; that statement, and that will continue to be done the same as it was before this was created. Every State in the Union, as far as I know, constantly requires the examination and certification of the liabilities and responsibilities of all these surety bond companies before they can do business in their respective States.

Mr. SABATH. But not as to the Government.

Mr. WOOD of Indiana. Yes; and the Government requires it, too.

Mr. SABATH. And this division had the jurisdiction to make the examination and investigation——

Mr. WOOD of Indiana. Every other department has the same jurisdiction—all the officers of the various departments.

Mr. SABATH. Over surety companies?

Mr. WOOD of Indiana. Yes.

Mr. SABATH. Is there any other department that issues this statement and returns on the part of the surety companies outside of this division?

Mr. WOOD of Indiana. The Post Office Department gets them and the various departments that have to do with the approval of their bonds. The Post Office Department carries them more fully than this department, I am informed.

Mr. SABATH. I do not think the gentleman has received the proper information. I happen to know something about that.

Mr. WOOD of Indiana. The information has been coming to us every year.

The Clerk read as follows:

Division of Public Moneys (including the designation of Government depositaries): Chief of division, $3,000; assistant chief of division, $2,500; clerks—4 of class 4, 3 of class 3, 3 of class 2, 2 of class 1, 1 $1,000; messenger; assistant messenger; in all, $26,660.

Mr. BLANTON. Mr. Chairman, I make a point of order against the paragraph because of the following being legislation on an appropriation bill. I refer particularly to the part in parentheses:

Including the designation of Government depositaries.

Mr. WOOD of Indiana. I wish the gentleman would reserve the point of order.

Mr. BLANTON. If the gentleman desires to discuss it, I will reserve it.

Mr. WOOD of Indiana. I will state the action of the committee in doing this was for the purpose of reducing this expenditure from $19,000 and some odd to $8,400 and putting it back where it belongs.

Mr. BLANTON. If the Chair sustains the point of order, why the gentleman will not only save the $19,000, but he will save this $8,400 which he provides for in the bill.

Mr. WOOD of Indiana. Somebody will have to have charge of these depositaries, and the trouble is, if this goes out here, it will go in somewhere else and cost us three or four times as much.

Mr. BLANTON. Has not the gentleman confidence in the Secretary of the Treasury whom the President elect is going to have appointed after the 4th day of March?

Mr. WOOD of Indiana. I do not want those who come along with him to be even tempted.

Mr. BLANTON. I seem to have more confidence in him than the gentleman himself.

Mr. WOOD of Indiana. I will say to the gentleman that if he insists on his point of order in the interest of economy, for which he and I are standing on the same platform, he will make a mistake, it would be better to withdraw it and save us at least $10,000 a year.

The CHAIRMAN. Does the gentleman from Texas make the point of order?

Mr. BLANTON. I make the point of order.

The CHAIRMAN. The Chair sustains the point of order.

The Clerk read as follows:

Commissioner of the public debt, $6,000.

Mr. MANN of Illinois. Mr. Chairman, I reserve a point of order just to get information. How have we gotten along all these years without a commissioner of public debt? Is this to be a new office?

Mr. WOOD of Indiana. It was a new office created under the reorganization of the Treasury Department in November, 1919. And this commissioner of public debt was created for the purpose of having supervision of the public debt and the payment of interest upon our bonds, and has charge of the loans that we have made to foreign countries and all the machinery connected with that.

Mr. MANN of Illinois. Where is his office force provided for?

Mr. WOOD of Indiana. The fact of the business is they are included in the Division of Loans and Currency. This man is practically the head of that division.

Mr. MANN of Illinois. Oh, no; they have a Chief of the Division of Loans and Currency.

Mr. WOOD of Indiana. I understand they have. He had a lot of extra machinery that we knocked out.

Mr. MANN of Illinois. I think I will not insist on the point of order, but it is a novel thing to me in my brief experience in the House to see a high official created with nobody to do the work.

Mr. WOOD of Indiana. We make an appropriation under the expense of loans, amounting to $7,250,000.

Mr. MANN of Illinois. I can very readily see if he has access to that fund he will have no trouble in maintaining the office force.

Mr. WOOD of Indiana. He is the gentleman.

Mr. MANN of Illinois. Is he now paid out of that fund?

Mr. WOOD of Indiana. He is now paid out of the lump-sum appropriation, I think—out of the expense of the loans.

Mr. MANN of Illinois. I know nothing about it, and hence I will not stand in the way of reform.

Mr. BLANTON. Mr. Chairman, I make the point of order if the gentleman withdraws his reservation that it is new legislation upon an appropriation bill.

The CHAIRMAN. The Chair sustains the point of order. The Clerk will read.

The Clerk read as follows:

Division of Loans and Currency: Chief of division, $3,500; assistant chiefs of divisions—4 at $2,700 each, 1 $2,500; chief clerk, $2,500; accountant, $3,000; custodian of paper, $2,250; custodian of vaults, $2,000; 2 assistant custodians of vaults, at $1,800 each; 6 section chiefs, at $2,000 each; bond and interest clerk, $2,000; clerks, bookkeepers, and accountants—12 at $2,000 each, 22 of class 4, 25 of class 3, 2 at $1,500 each, 30 of class 2, 100 of class 1, 21 at $1,000 each,

12 at $900 each; counter clerks—1 $1,400, 20 at $1,200 each, 30 at $1,100 each, 38 at $1,000 each, 32 at $900 each, 2 at $800 each, 5 at $720 each; computing machine operator, 1 $1,000; proofreaders—2 at $1,200 each, 2 at $1,100 each; superintendent of addressograph force, $1,800; addressograph operators—1 $1,600, 3 at $1,400 each, 8 at $1,200 each, 9 at $1,100 each, 20 at $1,000 each, 1 $900; 5 assorters at $1,000 each; 3 messengers; 5 assistant messengers; messenger boys—5 at $480 each; 3 at $420 each; skilled laborers—4 at $1,200 each, 4 at $1,000 each, 8 at $900 each; 12 laborers; in all, $637,250.

Mr. WOOD of Indiana. Mr. Chairman, I move to amend by striking out the word "a" at the end of the last line on page 41 and inserting the word "at." It is a typographical error.

The CHAIRMAN. Without objection, the amendment will be agreed to.

There was no objection.

Mr. DOWELL. Mr. Chairman, I move to strike out the last word.

The CHAIRMAN. The gentleman from Iowa moves to strike out the last word.

Mr. DOWELL. I do so, Mr. Chairman, for the purpose of asking the chairman of the committee how much the committee reduced the clerical force of this division?

Mr. WOOD of Indiana. We reduced the appropriation, I think, some $160,580.

Mr. DOWELL. And how many clerks were disposed of?

Mr. WOOD of Indiana. Well, the average pay of those clerks is about $1,200.

Mr. DOWELL. Mr. Chairman, I withdraw the pro forma amendment.

The CHAIRMAN. The pro forma amendment is withdrawn. The Clerk will read.

The Clerk read as follows:

Expenses of loans: For all necessary expenses, including rent, connected with any operations under the first Liberty bond act, the second Liberty bond act (except section 12), the third Liberty bond act, the fourth Liberty bond act, the supplement to second Liberty bond act, and the Victory loan act, or connected with any operations in connection with other public-debt issues or United States paper currency issues, with which the Secretary is charged, to be expended as the Secretary of the Treasury may direct, $7,250,000: *Provided*, That this appropriation shall not be available for the payment of personal services in the District of Columbia, except in the offices of the Secretary, the Commissioner of the Public Debt, the Register of the Treasury, the Division of Loans and Currency, and the Division of Public Debt Accounts and Audit: *Provided further*, That no person shall be employed hereunder at a rate of compensation exceeding $1,800 per annum except the following: One at not exceeding $3,500, 7 at not exceeding $3,000 each, 12 at not exceeding $2,500 each, 1 at not exceeding $2,400, 2 at not exceeding $2,250 each, 14 at not exceeding $2,200 each, 24 at not exceeding $2,000 each.

Mr. SNELL. I send an amendment up to the Clerk's desk.

The CHAIRMAN. The gentleman from New York offers an amendment, which the Clerk will report.

The Clerk read as follows:

Amendment offered by Mr. SNELL: Page 42, line 18, strike out "$7,250,000" and insert "$2,000,000."

Mr. SNELL. Mr. Chairman, I offer the following amendment: On page 42, line 18, strike out "$7,250,000" and insert "$2,000,000."

Mr. Chairman, I have looked over the hearings on this matter and——

Mr. GARD. Mr. Chairman, I reserve a point of order on the language on page 42, line 20, beginning with the language, "the commissioner of the public debt." I make a point of order against that language before the gentleman from New York proceeds.

Mr. SNELL. I did not exactly understand the gentleman.

Mr. GARD. I make a point of order on the language "commissioner of the public debt" on lines 20 and 21.

The CHAIRMAN. The Chair sustains the point of order.

Mr. SNELL. That does not apply to the part of the section I made my amendment to.

Mr. Chairman, I have looked over the hearings very carefully on this matter, and have also considered the explanation made by the chairman of the committee, and especially the colloquy he had with the gentleman from Illinois [Mr. MANN], and I can not find any evidence that would make anybody believe that it is necessary to make this appropriation of $7,250,000 at this time. The crux of the matter is shown on page 272 of the hearings, where the following appears:

Mr. WOOD. Have you any idea of the amount of money you might need of that amount?

Mr. BROUGHTON. We estimate $628,319.56 for possible certificate issues. That is our estimated expenditures on such account for this year; and, of course, with a budget of three or four billion dollars, we will probably have to issue certificates if for no other reason to spread the tax payments.

There is also authority in the law for the issue of bonds and notes which have not yet been issued, and I do not know what circumstances might develop another year requiring them; I do not anticipate such issues; but so long as authority for issues stands the accompanying appropriation should be available.

Now, the only argument there is in the hearings in favor of this proposition is what that gentleman states right there—"the fact that there is authority for issuing notes," and to issue notes costs money. He says himself he does not expect it, but says if that contingency should arise we should appropriate this vast amount of money, to take care of it if it does happen. It seems to me there is plenty of time to take that into consideration and make any appropriation that may be necessary when the occasion arises, and not appropriate this lump sum of $7,250,000 at this time, when there is no definite reason why we should appropriate it, only a possible contingency.

Now, take the explanation given by the chairman of the committee yesterday. He says:

Now, it becomes apparent that we of necessity must continue to issue these short-time notes until such time as the moneys derived from taxation will equal our governmental expenditures. And unless we reduce the cost of governmental expenditures that time seems to be far distant, and as long as this necessity continues there will be necessity for the expenditure of money in making these sales.

Now, if we cut off $5,000,000 of such expenditures as this $7,500,000, which it is absolutely certain we can do at this time and in no way affect governmental efficiency, it will not be necessary to issue any more of these certificates, as the chairman himself explains, to at least the extent of this $5,000,000. Otherwise we are simply going right in a circle. We authorize an expenditure of $5,000,000 and then issue more certificates to pay for this expense, when by refusing the first authorization we would save both, and it would not be necessary to have the expense of selling more bonds. Now is the time to cut such expenses down and not make this appropriation, and I appeal to the common sense of the House to do it.

Mr. MADDEN. Not $5,000,000 for the issuance of certificates.

Mr. SNELL. In connection with it and possible sale of bonds.

Mr. MADDEN. It is $7,000,000, and $5,000,000 for a possible issue of bonds, is it not?

Mr. SNELL. Yes. According to the hearings it is specified that all that is actually needed for the issuance of certificates and expenses of war savings, expenses for foreign loans, and so forth, would be less than the $2,000,000 that is carried in my amendment, so that my amendment of $2,000,000 carries all that is necessary for actual necessary expenses. The other $5,000,000 is merely for the proposition of the possibilities of issuing more loans that no one expects, and it does not seem to me, considering the condition of the Treasury, advisable at this time to authorize any such additional expenditures.

Mr. SNYDER. Mr. Chairman, will my colleague yield?

Mr. SNELL. Certainly.

Mr. SNYDER. If the gentleman's amendment carries there will be no necessity for issuing certificates for the $5,000,000?

Mr. SNELL. No; there will be no necessity for issuing certificates for the $5,000,000, and if we want to economize, here is the place to do it without in any way interferring with the efficiency of the Government service, and the man from the Treasury Department who advocated the expense admits it.

The CHAIRMAN. The time of the gentleman from New York has expired.

Mr. MANN of Illinois. Mr. Chairman, I ask unanimous consent that the gentleman may have five minutes more.

The CHAIRMAN. The gentleman from Illinois asks unanimous consent that the gentleman from New York [Mr. SNELL] may proceed for five minutes more. Is there objection?

Mr. MANN of Illinois. Mr. Chairman, will the gentleman yield?

Mr. SNELL. I yield to the gentleman from Illinois.

Mr. MANN of Illinois. I probably ought not to ask the gentleman the question that I would like to propound to him, but how is it possible to spend $7,500,000 in expenses of loans of the Government? That is a good deal of money.

Mr. SNELL. I tried to find out, but there is not anything in the hearings or anything that has been brought before the committee that tells how or in any way justifies that expenditure at this time.

Mr. MANN of Illinois. I assumed that this would cover all other expenses when I read the bill.

Mr. WOOD of Indiana. I think the gentleman is laboring under a misapprehension. Nearly half of this item is paid to the Federal reserve banks in taking care of the $60,000,000 of coupon bonds that are constantly being exchanged and transferred. That is part of the loans.

The gentleman will remember that when we passed the laws authorizing the Liberty loans, some of them carried one-tenth of 1 per cent to defray the expense, and others carried one-fifth of 1 per cent for the same purpose. That was not simply to defray the expense of selling the bonds. It was to defray the

expense of paying the coupons and taking care of the various transactions of these bonds during the period of their existence and as long as they were outstanding. Now, about half of this item of $7,000,000 will be paid to the Federal reserve banks, which are acting as the fiscal agents of the United States to help the United States in this bonding business.

Mr. SNELL. If that statement is true, I am more opposed to it than ever. The Federal reserve banks are making more money than any other business or banks that I know of, some of them as high as 200 per cent. Furthermore, they are fiscal agents of the Government and are expected and intended to do this work without charge. It is a shame for them to charge for this work. You do not pay anything to the small country banks throughout the country that handle Government bonds.

Mr. WOOD of Indiana. Yes; you do.

Mr. SNELL. They do not get a cent for that, and I am more opposed than ever if you are going to tax the people to raise more money to distribute to the Federal reserve banks. They have all the money they need, they have every advantage there is in the financial world, and they have no right to come here and ask for more money at this time. I think to do this is an imposition on every country bank in the whole country, and especially when the Federal reserve banks will not allow them a single cent for doing this work or anything else that they can help.

Mr. WOOD of Indiana. I am not standing here as the champion of the Federal reserve banks, but I do not think the gentleman wants to put us in a position so we can not take care of these bonds as the coupons mature. If we do, we will have every holder of bonds in this country on our backs. It is absolutely essential that this work be done by somebody. It is just a question whether or not it will be done by the several Federal reserve banks, because in large measure they are holding these bonds, or whether we will make an additional clerical force in the Treasury Department here and force all that business here. That would be inconceivable almost, and it would be practically a physical impossibility to do it.

Mr. MANN of Illinois. Will the gentleman yield?

Mr. WOOD of Indiana. Yes.

Mr. MANN of Illinois. Is this charge made by the Federal reserve banks for the collection of interest coupons, collecting them and presenting them to the Treasury?

Mr. WOOD of Indiana. No; I understand the larger portion of it is made because of what seems to be the constant changing of these bonds. In the first place I have a registered bond, and I want to have it unregistered. That is done through the Federal reserve bank. Or I have an unregistered bond, and I want to have it registered.

Mr. MANN of Illinois. There is not very much of that going on. There is a good deal of this sort of thing going on, or will be very soon: The fourth Liberty bonds are now ready to be exchanged for the permanent bonds——

Mr. WOOD of Indiana. It takes care of all of that.

Mr. MANN of Illinois. I suppose it is done largely through the Federal reserve banks and through the country National and State banks.

Mr. SNELL. And those banks do not get a cent for it.

Mr. MANN of Illinois. I understand those banks do not get anything for it.

Mr. SNELL. Not a cent.

Mr. MANN of Illinois. If it is for the collection of the interest coupons, it would be interesting to find that out, because the Federal reserve banks insist that the country banks shall cash checks and issue checks without exchange, and I wondered if the Federal reserve bank itself is charging the Government of the United States exchange for the collection of interest coupons on these bonds.

Mr. WOOD of Indiana. The hearings disclose the fact that the United States Treasury, instead of maintaining its own fiscal agents in these banks for the purpose of transacting this business, has some arrangement by which the Federal reserve bank employs these agents and these clerks and a separate and distinct account is kept of their service; and in addition to that they claim that they do a whole lot of service gratis; and about one-half of this item, as I remember, goes to reimburse the Federal reserve banks for the service that they are rendering as the fiscal agents of the Treasury Department of the United States.

Mr. MANN of Illinois. I suppose every National bank and many State banks keep one or more and sometimes a number of employees—and have from the beginning of the war up to date—solely for the purpose of handling the business of the Government of the United States relating to bonds. If they can do that, the Federal reserve bank ought to do it.

The CHAIRMAN. The time of the gentleman has expired.

Mr. SNELL. I ask unanimous consent to proceed for two minutes.

The CHAIRMAN. The gentleman from New York asks unanimous consent to proceed for two minutes. Is there objection?

There was no objection.

Mr. SNELL. As I understand it, the Federal reserve banks are Government agencies. That is partly what they were established for, and there is no reason for them to come before Congress at this time and ask for $3,500,000 to help take care of the Government bonds, when as a matter of fact every little country bank, as the gentleman from Illinois [Mr. MANN] has said, has done this for years, year in and year out, for nothing, and they are still called on to do it for the Government, and never expect anything for it. The statement has been made on the floor of the House time and again how valuable the Federal reserve banks were and how much money they were making. As that stock belongs to all the people and the Government, it seems to me there is positively no excuse at this time for appropriating this three and a half million dollars on the possibility that it might be necessary to be paid to them for work they are under obligation to do for nothing, in return for the many advantages, and so forth, they receive from the Government.

Mr. WOOD of Indiana. Mr. Chairman, I think it might be well to call to the attention of the committee what was said in the hearings upon this subject. I read from page 279 of the hearings:

Mr. WOOD. Then the Government is asked to pay for their expenses for acting as fiscal agents $3,500,000?

Mr. BROUGHTON. Yes. The estimates for the next year were $4,097,600, but we have cut that to $3,500,000.

Mr. WOOD. Let me have some idea what the Government is paying this $3,500,000 for. What is it? What do they do as fiscal agents for the Government to cost the Government three and a half million dollars?

Mr. BROUGHTON. I have already explained that in large measure. The Secretary places with the banks all possible exchange transactions for the accommodation of the public and to eliminate congestion at the Treasury. Bond and note transactions are conducted for millions of holders. A holder who sells, exchanges, or converts his bond or note ordinarily goes to his own bank, and his bank goes to the Federal reserve bank. It is the system we have erected to make it possible to handle the enormous number of transactions.

Mr. WOOD. Is that a percentage on the money handled?

Mr. BROUGHTON. No; that is actual cost.

Mr. WOOD. Give us an example of what it costs the Federal reserve banks that they charge up to the Government. What kind of service is it?

Mr. BROUGHTON. For insfance, in New York City you have ten $100 bonds and want to exchange them for a $1,000 bond. You go into the bank, and the exchange is made there.

Mr. WOOD. Yes.

Mr. BROUGHTON. They have been charged with the $1,000 bond, and they now get credit for it when they send in the ten $100 bonds. Or you have a coupon or bond which you want registered, and you take it to the bank in New York City, and they will send it on to Washington for you.

Mr. WOOD. And it is for that little detail that they charge this amount of money, $3,500,000?

Mr. BROUGHTON. Yes; but these transactions run into hundreds of thousands. For example, the Federal reserve bank of New York to June 30, 1920, had received 17,549,866 separate bonds and notes for exchange of denominations and issued in lieu thereof 4,657,249 other bonds and notes, the face amount of the receipts and issues being $2,437,553,250 in each instance. Other transactions are conversions of bonds and notes, interchanges as between coupon and registered issues, and exchanges of temporary for permanent bonds. A very great service is the receipt of transactions from the public and banks generally and their aggregation into cases of considerable size for submission to the Treasury, where such cases are handled as units, and each may represent several hundred separate items, which under a direct submission system would each be handled separately at the Treasury. It is the volume of business that makes it necessary to keep detail away from Washington.

Mr. MANN of Illinois. Mr. Chairman, the clearing house would do it the same way. I will give the gentleman an example. Last summer I desired to exchange some coupon bonds for registered bonds. They were in the hands of my bank in Chicago. That bank charged me nothing for doing it. They were transmitted to the Federal reserve bank and that bank charged for the exchange.

Mr. SNELL. That is what every little country bank all over the country does a thousand times during the year.

Mr. MANN of Illinois. I thought it would have been much fairer for me to pay the money to my own bank for doing something which was purely gratuitous than to pay the Government bank for doing something that was a Government function.

Mr. WOOD of Indiana. I would say to the gentleman that I had the same idea which the gentleman has, and that I pursued it a little further. I read from the hearings further, on page 280:

Mr. WOOD. But there must be some basis for it. What I am trying to get at is how much we pay the Federal reserve bank for this service. They do not have any clerks for this service?

Mr. BROUGHTON. They are not paid for the service, but merely reimbursed for actual expenses. They have hundreds of clerks employed on this work alone.

Mr. WOOD. They do business for the Government, and among other things they are employed as fiscal agents?

Mr. BROUGHTON. Yes, sir.

Mr. WOOD. The Federal reserve bank in New York City, in order to arrive at how much they will charge the Government, must have some basis for it?

Mr. BROUGHTON. Surely. The clerks in the line of employment engaged in this work. Many things are not reimbursed to them.

Mr. WOOD. Can you give us a list of the clerks employed in these Federal reserve banks, and the moneys paid them for and on behalf of the Government for doing the Government business?

Mr. BROUGHTON. I think I could.

And they furnished a very comprehensive list.

Mr. SNYDER. Mr. Chairman, I move to strike out the last two words. With regard to this large sum of money for handling of what I call the purely legitimate business of handling exchange of bonds and notes, brought about by transactions, starting with smaller banks throughout the country and finishing with the Federal reserve banks, it is nothing more than a multiplication of the same expense incurred in all of our banks throughout the country. It is a perfectly legitimate expense for the banks to stand, and the Federal reserve banks should stand it in the ordinary operation of their daily business.

It has grown up upon them since the war started. They wanted it. They have fixed it so that the country bank can make nothing on the handling of any Government obligation. Every gentleman here who is connected with banks knows if you have a loan to-day for a customer, secured by Liberty bonds, and you want to rediscount the note, you do it at a loss to your bank.

The Federal reserve bank makes money on everything it does. There is no reason in the world why it should not bear the full, legitimate expense of running the business of this bank. That is exactly what every single bank is doing throughout the United States.

The other large institutions in New York which handle the sale of bonds and the exchange of bonds for the United States Steel Corporation, as well as its stock, do not make a charge for that. If you sell stock or Liberty bonds, you are charged one-sixteenth of 1 per cent for the exchange. Some one gets that, but the little country bank gets nothing.

I may say modestly that I know something about the banking business, for I have had something to do with it for a good many years, and I make this final statement—that this charge run down to its final analysis, as the very efficient chairman of the committee has tried to run it down, simply will resolve itself into a normal charge that the Federal reserve banks should be compelled to stand, and it should come out of not the 100 per cent but the 210 per cent profit that the Federal reserve bank of New York City made last year.

Mr. WOOD of Indiana. Mr. Chairman, I will state to the committee that at first blush I had the same impression that gentlemen here have, and it seemed to me that this was one of the incidental duties that should be discharged by the Federal reserve banks, as a part of the duty they owe to the Government and the country, but this business is enormous. To give you some idea of the enormity of it, and which they say if it is not done by the Federal reserve banks will necessitate the forcing of all this business to Washington, where it will cost twice as much, I dare say, because this is the most expensive place to do anything in in the world.

Mr. SNELL. Mr. Chairman, will the gentleman yield?

Mr. WOOD of Indiana. Just let me give these figures—the amount estimated to be paid in 1922, and it is practically the same in 1921, at Boston is $271,630; New York, $870,550; Philadelphia, $227,900; Cleveland, $365,600; Richmond, $98,000; Atlanta, $78,700; Chicago, $784,100.

Mr. MANN of Illinois. Well, I think we can get along without it.

Mr. SNELL. Mr. Chairman, will the gentleman yield?

Mr. WOOD of Indiana. Yes.

Mr. SNELL. I want to know if that is any larger in proportion than it is for a little bank of $50,000 capital in my town, which has kept a clerk to do this for two years for nothing?

Mr. WOOD of Indiana. It may not be, but it is not a question of what we would like to have; it is a question of what exists.

Mr. SNELL. But the gentleman just spoke of the fact that it has run into large proportions.

Mr. WOOD of Indiana. It is not a theory with which we are confronted, it is a condition, and it is simply whether this work must be done. If it is not done by these Federal reserve banks it must be done here in Washington.

Mr. SNELL. They should not be paid for doing it any more than the small banks are paid for doing it.

Mr. WOOD of Indiana. The gentleman's theory may be correct, and I wish it were true.

Mr. SNELL. We can make it true by voting out this appropriation.

Mr. WOOD of Indiana. No, you can not; and you will find that this will be the result if you do. It is as much my desire, and I think I have worked as hard in trying to eliminate these useless appropriations as anyone——

Mr. SNELL. I appreciate the work the gentleman has done on this.

Mr. WOOD of Indiana. I do not think he does, or I do not think he appreciates the facts that actuated us in making this allowance. Under the law these gentlemen had $27,000,000 that they might use for this purpose. In order that the Congress of the United States might have some check and control on it, we repealed the law and covered the money into the Treasury of the United States. By doing that we did not mean to hamper or discommode or disaccommodate the thousands and tens of thousands of bondholders throughout the United States, for they are the ones who are going to be made to suffer, and my prediction is that if you vote out this appropriation and make it no longer possible for these reserve banks to act as the fiscal agents of the Treasury Department of the United States, this whole business will be dumped into Washington, where it will take eventually more money with far more inconvenience, to the very great discomfort of the people of the United States.

Mr. DOWELL. Does the gentleman think it is impossible for these banks to conduct this business in view of the fact they made over 100 per cent last year; yes, 210 per cent?

Mr. WINGO. Mr. Chairman, I offer an amendment to the amendment so that the amount will be $3,750,000.

The CHAIRMAN. The Clerk will report the amendment.

The Clerk read as follows:

Amendment by Mr. WINGO to the amendment offered by Mr. SNELL: Strike out "$2,000,000" in the Snell amendment and insert in lieu thereof "$3,750,000."

Mr. WINGO. Now, Mr. Chairman, my amendment does this: It simply takes from the item carried in the bill the $3,500,000 that the discussion and the hearings disclosed go to the Federal reserve banks. Now, I appreciate the splendid work the gentleman from Indiana [Mr. WOOD] has done by cutting down expenses in many ways, but he seems to be laboring under a misapprehension, and that is that the Federal reserve banks can refuse to do this work if we do not pay them for it. It is an outrage that they ever demanded any pay for acting as fiscal agents of the Government. Now, some of you gentlemen were here when we enacted the Federal reserve act. The question of franchise tax and the question of dividends of the Federal reserve banks gave the committee considerable trouble. I am one of those who insisted at the time that if the Federal reserve bank system was not held down so that it could not be a profit-making institution that you would have them putting out a greater volume of notes than was necessary. The banks were created, and some of the bankers, even members of the Federal Reserve Board, seemed to have overlooked the fact that they were created as cities of financial refuge, and not as everyday discount banks. Now, what did we do? We limited the dividends they might earn to 6 per cent—that is, the stockholding banks—and provided that in lieu of a franchise tax they should do what? First, render service to the Government as its fiscal agent whenever called upon; and, second, turn the surplus earnings into the Treasury, to be used in the retirement of the bonded indebtedness of the United States. Now, the Treasury has paid for this service in violation of the spirit of the Federal reserve act, because it is contrary to the spirit of the law to allow these Federal reserve banks to charge for acting as fiscal agents of the Federal Government.

Mr. MADDEN. Will the gentleman yield?

Mr. WINGO. With pleasure.

Mr. MADDEN. Now, they are taking the money that they have made in profits and investing it in great sky-scraping buildings so that they can make the rents out of these buildings.

Mr. WINGO. I do not care to be diverted to a discussion of that. At another time I shall discuss the conduct of these banks in detail. Gentlemen say if we do not make the appropriation for the banks the work will be done here in Washington by Treasury employees. No; it will not. You let any Federal reserve bank decline to act as the fiscal agent of the Government and you will see what will happen to the board of directors of that bank. I do not always agree with the Federal Reserve Board, but I think a majority on that board would act promptly if any Federal reserve bank insists on saying "No; we will not discharge one of the prime functions for which we were given one of the most valuable franchises which any corporation was ever given." It is a damnable outrage that the little banks in this country have to render free service and Federal reserve banks get paid for it.

If you gentlemen want economy you can not only have economy here, but you can do justice and take away from these banks pay for a service which they owe and for which they have obtained a valuable franchise. While you require the country banks to remit to these reserve banks and will not permit the country banks to demand even postage from the Federal reserve bank, here you propose to let this institution have for rent—go and read how they allocate. They say so much for rent, so much for salaries, so much for telegraph, so much for telephone. That is all tommyrot, they are making an arbitrary allocation on nearly every item but clerk hire. Each country bank in this Nation during the war had to keep at least one clerk——

The CHAIRMAN. The time of the gentleman has expired.

Mr. WINGO. May I have one minute more?

The CHAIRMAN. Is there objection? [After a pause.] The Chair hears none.

Mr. WINGO. These country banks had to keep at least one clerk, and every country bank of this Nation of any size at all has to give now even to this bond business the services of at least one man for half of his time. But you say this money comes back to the Treasury in surplus earnings. If that be true, and it is, then you are just taking money out of one pocket and putting it into another pocket. Why carry it and swell the volume of appropriations? It is not so much the money but principle involved. If they have the right to charge for acting as fiscal agent in one instance, and we concede it, you do not know but that some other kind of emergency may come and then they may say that "We have the right to charge, and the Government must pay us for the discharge of one of the prime functions for which we are created."

The CHAIRMAN. The time of the gentleman has again expired.

Mr. SNELL. Mr. Chairman, I accept the amendment to the amendment as offered by the gentleman from Arkansas [Mr. WINGO].

The CHAIRMAN. The question is on the amendment to the amendment offered by the gentleman from Arkansas [Mr. WINGO].

The question was taken, and the amendment was agreed to.

The CHAIRMAN. The question is now on the amendment offered by the gentleman from New York [Mr. SNELL] as amended.

The amendment as amended was agreed to.

Mr. VAILE. Mr. Chairman, I offer an amendment.

The CHAIRMAN. The gentleman from Colorado offers an amendment, which the Clerk will report.

The Clerk read as follows:

Amendment offered by Mr. VAILE: Page 42, line 25, after the colon, strike out the balance of the paragraph and insert in lieu thereof the following:

"One at not exceeding $6,000; 4 at not exceeding $5,000; 5 at not exceeding $4,500; 5 at not exceeding $3,500; 10 at not exceeding $3,000; 18 at not exceeding $2,500; 5 at not exceeding $2,400; 23 at not exceeding $2,250; 26 at not exceeding $2,000."

Mr. VAILE. Mr. Chairman and gentlemen of the committee, it seems to me that we make a mistake, having cut this appropriation so very materially, to limit the authority of the department in its right to employ, among those whom it does employ, expert help. The amount as reported by the chairman of the committee in this bill, $7,250,000, was itself a very substantial decrease, I understand, from the estimate of the department. That amount is now cut in half. But we are not satisfied with that. They say that out of that amount if you want to employ two $4,500 men you can not do it; you have got to employ instead three $3,000 men. If you find two good men that you want to pay $5,000, you can not employ them, but you can employ four at $2,500. Making an appropriation which is not to be effective until the next administration comes in, cutting that appropriation to a third of the amount asked for—and I do not complain of that contribution to the cause of economy—we then say that the appropriation so cut shall be used to employ only low-salary men. Gentlemen, true economy does not always consist in getting only that which is the cheapest. Sometimes it is even better served by getting that which is of the best quality. In this instance, we certainly performed our promise of economy when we made this last cut. Now, we are merely tying our hands when we say that we can not, if we want to, employ expert help when we find it.

Now, the organization exists at the present time. It has been built up in the last three years. It deals with the interests of 20,000,000 people who hold the obligations of the Government in large and small amounts. The higher officials charged with this work and their legal and financial experts are not ordinary clerks. They are high-grade men. The new administration will undoubtedly want men of at least similar caliber. I do not know how many of the present staff the new administration may want to retain. Doubtless they will want to retain some. In any event they will want men equally as good. It is highly probable that the new administration would not be able to retain all of the present force even at the present salaries, because some of the best of those men are leaving because rewards in private employment are higher than those they receive in the department. The whole proposition is analogous to saying, "Here is $100 with which to buy clothes," and to my saying, "Instead of buying two $50 suits I will buy 10 at $10 each."

Mr. GARD. If the gentleman will yield, how much does his amendment increase this appropriation?

Mr. VAILE. It does not increase the appropriation at all, and does not come up nearly to the amount carried in the last act. The real number of employees under my amendment will be less. It provides for a few high-grade places, which I think we ought at least to have the privilege of using, if we want to do so. These positions are not under the civil service. Can we not trust our own administration, coming in after the 4th of March, with enough power to employ $4,500 men or even a $6,000 man if they find it desirable to do so in the interest of efficient management? I am willing to trust the next administration, and I think the committee should be.

Mr. WOOD of Indiana. I wish to say in opposition to this amendment, if it prevails, that in order to be consistent we would have to change these limitations on every lump-sum appropriation asked for.

Mr. VAILE. Will the gentleman yield?

Mr. WOOD of Indiana. Wait until I get through. Here has been one of the most damaging things, so far as the Government employees are concerned, that happened as a result of the war. Of necessity we had to make large lump-sum appropriations to take care of these new activities, and they immediately set out to create large salaries in order to entice, possibly, big men. But there are hundreds and hundreds of cases here where they took young men, striplings, if you please, many of them in this department, and elevated them from $1,800 to $5,000 and $6,000 positions.

You can readily imagine what happened. These other clerks, who had been working here for years and years at fairly compensatory salaries, and knowing they were well worthy of an increase in their wage, and not getting it, and not being able to get it under the statutory provisions under which they are operating, began to complain, and are still complaining. And this attempt is for no other purpose—it does not increase the amount of the appropriation—than to fix a few high salaries for a few people. And I do not take very much stock in the proposition made by the gentleman from Colorado [Mr. VAILE] that because of the fact that we are soon to assume these places we ought to be feathering the nest of a lot of gentlemen to the exclusion of men who are far more entitled to these places and who have had long and consistent service in the employ of the United States.

Mr. VAILE. I would be very glad, indeed, to see some of the competent men retained, but they can not be retained at the salaries proposed in the bill.

Mr. WOOD of Indiana. They are staying here at the old salaries, which do not approach these salaries.

Mr. BLANTON. In order to get a new shift, I make the point of order there is no quorum present.

Mr. VAILE. I would like two minutes more.

Mr. BLANTON. Then I will withdraw the point.

Mr. VAILE. In this branch of the service now there are four men receiving $6,000. My amendment provides for only one.

Mr. WOOD of Indiana. And he should not be receiving half of it.

Mr. VAILE. The gentleman was saying a minute ago it was unfair to suggest to a new administration the placing of men at living salaries and not retain those who are in now.

There are five salaries at $4,500 and five at $4,000. We might not want to retain all of these men; I think it is quite possible that we would not. But, so far as the inconsistency of my amendment with respect to the rest of this bill is concerned, I call attention to page 44, the next page, providing for the Bureau of War Risk Insurance:

Three at not exceeding $7,500 each, 5 at not exceeding $5,000 each, 16 at not exceeding $4,500 each, 20 at not exceeding $4,000 each, and 16 at not exceeding $3,500 each.

And on page 63 of this bill, in the Internal Revenue Department, for expenses of assessing and collecting the internal-revenue taxes, I find this:

Including the employment of the necessary officers, attorneys, experts, agents, accountants, inspectors, deputy collectors—

And so forth, $30,000,000, without any limitation as to salaries at all.

I submit that my amendment is in accord with other precedents to be found in this identical bill.

The CHAIRMAN. The time of the gentleman from Colorado has again expired. The question is on agreeing to the amendment offered by the gentleman from Colorado.

The question was taken; and the Chairman announced that the noes appeared to have it.

Mr. VAILE. A division, Mr. Chairman.

The CHAIRMAN. A division is demanded.

The committee divided; and there were—ayes 5, noes 31.

So the amendment was rejected.

Mr. BLANTON. Mr. Chairman, I renew the point of order that there is no quorum present.

The CHAIRMAN. The gentleman from Texas makes the point of order that there is no quorum present.

Mr. WOOD of Indiana. Mr. Chairman, I move that the committee do now rise.

The CHAIRMAN. The gentleman from Indiana moves that the committee do now rise. The question is on agreeing to that motion.

The motion was agreed to.

Accordingly the committee rose; and the Speaker having resumed the chair, Mr. LONGWORTH, Chairman of the Committee of the Whole House on the state of the Union, reported that that committee, having had under consideration the bill (H. R. 15543) making appropriations for the legislative, executive, and judicial expenses of the Government for the fiscal year ending June 30, 1922, and for other purposes, had come to no resolution thereon.

SENATE BILL REFERRED.

Under clause 2 of Rule XXIV, Senate bill of the following title was taken from the Speaker's table and referred to its appropriate committee, as indicated below:

S. 4603. An act extending the time for the commencement and completion of the bridge or bridges authorized by an act entitled "An act to authorize the Gulf Ports Terminal Railway Co., a corporation existing under the laws of the State of Florida, to construct a bridge over and across the headwaters of Mobile Bay and such navigable channels as are between the east side of the bay and Blakely Island, in Baldwin and Mobile Counties, Ala.," approved October 5, 1917; to the Committee on Interstate and Foreign Commerce.

ENROLLED JOINT RESOLUTION SIGNED.

The SPEAKER announced his signature to enrolled joint resolution of the following title:

S. J. Res. 237. Joint resolution to enable the Secretary of the Senate and the Clerk of the House of Representatives to pay the necessary expenses of the inaugural ceremonies of the President of the United States on March 4, 1921.

LEAVE OF ABSENCE.

Mr. GRIFFIN, by unanimous consent, was granted leave of absence for two days on account of illness in the family.

FEDERAL LAND BANK OF LOUISVILLE, KY.

Mr. BARKLEY. Mr. Speaker, I ask unanimous consent to extend my remarks in the RECORD by having printed a short statement showing the condition of the Federal Land Bank of Louisville, Ky.

The SPEAKER. The gentleman from Kentucky asks unanimous consent to extend his remarks for the purpose indicated. Is there objection?

There was no objection.

Following is the statement referred to:

Federal Land Bank of Louisville, Ky.—District No. 4: Tennessee, Kentucky, Indiana, Ohio—Officers and directors: Walter Howell, president; H. A. Somners, vice president; James B. Davis, secretary; L. B. Clore, treasurer; A. P. Sandles—Paid up capital, $1,934,430.

Condensed statement of condition at close of business December 31, 1920.

RESOURCES.

Mortgage loans:	
Tennessee	$7,303,500.00
Kentucky	5,484,500.00
Indiana	10,928,000.00
Ohio	2,784,100.00
Total mortgage loans	26,500,100.00
United States bonds (par value, $150,000)	143,266.64
Federal farm loan bonds	56,700.00
Furniture and fixtures	13,300.00
Interest accrued (not due)	486,434.26
Other resources	634.26
Cash and due from banks	381,524.78
Total	27,581,959.94

LIABILITIES.

Capital stock:	
United States Government	$608,425.00
Individuals	940.00
National farm loan associations	1,325,065.00
Total capital stock	1,934,430.00
Reserve and undivided profits	233,895.42
